From a previous analysis of the cost of gas well abandonment it was determined that 84.5 per cent of the total installed cost of the wells would be lost on abandonment with- [fol. 9490] out consideration of any decline in worth of the salvable material. The estimated proportion of the total physical cost of gas well construction and equipment represented by the gross value of casing and fittings recovered was 22.50 per cent. The decline in worth of the equipment upon abandonment would not be less than 33.3 per cent of value new, or a loss of 7.50 per cent of the total installed cost of the physical property. The total loss on recovery would, therefore, be 92.0 per cent of the total installed cost. This percentage (92 per cent) applied to the average annual replacement rate (15.40 per cent) results in an annual rate of 14.17 per cent applicable to the reproduction cost of gas well construction and equipment.

The reproduction cost of the direct physical elements of gas well construction and equipment owned and operated by Lone Star Gas Company as of January 1, 1933, was $3,908,424. The application of the indicated annual rate of reserve accrual to this sum results in an estimated annual accrual of $553,824. This estimate has been based upon an

exact analysis of the most complete mortality data of gas wells drilled in the territory in which Lone Star Gas Company operates that have been compiled up to this time.

It is difficult to determine to what extent the accrual of annual reserves provide for the replacement of gas well construction and equipment should be based upon calculated annual rates developed from the Mortality Curve. The basic data from which the slope of the curve was determined was complete and included the history of the behavior of more than one thousand wells over a period of fourteen years.

It is seldom possible to secure a more complete background for the calculations of future rates of mortality than has been afforded by this study. Despite this fact, consider- [fol. 9491] ation must be given to certain factors that are applicable to gas wells and that are not applicable to other types of property units subject to periodic replacements. In practically all mortality calculations, the element of time is a basic factor. Time or service years is the ab-cissa of the rectangular co-ordinates that determine the slope of any mortality curve wherein the rate of replacement is a function of the passage of time. As has been previously set out the life of a gas well is primarily dependent upon the rate of gas withdrawals and is not primarily dependent upon the passage of time. It is also true in the calculation of future replacement rates that it is the usual practice to assume that the performance of replacements will correspond to the performance of the units replaced. In the case of most items of physical property, this assumption is basically sound. In the case of gas wells, however, the life of wells drilled in the future will be determined by the reservoir content and the rate of withdrawals and for this reason it is difficult, if not impossible, to anticipate the performance of future wells that may be drilled in widely scattered areas and from which varying rates of withdrawals will be made.

In this specific case it might be suggested the mortality data do not give the proper relative weight to the wells drilled in the Wheeler County district and to wells that will be drilled in this district in the future. An inspection of the tabulation upon which the mortality curve has been based discloses the fact that the slope of the curve is clearly indicated during the first five service years (1932-1928)

during which period a substantial number of the Wheeler County wells were attached. It is also true that future wells will not be confined to the Wheeler County District and no other rational assumption can be made than that the per-
[fols. 9492-9497] formance of wells drilled in other areas will conform in a general way to the performance of wells that have been drilled in the past in the same general territory.

The average life of gas wells indicated by the mortality curve is slightly in excess of 6 service years. There is no historical data available which would lead to a conclusion that the average life of a group of gas wells in this section of the Mid-continent Area will exceed six years. As previously stated, this indicated average life of gas wells based upon historical mortality data will result in a substantially higher annual reserve accrual than that determined by the application of an estimated average annual withdrawal rate to the unit cost per M. cubic feet of gas withdrawn. The behavior of the mortality curve eliminates the use of any type of reserve accrual based upon the sinking fund method.

[fol. 9505] Compressor Stations

[fol. 9506] The reproduction cost of Compressor Station Land, Structures and Equipment owned and operated by Lone Star Gas Company used in the public service as of January 1, 1933, and included in the reproduction cost estimate as of that date prepared by Mr. P. McDonald Biddison, Mr. E. A. Steinberger and Mr. Ed. C. Connor, is made up of the reproduction cost of two distinct types or groups of compressor installations. The first group may be defined as those stations so located on the main transmission trunks of the system as to be generally independent of the life of one or more gas fields with reference to service life in situ. This group of stations is hereinafter designated Main Line Stations. The second group of stations may be defined as those stations so located with reference to the system as a whole as to be generally dependent with reference to service life in situ (in part or as a whole) upon the life of one or more adjacent gas fields. This group of stations is hereinafter designated Field Stations.

In view of these definitions and classifications, it is evident that the factors that control the reserve accruals that will be applicable to Main Line Stations will differ in many essential respects from the reserve accruals that will be applicable to Field Stations. For this reason, it has been necessary to develop an independent estimate of the annual reserve accruals for each group.

The history of compressor station equipment in service in connection with the public service operations of Lone Star Gas Company has been comparatively brief. (See rate of growth Compressor Station Land, Structures and Equipment—Lone Star Gas Company.) The first installation was made in the year 1914, and consisted of a portion of the major units now in service as the Petrolia Main Line Sta-[fol. 9507] tion. This installation represents approximately fourteen per cent of the total horse-power installed and in service as of January 1, 1933. The first Field Station was installed in 1920, and this installation is now a part of the Fox Central Field Station. Of the present operative horse-power, seventy-five per cent has been in service less than ten years.

With the exception of certain major structures, the compressor units of Lone Star Gas Company are the largest individual property units found in the inventory of its

physical property. These units belonging to that class of property items whose mortality curve remains fairly constant at approximately one-hundred per cent survivors for a number of service years and then declines with comparative rapidity until one-hundred per cent abandonment is reached. The mortality of property items of this type, in practically every case, is brought about by excessive operating costs, or by the obsolescence of the equipment. True mortality data for this type of equipment are extremely rare due to the fact that a relatively small number of units are involved in any investigation, and to the comparatively long life cycle of the units themselves.

The history of Lone Star Gas Company offers no example of the complete functional depreciation of any of its individual compressor units. It must be borne in mind, however, that as of January 1, 1933, the oldest unit in service had been in service only seventeen years as of that date. Despite the lack of specific information concerning the mortality of any of the units, it is not reasonable to assume, in view of the mortality experience of all other types of reciprocating machinery, that the functional depreciation of the compressor units of Lone Star Gas Company will vary in [fol. 9508] any substantial way from the results of general experience and that the maximum service life of any given unit will exceed fifty years, or that the average service life of the group will exceed thirty-five years.

A typical mortality curve that compares to these basic stipulations has been prepared and will be discussed in detail in connection with the development of Functional Depreciation—Compressor Units.

An inspection of this curve discloses the fact that unlike the mortality curves of smaller property units whose individual mortalities have a wide variation from the average, the factor of replacements of replacements will have a relatively unimportant bearing upon the total replacements. In fact, any consideration of this factor may be eliminated without material error due to the fact that the life cycle of the group will probably extend beyond the period of time during which the property as a whole should be amortized and to the further fact that failures will be concentrated within a limited period of time.

In a situation of this character the logical method of reserve accrual is the accumulation of the reserves required

for complete functional depreciation upon a sinking fund basis.

What has been said up to this point has referred specifically to the complete functional depreciation of the main compressor units in service in both Main Lines and Field Stations. Incidental replacements of major elements of these main units have taken place in the past and will continue to take place at an accelerated rate as the age of the individual units, main and auxiliary, increases. Such replacements must be anticipated and be provided for by means of reserve accruals.

[fol. 9509] Included in the account, Compressor Station Land, Structures and Equipment, are many property items other than the main compressor units. These items include steel and wooden structures, cooling towers, underground and overhead piping and miscellaneous auxiliary equipment. Each of these items has a mortality rate that is dependent upon the class of materials used in construction and the type of service the units are called upon to render. For these reasons, it has been necessary to weigh the relative reproduction cost of the constituent elements of each compressor station in order to arrive at a rational basis for the calculation of the total reserve accrual requirements for Compressor Station Structures and Equipment.

As was stated at the beginning of this section of the report, the compressor installations of Lone Star Gas Company have been divided into two general classes—Main Line Stations and Field Stations. Field Stations have been defined as those stations so located with reference to the system as a whole as to be generally dependent with reference to service life in situ, upon the life expectancy of one or more gas fields. This condition introduces a factor of loss that grows out of the fact that the normal operations in the past have required, and will in the future require, the removal of units from one location to another and in many cases the complete abandonment of a station at a particular location and its wholesale transfer to another site better suited to the requirements of current operations.

It is evident that such removals, in part or as a whole, will result in substantial losses that must be met by means of reserve accruals. The history of the company's opera- [fol. 9510] tions from 1920 to July 1, 1933, affords a very fruitful source of information relative to mortalities aris-

ing from this source. These data have been fully correlated in the text.

Summarizing briefly the factors covered in the foregoing discussion, it may be stated that the determination of the proper annual reserve accruals designed to cover the depreciation, current replacements and other costs properly chargeable to reserve accounts in connection with the operation of the compressor stations of Lone Star Gas Company will require the following basic data:

1. The ratio of the reproduction cost of Main Line Stations to the reproduction cost of Field Stations.

2. An estimate of the rate of functional depreciation of the constituent elements of Main Line Stations and Field Stations.

3. The determination of the accrual charges for current replacements in all Structures and Equipment.

4. The determination of the probable rate of removal of compressor units due to depletion of gas reserves and other changed operating conditions.

5. The ratio of loss to salvable value in partial and complete removals of equipment installed in Field Stations.

Ratio of Reproduction Cost of Main Line Stations to the Reproduction Cost of Field Stations

Due to their location with reference to the main transmission lines of the system of Lone Star Gas Company, the following stations have been designated Main Line Stations:

[fol. 9511]

Station	Reproduction Cost January 1, 1933
Gainesville	$76,295
Joshua No. 1	441,056
Joshua No. 2	69,602
Petrolia	1,056,638
Total Main Line Stations	$1,643,591

Due to their location with reference to the system as a whole, the following stations have been designated Field Stations:

Defendant's Exhibit No. 42—Continued

Station	Reproduction Cost January 1, 1933
Alvord	$14,505
Brad	162,193
Brazos	89,622
Breckenridge	290,099
Caddo	261,986
Cheaney	137,093
Desdemona	77,230

Tiffin	51,067
X-Ray	69,241
Total Field Stations	$3,266,355

Annual Rates for Functional Depreciation

As was set out in the previous discussion, the total reserve accruals required for Compressor Station Land, Structures and Equipment of Lone Star Gas Company will consist of the accruals required to meet the functional depreciation of the individual property units which will ac- [fol. 9512] crue irrespective of the location of these units, the losses brought about by reason of the removal of units or the complete removal of stations, the cost of current renewals, and the decline in over-all per cent of new condition.

For the purpose of determining the relative reproduction cost of the constituent items making up the total reproduction cost of compressor stations, a break-down has been prepared for both Main Line Stations and Field Stations.

The following tabulations set out in summary form the result of these break-downs.

Main Line Stations

Item	Amount	Per cent of Total
Land and Improvements	$26,181	1.59
Leaseholds and Improvements	3,072	.19
Structures—Class A	120,064	7.30
Structures—Class B	129,849	7.90
Main Units	772,811	47.02
Boiler Plant	54,815	3.34
Auxiliary Units	68,755	4.18
Water Supply	20,965	1.28
Water Storage Tanks	37,154	2.26
Cooling Towers	26,606	1.62
Plant Piping	253,800	15.44
Field Water Lines	34,724	2.11
Shop Equipment	25,168	1.53
Furniture and Fixtures	2,515	.16
Fire Protection Equipment	1,360	.08
Other Equipment	59,707	3.63
Joint Facilities	6,046	.37
Total	$1,643,592	100.00

Field Stations

Item	Amount	Per cent of Total
Land and Improvements	$70,368	2.15
Leaseholds and Improvements	26,914	.82
Structures—Class A	195,308	5.98
Structures—Class B	272,835	8.35
Main Units	1,674,822	51.28
Auxiliary Units	127,418	3.90
Water Supply	52,267	1.60
[fol. 9513] Water Storage Tanks	36,464	1.12
Cooling Towers	64,600	1.98
Plant Piping	534,529	16.36
Field Water Lines	96,881	2.97
Shop Equipment	7,583	.23
Furniture and Fixtures	4,662	.14
Fire Protection Equipment	6,732	.21
Other Equipment	94,967	2.91
Total	$3,266,350	100.00

Class A Structures—Steel Frame, Iron sides—Lighting equipment included.

Class B Structures—Wood Frame, Iron or wood sides—Lighting equipment included.

Water Supply—Water wells, dams and pumping equipment.

Cooling towers—Cooling Tower, Louvre vents and concrete basins.

Plant piping—All plant piping, overhead and underground.

Field Water Lines—All pipe and fittings to source of supply.

Other Equipment—Machinery parts, guard rails, miscellaneous equipment and supplies.

As indicated by the mortality curve adopted for the functional depreciation of main units, the estimated average life of the Main Units is 35.00 years (area under Mortality Curve equals 3,500 units. Total area equals 5,000 units. Ratio equals 70.0 per cent times total life of 50 years equals 35.0 years average life), or an ultimate average rate for replacements of 2.86 per cent per annum.

As previously suggested, due to the indicated characteristics of the mortality curve, this annual rate should be expressed as an annuity. A thirty-five year annuity calculated upon the basis of five per cent interest compounded annually becomes 1.10 per cent per annum. This annual rate has been adopted for the functional depreciation of [fol. 9515] Main Units.

All other annual rates herein applied to other items included in the general account—Compressor Station Land, Structures and Equipment were selected after a careful consideration of the type of equipment in service and the character of service rendered. Consideration was also given to the annual rates prescribed for similar equipment in Depreciation Studies—Preliminary Report of the Bureau of Internal Revenue.

Main Line Stations

Item	Per cent of Total	Annual Rate of Reserve	Annual Weighted Rate

Reserves Required for Losses Due to Removals

The calculation of the annual reserve accrual required to offset losses growing out of the removal of individual compressor units, or the complete removal or abandonment of Field Stations is based upon the experience of Lone Star Gas Company with reference to this type of loss.

As shown by the tabulation included herein, 9,175 horsepower originally installed in Field Stations has been removed or abandoned as of July 1, 1933. The horsepower as shown by the tabulations represented 32.30 per cent of the total horsepower in service in Field Stations as of January 1, 1933, together with such horsepower as has been abandoned or transferred to other classes of service. This determination was made by dividing 9,175 by 28,405.

It is also shown by the tabulations that the weighted age of Field Station Units, together with units previously used in Field Stations and subsequently transferred to other classes of service was 8.39 years. The rate of removal indicated by these data is 3.85 per cent at approximately eight service years.

It is obvious that the same probability of future removal will apply to units that have been removed from an original location to a new location as was applicable to these units [fol. 9517] when originally installed.

For this reason, the mortality curve shown in the graph—Lone Star Gas Company Depreciation Analysis—Mortality Curve—Field Compressor Stations, and the distribution curve of annual removals gives effect to factor of removals of removals.

This distribution curve was based upon a uniform slope for the mortality curve indicating a rate of 3.30 per cent per annum for the removal of units from original locations.

The calculated annual rates of removals of original units and removals of removed units are shown in the tabulation —Calculated Annual Removal Rates from Mortality Curve —Field Compressor Stations.

As a check upon the accuracy of the mortality curve adopted the cumulative removal rates for various service years have been applied to the horsepower installed for the corresponding service years. The results of this check are shown in the following tabulation:

Year	Horse Power	Cumulative % Age of Removals	Horse Power Calculated Removals
1919	300	57.54	172.63
1920	880	52.51	462.10
1921	1,800	47.64	857.51
1922	4,320	42.92	1,854.28
1923	3,200	38.36	1,227.44
1924	4,160	33.94	1,411.80
1925	1,615	29.66	478.99
1926	5,890	25.52	1,502.94
1927	2,340	21.51	503.27
1928	800	17.63	141.00
1929	2,940	13.87	407.72
1930	.....	10.23	.....
1931	160	6.71	10.73
1932	.....	3.30	.....
1933	.....	.....	.....
Total	28,405		9,030.41

[fol. 9518] The calculated horsepower removed, 9,030.41, is to be compared with 9,175 horsepower historically removed from Field Stations.

The accuracy of the adopted mortality curve for Field Station removals having been established by the foregoing check, the future removal rates from the distribution curve were calculated for the years 1934 to 1955 inclusive in the tabulation—Calculation of Future Renewal Rates—Field Compressor Stations. For convenience and reference, the results shown in the calculation are set out in the following summary:

Defendant's Exhibit No. 42—Continued

Year	Calculated Horse Power Removed*	Per cent of Total*
1934	1,235.34	4.35
1935	1,276.26	4.94
1936	1,318.33	4.64
1937	1,361.88	4.79
1938	1,406.92	4.95
1939	1,453.17	5.12
1940	1,501.09	5.28
1941	1,550.86	5.46
1942	1,601.96	5.64
1943	1,645.99	5.83
1944	1,709.68	6.02
1945	1,765.82	6.22
1946	1,824.24	6.42
1947	1,884.15	6.63
1948	1,946.44	6.85
1949	2,010.68	7.08
1950	2,076.82	7.31
1951	2,135.44	7.52
1952	2,176.39	7.66
1953	2,187.62	7.70
1954	2,113.71	7.44
1955	2,069.89	7.29

* Calculated horse power removed is based upon 28,405 horse power installed. The actual horse power in service in Field Stations is 26,005. The use of the larger figure does not affect the calculated per cent of total.

Of the total horsepower removed or abandoned, 6,370.00 horsepower, or 69.43 per cent of the removals, was represented by complete removal or abandonment.

[fol. 9519] For this reason, an estimate has been made of the ratio of loss for both complete and partial removal or abandonment for a typical Field Station equipped with seven type 80, 170 horse power Cooper units, and two type 2, 10 horse power Fairbanks Morse auxiliary engines. Another estimate was made from an actual cost break-down of three typical Field Stations, and the results obtained from both estimates were in approximate agreement. From the tabulation—Estimated Loss on Total Removal or Abandonment—Typical Field Stations, and from the tabulation—Estimated Loss on Partial Removal—Typical Field Stations, it was developed that the percentage of loss on total removal or abandonment would be approximately 49.2 per cent of the total installed cost, and that the percentage of loss in partial removals would be approximately 21.9 per

cent of the total installed cost. The weighted percentage of loss is found as follows:

30.57 per cent times 21.9 per cent	6.69 per cent.
69.43 per cent times 49.2 per cent	34.16 per cent.
	40.85 per cent.

This weighted per cent of the total installed cost of Field Stations which represents the estimated per cent of loss by reason of partial and complete removals becomes the factor to be applied to the Calculated Future Removal Rates—Field Compressor Stations.

When this factor is applied to each of the annual rates of removal from 1934 to 1955 inclusive, which annual rates have been taken from the distribution curve of annual removals—Mortality Curve Field Compressor Stations, the resultant annual rates become the estimated future annual rates for losses on removals of Field Compressor Stations after giving effect to the salvable value of equipment in both partial and complete removals. The following summary [fol. 9520] sets out the results obtained by the application of the factor to each of the estimated removal rates, 1934 to 1955 inclusive.

Year	Annual Rate Per cent	Factor	Adjusted Annual Rate Per cent
1934	4.35	40.85	1.78
1935	4.49	40.85	1.83
1936	4.64	40.85	1.90
1937	4.79	40.85	1.96
1938	4.95	40.85	2.02
1939	5.12	40.85	2.09
1940	5.28	40.85	2.16
1941	5.46	40.85	2.23
1942	5.64	40.85	2.30
1943	5.83	40.85	2.38
1944	6.02	40.85	2.46
1945	6.22	40.85	2.54
1946	6.42	40.85	2.62
1947	6.63	40.85	2.71
1948	6.85	40.85	2.80
1949	7.08	40.85	2.89
1950	7.31	40.85	2.99
1951	7.52	40.85	3.07
1952	7.66	40.85	3.13
1953	7.70	40.85	3.15
1954	7.44	40.85	2.04
1955	7.29	40.85	2.98

[fol. 9521] Annual Reserve Accrual Required for Current Replacements

The annual rate of reserve accrual required for the functional depreciation of the constituent elements of both Main Line Stations and Field Stations and the annual rate of reserve accrual required for the cost of removals in Field Stations have been covered in the foregoing discussion. Consideration remains to be given to the annual rate required for current replacements and renewals properly chargeable to reserve accounts. The term Current Replacements, as used in this connection, is intended to cover the cost of the renewal of integral parts of the various items of equipment as distinguished from the replacement of the unit as a whole; the renewal of paint and other similar charges have been included under the general head of Current Replacements.

A complete analysis has been made of charges to the account Reserve for Depreciation—Compressor Station Construction and Equipment, the years 1929, 1930 and 1931. The results of this analysis are shown in the tabulation Summary of Charges to Reserve for Depreciation—Compressor Station Construction and Equipment.

It is evident from the summary that the annual charges to cover the cost of current replacements, as heretofore defined as distinguished from the cost of functional depreciation and the cost of major removals have been approximately one per cent per annum applied to the reproduction cost of Compressor Station Structures and Equipment. It is probable that the annual rate indicated by the current charges will increase with the increasing age of the structures and units and for this reason the adopted annual rate of reserve accrual, one per cent, is conservative.

Defendant's Exhibit No. 42—Continued

7813

[fol. 9523] Annual Reserve Accrual Required for Decline in Per Cent of New Condition

The reproduction cost of Compressor Station Structures and Equipment was included in the reproduction cost of the physical property, which, as a whole, was found to have suffered an annual decline in per cent of new condition of approximately one per cent per weighted service year and this rate of annual decline will continue for approximately fifteen years and the annual loss in value must be provided for by means of a reserve accrual of one per cent per annum for a period of at least fifteen years.

Salvable Value—Items Subject to Functional Depreciation

Of the total installed cost of the Main Line and Field Compressor Stations approximately fifty per cent would have some salvable value on replacement or abandonment. In order to salvage this material, approximately five per cent of the installed cost would be expended for recovery, leaving a net salvable value of forty-five per cent of the total installed cost upon the assumption that the recovered material has a salvage value of one hundred per cent of new. In view of the fact that functional depreciation as herein used contemplates the loss of usable value in the property item under consideration, not more than 33.3 per cent of value new could be obtained from items replaced or abandoned by reason of accrued functional depreciation—33.3 per cent applied to the gross salvable value, 45 per cent, results in an estimated net salvable value of 15 per cent. Therefore, .85 becomes the factor applicable to the indicated annual rate designed to provide for functional depreciation of equipment in both Main Line and Field Stations.

[fol. 9524] Summary

Main Line Stations:

The total annual rate of reserve accrual for Main Line Stations is as follows:

1. Annual Rate for Functional Depreciation 3.522 per cent times .85	2.994 per cent.
2. Annual Rate for Current Replacements	1.000 per cent.
3. Annual Rate for Decline in Per Cent of New Condition	1.000 per cent.
Total Annual Rate—Main Line Stations	4.994 per cent.

Field Stations:

The total annual rate for Field Stations is shown in Tabulation Showing Annual Rate of Reserve Accrual Field Compressor Stations, wherein average annual accrual of 6.83 per cent is indicated.

As previously set out, the reproduction cost of Main Line Stations as of January 1, 1933 was found to be $1,643,591 and the reproduction cost of Field Stations as of the same date was found to be $3,266,355. The ratio of the reproduction cost of Main Line Stations to the reproduction cost of Field Stations is, therefore, 33.47 to 66.53.

The weighted average annual rate of reserve accrual for both Main Line and Field Stations is, therefore:

33.47 per cent times 4.994 per cent = 1.6715 per cent.
66.53 per cent times 6.831 per cent = 4.5447 per cent.

Weighted Average Annual Rate 6.2162 per cent.

[fol. 9547] Miscellaneous Items

[fol. 9548] Miscellaneous Property Items

The miscellaneous property items included in the property account of Lone Star Gas Company subject to depreciation, replacements, removals and abandonments but which have not been covered by the detailed analyses in the preceding sections of the report may be summarized as follows:

1. Telephone Line Equipment.
2. General Office Structure.
3. Other General Structures.
4. Production System Structures.
5. Field Measuring Station Structures and Equipment.
6. Transmission System Structures and Equipment.
7. Drilling and Cleaning Equipment.
8. General Shop Equipment.
9. General Office Furniture and Fixtures.
10. Automotive Equipment.
11. Construction Tools.

Due to the manner in which Lone Star Gas Company handles the depreciation charges on Drilling and Cleaning Equipment and Automotive Equipment and Construction Tools, no annual reserve accrual is required in connection with this particular study except that which is necessary to provide for the decline in per cent of new condition. The current depreciation sustained on each of these property items other than the decline in per cent of new condition is charged direct either to an operating account or to a capital account. This practice eliminates the necessity for the accrual of an independent reserve so long as the same method of treating these items is followed.

Telephone Line Equipment

The basic mortality data for treated poles have been taken from a life study of 248,707 treated poles (Christiani —"Relative Life and Value of Treated Poles"). These data are shown in graphic form Lone Star Gas Company [fol. 9549] Mortality and Distribution Curve of Annual Failures of Original Units—Treated Poles.

The average annual renewal rate for treated poles, as indicated by the mortality and distribution curves, is slightly in excess of ten percent.

A breakdown of the reproduction cost estimate of the account Telephone Line Equipment is shown in the following tabulation:

Item	Amount	Per Cent of Total
Rights of way	$7,059.37	2.28
Wire	87,500.17	28.20
Poles and Cross Arms	163,488.90	52.70
Booths, Phones and Other Equipment	13,083.46	4.22
Insulators, Guys and Hardware	39,095.22	12.60
Total	$310,227.12	100.00

A further analysis shown that of the total wire in service, approximately 78.50 per cent is copper wire, and $21.50 per cent is iron wire.

Application of Annual Rates

The net salvable value of poles and other material removed is approximately fifty per cent of the installed cost.

Due to the accounting practice of Lone Star Gas Company with reference to charges to the accrued reserves, it is estimated that approximately fifty per cent of the cost of all replacements will be charged direct to current operating accounts.

Giving effect to each of these factors, the estimated annual weighted rate of reserve accrual required for Telephone Line Equipment is shown in the following tabulation:

[fols. 9550-9553]

Item	Per Cent of Total	Annual Rate	Weighted Annual Rate Per Cent
Rights of Way	2.28	....	.....
Insulators Guys and Hardware	12.60	2.50	.3150
Poles and Cross Arms	52.70	2.50*	1.3175
Booths, Phones and Other Equipment	4.22	2.50*	.1055
Wire—Iron	6.06	3.90**	.2363
Wire—Copper	22.14	1.65**	.3653
Weighted Annual Rate			2.3396

* Effect given to 50 per cent salvage and 50 per cent of charges made direct to operating accounts.

** Experience of Bell Telephone Company with effect given to 50 per cent of charges made direct to operating accounts.

Decline in Per Cent of New Condition

The average annual decline of one per cent per annum in per cent of new condition applicable to the property as a whole is applicable to Telephone Line Equipment.

Calculation of Annual Rate of Reserve

Weighted Annual Rate	2.34	per cent
Annual decline in per cent of New Condition	1.00	per cent
Total Annual Rate	3.34	per cent

[fol. 9555] General Office Structure

The details of the calculations of the annual reserve accrual required for the General Office Structure are shown in the tabulation Schedule of Annual Reserve Accruals—General Office Structure.

As shown in the schedule, the reproduction cost of the General Office Structure was broken down into its constituent elements and an independent annual reserve rate applied to the various items. The individual rates applied were taken from Depreciation Studies Preliminary Report of Bureau of Internal Revenue, Treasury Department, January 1, 1931. The amortization of the reproduction cost of the structure as a whole was based upon a forty year sinking fund accrual compounded annually at 5 per cent. The weighted annual accrual rate developed by this study is 3.30 per cent.

Other General Structures

The property account Other General Structures consists of the general warehouse of Lone Star Gas Company located on Logan Street, Dallas, Texas. The basic rate of reserve accrual for Other General Structures is based upon a thirty year useful life calculated upon a five per cent annuity or sinking fund accrual, which calculation results in an annual accrual for the amortization of the structure of 1.50 per cent.

An annual rate of reserve accrual of one per cent is estimated for the costs of charges and current replacements.

An annual rate of reserve accrual of one per cent is included to offset the annual decline in per cent of new condition applicable to the property as a whole.

The total estimated annual reserve accrual required for Other General Structures is, therefore, 3.50 per cent.

[fol. 9556] Schedule of Annual Reserve Accruals

General Office Structure

	Reproduction Cost New	Probable Life (Years)	Depreciation Rate (Percent)	Annual Amount
Elevators	$13.500	20	5.00	$675.00
Sidewalk Lift	550	25	4.00	22.00
Heating System and Plumbing	29,147	22	4.50	1,311.62
Lighting System				
Wiring	7,600	25	4.00	304.00
Fixtures	15,430	15	6.67	1,029.18
Linoleum	17,456	8	12.50	2,182.03
Venetian Blinds	936	10	10.00	93.60
Roofing	584	20	5.00	29.20
Fuel Tank	500	30	3.33	16.65
Retirement of Total Cost 40 year basis—5% annuity	321,438	40	.80	2,571.50
Painting, Removals and Changes	321,438		1.50	4,821.57
Decline in percent of new condition	321,438		1.00	3,214.38
Total Annual Reserve Accrual				$10,607.45
Reproduction Cost of Structure				321,438.00
Weighted Average Annual Rate				3.30%

[fol. 9557] Production System Structures

The annual rate of reserve accrual for the property account Production System Structures, which consist in the main of frame cottages located on producing leaseholds is based upon the following factors:

Decline in Per cent of New Condition	1.00% per annum.
Current Replacements	2.00% per annum.
Amortization in twelve years, Five per cent annuity basis	6.30% per annum.
Total Annual Accrual Rate	9.30%

Field Measuring Station Structures

The property account Field Measuring Station Structures consists of the wood framed corrugated iron meter houses located on the various well lines. These structures will be removed from an original location in conformity to the indicated average life of gas wells which has previously been determined to be approximately six years. The replacements and loss incident to periodic removals are approximated twenty-five per cent of the reproduction cost of these structures. The over-all life of the structures will not exceed twenty service years. This analysis indicates a loss of 150 per cent of the reproduction cost of the structures during a service life of twenty years or an annual reserve accrual of 7.50 per cent to provide for the loss on removals and ultimate abandonment. The total annual reserve accrual required is determined as follows:

Decline in Per Cent of New Condition	1.00% per annum.
Current Replacements and Paint	2.00% per annum.
Cost of Removals and Abandonment	7.50% per annum.
Total Annual Accrual Rate	10.50%

[fol. 9558] Field Measuring Station Equipment

The annual rate of reserve accrual for Field Measuring Station Equipment is based upon the same factors as were found to be applicable to Field Measuring Station Structures and the same annual rate, 10.5 per cent, is used.

Transmission System Measuring Station Structures and Equipment

The annual rate of reserve accrual for Transmission Measuring Station Structures is based upon the following factors:

Decline in per cent of new condition	1.0% per annum.
Current Replacements, Painting and Removals	2.0% per annum.
Amortization in 25 years, 5 per cent annuity basis	2.1% per annum.
Total Annual Accrual Rate	5.1%

The annual rate of reserve accrual for Transmission System Measuring Station Equipment is based upon the same factors which were found to be applicable to Transmission System Measuring Station Structures and the same annual accrual rate, 5.1 per cent, is used.

Office Furniture and Fixtures

The basis for the determination of the annual rate of reserve accrual for Office Furniture and Fixtures is shown in schedule of Annual Reserve Accruals General Office Furniture and Fixtures.

As shown in the schedule, a complete breakdown of the account has been made and to each class of items there has been applied the specific rate for the particular class prescribed by Depreciation Studies, Preliminary Report of the Bureau of Internal Revenue—Treasury Department, January 1931. To the weighted average rate shown in the schedule, 8.70 per cent, there is added 1 per cent to provide for the annual decline in per cent of new condition applicable to the property as a whole, resulting in an annual accrual rate of 9.70 per cent for General Office Furniture and Fixtures.

Defendant's Exhibit No. 42—Continued

[fol. 9560] Amortization Accruals for Property as a Whole

[fol. 9561] In the preceding sections of this report consideration has been given to the annual rate of reserve accruals that should be set aside to provide for the future cost of replacements, removals and abandonments of the various items of physical property included in the property account of Lone Star Gas Company. Consideration has also been given to the loss in value that will currently accrue in this physical property but which cannot be offset by replacements and repairs until such time as a static condition has been brought about by the cumulative effect of replacements of original units and replacements of replacements.

One of the basic assumptions upon which this study has been predicated was that the reserve accruals should provide for the maintenance of the status quo of the property as of January 1, 1933, with respect to the number of units in service and to the operating efficiency of the property as of that date. In the case of a few specific property units, a provision was made for the ultimate retirement of the units as a whole. The manner in which the property unit General Office Structure was treated is typical of the limited use of this method of reserve accrual. With these exceptions eliminated, no consideration has been given to the annual reserve accrual that would have as its primary function the provision for the loss caused by the ultimate abandonment of the property as a whole.

It will be obvious to anyone who has made a study of the natural gas business that any company that is engaged primarily in the production and transportation of natural gas should make some definite provision for that ultimate loss of service value in property dedicated to the production and transportation of natural gas that will grow out of the inevitable final exhaustion of the very basis of the property's operations.

[fol. 9562] The production and transportation of natural gas is primarily a mining venture and continuity of operation is directly dependent upon the capacity of natural reservoirs of gas which cannot be replenished and which are subject to inevitable exhaustion. This basic fact sharply differentiates the characteristics of the natural gas business from those of any other public utility enterprise. This basic fact also creates the obvious necessity for a

fundamentally different treatment of certain phases of reserve accruals on the part of natural gas production and transportation properties as contrasted with the methods of accrual applicable to properties having service lives which are independent of the depletion of a limited supply of a natural resource.

The rational method of providing for the conditions that are brought about by the inherent characteristics of the production and transportation of natural gas is the accumulation of an annual sum which at the end of a given period of time will return to the owners of the property a sum of money equal to the value which will be lost upon the abandonment of the enterprise.

Inasmuch as the reserve accruals that have heretofore been developed are designed to provide for the future cost of current replacements, removals and abandonments of property items required to maintain the status quo of the physical property of Lone Star Gas Company in service as of January 1, 1933, any accumulation in a reserve account in excess of the amounts accrued for the costs of current replacements, removals and abandonments will build up as credit balance until such time as it will be required for final liquidation. A reserve accrual of this type will not be subject to current withdrawals and for this reason may be accumulated upon a sinking fund basis provided no deduction is made from a rate-base by reason [fol. 9563] of so-called accrued amortization.

Property Value Subject to Final Liquidation

Before any estimate can be made of the annual sum required for the liquidation of future losses that will be caused by the final abandonment of the property and business of Lone Star Gas Company now in service as an agency for the production and transportation of natural gas, a determination must first be made of the values as of this date which will be lost on final abandonment and for the liquidation of which no reserve accrual has otherwise been provided.

The measure of this future loss is present value as distinguished from original or historic cost. The predominant factor in the determination of the present value of a property and business as of any given date is the reproduction cost of this property and business less the decrement in service value that has taken place in that portion of the

property subject to depreciation. The reproduction cost of the property of Lone Star Gas Company as of January 1, 1933, less value lost by depreciation suffered up to this date, is, therefore, used as the basis for this estimate. The estimate of the reproduction cost of the property and business of Lone Star Gas Company used, is the estimate made by P. McDonald Biddison, E. A. Steinberger and Ed. C. Conne[illegible]. A summary of this estimate is set out in the schedule—Summary of Reproduction Cost New—Property and Business of Lone Star Gas Company, January 1, 1933.

Included in this estimate of the cost of reproduction are certain major property items for which complete retirance has been provided in the reserve accruals heretofore set up. These property items and the estimated reproduction cost of each are as follows:

[fol. 9564] Item	Reproduction Cost
Leaseholds—Developed	$2,681,689
Leaseholds—Undeveloped	893,291
Gas Well Construction and Equipment*	3,894,317
Other production system Structures	9,450
Other production system Equipment	95,764
Measuring Station Structures—Well Lines	37,304
Measuring Station Equipment—Well Lines	130,223
Measuring Station Structures—Field Lines	3,474
Measuring Station Equipment—Field Lines	8,539
Measuring Station Structures—Transmission System	145,098
Other Structures—Transmission System	145,016
Measuring Station Equipment	402,068
Structures and Equipment—Compressor Stations	4,867,679
General Office Structure	321,438
Other General Structures	46,790
Other General Furniture and Fixtures	12,060
General Office Furniture and Fixtures	207,602
General Shop Equipment	104,000
General Tools	131,550
Automotive and Construction Equipment	423,718
Other Undistributed General Costs	860,644
Total Reproduction Cost	$15,421,714

* Direct structural costs—Company owned wells.

Provision has been made for the complete retirance of the present value of developed leaseholds by means of a depletion unit applied to the estimated future annual withdrawals of gas from the calculated reserves embraced by these developed leaseholds. The value of undeveloped leaseholds will be retired in the same manner when these leaseholds pass from the classification—Undeveloped Leaseholds, to the classification—Developed Leaseholds. Should the undeveloped leaseholds be cancelled or surrendered, then cost to date of cancellation or surrender will be charged direct to operating expense as has been the accounting practice of Lone Star Gas Company.

Provision has also been made for the complete retirance of the present value of Gas Well Construction and Equipment by means of the application of a unit of production cost [fol. 9565] to the estimated future average annual production from company owned wells. The value of any producing gas wells drilled or purchased by the company in the future will also be completely retired by means of the same process.

Provision has also been made for the complete retirance of the property items—General Office Structure and Other General Structures by means of an amortization accrual which in its application is independent of the accrual rates set up to provide for the cost of current replacements and renewals and for the decline in per cent of new condition.

Provision has also been made for the complete retirance of practically all of the items included in Compressor Station Structures and Equipment by means of the accruals set up for the functional depreciation of the constituent elements of the property account.

Included in the estimate of the cost of reproduction are certain property items upon which no losses will be incurred incident to the final abandonment of the business of Lone Star Gas Company as an agency for the production and transportation of natural gas. These items consist of General Office Land and Other General Land. The other parcels of land owned by Lone Star Gas Company as of January 1, 1933, consisting largely of compressor station sites and measuring station sites would have little if any value if severed from their present utilization and are therefore not included in this classification.

Included in the estimate of the cost of reproduction are certain property groups that have relatively short service lives, that are mobile and may be utilized without loss in other classes of service. These items consist of Other Production System Equipment, Automotive Equipment, General Tools, General Shop Equipment and Office Furniture and Fixtures.

[fol. 9566] The total estimated reproduction cost of these specific property items for which no additional reserve accruals will be required to provide for loss of value on the final abandonment of the business of Lone Star Gas Company as an agency for the production and transportation of natural gas is set out in the following summary:

Property Items	Reproduction Cost
Leaseholds—Developed	$2,681,689
Leaseholds—Undeveloped	893,291
Gas Well Construction and Equipment*	3,894,317
Other production system Structures	9,450
Other production system Equipment	95,764
Measuring Station Structures—Well Lines	37,304
Measuring Station Equipment—Well Lines	130,223
Measuring Station Structures—Field Lines	3,474
Measuring Station Equipment—Field Lines	8,539
Measuring Station Structures—Transmission System	145,098
Other Structures—Transmission System	145,016
Measuring Station Equipment	402,068
Structures and Equipment—Compressor Stations	4,867,679
General Office Structure	321,438
Other General Structures	46,790
Other General Furniture and Fixtures	12,060
General Office Furniture and Fixtures	207,602
General Shop Equipment	104,000
General Tools	131,550
Automotive and Construction Equipment	423,718
Other Undistributed General Costs	860,644
Measuring Station Land and Improvements—Transmission System	45,195
Other Transmission System land and Improvements	13,243
Land and Leaseholds including Improvements—Compressor Stations	63,267

Defendant's Exhibit No. 42—Continued

Property Items	Reproduction Cost
General Office Land	44,545
Other General Land	49,274
Working Capital	1,701,600
Total Reproduction Cost New	$17,338,838

*Includes $860,644 for General Costs allocated to Gas Well Construction and Equipment.

In the calculation of the annual rate of reserve accrual required for various property items included in the property account of Lone Star Gas Company as of January 1, 1933, an annual allowance of one per cent per annum was set [fol. 9567] up as a part of the total annual accrual rate to provide for the future decline in per cent of new condition which would take place in these specific property items before a static per cent of new condition would ultimately be reached. This annual reserve accrual was not a continuous one but was limited in its application to the estimated period of time required for the effect of replacements, renewals and repairs to offset any further decline in per cent of new condition. Inasmuch as the loss in value below the value as of January 1, 1933, brought about by decline in per cent of new condition has been thus provided for in the current accrual rates, it is obvious that only the residual value represented by the value of the various property items after they have reached a static per cent of new condition will be the value which will be lost on final abandonment and which must be provided for by means of the amortization accrual set up for this specific purpose.

The weighted per cent of new condition of the physical property of Lone Star Gas Company as of January 1, 1933, as determined by P. McDonald Biddison was approximately 93 per cent. The application of an annual reserve accrual of one per cent to provide for the future decline in per cent of new condition of the specific property in service as of January 1, 1933, was extended over a period of fifteen years from January 1, 1933. The annual rate of reserve accrual of one per cent for fifteen years set up for the specific purpose of providing for future decline in per cent of new condition in certain property items taken in connection with

Mr. Biddison's determination of weighted per cent of new condition as of January 1, 1933, indicates that a residual value of approximately 78 per cent of the reproduction cost new of these specific items, less net salvable value on abandonment, should be provided for by means of an amortiza-
[fol. 9568] tion accrual.

In this connection, attention should be directed to the fact that Mr. Biddison applied to General Undistributed Costs the same weighted per cent of new condition that he found for the physical property items and that in this estimate of the annual rate of reserve accruals required for various property items there has been included an annual accrual of one per cent to provide for the corresponding future decline in per cent of new condition applicable to General Undistributed Costs. This treatment of Undistributed General Costs requires that 78 per cent representing the residual value of these items after a static per cent of new condition has been reached should be amortized. Inasmuch as $860,644 of Undistributed General Costs have been included in the account—Gas Well Construction and Equipment, the estimated reproduction cost new of Undistributed General Costs should be reduced by this amount. As previously set out, the complete retirance of the reproduction cost of Gas Well Construction and Equipment together with an allocation of $860,644 for General Overheads has been provided for by means of a production unit applied to the estimated average annual production from company owned wells.

This discussion covers most of the adjustments in the reproduction cost estimate of the property and business of Lone Star Gas Company as of January 1, 1933, required to determine the value of the items to which an amortization accrual is applicable. The manner in which this determination has been made is set out in tabulation showing—Value of Property Items to be Amortized—Lone Star Gas Company, January 1, 1933.

Other Basic Factors

Three other factors which have not been covered by the
[fol. 9569] foregoing discussion have a direct bearing upon the annual amortization rate. The most important of these factors is the period of time assigned for accumulation of the reserve. The second factor is the interest rate at which the annuity will be compounded upon a sinking fund basis.

The third factor is the amount of net salvable value that may be recovered upon the final abandonment of the property as an agency for the production and transportation of natural gas.

It is impossible to predict with accuracy the ultimate life of any company primarily engaged in the production and transportation of natural gas within a specific area of production and final delivery. Many contingencies may arise that will either lengthen or shorten the total life of such a business with reference to an estimate made at a given time and based upon a set of conditions existing at the date of estimate. This fact, however, does not remove the necessity for the provision of an accrual designed to liquidate an inevitable loss, nor does it eliminate from the current cost of service a proportionate part of this inevitable loss of physical and intangible values. The limitation governing the amount of accrual of this nature should be the reasonableness of the period of time assigned for its accumulation in view of all available date. In this estimate, a period of forty years from January 1, 1933, has been adopted as a reasonable period upon which to base the accruals of the annuity. Based upon the expected rate of average future withdrawals, the developed gas reserves of Lone Star Gas Company as of January 1, 1933, will have a life expectancy of twenty years. In view of all known facts, the adoption of an amortization period which is double the life expectancy of the present developed reserves is clearly within the rule of conservatism.

The annual interest rate upon which the annuity is com- [fol. 9570] pounded is five per cent. An annuity designed for the purpose of liquidating a future loss must conform to certain definite specifications. Its principle sum must be safe throughout the period of accumulation. This principal sum must be subject to prompt liquidation without loss and the continuity of the interest payments must be assured. If any of these basic stipulations are not met, the accrual will be inadequate. It is not reasonable to assume that securities carrying a coupon rate higher than five per cent per annum will conform to these basic stipulations.

It is estimated that the net salvable value of the property of Lone Star Gas Company in service as of January 1, 1933, together with the renewals and replacements of this specific property during the forty year interim will be fifteen per cent of reproduction cost new as of January 1, 1933. This

estimate is based upon a careful analysis of the losses that will be incurred upon final abandonment, the cost of recovery of the materials salvaged and a liberal consideration for the residual value of the material recovered. In this connection, consideration must be given to the fact that this estimate is confined to the property in service as of January 1, 1933, and does not take into account any net capital additions that may be made during the future life of the property. The effect of the application of net salvable value to items subject to amortization is shown in Column E of the tabulation showing—Value of Items To Be Amortized —Lone Star Gas Company, January 1, 1933.

Calculation of Annual Amortization Accrual

From the foregoing basic data, the calculation of the annual amortization accrual resolves itself into the application of the annual percentage required for amortization over a forty year period upon a five per cent sinking fund [fols. 9571-9573] basis to the net value as of January 1, 1933, subject to amortization. The annual percentage for a forty year amortization accrual upon a five per cent sinking fund basis is .828 per cent. The total net value as of January 1, 1933, subject to amortization, was found to be $42,332,672. The annual accrual required for the amortization of this amount upon a forty year sinking fund basis is $350,515.

[fol. 9577] Treatment of Undistributed General Costs in Connection With an Estimate of Annual Reserve Accounts

It has been the general custom of engineers in calculating reserve accruals to apply to General Undistributed Costs in reproduction cost estimates the weighted annual rate of reserve accrual found to be applicable to the reproduction cost estimate of the physical elements of the property usually styled Direct Structural Costs. In this connection, Undistributed General Costs include Administration and Legal Expenses During Construction, General Engineering Costs, General Supervision Costs, Taxes During Construction and Interest During Construction.

In the preceding sections of this report, a careful analysis has been made of the functions of the various reserve accruals set up for specific property items in service in the system of Lone Star Gas Company as of January 1, 1933. It is obvious that consistency requires that the reserve accruals set up for the General Undistributed Costs should be calculated in a manner that takes into consideration the manner in which the reserve accruals for specific property items have been determined and the manner in which charges would be made to the reserve account under the general plan that has been adopted.

For this purpose of illustration, the manner in which the annual rate of reserve accrual for Main Line Pipe was developed may be taken as a typical example of how annual rates for specific property items were determined. This annual rate was based upon the cumulative effect of the following factors:

1. The future decline in per cent of new condition.

2. The calculated rate of future replacements of pipe due primarily to the physical condition of the pipe.

[fol. 9578] 3. The calculated rate of future replacements, removals and abandonments of pipe due primarily to changed operating conditions.

4. The future cost of major rehabilitation of Lines chargeable to reserve account.

With the exception of the cost of rehabilitation, these primary factors were in the first step of the investigation,

expressed in terms of the average future rate of occurrence. After certain adjustments, which took into account cost of replacements and salvable value of pipe replaced, this average future rate of occurrence was translated into an annual percentage of the reproduction cost of Main Lines. It was pointed out that the unit cost of replacements made piece-meal would be in excess of the unit cost based upon a wholesale reproduction cost estimate. With reference to the incurrence of General Undistributed Costs, the situation is reversed and practically all of the general costs which will be incurred in substantial amounts in wholesale reproduction will be negligible factors in connection with piece-meal replacements.

For this and for other reasons which readily suggest themselves, there is no relation between the necessary reserve accruals that are designed to provide for certain costs of replacements of physical property and the reserve accruals that are designed to provide for the ultimate loss of that proportionate part of reproduction cost represented by General Undistributed Costs.

In this report an effort has been made to fix the annual rate of reserve accrual for the various classes of property and the various elements of reproduction cost in a manner consistent with the methods used by Lone Star Gas Company in its current accounting practice and with the methods used in the determination of the present value of the property. Lone Star Gas Company makes practically no charges [fol. 9579] to the reserve account for Undistributed General Costs in connection with the cost of replacements for the reason as above stated—that these costs are actually incurred in a very limited amount in making current replacements. On the other hand, P. McDonald Biddison in fixing the per cent of new condition of the property reduced the reproduction estimate of Undistributed General Costs by an amount equal to the weighted reduction in per cent of new condition found in the depreciable physical property.

For these reasons, the annual rate of reserve determined for General Undistributed Costs has been confined to an allowance to cover a future decline in per cent of new condition corresponding to the estimated future decline in per cent of new of the depreciable property together with an amortization allowance designed to provide for the loss that will be incurred by reason of the final abandonment of the property as a whole.

[fol. 9580] Depletion Allowance—Gas Reserves

[fol. 9581] The value of the developed gas reserves of Lone Star Gas Company as of January 1, 1933, was determined upon the basis of the present value per M. cubic feet of the volume of recoverable gas contained in reservoirs under lease by the company and proven as to production by actual exploration and development.

The net value of these reserves as determined by D. A. Hulcy was $2,681,689, and the volume of recoverable gas contained in these reserves as determined by J. H. Dunn was 367,362,084 M. cubic feet. The unit value of recoverable gas as of January 1, 1933, was, therefore, $.0073 per M. cubic feet.

The withdrawals of each M. cubic feet of gas from these developed reserves will reduce the value as of January 1, 1933, by $.0073 and this dissipation of a capital asset must be provided for by means of a reserve accrual.

As previously stated, the basic reason for the accrual of reserves to provide for the cost of current replacements and current capital losses rather than the use of direct operating charges, grows out of the fact that the use of the uniform reserve accrual eliminates the distortion of current operating charges and properly distributes the cost of service. In the discussion covering the development of the annual charges for Gas Well Construction and Equipment, it was shown that the annual withdrawals of gas from company owned wells, which withdrawals will effect a corresponding reduction in the capital asset—Developed Leaseholds, would be a variable factor which will materially increase with the passage of time. This increase in production by means of company owned wells and company owned gas reserves will increase without consideration of any increase in market demand.

After a careful analysis of all factors that will have a [fols. 9582-9584] *h*earing upon the future annual rate of withdrawal of gas from company owned wells and from company owned leaseholds it was estimated that the future average annual rate of withdrawal would be not less than 20,000,000 M. cubic feet. This average annual rate of withdrawal applied to the unit value of gas reserves, $.0073 per

M. cubic feet, results in an average annual depletion allowance of $146,000.

[fol. 9607] Part I

[fol. 9608] Analysis of Specific Gravity Records and Determination of Percentages of West Texas Gas

[fol. 9609] Explanation of Specific Gravity Method for Determining Percentages of West Texas Gas Transported in Lone Star Gas Company's Lines During the Year 1933

The specific gravity of gas is the ratio of its density to the density of air when both the air and gas are under the same conditions of temperature and pressure. Specific gravity, therefore, is a measure of the relative weights of gases. A gas having a specific gravity of .6 weighs 6/10 as much as an equal quantity of air.

When two fluids (all gases are fluids) of known weights are mixed, and the weight of the mixture is known, the percentage of each of the two components present in the mixture can be determined by simple proportion. For instance, if the weight of a gallon of alcohol and the weight of a gallon of water is known, and the weight of a gallon of a mixture of alcohol and water is also known, the respective percentages of alcohol and water in the mixture can be determined. Also, if the specific gravity of two different gases is known, and the specific gravity of a mixture of the two gases is known, the percentage of each which must be in the mixture to give the specific gravity of the mixture can likewise be determined.

The problem of determining the percentage of West Texas gas in the lines of Lone Star Gas Company by the above method was simplified by the fact that there is a wide divergence between the specific gravity of gas taken from the Oklahoma and Shamrock Fields combined and the specific gravity of gas taken from West Texas Fields. The accuracy of the calculations used herein was increased by [fol. 9610] reason of this fact. For all practical purposes the specific gravity of Oklahoma and Shamrock gas averages .63, and no gas taken from either of these sources varies very slightly from .63 specific gravity. The slight variations which do occur are plus and minus and tend to equalize, and .63 therefore represents a fair average for the specific gravity of gas from these two sources. A continuous record of the specific gravity of gas from West Texas Fields is maintained at all times and the average for the year 1933

was .825. Any mixture of gases with a specific gravity between .63 and that recorded for West Texas gas must contain some percentage of West Texas gas.

Lone Star Gas Company maintains and operates recording gravitometers which make a continuous record of specific gravity of gases in its main lines at all times. When the recorded specific gravity of the gas in any of these lines during the year 1933 was more than .63, (which showed that the mixture contained West Texas gas) the percentage of West Texas gas was obtained by dividing the difference between .63 and the actual specific gravity by the difference between .63 and the specific gravity of West Texas gas.

As an example: if the recorded specific gravity of the gas in a line was .70 and the specific gravity of West Texas gas was .83, the calculation would be as follows: .70 — .63 divided by .83 — .63 equals 35 per cent West Texas gas. In order to furnish a rapid means of determining these percentages of West Texas gas, a graph for each month was prepared which shows the percentages corresponding to different specific gravities. By reading directly from the graphs the trouble of making the calculations was avoided.

[fol. 9611] Line B—Per Cent West Texas Gas of Total Used and Unaccounted for 1933

Gas was measured into the North end of Line B through Meter #12 and into and out of the South end through Meter #17. All West Texas gas into the line had to come into the South end by way of Line C.

During January, February, March, April and November there was practically no gas delivered from Line C into Line B; consequently no West Texas gas was transported in the line. During the remainder of the year gas was delivered into the line from the South end, a part of which was West Texas gas. Since the North Station at Fort Worth obtained its gas from Line C at the same point as did Line B, the percentage of West Texas gas delivered into line B was the same as that which was delivered to the North Station at the same time.

During the months of May, June, July, August, September, October and December the daily amount of gas used and unaccounted for in Line B was determined by subtracting the outlet volume from the inlet volume. From the daily volume used and unaccounted for there was sub-

acted the daily volume into the North end. The remainder as the daily amount delivered into the South end from ine C, and the daily volumes were added to obtain the total olume into the South end for each month. By applying the me percentages of West Texas gas as was delivered to e North Fort Worth Station, the volume of West Texas as delivered by months into Line B was obtained.

The Trinity Portland Cement Company secured its gas ol. 9612] from Line B, which gas comes off relatively close the inlet meter #17 at the South end of Line B, and down-ream from the inlet. The volume of West Texas gas to the rinity Portland Cement Company, having previously been etermined, was deducted from the total volume of West exas gas into Line B by months, and the result was the et volume of west Texas gas delivered to Line B by months. he ratio of this volume to the total used and unaccounted or gave the percentage of the total gas in the line which me from West Texas Fields. Following is a tabulation of ese percentages by months for the year 1933.

Defendant's Exhibit No. 45—Continued

[fol. 9614] Line C—Per Cent West Texas Gas of Total Transported—1933

Gas was delivered out of Line C during the year 1933 at the following points of measurement:

Central City Gate Station—Dallas.
Hudnall City Gate Station—Dallas.
North City Gate Station—Fort Worth.
South End—Line B.
South End—Line F.
North End—Line C-2.
Marathon Oil Company—Refinery—Fort Worth.
Irving City Gate Station.

All of the West Texas gas reaching these points of measurement was transported through Line C. The actual volume of West Texas gas delivered to these points by months was determined from the specific gravity at each point. The total gas delivered in each case was determined from meter records at each point.

The ratio of the total West Texas gas delivered from the line to the grand total delivered from the line gave the percentage of the grand total which came from West Texas Fields. Percentages of West Texas gas delivered to each of the above points of discharge are shown in separate reports for each elsewhere in this exhibit.

Following is a tabulation of these percentages:

[fol. 9615]

Line C

Per Cent West Texas Gas of Total Transported—1933

Month	Total Millions	Total West Texas Millions	Per cent West Texas
January	1,282	718	56.00
February	1,229	608	49.00
March	1,092	578	53.00
April	902	681	76.00
May	804	766	95.00

December	1,347	674	50.00
Total	11,698	8,253	

[fol. 9616] Central and Hudnall City Gate Stations—Dallas —Per Cent West Texas Gas in Total Delivered—1933

A continuous record of the specific gravity for the year 1933 was made at the point of measurement. During the months of January, February, March, October, November and December the specific gravity varied to such an extend that it was necessary to take daily averages of the specific gravity and determine the corresponding percentage of West Texas gas from the graphs by days. These percentages were applied to the daily total volumes to obtain the daily volumes of West Texas gas, which were totaled to obtain the volume of West Texas gas for each month. The total volume of West Texas gas was divided by the total of all the gas to obtain the percentage of West Texas gas in the total volume delivered.

For the remaining months of the year the specific gravity did not vary enough to warrant using daily averages. The monthly average specific gravity was used to determine from the graphs the per cent of West Texas gas in the total delivered. A tabulation of these percentages by months for the year 1933 for both stations follows:

[fol. 9617] Central City Gate Station—Dallas

Per Cent West Texas Gas in Total Delivered—1933

Month	Total Millions	Total West Texas Millions	Per cent West Texas
January	464	306	66.00
February	536	288	54.00
March	400	256	64.00
April	319	290	91.00
May	262	257	98.00
June	244	234	96.00
July	236	236	100.00
August	239	239	100.00
September	238	207	87.00
October	286	264	92.00
November	459	285	62.00
December	494	280	57.00
Total	4,177	3,142	

In working up the above data volumes in M. C. F. were used whereas only the nearest number of millions is shown in the above tabulation. Hence, some of the above figures may not check exactly.

Defendant's Exhibit No. 45—Continued

[fol. 9618] Hudnall City Gate Station—Dallas

Per Cent West Texas Gas of Total Delivered—1933

Month	Total Millions	Total West Texas Millions	Per cent West Texas
January	86	50	58.00
February	99	38	38.00
March	60	29	48.00
April	23	22	94.00

September	....	....	.....
October	13	11	87.00
November	65	33	52.00
December	89	42	47.00
Total	441	231	

In working up above volumes in M. C. F. were used, whereas only the nearest number of millions is shown in the above calculation. Hence, some of the above figures may not check exactly.

[fol. 9619] North Station—Fort Worth—Per Cent West Texas Gas of Total Delivered—1933

A continuous record of the specific gravity of the gas for the year 1933 was made at the point of measurement. During the months of January, February, March, April, October, November and December the specific gravity varied to such an extent that it was necessary to take daily averages of the specific gravity and determine from the graphs the corresponding percentage of West Texas gas by days. These percentages were applied to the daily total volumes to determine the volume of West Texas gas for each day, which were totaled to get the total volume of West Texas gas for each month. These totals were divided by the total of all gas to obtain the per cent of West Texas gas in the total delivered.

For the remaining months of the year the specific gravity did not vary enough to warrant the use of daily averages and the monthly average specific gravity was applied to the graphs to obtain the per cent of West Texas gas in the total delivered.

Following is a tabulation of the percentages by months for the year 1933:

Defendant's Exhibit No. 45—Continued

[fol. 9620]

North Station—Fort Worth

Per Cent West Texas Gas in Total Delivered—1933

Month	Total Millions	Total West Texas Millions	Per cent West Texas
January	459	148	32.00
February	469	115	25.00
March	401	134	33.00
April	343	188	55.00
May	318	292	92.00
June	303	294	97.00
July	311	311	100.00
August	300	297	99.00
September	305	253	83.00
October	328	282	86.00
November	446	134	30.00
December	499	168	34.00
Total	4,482	2,616	

In working up the above data volumes in M. C. F. were used, whereas in the tabulation above only the nearest number of millions is shown. Hence, some of the above figures may not check exactly.

[fol. 9621] Irving, Texas, City Gate Per Cent West Texas Gas in Total Delivered—1933

The gas delivered to Irving came off Line C at about the same point as did the gas into Line C-2. Therefore the same percentages of West Texas gas was used as was determined for Line C-2 in order to obtain the percentage of West Texas gas in the total delivered. Following is a tabulation by months for the year 1933.

[fol. 9622]

Irving, Texas, City Gate

Per Cent West Texas Gas in Total Delivered—1933

Month	Total M.C.F.	Total West Texas M.C.F.	Per cent West Texas
January	1,619	1,166	72.00
February	1,512	983	65.00
March	1,202	817	68.00
April	945	803	85.00

[fol. 9625] Trinity Portland Cement Company—Dallas Plant—Per Cent West Texas Gas of Total Delivered—1933

The specific gravity of this gas was not recorded during the year 1933. The gas delivered to the Trinity Portland Cement Company came from Line C-2 and the same per cent was used for West Texas gas in the total as was determined for Line C-2. Following is a tabulation of the percentages by months for the year 1933.

[fol. 9626] Trinity Portland Cement Company—Dallas
Per Cent West Texas Gas of Total Delivered—1933

Month	Total M.C.F.	Total West Texas M.C.F.	Per cent West Texas
January	1,059	762	72.00
February	1,474	958	65.00
March	13,853	9,420	68.00
April	33,325	28,326	85.00
May	40,917	39,280	96.00
June	48,740	46,790	96.00
July	1,710	1,710	100.00
August	1,291	1,265	98.00
September	5,793	5,040	87.00
October	614	571	93.00
November	854	547	64.00
December	2,105	1,431	68.00
Total	151,735	136,100	

[fol. 9627] Trinity Portland Cement Company—Fort Worth —Per Cent West Texas Gas in Total Delivered—1933

This plant was in actual operation during August and September only. The average specific gravity for each day of operation was determined from a recording gravitometer located at the point of measurement of the gas. The corresponding percentage of West Texas gas was determined from the graphs for each day and added in order to secure the total volume for each month. These monthly totals were divided by the total volume of gas delivered during the month to obtain the percentage of West Texas gas in the total.

Following is a tabulation of results by months:

[fol. 9628] Trinity Portland Cement Company—Fort Worth Plant

Per Cent West Texas Gas in Total Delivered—1933

December	247	.....	.....
Total	234,388	123,810	

[fol. 9629] Line C-2—Per Cent West Texas Gas of Total Transported—1933

A Continuous record of the specific gravity of gas transported was made at the point of measurement of gas into the line. During the months of January, February, March, April, October, November and December the specific gravity varied to such an extent that it was necessary to take daily averages of the specific gravity and determine the corresponding percentage of West Texas gas from the graphs by days. These daily percentages were multiplied by the daily total volumes to obtain the volume of West Texas gas by days and the daily figures added to get the monthly total for each month. The monthly total volume of West Texas gas divided by the monthly total volume

of all gas gave the percentage of West Texas gas for each month.

During the months of May, June, July, August and September the specific gravity was fairly constant for each month and the monthly average specific gravity was used to determine the percentage of West Texas gas from the graphs for those months.

Following is a tabulation for the year 1933:

[fol. 9630] Line C-2

Per Cent West Texas Gas of Total Transported—1933

Month	Total Millions	Total West Texas Millions	Per cent West Texas
January	47	33	72.00
February	35	23	65.00
March	47	32	68.00
April	70	59	85.00
May	76	73	96.00
June	69	66	96.00
July	23	23	100.00
August	25	25	98.00
September	24	21	87.00
October	30	28	93.00
November	60	39	64.00
December	62	42	68.00
Total	568	464	

NOTE.—The above percentages in right hand column were obtained from gravity record. The total in M. C. F. each month was multiplied by the percentages to get West Texas Gas in M. C. F. The figures in the first two columns above represent the nearest number of millions and explains why the above figures may not check each other exactly.

[fol. 9631] Line E—Per Cent West Texas Gas of Total Used and Unaccounted for—1933

A continuous record of the specific gravity of gas transported was made at the point of measurement of gas into the line. During the months of January, February, March, October, November and December the specific gravity varied to such an extent that it was necessary to take daily averages of the specific gravity and determine the corresponding percentage of West Texas gas from the graphs by days. These daily percentages were multiplied by the daily total volumes to obtain the volume of West Texas gas by days and the daily figures added to arrive at the monthly total for each month. The monthly total volume of West Texas gas divided by the monthly total volume of all gas gave the percentage of West Texas gas for each month.

During the months of April, May, June, July, August and September the specific gravity was fairly constant for each month and the monthly average specific gravity was used to determine the percentage of West Texas gas from the graphs for those months.

Following is a tabulation by months for the year 1933:

[fol. 9632] Line E

Per Cent West Texas Gas Used and Unaccounted For—1933

Month	Total Millions	Total West Texas Millions	Per cent West Texas
January	173	89	51.00
February	184	65	35.00
March	149	73	49.00
April	99	74	75.00
May	79	73	93.00
June	74	69	93.00
July	76	65	85.00
August	77	72	94.00
September	104	86	83.00
October	115	90	78.00
November	164	87	53.00
December	176	77	44.00
Year	1,470	920	

NOTE.—Percentages in right hand column were obtained from specific gravity record. The total in M. C. F. each month was multiplied by the percentages to get West Texas gas in M. C. F. The volumes shown above represent the nearest number of millions and explains why the above figures may not check each other exactly.

[fol. 9633] Line F—Per Cent West Texas Gas in Total Used and Unaccounted for—1933

The recording gravitometer on gas in Line F was located on the tap line from Line F to the McKinney City Gate Station, located about midway between the two ends of Line F. Since flow through the McKinney Tap Line was continuous, this gravitometer made an accurate record of the specific gravity in Line F at all times.

The line was fed from both ends. Gas was delivered into the North end from Line G, which transported gas from Fox and surrounding fields. Gas was fed into the South end from Line C, part or all of which gas came from West Texas. During the months of January, February, March, April, October, November and December, the specific gravity varied to such an extend that it was necessary to take daily averages of the specific gravity and determine from the graphs the corresponding percentages of West Texas gas by days.

The gas used and unaccounted for in the line was determined for each day by deducting the gas metered out from that metered in. The percentages of West Texas gas mentioned above were applied to these total daily volumes and the volume of West Texas gas for each day determined. By adding the daily figures the total volume of West Texas gas for each month was obtained and by dividing these totals into the total used and unaccounted for, the per cent of West Texas gas for each of the months mentioned above was obtained.

[fol. 9634] During the months of May, June, July, August and September, the specific gravity record did not vary enough to warrant the use of daily averages. The monthly average specific gravity was used to determine the corresponding per cent of West Texas gas for each of those months.

Following is a tabulation of these percentages by months for the year 1933:

[fol. 9635] Line F

Per Cent West Texas Gas in Total Used and Unaccounted For—1933

Month	Total Millions	Total West Texas Millions	Per cent West Texas
January	110	90	81.00
February	125	77	62.00
March	75	52	69.00
April	55	46	83.00
May	54	52	96.00
June	49	48	97.00
July	51	50	99.00
August	56	56	100.00
September	56	49	87.00
October	67	62	94.00
November	80	54	68.00
December	97	60	62.00
Total	875	696	

In working up the above volumes in M. C. F. were used, whereas only the nearest number of millions is shown above. Hence, some of the above figures may not check exactly.

[fol. 9636] Part II

[fol. 9637] Allocation of Property

[fol. 9638] As previously determined by the analysis of the specific gravity of the flowing gas, during the year ended December 31, 1933, certain property units of Lone Star

Gas Company were jointly and/or concurrently used in the transportation and/or compression of gas which has been withdrawn from the Central West Texas area and the Petrolia Field and gas which had been withdrawn from the Shamrock area and Southern Oklahoma. The specific items of physical property which were jointly and/or concurrently used in the transportation and/or the compression of gas from these respective areas during the year 1933 were as follows:

Lines and Equipment:

Line B and B taps.
Line C.
Line C-2.
Line E and E taps.
Line F and F taps.
Line G.
Line G-3 and G-3 taps.

Compressor Station:

Gainesville Compressor Station.
Petrolia Compressor Station.

All other items of property included in the property account of Lone Star Gas Company, during the year ended December 31, 1933, were used exclusively in either the production, compression and transportation of gas which had been withdrawn either from the Central West Texas area and the Petrolia Field or from the Shamrock area and Southern Oklahoma.

This situation relative to the joint and/or concurrent use of property items in the transportation and/or compression of gas which during the process of its transportation remained wholly within the boundaries of the State of Texas, [fol. 9639] and in the transportation and/or compression of gas which during the process of its transportation passed from the State of Oklahoma into the State of Texas, creates the necessity for the allocation of the property items involved. This allocation is necessary in order that a determination may be made of the proportionate amount of the fixed charges (return, reserve accruals and taxes) on the value of the property which may be ascribed to each service. This same situation also holds true with reference to cer-

tain operating charges incurred by Lone Star Gas Company during the year ended December 31, 1933.

Method of Allocation:

The fixed charges which accrue on the value of the property items of Lone Star Gas Company are largely a function of the passage of time and are therefore independent of the amount of use to which these property units are put measured in terms of the volume of gas transported. Interest or return, ad valorem taxes and local assessments and the reserves required for depreciation, amortization and the cost of replacements will accrue uniformly upon the value of a pipe line irrespective of the volume of gas which may be transported through this line during the period of time (the year 1933 in the instant case) in which these fixed charges will accrue. With this fact in mind, the allocation of the various lines jointly and/or concurrently used during the year ended December 31, 1933, for the transportation of gas produced in the Central West Texas area and the Petrolia Field and for the transportation of gas produced in the Shamrock area and in Southern Oklahoma was made in the following manner:

[fol. 9640] As previously set out, the percentage of the total gas transported each month in lines jointly and/or concurrently used which was represented by gas produced in the Central West Texas area was determined by means of daily calculations from gravitometer records. The summation of these daily calculations determined the weighted percentage of gas produced in the Central West Texas area which was transported in lines jointly and/or concurrently used during each month of the year ended December 31, 1933.

The total fixed charges for any year on any property item equal 100 per cent of these fixed charges for the year. The proportionate part of the total annual fixed charges which accrue during any one month is 8.33 per cent, or one-twelfth of 100 per cent. The percentage of the total gas delivered by any line jointly and/or concurrently used which was represented by gas produced in the Central West Texas area was applied to 8.33 per cent in order to ascertain the percentage of the fixed charges accrued during any one month which should be allocated to the delivery of gas produced in the Central West Texas area. This method of al-

location has been designated the time-volume method inasmuch as it gives effect to the element of time in fixing the percentage of fixed charges for each month, while it also gives effect to the relative volume of gas from the respective sources for each month.

When the sum of the percentages derived from the application of the percentage of the total gas transported each [fol. 9641] month represented by gas produced in Central West Texas (as determined by daily gravitometer readings) to 8.33 per cent is determined for each of the twelve months during the year 1933, this cumulative percentage represents the weighted annual percentage of the line in question which should be allocated to the transportation of gas produced in Central West Texas. The percentage thus derived also provides the basis for the allocation of the cost of the fixed charges, return, taxes and reserve accruals to the transportation of gas produced in Central West Texas by means of facilities jointly and/or concurrently used during the year ended December 31, 1933. It also provides the basis for the allocation of certain operating charges which are subject to allocation by reason of the joint and/or concurrent use of certain property items in the transportation and/or compression of gas which has been produced in the Shamrock area and Southern Oklahoma.

The tabulations which follow set out the application of the weighted monthly percentages of the total gas delivered represented by gas produced in the Central West Texas area during the year ended December 31, 1933, to 8.33 per cent per month in Lines B and B taps, C, C-2, E and E taps, F and F taps, G, G-3 and G-3 taps.

The allocation of the value of the compressor station located at Gainesville, Texas, has been based upon the weighted percentage developed for Line F which line provides the gas compressed at this station.

The allocation of the value of the compressor station located at Petrolia, Texas, has been based upon the fact that 2,500 horse power out of a total of 7,710 horse power in- [fol. 9642] stalled was used solely for the compression of gas produced in the Petrolia field during the year ended December 31, 1933.

It must be borne in mind that the allocations herein set out are applicable only to the operations of Lone Star Gas Company during the year ended December 31, 1933.

fol. 9646]

Part III

fol. 9647]

Allocation of Sales by Classes

fol. 9648] As disclosed by the allocation of property items sed for the joint and/or concurrent transportation of gas roduced in the Central West Texas area, and gas produced n the Shamrock area and in Southern Oklahoma, the per-entage of the total deliveries represented by gas produced n West Texas varied materially from month to month. An nalysis of the sales records of the various cities and towns ocated on lines used for the joint and/or concurrent trans-ortation of gas produced in the Central West Texas area nd gas produced in the Shamrock area and Southern Okla-oma also disclosed the fact that there had been a wide ariation from month to month in the proportionate amount f gas for which Lone Star Gas Company received 40 cents er M. C. F., and the proportionate amount of the total olume of gas delivered each month for which Lone Star as Company received what may be termed its proportion-e part of the industrial rate for gas. Due to the existence these variable factors, it was necessary to make a de-rmination by months of the relative volume of gas pro-ced in the Central West Texas area which had been sold the domestic rate and the gas from the same area which

had been sold at the industrial rate. The necessity for this determination grows out of the fact that an essential factor in this study is the amount of revenue which Lone Star Gas Company derived during the year ended December 13, 1933, from gas which was transported wholly within the State of Texas and the revenues which Lone Star Gas Company received during the same period from the sale of gas which was transported from the State of Oklahoma into the State of Texas.

The particular localities which during the year ended De- [fol. 9649] cember 13, 1933, were involved in the situation which grew out of the delivery of gas produced in the Central West Texas area and gas produced in the Shamrock area and Southern Oklahoma were as follows:

The cities and towns served by Line B, the town of Irving which was served by Line C, the metropolitan area of the city of Dallas which was served in part by deliveries from Line C and Line C-2. The metropolitan area of the City of Fort Worth which was served in part by deliveries made at the North Fort Worth measuring station. The cities and towns which were served by Line E, the cities and towns which were served by Line F, the cities and towns which were served by Line G-3, the Cities of Arlington, Handley, Dalworth, Grand Prairie and Arcadia Park which were served in part from Line C-2.

In addition to these cities and towns certain large industrial consumers received varying amounts of gas from the sources under consideration and a separate study has been made of the deliveries to each of these industrial plants.

The first step in the allocation of sales by classes was the determination of the volume of domestic and unaccounted for gas and the volume of industrial gas which each city or town purchased from Lone Star Gas Company during each month of the year 1933. In the case of the cities and towns which were served wholly from one point of delivery, it was necessary only to determine the proportionate amount of the gas delivered during each month from the Central West Texas area and from the Shamrock area and Southern Oklahoma. These percentages which [fol. 9650] were determined by the methods heretofore described were then applied to the respective volume of domestic and unaccounted for gas and the volume of industrial gas purchased by each city or town during each month of the year 1933. The results of these calculations are shown

n a series of tabulations which are a part of this report. In the case of the metropolitan area of the city of Dallas and the metropolitan area of the city of Fort Worth, a different method was required by reason of the fact that concurrent deliveries of gas from Central West Texas and gas from the Shamrock area and Southern Oklahoma by means of common facilities did not constitute the entire volume of gas used by these particular cities.

As an example: The metropolitan area of the city of Dallas received its supply of gas from 5 points of delivery; Boundary measuring station, Hudnall measuring station, Central measuring station, Second Avenue measuring station, and the Lisbon measuring station. Of these measuring stations, the Lisbon and Second avenue measuring stations delivered gas which was wholly produced in the Central West Texas area. It became necessary, therefore, o determine the percentages by months which the deliveries nade at the stations which carried mixed gas bore to the otal deliveries into the metropolitan area during the same nonths. These percentages were then applied to the total volume purchased for the city of Dallas from Lone Star Gas Company at 40 cents per M. C. F., and to the total volume purchased each month from Lone Star Gas Company at industrial rates. By these processes, the monthly totals of as of these two classes represented by deliveries made rom measuring stations where mixed gas had been de-
fol. 9651] livered was determined. To these monthly volmes of gas which were purchased at 40 cents per M. C. F. nd gas which was purchased at industrial rates, there was hen applied the corresponding percentage of the deliveries or each month represented by gas produced in Southern klahoma and the Shamrock Area. In this way it was posible to ascertain the volume of gas represented by gas roduced from the Central West Texas area which was aid for at a rate of 40 cents per M. C. F. and at the industrial rate. The various results of the calculations which ave been explained are clearly shown in the tabulations hich are incorporated in this report. In the case of the roup of small towns located on Line J-2, it was necessary o ascertain the amount of gas which fed into Line J-2 from ine C-2. This step was taken and the resultant allocations re clearly set out in the tabulation—Allocation of Sales by lasses, Arlington, Handley, Dalworth, Grand Prairie and rcadia Park.

[fol. 9664] Appendix

[fol. 9665] Line B

The same weighted monthly percentages as were determined for North Station at Fort Worth were used on the net into South end of Line B.

These percentages were applicable to delivery both into South end of Line B and delivery into North Station—Fort Worth on account of the fact that both deliveries were taken from Line C at approximately the same point.

[fol. 9666] Line C

Covered by detailed explanation in Part I.

[fol. 9667] Central Station—Dallas

Total			499,006	168,375

Weighted Monthly Percentage = 168,375 divided by 499,006 = 33.7%

[fol. 9685] Irving Gate Station

Covered by detailed description in Part I.

[fol. 9686] Marathon Oil Company

Fort Worth Plant

The same weighted monthly percentages as were determined for North Station—Fort Worth were used on the delivery to this plant.

The same percentages were applicable to both deliveries on account of the fact that the delivery to the Marathon Oil Company was taken from Line C at approximately the same point as was delivery to the North Fort Worth Station.

[fol. 9687] Trinity Portland Cement Company

Dallas Plant

The same weighted monthly percentages as were determined for Line C-2 were used on the delivery to this plant.

The same percentages were applicable to both deliveries on account of the fact that delivery to the Cement Plant was taken from Line C-2 near the point where the specific gravity record for Line C-2 was made.

Defendant's Exhibit No. 45—Continued

[fol. 9723] DEFENDANT'S EXHIBIT No. 46

Lone Star Gas Company

Report on Property, Revenues and Expenses Within Specified Areas

Year 1933

[fol. 9724] Dallas, Texas, June 30th, 1934.

Lone Star Gas Company, Dallas, Texas.

GENTLEMEN:

As requested by you, I have prepared and tender herewith, report covering property, revenues, and expenses of Lone Star Gas Company, Public Service Operations, for the calendar year 1933.

This report has been prepared upon the basis of segregating property and business between defined areas, and in order to do this it has been necessary to collaborate with Messrs. E. F. Schmidt and Ed C. Connor, who have made rather extensive studies covering that portion of the system where a joint or concurrent use of facilities occurs. The results of their studies have been prepared in report form, a copy of which was furnished to me, and specific reference is made to such report insofar as it pertains to use of property and sale of gas in that portion of the pipe line system that is jointly and/or concurrently used.

The public service property and business of Lone Star Gas Company has been divided in this report as follows:

Area "A"—Gas sales, expenses, and property used in connection with gas purchased and produced in Texas, transported and sold wholly within the State of Texas, and in areas where the source of supply can be easily defined.

[fol. 9724½] *Area "B"*—Gas sales, expenses, and property used in connection with gas purchased and produced in Texas and/or Oklahoma, transported through and sold in the Stat-s of Oklahoma and/or Texas, and areas where the source of supply can be easily defined.

Area "C"—Gas sales, expenses, and property used in connection with gas purchased and produced in both Okla-

homa and Texas, where the sale thereof and facilities used, are joint and concurrent.

The total property account, revenues and expenses of Lone Star Gas Company, Public Service Operations, have been divided into the three areas shown above. The production, gathering and transportation system of the company is so arranged that under normal operating conditions it becomes very easy to segregate the property and business into Areas "A" and "B"; however, it requires rather extensive studies to define just what part of the property and business should be included in Area "C". As mentioned before, this area has been defined and is set out in report prepared by Messrs. Schmidt and Connor.

After dividing the Public Service Property and business of the company into the three areas set out above, it was then necessary to further classify such property and business as follows:

"D" Operations—Gas sales, expenses, and property used in connection with gas purchased and produced in the State of Texas, transported and sold wholly within the State of Texas. ("D" Operations include all items shown in Area "A" plus a portion of Area "C".)

[fols. 9725-9728] *"E" Operations*—Gas sales, expenses, and property used in connection with gas purchased and produced in the State of Texas and/or Oklahoma, transported through and sold in the State of Oklahoma and/or Texas. ("E" Operations include all items shown in Area "B" plus a portion of Area "C".)

Tabulated statements have been prepared and are included in this report, showing sales, operating expenses, and property by locations, and I believe in sufficient detail to enable the easy verification thereof.

D. A. Hulcy.

[fols. 1-8] IN COURT OF CIVIL APPEALS FOR THE THIRD SUPREME JUDICIAL DISTRICT, AT AUSTIN, TEXAS

No. 8238

THE STATE OF TEXAS et al., Appellants,

vs.

LONE STAR GAS COMPANY, Appellee

Appealed from the District Court of Travis County, Texas, for the Fifty-Third Judicial District

BRIEF FOR APPELLEE

* * * * * *

[fol. 9] DEFENDANT'S CROSS-ASSIGNMENTS OF ERROR

1

The court erred in overruling and in refusing to give defendant's request for a peremptory instruction duly and timely presented at the conclusion of all the evidence in the case, and after both plaintiffs and defendant had rested. (Defendant's Cross Assignment of Error No. 14, Transcript 587.)

2

The court erred in overruling and in refusing to give defendant's request for a peremptory instruction duly and timely presented at the conclusion of all the evidence in the case, and after both plaintiffs and defendant had rested, because it appeared from the statement of the Railroad Commission of Texas attached to the opinion and order of the said Commission, marked Exhibit "A" and referred to in plaintiffs' Second Amended Original Petition, that defendant was engaged in the production and sale at wholesale of natural gas, engaging in both interstate and intrastate commerce in the sale of gas to some 300 cities and towns in the States of Oklahoma and Texas. The order [fol. 10] of the Railroad Commission undertook to fix a reasonable rate for all of the gas supplied by the defendant to the various distributing companies. A part of the gas being delivered by the defendant at the city gates of various towns and cities in Texas at the time of the investigation of

the Railroad Commission, and at all times in question was being transported uninterruptedly through defendant's high-pressure pipe lines from and through the State of Oklahoma into the State of Texas. The business of transporting natural gas uninterruptedly through defendant's high-pressure pipe lines from the State of Oklahoma into the State of Texas, and from the State of Texas through Oklahoma and back into the State of Texas is national in character and constitutes interstate commerce and transportation, and also constitutes a substantial portion of defendant's entire natural gas business. The order of the Railroad Commission was intended to and did, in fact, prescribe the rate to be charged for all gas sold by the defendant, including interstate gas, and thereby prevented the defendant from charging and receiving the price for interstate gas which it was charging and receiving, and, therefore, was a burden upon and a direct regulation of interstate commerce. The order of the Railroad Commission therefore was void insofar as it related to interstate commerce, and gas sold by the defendant moving in interstate commerce under the Commerce Clause of the Federal [fol. 11] Constitution, and, being void in part, and being indivisible in character, it was void in its entirety and could not be enforced in whole or in part by the plaintiffs in this suit.

Wherefore, defendant was entitled to an instructed verdict and judgment of the court entered thereon. (Defendant's Cross Assignment of Error No. 23, Transcript 595.)

3

The court erred in overruling and in refusing to give defendant's request for a peremptory instruction duly and timely presented at the conclusion of all the evidence in the case, and after both plaintiffs and defendant had rested, because it appeared from the undisputed evidence, as a matter of law, that the rate of 32 cents prescribed by the Commission in its order of September 13, 1933, was unjust, unreasonable, and confiscatory in this, that if said rate had been in effect during the year 1931, and subsequent accounting periods, defendant would not have earned and would not have been able to earn the minimum net rate of return to which the Railroad Commission found it was en-

tified, upon the fair value of its public service property as determined by the Commission.

Wherefore, defendant was entitled to an instructed verdict and to judgment based thereon. (Defendant's Cross Assignment of Error No. 15, Transcript 587.)

[fol. 12]

4

The court erred in overruling and in refusing to give defendant's request for a peremptory instruction duly and timely presented at the conclusion of all the evidence in the case, and after both plaintiffs and defendant had rested, because it appeared from the undisputed evidence, as a matter of law, that the rate of 32 cents prescribed by the Commission in its order of September 13, 1933, was unjust, unreasonable and confiscatory in this, that said rate was based on a determination of the value of defendant's public service property as of December 31, 1931, considering labor and material prices substantially less than those prevailing on the date of the inquiry; and even though it be assumed that the Railroad Commission correctly valued such property as of December 31, 1931, nevertheless, if effect be given to such increased labor and material prices, the Railroad Commission's valuation would be materially increased as of the date of the inquiry; and if said rate of 32 cents had been in effect during 1931, and subsequent accounting periods, defendant would not have earned and would not have been able to earn anything like the minimum net rate of return to which the Commission found it was entitled upon the fair value of its public service property at the time of the inquiry.

Wherefore, defendant was entitled to an instructed verdict and to judgment based thereon. (Defendant's Cross [fol. 13] Assignment of Error No. 16, Transcript 588.)

5

The court erred in overruling and in refusing to give defendant's request for a peremptory instruction duly and timely presented at the conclusion of all the evidence in the case, and after both plaintiffs and defendant had rested, because it appeared from the undisputed evidence, as a matter of law, that the rate of 32 cents prescribed by the Commission in its order of September 13, 1933, was unjust,

unreasonable and confiscatory in this, that if said rate had been in effect during 1931, and subsequent accounting periods, defendant would not have earned and would not have been able to earn anything like the fair net annual rate to which it was entitled in law, or the minimum net rate of return to which the Commission found it was entitled upon the fair value, at the time of the inquiry, of all of its public service property, wherever located.

Wherefore, defendant was entitled to an instructed verdict and to judgment based thereon. (Defendant's Cross Assignment of Error No. 17, Transcript 589.)

6

The court erred in overruling and in refusing to give defendant's request for a peremptory instruction duly and [fols. 14-15] timely presented at the conclusion of all the evidence in the case, and after both plaintiffs and defendant had rested, because it appeared from plaintiffs' own testimony that the rate of 32 cents prescribed by the Commission in its order of September 13, 1933, was unjust, unreasonable and confiscatory in this, that even adopting plaintiffs' valuation of defendant's public service property located in Texas, and assuming that such valuation is of probative force and effect under the issues made in this case, nevertheless, if said rate had been in effect during 1933 and 1934, defendant would not have earned as much as the minimum net rate of return to which the Railroad Commission found it was entitled. Hence, on the basis of plaintiffs' own testimony, defendant was entitled to an instructed verdict and to judgment based thereon. (Defendant's Cross Assignment of Error No. 20, Transcript 591.)

[fol. 16] IN COURT OF CIVIL APPEALS OF TEXAS

No. 8238

THE STATE OF TEXAS et al. Appellants,

vs.

LONE STAR GAS COMPANY, Appellee.

Appeal From District Court of Travis County

OPINION OF COURT—Filed July 10, 1935

Acting under the power conferred by Article 6050, et seq., R. S. 1925, and after a hearing which continued for more than seven months, the Railroad Commission of Texas promulgated its order requiring appellee Lone Star Gas Company to "charge, bill and receive for domestic gas at the city gate from all distributing companies served by it, a rate not to exceed $0.32 per thousand cubic feet", in lieu of the $0.40 rate theretofore charged. Immediately appellee filed a bill of complaint in the Federal District Court, seeking to restrain the enforcement of the rate order on several constitutinal grounds, and particularly as being confiscatory of its property. Thereafter, the Commission, Attorney General, and others, herein called Commission, instituted this proceeding in the District Court of Travis County, Texas, in order to bring appellee within the jurisdiction of the state court under the provisions of Sec. 266 of the Judicial Code of the United States (28 U. S. C. A., Sec. 380). The Commission asserted the validity of the order in every particular, and sought to restrain appellee from violating it. In conformity with what was regarded as proper procedure under Sec. 266 of the Judicial [fol. 17] Code, both the state and the federal courts temporarily restrained the enforcement of the rate order, and later the federal court ordered all proceedings therein stayed until the final disposition of this cause. Appellee's answer herein, seeking to set aside the rate and restrain its enforcement, was in effect an appeal by it under Article 6059,

which provides that any gas utility dissatisfied with any rate may petition a court of competent jurisdiction in Travis County and have same set aside, upon showing by "clear and satisfactory evidence that such rate is unreasonable and unjust as to it." Appellee alledged that the rate order was violative of the commerce, the due process, the equal protection, and the freedom of contract clauses of the Federal Constitution; and was confiscatory and unreasonable and unjust, because it would not afford a reasonable return on the fair value of its property used in the public service. In reply, the Commission asserted the validity of the order in every particular, denied that any gas moved in interstate commerce; but that if so, it was negligible in amount and was not affected by the rate; and that in absence of legislation by Congress on the subject, the Commission had the authority under the statutes and in the exercise of the police power of the state to regulate and control public gas utilities, and to fix reasonable rates for gas sold and delivered to its citizens, even though interstate commerce was indirectly or incidentally affected thereby.

The trial court concluded the commerce and all constitutional questions against appellee; but the jury found in answer to the one special issue submitted, that "the order [fol. 18] for a rate not to exceed 32 cents per thousand cubic feet of gas sold to the distributing companies at the gates of the points served, is unreasonable and unjust as to the Lone Star Gas Company". Judgment was accordingly rendered setting aside the 32-cent rate order, and perpetually restraining its enforcement.

The special issue submitted, with the definition and instructions given in connection therewith, was in the nature of a general charge, and required the jury to determine all questions of law and fact of the entire case. Under the pleadings of appellee the ultimate question of fact was whether the 32¢ rate would yield a reasonable return on the fair value of the property used in the public service of delivering and selling natural gas to the distributing companies at the city gates of the various Texas cities and towns. Appellee attempted to prove that the 32¢ rate would not yield a reasonable return, for two reasons, as follows:

1. Because the 32¢ rate would not yield the minimum return of 6% declared to be reasonable by the Commission; and

2. Because if so, a return of 6% was so low as to be confiscatory and unreasonable and unjust.

The burden was heavily upon appellee to show by clear and satisfactory evidence that the 32¢ rate would not afford a reasonable rate of return on the property used in the Texas public service. Appellee did not meet this burden and quantum of proof; and the trial court erred in overruling the Commission's motions for an instructed verdict and for judgment declaring the rate to be valid. In view of this conclusion, the appeal presents two main divisions, as follows:

[fol. 19] 1. Three constitutional objections are urged against the 32¢ rate order, as follows:

(a) Interference with interstate commerce.
(b) Interference with the right to contract.
(c) Confiscation of property.

2. The legal sufficiency of the evidence adduced by appellee to show that the rate order was confiscatory or unreasonable and unjust as to it.

The Texas statutes, particularly Articles 6050, 6051 and 6053, classify the various kinds of business engaged in producing, transporting, delivering and selling natural gas to the public for domestic or other use, and declare each to be a public gas utility, affected with the public interest and subject to the regulation and control of the Commission. Gas pipe lines engaged in producing, buying, transporting, delivering, or otherwise dealing in natural gas are each declared to be a public utility, affected with the public interest, and in nature and according to the established method of conducting same a monopoly, and subject in respect to all their holdings pertaining to the Gas business and in all relations to the public, and in respect to their producing, transporting, receiving and distributing facilities, to the full and complete control and supervision of the Commission. Authority is also given the Commission to fix, establish and enforce a reasonable rate which pipe line may charge for gas delivered at the city gate to another distributing company or municipality; to fix a reasonable rate for gas sold and delivered by pipe lines or other distributing companies to the public for domestic or other use; [fol. 20] and to fix and establish a fair and equitable divi-

sion of the proceeds of the sale of natural gas between the producing or transporting companies and the companies distributing or selling it to the ultimate consumer. In the exercise of the power so conferred, the Commission is authorized to act upon its own motion, or upon the petition of any person, corporation, municipality, etc., showing a substantial interest in the subject.

Accordingly the Commission of its own motion, ordered a hearing to investigate the 40¢ city gate rate which appellee uniformly charged the various distributing companies throughout the State for gas. Appellee and each of the approximately 270 cities and towns served by it were given notice of the hearing, after which the Commission made its order fixing the 32¢ gate rate, found to be "fair, just and reasonable", in lieu of the 40¢ rate theretofore charged, found to be "unfair, unjust and unreasonable."

Interstate Commerce Issue

Appellee obtains its natural gas from two states, which under its system of accounting is allocated to three sources. The first source is gas produced or purchased in Texas and transported and delivered entirely within Texas. As to this gas, appellee admits the authority of the Commission to regulate and fix the price for which it shall be sold at the city gates to the affiliated distributing companies in a proper proceedings; but contends that since the rate order in question also attempts to fix the price of gas transported in interstate commerce, the order is invalid in [fol. 21] toto because invalid in part. From this source appellee accounts for about 79% of its total gas supply.

The second source of gas is produced or purchased by appellee in Oklahoma, and transported through its pipe lines from points of production into Texas. All of this gas is processed and treated in gasoline plants located near Gainesville, Texas, and Petrolia, Texas. At these plants the heating value of this gas is lowered by extracting the gasoline therefrom, and practically all of it is recompressed. When this gas leaves Oklahoma for Texas its exact ultimate destination is not known, and a considerable amount of it is run through and stored in wells at the extraction plants in Texas for future use as needed. Each pipe line transporting this gas has a meter at the State line, for the purpose of measuring the amount thereof. From

this source, over the 1927-1933 period considered, appellee accounts for about 4% of its total gas supply. However, the amount of this gas has shown a marked decline until during the last year of the accounting period it amounted to about one-half of 1% of appellee's total gas supply. All of this gas is commingled in storage or pipe lines with appellee's Texas gas before delivery at the city gates. Appellee contends that this gas moved in interstate commerce to the city gates, and is, therefore, not subject to the jurisdiction of the Commission.

The third source of gas is produced or purchased in the Panhandle field in Wheeler county, Texas, and transported by appellee's private pipe line through a corner of Oklahoma (less the amount of deliveries at Hollis, Oklahoma) [fol. 22] and back into Texas, uninterruptedly. The Commission alleged and indisputably proved that this pipe line was built through a sparsely settled, rough, rocky region, just within and paralleling the bound-ry line of Oklahoma, for about 40 miles, recrossing the Texas line at a point on the Prairie-Dog Town Fork of Red River, where an exceedingly expensive crossing was necessary, which would not have been necessary if the pipe line had been constructed by a more direct route within Texas; and that as compared to the Oklahoma route, the Texas route would have been much less expensive, through sandy and less corrosive soil, more direct, and through a more populous region. The Commission contends that the construction of this pipe line was, therefore, fraudulently done for the purpose of attempting to deprive it of jurisdiction over appellee. From this source of gas appellee accounts for about 17% of the total supply subject to the rate order in question.

The gas reserve of appellee in Oklahoma as compared to those in Texas amounted to about one-fourth of one per cent. The gas reserves in Texas are more than sufficient to supply all Texas needs, and the gas supply of Oklahoma will likewise supply all its needs. The Texas gas used in Oklahoma and the Oklahoma gas used in Texas about strike a balance, and in any event, if the excess should be in favor of Oklahoma, it is negligible. Texas gas is less expensive to produce than Oklahoma gas. Approximately 85% of appellee's property is situated in Texas; and approximately 99% of its gas reserves are in Texas. Gas

coming from Oklahoma is so mixed and commingled with [fol. 23] Texas gas that it cannot be definitely traced by volume to any particular city gate, because it is divided and redivided into the network of appellee's pipe lines, in amounts which are negligible in comparison with the amount of the Texas gas. Oklahoma produced gas is not served south of Fort Worth or Dallas, nor west of Fort Worth. A very small amount of Oklahoma gas is delivered to independent distributors at Gainesville and Waxahachie. The order does not in any manner interfere with the sale of the Oklahoma gas at the same rate as the Texas gas.

In view of these facts, appellee contends that the order was an attempt to regulate and burden interstate commerce, because a part of the gas affected by the 32¢ rate is produced or purchased in the State of Texas, and transported by the pipe lines of appellee through a corner of the State of Oklahoma and back into Texas, where it is sold and delivered wholesale at the gates of the various Texas cities and towns; and because a part of the gas is produced or purchased in the State of Oklahoma and transported by the pipe lines of appellee uninterruptedly and at high pressure into Texas, where it is sold wholesale at the city gates.

As preliminary and as bearing upon the issues of interstate commerce, the interference with the right to contract, operating expenses, and other issues relating to the jurisdiction of the Commission to regulate and control appellee, it was the theory of the Commission that by reason of an intercorporate setup and affiliation between appellee and the distributing companies to which it delivered gas at the [fol. 24] city gates, an integrated but single business enterprise was established in which appellee and the distributing companies were merely the departments or instrumentalities through which the single business enterprise sold and delivered natural gas to the ultimate consumer or burner tip user. The Commission asserted that the fixing of the gas rate at the city gate under such business setup effectually fixed the rate from the city gate to the burner tip, which was intrastate commerce and subject to the control and regulation of the Commission. It was alleged that the unity or oneness of the business enterprise was accomplished by the combination of property and effort, and through a holding corporation, the Lone Star Gas Corporation, a Delaware chartered corporation, with its principal offices in Pitts-

burgh, Pennsylvania. The facts sustaining this allegation are as follows:

Appellee, Lone Star Gas Company, is in corporate theory a Texas gas pipe line corporation, classified by Article 6050 as a "public utility", and "declared to be affected with a public interest and subject to the jurisdiction, control and regulation of the Commission." By Article 6051, appellee's business is declared to be "a business which in its nature and according to the established method of conducting the business is a monopoly and shall not be conducted unless • • • such business be subject to the jurisdiction herein conferred upon the Commission." In excess of 99% of appellee's common, voting or controlling stock is owned by the Lone Star Gas Corporation, the Delaware chartered corporation, which does not have a permit to do business in Texas.

The affiliated distributing companies material to this [fol. 25] case are the Community Natural Gas Company, County Gas Company, Dallas Gas Company, Municipal Gas Company, and Texas Cities Gas Company. Each of these companies is a Texas Corporation, and in corporate theory and as classified by Article 6050, each is a "public utility", engaged "in distributing or selling natural gas to the public for domestic or other use," serving one or more of some 270 cities and towns in Texas. The Delaware holding corporation owns in excess of 99% of the common or voting stock of the affiliated Community Gas Company, County Gas Company, Municipal Gas Company, Texas Cities Gas Company, and, through a sub-holding corporation, the Dallas Gas Company.

Appellee and all of its affiliated distributing companies have connected offices in Dallas, Texas, and all of these Texas corporations and the Delaware holding corporation have officers and directors common to each corporation, although there is not a majority by number in any instance. Voting by proxy or as attorney in fact is practiced by the interlocking directors and officials of all corporations involved in the intercorporate setup. All Texas corporations confer with and are subject to the management of the Lone Star Gas Corporation, the holding corporation. For these services it exacts a "management fee" of one per cent of the gross annual revenue of appellee, and a "management fee" is also exacted by the holding corporation from each

affiliated distributing company. The holding corporation has loaned appellee $17,600,000 on its unsecured note; and loans have been made to each affiliated distributing company either on open account or on unsecured notes. In- [fol. 26] terest at six per cent, is charged on the $17,600,000 indebtedness of appellee, although the holding corporation borrowed the money at five per cent, and a similar condition exists as to the affiliated distributing companies, notwithstanding some of them are able to borrow large sums from local banks at from four to four and one-half per cent interest.

All books of all corporations, except the holding corporation, are kept in the offices at Dallas, Texas, and a general or supervising auditor has authority and direction over all books. Accounting services, engineering, financing, purchasing and operating supervision are furnished all Texas corporations by the Delaware holding corporation, and a general counsel represents all the corporations involved in the intercorporate setup.

In its department of the integrated business enterprise, appellee is engaged in producing and purchasing natural gas and in transporting same by its 4000-mile pipe line system from the point of production to the city gates of some 270 cities and towns in Texas, where the gas is delivered to one and the other affiliated distributing companies. A uniform rate of 40¢ at the city gate is made by appellee, which rate it filed with the Commission, and has charged and collected for several years. Appellee has long-term contracts with its affiliated distributing companies for the 40¢ city gate rate.

In their department of the integrated business enterprise, the affiliated distributing companies are engaged in selling and delivering the gas to the burner tips of the consumers, and for which service they charge a fixed rate.

[fol. 27] Appellee also furnishes gas at the city gates of Waxahachie and Gainesville, Texas, to two independent distributing companies,—the Waxahachie Gas Company and the Gainesville Gas and Electrical Company; and in Waxahachie, a small amount to its affiliated Municipal Gas Company. The amount of this gas is negligible, in comparison with appellee's total gas business. Each independent distributing company pays the 40¢ city gate rate under long-term contracts with appellee.

The cases are legion which deal with the relationship of two or more corporations from the standpoint of ownership of the capital stock in one by another, and from the standpoint of association together for the purpose of carrying on a single or common business enterprise. The rule is well settled that courts will look through the forms to the realities of the relationship between two or more corporations in order to determine whether each is a separate entity or corporation; or whether their commingled affairs are such as to constitute them one integrated and single business enterprise; or whether through intercorporate setup, affiliation or stock ownership, the purpose is to control the subsidiary corporation or corporations so that they are used as the mere instrumentalities or agents of the owning corporation or corporations. In discussing the rule, it has been held that while "ownership alone of capital stock in one corporation by another does not create an identity of corporate interest * * * or create the relation of principal and agent or representative between the two;" still it has been repeatedly held that such rule is not applicable "where stock ownership has been [fol. 28] resorted to, not for the purpose of participating in the affairs of a corporation in the normal and usual manner, but for the purpose * * * of controlling a subsidiary company so that it may be used as a mere agency or instrumentality of the owning company or companies." Chicago Ry. v. Minn. Civic Ass'n., 247 U. S., 490, 62 L. Ed. 1229; United States vs. Lehigh Valley R. R. Co., 220 U. S. 257, 55 L. Ed., 458; United States v. Reading Co., 253 U. S., 26, 64 L. Ed., 760; United States v. Delaware L. & W. R. Co., 238 U. S. 516; 59 L. Ed., 1438. Also in discussing the rule the fact that the same persons are directors and managers of two corporations has been given consideration (McCaskill Co. v. United States, 216 U. S., 504) and "a growing tendency is therefore exhibited in the courts to look beyond the corporate form to the purpose of it and to the officers who are identified with that purpose." See also Gallatin Gas Co. v. Public Service Co., 256 Pac., 373. Where one corporation owns or dominates another it has been often held that "the independent entity of the two companies is so far disregarded that each is considered a part of the invisible whole." Kimberly Coal Co. v. Douglas, 45 Fed. (2d) 25; In re Kentucky Wagon Mfg. Co., 3 F. S. 958; Law v. McLaughlin, 2 F. S., 601. And "the rule which appears to be established by these cases is that,

where the corporate organization and affairs of one railroad company are controlled and dominated by another railroad company through ownership of stock or lease, the roads must be regarded as identical for the purpose of rate making." Pontiac Ry. Co. v. R. R. Com., 168 N. W., 927.

[fol. 29] A somewhat analogous question was decided by this court in A. T. & S. F. Ry. Co. v. R. R. Com., 77 S. W. (2d), 773, (writ refused), wherein it was held that subsidiary corporations, owned, controlled and operated by railroads to carry on pickup and delivery service, did not possess separate legal individuality from the parent corporations, as regards the jurisdiction of the Railroad Commission; and wherein it was held as follows:

"To permit railroads to perform such steps in the process of transportation through other separate legal entities created and owned by them would enable them to defeat the jurisdiction of the Commission over such transportation. And in such case where the stock of such separate corporation is owned by the railroad company, and its sole function is merely to help conduct the business of the parent corporation under whose complete control it operates, and in the instant case largely, if not wholly, through the same employees, the subsidiary corporation will be treated as if it were a mere department of the railroad itself."

When viewed in the light of the facts and the aforesaid rule, it becomes apparent that appellee and its affiliated distributing companies were engaged in an integrated but single business enterprise of producing, purchasing, transporting, delivering and selling natural gas for domestic or other use to the ultimate consumer. This was accomplished by combination of property and effort, and through ownership of more than 99% of the capital stock of appellee and all affiliated distributing companies by the holding corporation. All corporations are under the common management of the holding corporation, for which service it is paid management fees. The Texas corporations and the holding corporation have officers and directors common to each, who actually [fol. 30] manage, supervise and control the entire business enterprise through the intercorporate setup. By permitting or organizing such intercorporate setup, the Texas corporations have, considering their entire operations as a whole,

created a single and integrated business enterprise, and with respect to the jurisdiction of the Commission, to regulate and control such business, and particularly for the purpose of fixing the rates for which it might sell gas to the public in Texas, the corporation must be regarded as being engaged in the single business enterprise of producing, purchasing, transporting, delivering, and selling natural gas to the ultimate consumer or user in Texas. The fact that separate corporate entities were formed which represent different departments of the integrated but single business enterprise, does not affect the question, because the court must look beyond the corporate form to the purpose of the unified organization, and to the officials who are identified with that purpose. To otherwise hold, and to permit the Texas Corporations to so dispose of their capital stock and to so form a separate entity of their own, and to surrender the management and control of their business to the holding corporation, which has no permit to do business in Texas, would enable them to defeat the jurisdiction of the Commission over them as Texas public utilities, for which purpose the State of Texas granted them life and the privilege of doing business.

The fact that appellee and the affiliated distributing companies may be engaged in the integrated but single business enterprise of producing, purchasing, transporting and sell-[fol. 31] ing natural gas to the ultimate consumer or burner tip user, is not of controlling importance on the commerce issue; because the Commission did not fix the burner tip rate, nor did it require the distributing companies to pay appellee not in excess of the 32¢ city gate rate, and to pass the 8¢ reduction on to the ultimate consumer or burner tip user.

Just why the Commission fixed the 32¢ city gate rate for gas without also requiring the distributing companies to pay not in excess of such rate, and to pass the 8¢ reduction on to the ultimate consumer or burner tip user, is not clear from the order or record. It is conceded that the business of distributing gas from the city gate to the burner tip user was intrastate commerce over which the Commission had jurisdiction; and that it could have, after a hearing at which the reasonableness of the City gate rate charged by appellee for gas was inquired into, required the various distributing com-

panies to pay appellee at each city gate a rate not in excess of the 32¢ rate, even though the gas sold and delivered by appellee moved in interstate commerce to the city gate. Article 1119, R. S. 1925, authorizes cities and towns of over 2000 population to fix local rates for gas sold by a public utility. Texas-Louisiana Power Co. v. City of Farmersville (Com. App.), 67 S. W. (2d), 235. The Commission is authorized to originate rates for cities and towns of less than 2000 population; and Article 6053 authorizes it to fix city gate and other rates for natural gas for all cities and towns without regard to population. The order recited that there were then pending some 125 appeals from rates fixed by cities [fol. 32] and towns under the provisions of Articles 1119 and 6058, and that there were also pending before the Commission numerous cases in which the rates to be reviewed or fixed necessarily involved the determination of the reasonableness of the city gate rate charged the distributing companies by appellee, as a step preliminary to the disposition of such appeals and cases, and in order to determine or fix reasonable local or burner tip rates therein. All of these cities and towns were given notice of the hearing before the Commission. It would seem from these recitations of facts and circumstances, that the Commission consolidated all the appeals and cases pending before it in which the determination of the city gate rate charged by appellee for gas was necessarily involved as a step preliminary to reviewing or fixing the local or burner tip rates for gas. The wisdom of the method of procedure adopted cannot be successfully attacked. A separate hearing in the case of each city or town would have presented an insurmountable task; and if the expenses of this hearing are a criterion, no city or town could bear such expense. Separate hearings would not afford appellee any relief to which it is not entitled to receive here. Nor is it "essential that the Commission dispose of the matter pending before it in a single order, but that it may in a proper case make a preliminary disposition of the matter, and reserve for further consideration, and dispose of by subsequent order, other questions or issues involved in the main issue without further notice or hearing." Houston Chamber of Commerce v. R. R. Com., 19 S. W. (2d), 586, affirmed 78 S. W. (2d), 591; Magnolia Pet. Co. v. Edgar, 62 S. W. (2d), 359, (writ ref.). Moreover, all parties have by court pro- [fol. 33] ceedings and otherwise treated the order as a final

order fixing the 32¢ city gate rate. Certainly appellee has so treated the order, and if declared valid herein, appellee has no further interest in any order the Commission may make with regard to requiring the various distributing companies to pay not in excess of the 32¢ city gate rate, and to pass the 8¢ reduction on to the ultimate consumer or burner tip user. Furthermore, in its department of the intercorporate setup and affiliation appellee was a gas pipe line utility, engaged in the integrated business of producing, purchasing, transporting by pipe line, and selling natural gas to the distributing companies at the city gates of some 300 cities and towns in Texas and Oklahoma. Appellee's charter and the books kept under the direction of the auditor of the intercorporate business setup established that it was so engaged. On the hearing before the Commission, all parties proceeded upon the theory that appellee was so engaged. It had contracts with the affiliated as well as the two independent distributing companies for the 40¢ city gate rate uniformly charged throughout the State of Texas by appellee. The Texas statutes authorize the Commission to fix reasonable city gate as well as local or burner tip rates for gas, and appellee states in its brief that "the Railroad Commission of Texas has power and authority to fix and prescribe the charges which defendant may make for gas produced or purchased by it and moving throughout its entire transit, up to the point of delivery at the city gates, wholly within the State of Texas, subject to defendant's rights under the 14th Amendment of the Constitution of the United States, and the Bill of Rights [fol. 34] of the Texas Constitution; and it has power and authority to determine the rates and charges to be received for the sale of gas to domestic customers in towns and cities in Texas (i. e. local rates), even though a part of the gas so sold has moved continuously in interstate commerce from the points of origin to the points of delivery at the city gates, subject to a similar qualification. But it may not regulate the gate rate to be charged by defendant for the sale of interstate gas." In view of these facts, admissions and proceedings, we will consider the rate order in question as a final appealable order, and pass to a further consideration of the interstate commerce issue.

Whether the conduct of appellee, in constructing and transporting by its private pipe line gas from the Texas Panhandle field through Oklahoma and back into Texas, where

it is intended at all times to be delivered, sold and used, constitutes a fraudulent attempt to make such gas move in interstate commerce, and thereby deprive the Commission of the power to regulate the price for which it may be sold, does not appear to be material, because such transportation of the gas is not interstate commerce as a matter of fact. Except for the right to authorize the construction of the pipe line within its boundary, the State of Oklahoma has no concern whatever with the transaction. Only one town, Hollis, in Oklahoma, is served by the pipe line. It could have been as well served by a direct pipe line from Texas to it, and such service is in no manner affected by the rate order in suit. The mere fact that such town is served with gas delivered from [fol. 35] the pipe line does not stop, hinder, affect, or in any manner interrupt or interfere with the continuous flow of the gas from Texas through Oklahoma and back into Texas, where it is intended at all times to be delivered, sold and used.

In 1 Supreme Court Law, 347, the following rule is stated:

"Interstate commerce is a practical conception drawn from the course of business upon a broad consideration of the substance of the whole transaction. Substance, and not form controls. The actual fact, not technical considerations, governs."

The text cites many cases supporting the rule, holding in substance that what is or is not interstate commerce is to be determined upon broad consideration of the substance of the whole transaction. See Federal Trade Com. v. Pacific, etc. Ass'n., 273 U. S., 52, 71 L. Ed. 534; Eureka Pipeline Co. v. Hallahan, 257 U. S., 265, 66 L. Ed., 227; R. R. Co. v. United States, 196 U. S., 398; 28 L. R. A. (N. S.) 264.

Cases cited by appellee and many others hold that gas produced in one state and transported by pipe line to another state for sale and use is interstate commerce. 1 Supreme Court Law, 367. But no case is cited and none is found by us which would support a holding that the transportation by its private pipe line of gas produced or purchased by appellee in Texas through a corner of Oklahoma and back into Texas, uninterrupted, and with the intention at all times that such gas would be delivered, sold and used in Texas, is interstate commerce. Appellee is a Texas public gas utility corporation. Its primary duty is to serve Texas citizens with gas

[fol. 36] produced from Texas soil. Its corporate life and being was granted in consideration of these premises. With this in view, but one practical conception can be drawn from the whole transaction involved, that is, the gas produced in Texas and intended to be delivered, sold and used in Texas is intrastate commerce. The mere fact that appellee has selected a route through Oklahoma as an aid to the transaction of its Texas business can not work a change in the nature of the business, nor does it affect the character of the business. The transportation of gas through Oklahoma is merely a method of delivery and is a negligible circumstance in determining the interstate commerce issue. Heyman v. Hays, 236 U. S., 178, 59 L. Ed., 527.

If, however, the delivery of the gas by appellee from Texas through Oklahoma and back into Texas, intended at all times for Texas consumption, be regarded as interstate commerce, such transaction only affects transportation of the gas and as to which only appellee and the Texas consumers are interested. The Interstate Commerce Act, as now amended, expressly excepts from the jurisdiction of the Interstate Commerce Commission the regulation of interstate transportation of "natural or artificial gas by pipe.line, or partly by pipe line and partly by railroad or by water." 28 U. S. C. A., Title 49, Chap..1, Sec. 1, Subdiv. (b). And since the regulation of the transportation of gas is expressly excluded from the scope of the interstate Commerce statute, it is within the police power of the state to fix reasonable rates for which gas may be sold to its citizens, even though such rates may indirectly or incidentally affect the interstate [fol. 37] transportation of such gas, or may so affect interstate commerce in the same. Simpson v. Shepard, 230 U. S., 352, 57 L. Ed., 1511, 48 L. R. A. (N. S.) 1151. West v. Kansas Gas Co., 221 U. S., 229, 55 L. Ed., 716, 35 L. R. A. (N. S.), 1193; Pennsylvania Gas Co. v. Public Service Com., 252 U. S., 23, 64 L. Ed., 434; Manufacturers Light & Heat Co. v. Ott, 215 Fed., 944.

Neither the Texas statutes nor the rate order interfere in any manner with the transportation of gas from Texas through Oklahoma and back into Texas. The order only attempts to regulate and fix the price for which such gas may be sold in Texas by appellee to its various distributing companies. Manifestly, this circuitous route of delivery of gas through Oklahoma can not and does not affect the

exercise of the police power of Texas to make or fix reasonable rates for such gas sold to its citizens.

Appellee contends, however, that there can be no question but that the gas produced or purchased by it in Oklahoma and transported to and sold in Texas, is gas moving in interstate commerce up to the time it reaches the city gates of delivery; and that the fact that the amount of this gas is small does not affect its interstate commerce character, nor its interstate transportation. We do not sustain the contention.

The facts show that the gas produced or purchased by appellee in Oklahoma and transported by its pipe lines to Texas, does not move in interstate commerce, when it reaches the city gates of delivery. All gas coming from Oklahoma is run through extraction plants in Texas, where the heavier hydro-carbons and volatile gasoline are extracted, leaving the residue gas changed in its composition, and with its [fol. 38] heating value lowered and changed. Large amounts of it are run through and stored in wells on the Miller farm near the extraction plant in Texas, continuously, and for use later as needed. The Oklahoma gas has no particular Texas city gate destination, but it is first transported to the extraction plants, and after its composition is changed, it is passed into the pipe line system of appellee, mixed and commingled with Texas gas, divided and redivided in the pipe line system until it is impossible to trace or identify it by volume at any city gate of delivery. At various points before delivery its pressure is reduced and the gas allowed to expand. The amount of Oklahoma gas as a whole is small and as divided and redivided before delivery to the various city gates, its amount is negligible in comparison with the amount of the Texas gas with which it is mixed or commingled.

Doubt has been expressed by several courts as to whether gas produced in several states and commingled in pipe lines from which it is sold, is interstate commerce. This conclusion seems to have been reached on the "original package" doctrine, the courts holding that after the bulk of the imported gas is broken up for indiscriminate distribution to individual purchasers at retail sale, the interstate commerce is at an end. Contrary conclusions seem to have been reached where merely transmission for immediate or practically immediate use, direct from the seller to the consumer,

is involved. But a different question arises where the gas transmitted from one state is stored and then distributed as its needs might afterwards develop; and where, as in this [fol. 39] case, the composition of the gas is and must be changed by extracting hydro-carbons and volatile gasoline before it is ready for delivery and use by the consumer. As to such transmission of gas, the "original package" theory or doctrine is applicable and should be invoked, even though the transporting company, as did appellee and the affiliated distributing companies through stock ownership and inter-corporate setup, actually sells the Oklahoma produced gas as changed to the ultimate consumers in Texas. These questions have been either passed upon or anticipated and discussed in the following cases. Pennsylvania Gas Co. v. Public Service Com., 252 U. S., 23, 64 L. Ed., 434, 225 N. Y. 399, 122 N. E., 260; West v. Kansas Natural Gas Co., 221 U. S. 229, 55 L. Ed., 716, 35 L. R. A. (N. S.) 1193; Public Utilities Com. v. Landon, 249 U. S., 236, 590, 63 L. Ed., 577, 791; State v. Flannelly, 96 Kansas, 372, 152 Pac., 22; West Virginia, etc. Co. v. Towers (Md.), 106 Atl. 265.

In other cases it has been held that in the exercise of the police power of the state, the state commission has authority to fix the local burner tip rates, even though the gas moved in interstate commerce to the city gate, and particularly so where, as in the instant case, an affiliation exists between the transporting and the distributing companies. Thus the state commission may validly, by the indirect process of prescribing reasonable rates for local distributing companies, control and fix the city gate rate for gas moved in interstate commerce.

The Commission did not expressly require the distributing companies to pay not in excess of the 32¢ city gate rate, [fol. 40] but since this hearing was necessary as a preliminary step to the disposition of the appeals and cases pending, it was not essential that the Commission dispose of the matter before it in a single order; but it may, if the rate herein complained of be held not confiscatory or unreasonable and unjust, subsequently make its order requiring the distributing companies to pay not in excess of such rate, without further notice or hearing. Houston Chamber of Commerce v. R. R. Com., supra. Manifestly, if the 32¢ rate is declared valid herein, appellee can have no further in-

terest in any order the Commission may make with regard to requiring the various distributing companies to pay not in excess of such rate, and to pass the 8¢ reduction on to the ultimate consumer. Missouri v. Kansas Gas Co., 265 U. S. 298; Public Utilities Com. v. Landon, supra; East Ohio Gas Co. v. Tax Com., 283 U. S., 465; Pennsylvania Gas Co. v. Public Service Com., supra; State Cor. Com. v. Wichita Gas Co., 290 U. S., 561, 78 L. Ed. 500; Dayton P. & L. Co. v. Public Utilities Com., 292 U. S. 290, 78 L. Ed., 1267; Gallatin Gas Co. v. Public Service Com., 256 Pac., 373.

Final decision, however, in most cases is rested upon the principle that the State may regulate interstate commerce of the character of natural gas in the absence of action by Congress. As hereinabove stated, the Interstate Commerce Act expressly excludes from the scope of the interstate commerce statute the transportation of natural gas. The amount of the rate or price to be charged for gas is primarily for the determination of the state in which the gas [fol. 41] is consumed, and it is within the police power of the state to make or fix reasonable rates for gas furnished by a public utility to its citizens. Where the rates are reasonable and are fixed according to some uniform, fair and practical standard, they constitute no burden on interstate commerce. So, if the delivery of the gas by appellee from Texas through Oklahoma and back into Texas, intended at all times for Texas consumption; and if the production and transportation of the small amount of gas from Oklahoma to Texas, where it is sold, be regarded as interstate commerce, still appellee's business is predominantly a Texas business; and it is within the police power of the state to fix reasonable rates for which gas may be sold to its citizens, even though such rates may indirectly or incidentally affect the interstate transportation of such gas, or may so affect interstate commerce in the same. Simpson v. Shepard, 230 U. S., 352, 57 L. Ed., 1511, 48 L. R. A. (N. S.), 1151, wherein it is held as follows:

"Where the subject is peculiarly one of local concern, and from its nature belongs to the class with which the state appropriately deals in making reasonable provision for local needs, it cannot be regarded as left to the unrestrained will of individuals because Congress has not acted, although it may have such a relation to interstate commerce as to be within the reach of the federal power."

This doctrine has been carefully restated in the recent case of Schechter Poultry Cor. v. United States, 55 S. Ct. Rep., 850, as follows:

"But where the effect of intrastate transactions upon interstate commerce is merely indirect, such transactions remain within the domain of state power. If the commerce clause were construed to reach all enterprises and transactions which could be said to have an indirect effect upon interstate commerce, the federal authority would embrace [fol. 42] practically all the activities of the people; and the authority of the state over its domestic concerns would exist only by sufferance of the federal government. Indeed, on such a theory, even the development of the state's commercial facilities would be subject to federal control. As we said in Simpson v. Shepard (Minnesota Rate Case), 230 U. S. 352, 410, 33 S. Ct. 729, 745, 57 L. Ed. 1511, 48 L. R. A. (N. S.) 1151, Ann. Cas. 1916 A, 18: 'In the intimacy of commercial relations, much that is done in the superintendence of local matters may have an indirect bearing upon interstate commerce. The development of local resources and the extension of local facilities may have a very important effect upon communities less favored, and to an appreciable degree alter the course of trade. The freedom of local trade may stimulate interstate commerce, while restrictive measures within the police power of the state, enacted exclusively with respect to internal business, as distinguished from interstate traffic, may in their reflex or indirect influence diminish the latter and reduce the volume of articles transported into or out of the state.' See, also, Kidd v. Pearson, 128 U. S. 1, 21, (9 S. Ct. 6, 32 L. Ed. 346; Heisler v. Thomas Colliery Co., 260 U. S. 245, 259, 260, 43 S. Ct. 83, 67 L. Ed. 237."

It has also been held that, "if it be assumed that interstate commerce will be incidentally affected, yet the regulation of the local charges of the Natural Gas Company as a public service corporation is within the police power of the state until Congress sees fit to act." Manufacturers Light & Heat Co. v. Ott, supra. And certainly the state's regulatory power is not denied where it does not interfere with or burden the free interstate flow of gas. Peoples Natural Gas Co. v. Public Service Com., 270 U. S., 550, 70 L. Ed., 726. The rate order in this suit does not in any manner

interfere, restrain or burden the free transportation of gas between Texas and Oklahoma. Oklahoma gas may be freely transported to Texas and sold in the open market at the same reasonable rate fixed for Texas gas. We therefore, conclude that, absent legislation by Congress, and since [fol. 43] the Interstate Commerce Act as now amended, expressly excepted the regulation of transporation of "natural or artificial gas by pipe lines" from the jurisdiction of the Interstate Commerce Commission, the State Commission, in the exercise of the police power of the State to regulate and control public gas utilities, had the power to fix reasonable rates for gas delivered by appellee to distributing companies at the city gate, although interstate commerce may be indirectly or incidentally affected thereby.

We further conclude that since the amount of gas produced or purchased by Appellee in Okalhoma and transported to and sold in Texas, is negligible; and, if interstate commerce, the 32¢ rate fixed by the Commission in no manner interfered with, impeded, or burdened the flow of gas from Oklahoma, but such gas may be sold in competition with Texas gas and at the same reasonable price fixed by the Commission.

Freedom of Contract Issue

The contracts of appellee with the distributing companies for the 40¢ city gate rate were made in the light of the Constitution and laws, and of the jurisdiction of the Commission to regulate such rates. The order changing such rate is therefore not violative of the freedom of contract, or impairment of obligation clauses of either the State or Federal Constitutions.

The right of the State to regulate the rates and practices of a public utility is referable to the police power of the State, and is a legislative function which cannot be alienated or contracted away by the State or any agency or political [fol. 44] subdivision of the State. The Constitution and laws of a state are a part and parcel of the terms of A corporate franchise, and the right of the state in the exercise of its police power to change franchise or contract rates in the protection of the inalienable rights and general welfare of its citizens is settled. Nunn v. Illinois, 94 U. S. 113; Milwaukee Electric Ry., etc. Co. v. R. R. Com., 153 Wis. 592, affirmed in 238 U. S. 174; the State v. Public Serv. Com., 275 Mo., 201. The one exception to the rule is with regard

to ordinances or contracts fixing rates for a limited period of time. Southern Iowa Electric Co. v. Chariton, 255 U. S. 539. Appellee's contracts are all for long periods of time, and do not come within the exception. And where, as in the instant case, there is an intimate alliance between the buyer and seller, and they are not dealing at arm's length because of intercorporate affiliation and transactions, the prices they fix are of no concern to the public, unless they are not within the bounds of reason. Houston v. Swr. Bell Tel. Co., 259 U. S. 318, 323; Missouri ex. rel Swr. Bell Tel. Co. v. Public Service Com., 262 U. S. 276, 288; United Fuel Gas Co. v. Railroad Com. of Kentucky, 278 U. S. 300, 320, 49 S. Ct. 150, 156, 73 L. Ed. 390, citing and quoting from Chicago Grand Trunk Railway v. Wellman, 143 U. S. 339, 345, with approval; Smith v. Illinois Bell Tel. Co., 282 U. S. 133, 51 S. Ct. 65, 75 L. Ed. 255; Western Distributing Co. v. Public Service Com. of Kansas, 285 U. S. 119, 52 S. Ct. 283, 76 L. Ed. 655; Dayton Power & Light Co. v. Public Utility Com., 78 L. Ed. 832, 836, 54 S. Ct. 647, 650.

[fol. 45] Confiscation of Property

The constitutionality of a rate depends upon whether it will yield a fair return for the present and immediate future, on the value of the property used in the public service. In absence of an actual test under a new rate, the question of whether it will afford a reasonable return is one of fact. The burden rests heavily upon one seeking to set aside a state-made rate to plead and prove the invalidating facts. Ætna Ins. Co. v. Hyde, 275 U. S. 440, 72 L. Ed. 357; Beaumont S. L. & W. Ry. Co. v. United States, 282 U. S. 74, 75 L. Ed. 221; Brush Electric Co. v. Galveston, 262 U. S. 443, 67 L. Ed. 1076. Appellee failed as a matter of law to plead and prove any invalidating fact as to the rate in suit; to which question we now pass.

[fol. 46] Legal Sufficiency of Evidence to Show Rate Confiscatory or Unreasonable and Unjust

The remaining question concerns the legal sufficiency of the evidence adduced by appellee to show that the 32¢ city gate rate was confiscatory and unreasonable and unjust. The rate was alleged to be so because it would not afford a reasonable return on the fair value of the property used in the public service of delivering gas to the various city

gates, and amounted to taking the property without just compensation or due process of law, in violation of the 14th amendment to the Federal Constitution. When viewed in the light of the presumption in favor of the validity of the rate order, and the quantum and character of the evidence required to overcome such presumption, the evidence adduced by appelle was clearly insufficient to show the rate confiscatory or unreasonable and unjust on the ground alleged.

The rate fixed by the Commission is presumed to be valid, reasonable and just until it is declared otherwise by a court of competent jurisdiction. R. R. Com. v. Uvalde Construction Co., 49 S. W. (2d), 1113. In order to overcome this presumption in favor of the validity of the rate on the constitutional ground of confiscation, the burden of proof rests heavily upon appellee. Dayton P. & L. Co. v. Pub. Com., 292 U. S. 290, 78 L. Ed. 1267. And in order to set aside the rate as being unreasonable and unjust, Article 6059 requires that appellee show by "clear and satisfactory evidence that such rate is unreasonable and unjust as to it." A controversy immediately arises as to the proper [fol. 47] interpretation to be given these rules and statutory requirements as to the burden and quantum of proof. The Commission contends that the rate must be sustained against the attack that it is confiscatory and unreasonable and unjust, because it does not allow a reasonable return on the fair value of the property, when it is shown to be based upon substantial evidence adduced before the Commission, and that only the evidence adduced before the Commission on the rate hearing may be considered on appeal to the court. On the other hand, appellee contends that the hearing on appeal to the court of such issuance is de novo, and that "due process of law requires submission to a judicial tribunal for determination upon its own independent judgment as to both law and facts according to the settled rules governing judicial action and decision." Otis Elevator Co. v. Com., 302 Ill. 90; Ben Avon Burough v. Ohio Valley Water Co., 253 U. S. 287; Regan v. Farmers Loan & Trust Co., 154 U. S. 363, 38 L. Ed. 1014. As regards the rate making power of the Commission, the Texas courts have adopted this wider scope of review. Com. v. H. & T. C. R. R. Co. 90 Texas, 352, 38 S. W. 750; Com. v. Weld et al, 96 Texas, 403, 73 S. W. 529; G. C. & S. F. Ry. v. Com., 113 S. W. 741; Com. v. S. A. Compress Co., 264 S. W. 214, (writ

refused); Houston Chamber of Commerce v. Com. 19 S. W. (2d), 583, affirmed 78 S. W. (2d), 591; and M. K. & T. Ry. Co. v. Com., 3 S. W. (2d) 489 (494), affirmed 13 S. W. (2d), 679, wherein this court said:

"Rate making is essentially a legislative function, and operates prospectively. Railroad Com. vs. Weld & Neville, above; Prentis vs. Atlantic Coast Line Co., 211 U. S. 226, 29 S. Ct. 67, 63 L. Ed. 158, 159, and authorities there cited. And the same is true of many rules and regulations within [fol. 48] the delegated powers of the commission. Rate making has been delegated to the Railroad Commission alone, and its acts in that regard have the force and effect of statutes, and are subject to review to the extent only that statutes of the same import are so subject, with the additional power which articles 6657 and 6658 confer upon the courts to determine whether a rate, etc., is unreasonable or unjust to the party complaining."

The case of Crowell v. Benson, 285 U. S. 22, 76 L. Ed. 598, in determining the scope of review and whether new evidence will be heard on appeal from a state commission's rate order, held as follows:

"In cases brought to enforce constitutional rights the judicial power of the United States necessarily extends to the independent determination of all questions, both of fact and law, necessary to the performance of that supreme function. The case of confiscation is illustrative, the ultimate conclusion almost invariably depending upon the decisions of questions of fact. This court has held the owner to be entitled to 'a fair opportunity for submitting that issue to a judicial tribunal for determination upon its own independent judgment as to both law and facts.'" • • •

"Assuming that the Federal court may determine for itself the existence of these fundamental or jurisdictional facts, we come to the question—Upon what record is the determination to be made? There is no provision of the statute which seeks to confine the court in such a case to the record before the deputy commissioner or to the evidence which he has taken. • • •

"We think that the essential independence of the exercise of the judicial power of the United States in the enforcement of constitutional rights requires that the Federal

court should determine such an issue upon its own record and the facts elicited before it."

See also State Com. v. Wichita Gas Co., 290 U. S. 561, 78 L. Ed. 500; Lehigh Valley R. Co. v. Com., 278 U. S. 24, 73 L. Ed. 161; Prendergast v. N. Y. Tel. Co., 262 U. S. 43, 67 L. Ed. 853.

As regards the statutory appeal authorized by Article [fol. 49] 6059, to determine whether a rate order is unreasonable and unjust, it is manifest that the legislature intended for the trial on appeal to be de novo and upon new or additional evidence pertinent to the issue, because the complainant is required to show by "clear and satisfactory evidence that such rate is unreasonable and unjust as to it." Similar statutes regarding railroad rates have been so construed by the above cited Texas cases, and in other states. The scope of judicial appellate review of orders of administrative boards or commissions is usually controlled by legislative enactment. This may be either by a hearing de novo or it may mean merely the correction of non-permissible error. Freund on Administrative Powers over Persons and Property, 278. Statutes which authorize appeals from matters of purely administrative decision or discretion are usually construed to authorize only the correction of non-permissible error, or to favor the merely corrective scope of review. Illustrative of these matters is the question of issuing a license, or the granting of a permit, or determining whether a public necessity or convenience exists for bus or truck operation. In such cases the legislature does not vest in courts the administrative function of determining whether a license, permit, or certificate of convenience or necessity should issue, but merely gives the courts authority to determine whether the action of the administrative board or commission is (a) beyond the power it could constitutionaly exercise, or (b) beyond its statutory power, or (c) based upon substantial evidence.

As to such administrative matters the legal effect of the [fol. 50] findings of fact by the administrative body approximates a question of law, and a finding without evidence is, of course, beyond the power of the administrative body. Nor will courts in such cases review conclusions of the administrative body based upon conflicting evidence; but will sustain its order if based upon substantial evidence. Such is the holding in the case of R. R. Com. v. Shupee, 57 S. W.

(2d), 295, affirmed 73 S. W. (2d), 505, and R. R. Com. v. Lamb, 81 S. W. (2d), 161. But the questions of whether a rate is confiscatory or unreasonable and unjust have been held to be legal or justiciable questions of fact, and as to which the wider scope of judicial appellate review seems to have been adopted by the legislature and courts of this state. The limited scope of judicial review of rates fixed by an administrative commission was first enforced (Pick v. Chicago, etc. Ry. Co., 94 U. S. 178) by the courts; but was soon abandoned, and through a process of trial and argument of several cases, the present rule that the 14th Amendment to the Constitution protects the property of citizens from confiscation by an act of the Legislature or by a commission to which legislative regulatory power has been delegated, was developed. State v. Swr. Bell Tel. Co. (Mo.) 233 S. W., 425.

But whether the scope of judicial review is a hearing de novo or the correction of non-permissible error, the appeal is still merely corrective. The question is not whether the court, if the order were originally before it, would make the same order as was made by the Commission, but only whether the commission has acted reasonably upon sufficient evidence, and whether any substantial right of the com- [fol. 51] plaining party has been infringed. In determining the sufficiency of the evidence under the wider scope of judicial review, the question is not whether there is a scintilla of evidence to support the order, but whether the order is fairly and substantially supported by the evidence, when viewed in the light of the presumption in favor of the order, and the quantum and character of the evidence required to overcome such presumption. Particularly is this so with regard to making rates or division of rates, which are legislative and not judicial in character, and necessarily imply a range of legislative discretion, which the courts must recognize, and with which they cannot interfere except where constitutional or statutory rights are violated. The reason for the court appeal being corrective only is well stated in the Bell Telephone case, supra, as follows:

"The statutes declaring rates fixed by the Commission to be prima facie reasonable until that presumption is removed by one seeking their annulment are but a proper recognition of the power and purpose of the Commission,

without which its acts would be mere empty declarations, whose effective operation would, in each instance, have to await judicial approval. Such a conception of the nature and powers of the Commission is wholly unauthorized. Organized, as the Statute creating the Commission clearly declares, for the purpose of supervising and regulating public service corporations, the courts, in reviewing its actions, proceed upon the assumption that the experience of the members of the Commission has especially fitted them for dealing with questions concerning the powers and activities of such corporations; and, despite the fact that the entire evidence will be reviewed, much consideration is to be given to the findings of the Commission, which, if reasonable, and neither arbitrary nor capricious, will be deferred to. N. Y. & G. Gas Co. v. McCall, 245 U. S. loc. Cit. 347, 38 Sup. Ct. 122, 62 L. Ed. 337."

In the case of R. R. Commission v. Galveston C. of C., 105 Texas, 101, 145 S. W., 573, which construed the similar [fol. 52] statutes authorizing appeals from railroad rates fixed by the Commission, and the statutory requirement that complainant show "by clear and satisfactory evidence that the rates are unreasonable and unjust," the scope of judicial appellate review was held to be as follows:

"The foregoing statute so guards the Commission from improper interference that the courts must regard its actions, when within the limits of its delegated powers, as being the result of a purpose to do justice between all parties, and as having resulted in just and correct action until it be shown by clear and satisfactory evidence to be otherwise. R. R. Commission v. Weld & Neville, 96 Texas 409. The language, "clear and satisfactory evidence," limits the power of courts in setting aside rates, etc., to cases in which it may be established by evidence which leaves no reasonable doubt in the judicial mind that the rate or rule is unjust and unreasonable. Willis v. Chowning, 90 Texas, 617. It is true that this attributes to the work of the Commission a high degree of verity, but it is the plain language of the law, and is no doubt a wise provision."

"It is not within the language nor the spirit of the law which authorizes the courts to review the action of the Railroad Commission that any court should investigate the methods adopted by the Commission in fixing its rates

nor the motives or purposes which prompted such action. The result and its effect upon the rights of railroads and shippers mark the limit of judicial inquiry."

The rules and statutory requirements are general in nature and their applicability necessarily depends upon the facts in each case. No rule can be laid down as to rates which will apply uniformly to all sorts of utilities. In determining whether a rate is confiscatory or unreasonable and unjust because it may not in the future yield a proper return, the basis of calculation is the fair value of the property used in the public service. What may be a fair return for one may be inadequate for another, depending upon circumstances, competition or monopoly, public necessity, speculative and highly profitable enterprises, hazards, locality [fol. 53] and risk. And where as in the instant case the evidence is conflicting and the conclusion to be drawn therefrom in respect of this or that item uncertain or speculative, the court should not interfere with gas rates in advance of any actual experience of the practical result of such new rates. Wilcox v. Consolidated Gas Co., 212 U. S. 19, 53 L. Ed. 382; Brush Elc. Co. v. Galveston, 262 U. S. 443, 67 L. Ed. 1076. N. P. Ry. Co. v. North Dakota, 216 U. S. 579, 54 L. Ed. 624; Cedar Rapids Gas Light Co. v. Cedar Rapids, 223 U. S. 655, 56 L. Ed. 594; Louisville v. Telephone Co., 225 U. S., 430, 56 L. Ed. 1151; Knoxville v. Knoxville Water Co. 212 U. S. 1, 53 L. Ed. 371. Especially is this true where our statutes and the rate order here complained of provide that "this proceeding shall be kept open for such orders as may be proper." Immediately upon the rate in question being fixed, appellee applied to the courts to restrain its enforcement before an actual test was had under the reduced rate.

On the hearing before the Commission as well as on appeal to the court, five primary factors were considered as essential to the correct determination of whether the rate was confiscatory or unreasonable and unjust because it did not allow a reasonable return on the fair value of the property of appellee used in the public service of delivering natural gas to the various city gates, as follows:

1. What was the present fair value of the property of appellee used in the public service?

2. What was a reasonable annual allowance for depreci- [fol. 54] ation of such property?

3. What were the reasonably necessary operating expenses?

4. What were the reasonable operating revenues?

5. What was a reasonable rate of return on the property used?

The fair value of the property used by appellee in the public service was determined by deducting from the reproduction cost new the accrued depreciation of such property. Since appellee was engaged in the integrated business of producing, purchasing, transporting and selling natural gas to the distributing companies at the city gates of some 300 cities and towns in Texas and Oklahoma, it became necessary to allocate or segregate the property used in Texas as well as that used conjointly in both states, in order to determine the fair value of the property used in the Texas public service, the annual depreciation thereof, and the Texas operating expenses and revenue. In making the segregation and proof of fair value of the property, both the Commission and appellee used calculations, estimates and opinions of expert accountants and engineers. However, different methods of segregation were adopted by the parties. The method of segregation adopted by the Commission provided for allocation to Texas operations, or to intrastate commerce the value of all property located within the physical boundary of Texas. The short section of pipe line from Texas Panhandle field across the corner of Oklahoma and back into Texas was also allocated to Texas operations. Gas sales adjustment was made wherein Texas or intrastate operations were charged with the net amount of Oklahoma produced gas for the six-year [fol. 55] (1929-1934) accounting period adopted by the Commission. No charge against Oklahoma or interstate operations was made for the use of the transmission lines and for equipment within Texas; the effect of which was to give free transportation in Texas of all Oklahoma produced gas. Texas and Oklahoma expenses and revenues were allocated in general accord with the segregation of the physical properties. Under this method the fair value of the property undepreciated used in Texas public service was $40,256,862.39, according to the calculations and opinions of the Commission's experts. After deducting the operating expenses and annual depreciation there re-

mained for the last two years of the accounting period, being the two lowest revenue years of the period, Texas net revenue which would yield a return of 6.74% and 6.76%, respectively. The method of segregation used by appellee was materially different. Under its method of segregation all of the gas produced or purchased by appellee in Texas Panhandle field and transported by its private pipe lines across the corner of Oklahoma and back into Texas for sale and use, and all Oklahoma produced gas were allocated to interstate commerce. The allocation was made by a determination of the specific gravity of the Oklahoma and Texas Panhandle gas on the one hand, and West Texas gas with which it was commingled in pipe lines on the other hand. It seems that the Oklahoma and Panhandle gas had about the same specific gravity. Appellee claimed that by determining the specific gravity of the gas in any particular pipe line, the percentage of Oklahoma-Texas Panhandle gas could be determined and [fol. 56] allocated to that line. Appellee allocated operating expenses and revenue between the two states upon substantially the same basis as used for the property. An expert employed by appellee found the fair value of property used in Texas public service, based upon reproduction cost new, less depreciation, to be $38,350,882.32. He excluded from this calculation all property and equipment used in handling the Texas Panhandle field gas. If he had allocated such property to Texas and considered the fair value of the property as undepreciated, there would have been very little difference between his finding of fair value and that found by the Commission's experts. However, in all their elaborate calculations, estimates and opinions, the experts employed by the appellee allocated the Texas Panhandle gas to interstate commerce. We have held that this gas did not move in interstate commerce, and it necessarily follows that the testimony of the experts based upon the erroneous assumption that such gas did move in interstate commerce proved nothing material to this case. Appellee offered no other proof upon a correct segregation or allocation of the property, and the trial court erred in refusing the Commission's motion for an instructed verdict and for judgment declaring the rate order appealed from to be valid in every respect. The burden was upon appellee to show by clear and satisfactory evidence a proper segregation of interstate and intrastate properties and busi-

ness, and to show the value of the property employed in intrastate business or commerce and the compensation it would receive under the rate complained of upon such valuation. Having failed to make a proper segregation of [fol. 57] interstate and intrastate properties, appellee did not adduce the quantum and character of proof necessary to establish the invalidity of the rate as being confiscatory, or unreasonable and unjust. Simpson v. Shepard, 230 U. S. 352, 57 L. Ed. 1511; Allen v. St. Louis, I. & M. S. R. Co., 230 U. S. 553, 57 L. Ed. 1625; Smith vs. Illinois Bell Tel. Co., 282 U. S. 133, 75 L. Ed. 255.

Clearly the difference in theory as to whether the gas produced or purchased by appellee in the Texas Panhandle field and transported by its private pipe line across a corner of Oklahoma and back into Texas, where it was intended at all times to be sold and used, accounts for most of the important difference with respect to the fair value of the property used in Texas public service, the annual depreciation thereof, and particularly as to the operating expenses and revenues. For instance, the Texas Panhandle gas cost appellee 2¢ per thousand cubic feet at the well; whereas, the gas from all other sources or fields cost from 6 to 10¢ per thousand cubic feet. The advantage in favor of appellee in excluding this gas from intrastate commerce is apparent. The cost of the 2¢ gas would add only about $125,000 annually to Texas operating expenses, according to appellee's Exhibit No. 46; whereas, according to the same exhibit, which shows the percentage of the total cost of gas transported from the Panhandle field and sold in Texas, the Texas revenue would have been increased for the 1929-1933 period more than $1,500,000 annually; and calculations show that if other proper operating expenses were included and charged against the Panhandle gas, still [fol. 58] the profit in such gas was more than in other gas handled by appellee either in Oklahoma or Texas. Thus the double advantage to appellee in freeing this gas from intrastate commerce and from state regulation is shown.

The appraisals also differ as to various units of transmission construction costs, due in a large measure to the difference in theory of segregation. Where they relate to the same property the appraisals are in every way comparable. Appellee used actual cost experiences and arbitrarily added 20% as possible contingencies. The Com-

mission allowed only actual cost experiences, which were substantiated by the testimony of contractors engaged in excavation and general construction work. At most the evidence merely presented the difference of opinions of equally well qualified experts. Manifestly this evidence in absence of actual experience under the rate, does not meet the quantum and character of proof necessary to set aside the rate order as being confiscatory or unreasonable and unjust as to appellee.

The greatest difference between the parties relates to a proper allowance for depreciation and amortization. Appellee estimated that for both Texas and Oklahoma properties, exclusive of gas leasehold depletions, the annual requirement for depreciation and amortization was $3,465,-123.36. The Commission estimated that appellee should be allowed for annual depreciation and amortization of its Texas properties exclusive of leaseholds, the sum of $831,946.08. The actual experience of the appellee for the seven-year period as shown by its books, is as follows:

[fol. 59] "Jan. 1, 1927, to Dec. 31, 1933, Inclusive

Jan. 1st	Balance	Accrual	Net Charges
1927	$8,294,762.08	$1,280,856.10	$245,097.73
1928	9,330,520.45	1,198,192.50	260,768.59
1929	10,267,944.36	1,190,062.06	450,335.00
1930	11,007,671.42	580,022.80	464,875.93
1931	11,122,818.29	1,841,779.61	720,014.28
1932	12,244,583.68	1,841,508.16	(Credit 62,725.18
1933	14,148,817.02	1,882,333.41	335,736.55
1934	15,695,413.88	Total	$2,414,102.90"

Thus it is shown that the depreciation allowance of appellee's experts is speculative, at war with the actual experience, and plainly excessive. Against $2,414,102.90 for the seven-year period as evidenced by appellee's books, its experts estimate annual depreciation and amortization at approximately $1,000,000.00 per year more. With respect to such proof it was held in the case of Lindeheimer v. Ill. Bell Tel. Co., 292 U. S., 151, 78 L. Ed. 1182, that:

"The company has had abundant opportunity to establish its contentions. In seeking to do so the company has submitted elaborate estimates and computations, but these have overshot the mark. Proving too much, they fail of the intended effect." • • • •

"Elaborate calculations which are at war with realities are of no avail."

3363

The Commission adopted the sinking fund method for determining annual depreciation, which provides for an annual return on an undepreciated rate base; and which in addition to the annual depreciation of $831,946.08, also allowed 6% per annum on the accumulated depreciation reserve. The calculations and estimates of appellee applied to both Texas and Oklahoma properties, and since such calculations and estimates are so contrary to the experiences of the company, they do not meet the quantum [fol. 60] and character of proof required with respect to judicial appellate review of utility rates fixed by an administrative commission or board. Dayton P. & L. Co. v. Pub. Com., supra.

With respect to operating expenses, except as to a few controverted items, and with respect to revenues, there is no substantial difference in the testimony as to totals of both Texas and Oklahoma for the years of the accounting period. However, the same controversy arises as to a proper segregation of such expenses and revenues to each state. This difference has already been pointed out, and since appellee failed to make proper segregation of the expenses and revenues, it failed to prove its case.

Many items of operating expense are so contrary to the actual experiences of appellee, or are so large as to be excessive on their face. A few of these will be adverted to as showing that in proving too much appellee's experts proved nothing.

Federal Taxes

An item of between three and four hundred thousand dollars a year is set aside by the experts as federal income and other taxes. The company has never paid an income tax, and its liability therefor is now in litigation. The only testimony in the record with regard to the amount that should be paid for taxes by appellee in its department of the corporate hook-up was around $50,000 per annum. The testimony indicates that the Lone Star Gas Corporation, the holding company, has paid all of the income taxes for all of its affiliated companies; but if it be assumed that such payment is chargeable back to appellee company, a [fol. 61] proper amount would not be more than $50,000 per year, instead of the three or four hundred thousand dollars charged against it by the experts. Galveston Electric Co. v. Galveston, 258 U. S., 388.

Management Fees

The evidence shows that the holding corporation has charged appellee management fees ranging from $78,000 to around $100,000 per year. These fees appellee claims were earned by four persons, Crawford, Mitchell, Gregory and Simpson. They are directors of one or the other corporations constituting the corporate set-up above referred to. Simpson seems to have rendered service as a purchaser of pipes for appellee. The item of pipes was the greatest of appellee's expenses. The evidence shows that if Simpson rendered any service in purchasing pipes at a discount, that no such discount would be any longer allowed, and that appellee would have to pay the quoted prices like anyone else. Manifestly this service is not worth anything in the future. Besides, he rendered the services prior to 1929, when the management fee was originated, and no compensation was required before that time. Other management fees were charged, as legal fees, accounting fees, and engineering and supervision fees. Appellee was organized in 1909, with a capital stock of $2,500,000, half of which was paid for with gas leases owned by the incorporators. Since then its capital stock has been increased to $12,500,000. It borrowed on its unsecured note or open account $17,600,000 from the holding corporation, which debt with others amounting to $19,000,000, have been gradually reduced. The holding [fol. 62] corporation borrowed this money from one-half to two per cent less than it charged appellee. This ought to be sufficient management fees, if any should be demanded by the holding corporation. The holding corporation has been paid fair to large dividends annually on the stock of appellee owned by it. In addition, some of the holding company officers are paid salaries by appellee and the affiliated distributing companies. The proof as to the reasonableness of the management fee was not clear and satisfactory, as required to be under the aforementioned rule.

New Business Expenses

These advertising or new business expenses vary from $81,000 to $126,000 per annum. Appellee does business with the affiliated corporations. Besides sale of the industrial gas, the affiliated corporations sell to the domestic

and local burner tip consumers. Appellee proved only a small amount of advertising, nothing in proportion to the charges made by the experts in their account. Except for a few items, it made no showing how much advertising it did for the affiliated distributing companies; and certainly this $100,000 annual expense for advertising is not supported by the quantum and character of evidence required.

Cancelled and Surrendered Leases

The undisputed evidence shows that appellee has gas reserves which are adequate for forty years to come. It has gas reserves in the largest gas fields in the world. Beginning in 1929, appellee began to charge off around $200,000 per annum for cancelled and surrendered leases. In view of its admitted large gas reserves, which will last for forty [fol. 63] years, and in view of the fact that it is a matter of judicial knowledge that gas by the multiplied millions in cubic feet is being wasted daily because of the lack of a market, we think these large charges are unjustified. The Commission allowed the company for its gas produced from company owned wells the full prevailing price. They eliminated production expenses, drilling and tool expenses, dry holes, and cancelled and surrendered leases, because the method adopted of allowing the full prevailing field price concurrently paid to other gas owners necessarily eliminated such items. The owners of other gas wells bear all of these expenses, and it would seem that the price paid other owners includes all of these items of expense. West Ohio Gas Co. v. Public Utilities Com., 191 N. E., 105. At any event, if appellee was entitled to some charge for leasehold depletions, the amount claimed was clearly too large and excessive. The burden was upon appellee to show that the charge was reasonable.

Regulatory Commission and General Expenses

The experts employed by appellee charged in excess of $400,000 per annum for regulatory commission and general expenses. The proof did not show the reasonableness of any item of such expense. There was some character of litigation in Oklahoma and this present litigation. If the entire expense should be spread over a period of years since 1909, when the appellee began to do business, it would amount to some $16,000 per year. A witness for appellee

testified that such annual amount would be reasonable. It is, therefore, manifest that $50,000 per year or better for [fol. 64] such expenses is too much. This defendant began business in 1909, with a comparatively small capital stock. It has now a capital stock of $12,500,000, which is fully paid up. It owes approximately $17,600,000; it has properties in Oklahoma and Texas of the aggregate value of $75,000,000. Allocated to Texas public service is property valued at $40,000,000. Appellee offered evidence covering only about 3½ years next preceding the fixing of the rate as to its operating expenses. These calculations covered the depression years, which, of course, are the worst in its history; and even at that the last year shows an upward trend in its business. It is not shown to have lost money at any time, nor to have failed to earn a fair return upon the property allocated to Texas, not even for the year 1933, which was the most abnormal one from the standpoint of temperature and financial depression. Its experts testified that its property is almost 85% perfect. From the very beginning appellee has been favored, enjoying a clear monopoly with all the rights of eminent domain. There is nothing in the history of appellee's business experience which would justify the exorbitant and large account sought to be charged in this item of expense.

Going Value

In arriving at its rate base appellee included an item of more than $7,000,000 as "going value". Appellee has not experienced any losses on account of inception costs, which are usually included in going value. With the exception of a few small items, inception costs of all kinds have been included in reproduction cost new calculations. Appellee's [fol. 65] business was valued as an assembled and going business. The business has always been profitable, and all inception costs have no doubt been long since paid out of rates heretofore charged and collected. The reproduction cost new value, as determined in the instant case, allows for all overhead expense, which, together with the reasonable operating expenses allowed, fully compensate appellee for all development costs which have been incurred, and are ample to cover items entering into and forming a part of what is referred to as "going concern value". The following authorities show clearly the impropriety of allow-

ing going concern value under the facts of the instant case. Los Angeles Gas & Electric Corp. v. R. R. Com., 289 U. S., 287, 77 L. Ed. 1180; Columbus Gas & Fuel Co. v. Pub. U. Com., 78 L. Ed. 1327; Dayton Power & Light Co. v. Utility Com. 292 U. S. 290, 78 L. Ed. 1267; Galveston Electric Co. v. Galveston, 258 U. S., 388, 272 Fed. 147.

Rate of Return

It is the contention of appellee that the jury may have found that a 6% rate of return was confiscatory or unreasonable and unjust. The issue of confiscation was not submitted to the jury, and we are clear in the view that the evidence adduced by appellee did not raise a jury question as to whether a 6% rate of return was either confiscatory or unreasonable and unjust. The Commission found that a 6% rate of return on the fair value of the property used in the public service, after allowing for all reasonable operating expenses and for depreciation and amortization, was sufficient. The burden was heavily upon appellee to show by clear and satisfactory evidence that such rate of return [fol. 66] was confiscatory or unreasonable and unjust. To meet this test appellee was required to "establish by evidence which leaves no reasonable doubt in the judicial mind that the rate or rule is unjust and unreasonable." R. R. Com. v. Galveston, etc., supra. This appellee did not do. It offered the testimony of an interested witness and the testimony of experts employed by it to the effect that in their opinion an 8% or 10% rate of return would be reasonable. A disinterested expert testified that under present business conditions a 6% rate of return was entirely fair and reasonable. This evidence merely presented the difference of opinion of experts, and manifestly their opinion or opinions cannot be substituted for the finding of the Commission that a 6% rate of return was fair and reasonable, which finding was based upon substantial evidence. In fact, six per cent per annum is the legal or statutory rate of interest in this State, and appellee offered no evidence which even tended to show that a 6% rate of return would confiscate its property, or was unreasonable or unjust. And since the rate order was calculated upon the fair value of the property used in the public service, after allowing very reasonable operating expenses and depreciation

and amortization allowances, no reason exists why the 6% rate of return should be declared confiscatory; but to the contrary, it should be held to allow a fair and reasonable rate of return on the property dedicated to the public service by appellee.

A 6% rate of return has been held not confiscatory in the following cases: Wilcox v. Consolidated Gas Co., 212 U. S. [fol. 67] 19, 48, 50, 29 S. Ct. 192, 53 L. Ed. 382, 15 Ann. Cas. 1034, 48 A. L. R. (N. S.) 1134; Cedar Rapids Gas & Light Co. v. Cedar Rapids, 223 U. S. 655, 670, 32 S. Ct. 389, 56 L. Ed. 594; Des Moines Gas Co. v. Des Moines, 238 U. S. 153, 172, 35 S. Ct. 811, 59 L. Ed. 1244. See also Stanislaus County v. San Joaquin C. & I. Co., 192 U. S. 201, 216; West Ohio Gas Co. v. Public Utilities Com., 191 N. E. 105, 115; State ex rel Capital City Water Co. v. Public Service Com. of Missouri, Sup. Ct. of Mo. in Banc, 252 S. W. 446, 454-459.

We are also clear in the view that where a state commission fixes a utility rate so as to allow a 6% rate of return on the property used in the public service, the courts will not, prior to a fair test of such rate, declare same void, unless the evidence establishes that it is confiscatory or invalid as a matter of law. Denver Union Stock Yard Co. v. United States, 57 Fed. (2) 735, 752, 753; State v. Public Service Com., 252 S. W. 446, 458 (Mo. in Banc); Knoxville v. Water Co., 212 U. S. 1, 15; West Ohio Gas Co. v. Public Utilities Com., 191 N. E. 105, 110; Cedar Rapids Gas Co. v. Cedar Rapids, 223, U. S. 655, 666, 670; Wilcox v. Consolidated Gas Co., 212 U. S. 19, 51; Railroad Com. of Louisiana v. Cumberland Tel. & Tel. Co., 212 U. S. 414, 426.

The calculations, estimates and opinion of its experts show a studied effort on the part of appellee to charge large items as operating expenses and depreciation, at war with the actual experience of the company, and we find no proof which would authorize the trial court to submit any issue to the jury, but find that appellee wholly failed to meet the [fol. 68] burden of proof placed upon it, and to show by clear and satisfactory evidence that the rate was confiscatory, unjust, and unreasonable as to it. Especially is this true in view of the rule that absence actual experience under the rate fixed, the courts will not disturb a rate where the evidence is so conflicting, and the conclusions to be drawn therefrom in respect to this or that item uncertain

and speculative; and particularly is this true where, as in the instant case, if it be shown in actual experience that the rate would not afford a reasonable return and was confiscatory, appellee is free to make another application for relief before the Commission.

Judgment of the trial court declaring the rate to be unjust and unreasonable is reversed. The injunction granted by the trial court is dissolved, and the city gate rate of 32¢ fixed by the Commission is declared to be just, reasonable and valid in every particular.

M. B. Blair, Associate Justice.

Judgment trial Court Reversed; Injunction Dissolved.

[File endorsement omitted.]

[fol. 69] In Court of Civil Appeals of Texas

8238

State of Texas et al. vs. Lone Star Gas Company

Appeal from District Court of Travis County

Opinion by Associate Justice Blair

Judgment—July 10, 1935

This cause came on to be heard on the transcript of the record and same being inspected, because it is the opinion of the Court that there was error in the judgment; It is therefore considered, adjudged and ordered that the judgment of the trial court be, and same is hereby reversed, and that judgment be, and is hereby rendered for appellants decreeing that the order of the Railroad Commission of Texas, appealed from, is valid in every particular; and it is further ordered, adjudged and decreed that the injunction granted by the trial court be, and same is hereby dissolved; that the appellee, Lone Star Gas Company, pay all costs in this behalf expended, both in this Court and in the trial court, and that this decision, with a copy of the opinion herein delivered, be certified below for observance.

[fol. 70] IN COURT OF CIVIL APPEALS FOR THE THIRD SUPREME JUDICIAL DISTRICT OF TEXAS

[Title omitted]

APPELLEE'S MOTION FOR REHEARING—Filed July 24, 1935

Comes now Lone Star Gas Company, appellee in the above styled and numbered cause and moves the court to set aside its judgment reversing the judgment of the District Court and rendering judgment for appellants, rendered on the 10th day of July, A. D. 1935, and to grant appellee a rehearing, and as grounds for its motion appellee respectfully shows:

1

The Honorable Court of Civil Appeals having held that [fol. 71] the scope of judicial review of the Railroad Commission's order by the district court under the Texas statutes, on appellee's claim that said order is unjust, unreasonable and confiscatory, is merely corrective and that such review is limited to a determination of whether the commission's order is supported by substantial evidence, erred in failing to declare said order void as being in conflict with the due process requirements of the 14th Amendment to the Federal Constitution, which entitles appellee to a judicial review of said order before a court with power to exercise an independent judgment as to both the facts and law involved.

2

The Honorable Court of Civil Appeals having held that under the statutes and procedure of Texas the district court was without power to exercise an independent judgment as to the probative force of the facts involved and the law applicable thereto on the issue of confiscation, unjustness and unreasonableness of the Railroad Commission's order as raised in appellee's answer and by appellee's evidence, the Honorable Court of Civil Appeals erred in failing to hold said order invalid and void as being in conflict with the due process clause of the 14th Amendment to the Constitution of the United States.

3

The court having held in effect that in suits filed pur- [fol. 72] suant to the provisions of Article 6059 R. S. 1925

the courts may not exercise an independent judgment in determining whether rate orders of the Railroad Commission are unjust and unreasonable or confiscatory, but that the courts must affirm such orders if there is substantial evidence to support them notwithstanding the evidence is conflicting, erred in holding the Railroad Commission's order valid for the reason that such holding denies to appellee a judicial review of the rate order in question on the constitutional issue of confiscation to which appellee is entitled under the 14th Amendment to the Constitution of the United States.

4

The court having construed Article 6059 R. S. 1925 as withholding from the district court the power to determine the question of confiscation, unjustness and reasonableness of the rate order of the Railroad Commission according to its own independent judgment, the court erred in sustaining the commission's order and in not holding the same invalid and repugnant to the 14th Amendment to the Federal Constitution for want of due process of law in the State procedure for testing the validity of said order.

5

The court erred in holding that in determining the question of whether the order of the Railroad Commission was confiscatory of appellee's property used in the public service the district court was confined to a determination of [fol. 73] whether or not there was substantial evidence to support the order of the commission, and that if there was such evidence the order of the commission must be upheld, because such holding operates to deny to appellee the right to the independent judgment of the court on both the facts and law and to deny to appellee the right to a determination of the reasonableness of the order based upon the weight to be given to conflicting testimony, in violation of appellee's rights under the due process clause of the 14th Amendment to the Constitution of the United States.

6

The judgment of the Honorable Court of Civil Appeals is erroneous in that the court in effect has denied to the district court the power to pass upon the facts which underlie the

question of whether or not appellee's property is being confiscated, and inasmuch as neither this court nor the Supreme Court of Texas has any statutory power to pass upon such facts, appellee has been denied the opportunity of having the independent judgment of a Texas court on questions of fact involved in a determination of the issue of confiscation and thus has been denied due process of law in violation of its rights under the 14th Amendment to the Constitution of the United States.

7

The judgment of the Honorable Court of Civil Appeals is erroneous in that the court has construed Article 6059 Re- [fol. 74] vised Statutes of 1925, as withholding from the district court the power to pass upon the facts which underlie the question of whether or not appellee's property is being confiscated.

8

Inasmuch as the Honorable Court of Civil Appeals holds that this suit, or appellee's answer herein, is in effect an appeal from the order of the Railroad Commission pursuant to the provisions of Article 6059 Revised Civil Statutes of Texas, and inasmuch as the court has construed that statute as withholding from and denying to the district court the right and power to exercise an independent judgment on the facts underlying the issue of the unreasonableness, unjustness and confiscatory character of the order of the commission and has held that the order of the commission must be sustained if there is any substantial evidence offered upon the trial de novo supporting it, and inasmuch as the statutes and Constitution of Texas as construed deny to this court and the Supreme Court of Texas such power and authority, and inasmuch as appellee has been compelled to follow the procedure which has been followed against its wishes and over its objection, appellee has not obtained that due process of law to which it is entitled under the 14th Amendment to the Constitution of the United States. Accordingly, the order of the commission was void and the court erred in failing to so hold.

9

Appellee having filed its bill of complaint in the United States District Court for the Western District of Texas al-

[fol. 75] leging that the order of the Railroad Commission was unjust, unreasonable and confiscatory and praying for an injunction enjoining and restraining the enforcement of said order, and said proceeding having been stayed and suspended after the filing of this suit and until its final determination pursuant to Section 266 of the Judicial Code, and appellee having been forced to defend itself in this proceeding brought to enforce the commission's order, and having alleged as a defense to this suit that said order of the Railroad Commission was unjust, unreasonable and confiscatory, and having produced competent evidence showing that under said order it would not receive an annual return of six (6%) per cent on the fair value of its public service property, which the commission held was the minimum return to which appellee is entitled, the Honorable Court of Civil Appeals erred in reversing the judgment of the district court that said order was unjust and unreasonable and invalid, and in holding that the district court in this case was without power to exercise an independent judgment as to the law and facts involved on the conflicting evidence but was required as a matter of law to instruct a verdict in favor of appellants sustaining the validity of the commission's order.

10

The court erred in holding that appellee obtained a trial de novo on the question of confiscation or on the question [fol. 76] of the reasonableness and justness of the order of the commission in view of its holding that the order of the commission must be upheld as a matter of law if there is any substantial evidence to support it, the latter holding denying in substance the right recognized by the former holding.

* * * * * * *

[fol. 77] 12

The court erred in rendering judgment for appellants, because not only does Article 6059 of the Revised Civil Statutes of Texas as construed deny to appellee due process of law in violation of its rights under the 14th Amendment to the Constitution of the United States, and not only does the court treat this case and answer of appellee as an appeal thereunder, but appellee has been compelled to follow the procedure outlined thereunder upon representations by ap-

pellants that every constitutional and legal right to which it might be entitled would be fully safeguarded and that it would be entitled to the same sort of trial to which it would have been entitled in its suit in the Federal Court upon the basis of which representations the Federal Court stayed proceedings therein, with the result that not only does appellee fail to get the kind of trial to which it would have been entitled in the Federal Court but is denied the opportunity of ever obtaining the same.

* * * * * * *

[fol. 78] 14

The Honorable Court of Civil Appeals erred in holding in effect that in order to overcome the prima facie presumption of the validity of the Railroad Commission's order, appellee was required, as a matter of law, to show by undisputed and indisputable evidence that the order of the Railroad Commission was unjust, unreasonable and confiscatory.

* * * * * * *

16

The appellee having alleged that the order of the Rail-
[fols. 79-80] road Commission was unjust and unreasonable as to it and confiscatory of its property, and appellee's evidence being clear and satisfactory and having clearly shown that the rate prescribed in the commission's order would not afford appellee a net return of six (6%) per cent per annum on the fair value of its public service property which the commission found was the minimum return to which appellee is entitled, the Honorable Court of Civil Appeals erred in holding that because there was a conflict in the evidence and the appellants' evidence sustained the commission's order, the trial court was required as a matter of law to sustain appellants' motion for an instructed verdict.

* * * * * * *

[fol. 81] 22

The court erred in holding that "when viewed in the light of the presumption in favor of the validity of the rate or-

der, and the quantum and character of the evidence required to overcome such presumption, the evidence adduced by appellee was clearly insufficient to show the rate confiscatory or unreasonable and unjust on the ground alleged."

* * * * * * *

[fol. 82] 25

The court erred in holding in substance and effect that Article 6059 of the Revised Statutes of 1925, denies to the district court on the trial de novo the right to determine that the order of the commission is unjust and unreasonable if there is any substantial evidence to support the order of the commission, because the statute as thus construed denies to appellee in this case the right to the independent judgment of the court on both the facts and law and is a denial to appellee of due process of law.

26

The court erred in holding that "we are clear in the view that the evidence adduced by appellee did not raise a jury question as to whether a six (6%) per cent rate of return was either confiscatory or unreasonable and unjust," because such holding denies appellee due process of law and the right to a judicial review of the order of the Railroad Commission, based upon the independent judgment of the court on the facts and law, inasmuch as the trial court and the jury are deprived of the right to make such independent determination based upon the credibility of witnesses and the weight to be given to their testimony.

* * * * * * *

[fol. 83] 29

The court erred in holding that appellee did not meet the burden of showing by clear and satisfactory evidence that the 32¢ rate would not afford a reasonable return on the property used in the Texas public service, and that "the trial court erred in overruling the commission's motions for an instructed verdict and for judgment declaring the rate to be valid," because appellants' evidence, if believed (and the credibility of the witnesses and the weight to be given to

their tsetimony were matters to be determined by the jury) proved clearly and satisfactorily that the rate was unjust, unreasonable and confiscatory, and such testimony, if it did not prove as a matter of law that the rate fixed by the com-
[fol. 84] mission was confiscatory, unjust and unreasonable, at least raised an issue of fact which should have been submitted to the jury.

30

The court erred in failing and refusing to sustain appellee's Third Cross-Assignment of Error as follows:

"The court erred in overruling and refusing to give defendant's request for a peremptory instruction duly and timely presented at the conclusion of all the evidence in the case, and after both plaintiffs and defendant had rested, because it appeared from the undisputed evidence, as a matter of law, that the rate of 32 cents prescribed by the commission in its order of September 13, 1933, was unjust, unreasonable, and confiscatory in this, that if said rate had been in effect during the year 1931, and subsequent accounting periods, defendant would not have earned and would not have been able to earn the minimum net rate of return to which the Railroad Commission found it was entitled, upon the fair value of its public service property, as determined by the commission.

"Wherefore, defendant was entitled to an instructed verdict and to judgment based thereon. (Defendant's Cross-Assignment of Error No. 15 (Transcript 587)."

31

The court erred in holding that the fair value of the property undepreciated used in Texas public service was $40,256,862.39, because such evaluation includes only a part of the property physically located in Texas and none of the property situated in Oklahoma and used in Texas public service.

* * * * * * *

[fol. 85] 33

The court erred in failing and refusing to sustain appellee's Fifth Cross-Assignment of Error, as follows:

"The court erred in overruling and in refusing to give defendant's request for a peremptory instruction duly and

timely presented at the conclusion of all the evidence in the case, and after both plaintiffs and defendant had rested, because it appeared from the undisputed evidence, as a matter of law, that the rate of 32 cents prescribed by the commission in its order of September 13, 1933, was unjust, unreasonable and confiscatory in this, that if said rate had been in effect during 1931, and subsequent accounting periods, defendant would not have earned and would not have been able to earn anything like the fair net annual rate to which it was entitled in law, or the minimum net rate of return to which the commission found it was entitled upon the fair value, at the time of the inquiry, of all of its public service property, wherever located.

"Wherefore, defendant was entitled to an instructed verdict and to judgment based thereon. (Defendant's Cross-Assignment of Error No. 17, Transcript 589.)"

34

The court erred in failing and refusing to sustain appellee's Sixth Cross-Assignment of Error, as follows:

"The court erred in overruling and in refusing to give [fol. 86] defendant's request for a peremptory instruction duly and timely presented at the conclusion of all the evidence in the case, and after both plaintiffs and defendant had rested, because it appeared from plaintiff's own testimony that the rate of 32 cents prescribed by the commission in its order of September 13, 1933, was unjust, unreasonable and confiscatory in this, that even adopting plaintiffs' valuation of defendant's public service property located in Texas, and assuming that such a valuation is of probative force and effect under the issues made in this case, nevertheless, if said rate had been in effect during 1933 and 1934, defendant would not have earned as much as the minimum net rate of return to which the Railroad Commission found it was entitled. Hence, on the basis of plaintiffs' own testimony, defendant was entitled to an instructed verdict and to judgment based thereon. (Defendant's Cross-Assignment of Error No. 20, Transcript 591)."

35

It appearing from the undisputed evidence in this case that the rate prescribed in and by the order of the Rail-

road Commission would not permit appellee to earn a reasonable return on the fair value of its property used and useful in the public service, the judgment of the Honorable Court of Civil Appeals affirming the validity of said order operates to take appellee's said property for public use without just compensation or due process of law in violation of appellee's rights under the 14th Amendment to the Constitution of the United States and said Honorable Court of Civil Appeals erred in rendering said judgment and in not affirming the judgment of the district court holding said order invalid.

36

It appearing from the undisputed evidence in this case [fol. 87] that the rate prescribed in and by the order of the Railroad Commission would not permit appellee to earn a reasonable return on the fair value of its property used and useful in the public service, the judgment of the Honorable Court of Civil Appeals affirming the validity of said order operates to take appellee's said property for public use without just compensation or due process of law in violation of appellee's rights under Section 17, Article I, of the Constitution of the State of Texas, and said Honorable Court erred in rendering said judgment and in not affirming the judgment of the district court holding said order invalid.

37

The Railroad Commission and the Honorable Court of Civil Appeals having found and held that appellee's pipe line system in both Texas and Oklahoma is an integrated system, and the Honorable Court of Civil Appeals having further held that the gas produced by appellee in Oklahoma and transported and delivered at points in Texas is not interstate commerce, and the undisputed evidence showing that appellee's property in Oklahoma having a value of several millions of dollars is used in producing gas which is transported by pipe lines and sold in Texas, it was error for the Honorable Court of Civil Appeals to approve appellants' estimate of the fair value of appellee's property which admittedly excluded all of appellee's prop- [fol. 88] erty in Oklahoma and upon which estimate the order of the Railroad Commission is held to be fair, reasonable and valid, appellee being denied an opportunity

under the court's holding of earning a reasonable return on the fair value of such property and thereby being denied due process of law and just compensation for the use of its property in the public service in violation of the Texas and National Constitutions.

* * * * * * *

39

The witnesses for appellants having eliminated from their computation of the value of appellee's property in Texas, natural gas reserves, including producing as well as non-producing, gas wells and gas well equipment, having an actual book cost of approximately $4,500,000.00 and pipe lines of the value of many thousands of dollars, all of which the undisputed evidence in this case shows were used and useful in the public service, in order to show that the rate prescribed in the commission's order permitted appellee to earn approximately the six (6%) per cent return which the commission held was the minimum return to which appellee was entitled, the Honorable Court of Civil Appeals erred in holding that appellants' computation of value represented the fair value of appellee's property in Texas and [fol. 89] that the trial court should have instructed a verdict for appellants because there was substantial evidence to support the commission's order allowing appellee a return of 6% per annum, the effect of which holding was to deny to appellee just compensation for the use of its property in the public service in violation of appellee's rights under the Texas and Federal Constitutions.

40

The witnesses for appellants having included in their computation of appellee's operating revenues $334,000.00, which indisputably appellee never received, on the ground that appellee would have sold more gas and thereby increased its revenues if the weather had been colder, in order to show a return to appellee of approximately six (6%) per cent per annum on a part of its property located in Texas, the Honorable Court of Civil Appeals erred in holding that there was substantial evidence to support the Railroad Commission's order.

41

The Honorable Court of Civil Appeals erred in holding in effect that after allowing appellee the well head price paid by appellee to independent producers for all gas produced by appellee from its own gas reserves, the elimination from the rate base of gas reserves, gas wells and equipment which cost appellee approximately four million, five hundred thousand ($4,500,000.00) Dollars, and of appellee's actual expenses of operation for cancelled and surrendered [fol. 90] leases, dry hole expense, gas production expense and drilling and tool expense was justified, inasmuch as the uncontradicted evidence shows that said allowance would be insufficient to provide for the depletion of said gas reserves, allow for the aforesaid expenses of operation and provide any return to appellee on the fair value of its gas reserves, gas wells and gas well equipment.

42

The undisputed evidence showing that appellants' witnesses eliminated from their evaluation of appellee's production system property producing and non-producing gas reserves, gas wells and gas well equipment which cost appellee approximately $4,500,000.00 and in lieu thereof allowed appellee as an expense of operation the well head price paid by appellee for gas produced from independent gas operators, the court erred in adopting and approving such method of evaluation in affirming the validity of the commission's order, for the reason that such method of evaluation, as well as the court's holding, denies to appellee an opportunity of earning a reasonable return upon the fair value of its property used in the public service.

43

It appearing from the record and evidence herein that after allowing the sum advocated by appellants for an- [fol. 91] nual depreciation, depletion and amortization reserve accruals, and after giving effect to the actual revenues received and operating expenses incurred by appellee, but excluding any fees paid to the holding company, appellee would receive under the rate prescribed in the order of the Railroad Commission, less than a six (6%) per cent

annual return on the property value contended for by appellants under the theory of allocation adopted by appellants and approved by the Honorable Court of Civil Appeals, it was error for the Honorable Court of Civil Appeals to reverse the judgment of the trial court and render judgment for appellants on the grounds that the evidence was insufficient as a matter of law to show that the order of the Railroad Commission was unjust and unreasonable as to appellee.

44

The evidence introduced by appellee having clearly shown that under the rate prescribed in the Railroad Commission's order appellee would receive less than the six (6%) per cent annual return which the Railroad Commission found and held was the minimum return to which appellee is entitled on the fair value of its public service property, the Honorable Court of Civil Appeals erred in reversing the judgment of the trial court and rendering judgment for appellants sustaining the validity of the said order on the grounds that appellee failed, as a matter of law, to offer evidence of such probative force as to overcome the [fol. 92] presumption that said order was valid, just and reasonable.

* * * * * * *

47

The Honorable Court of Civil Appeals having held in effect that the Railroad Commission made out a prima facie case by introducing the order of the Railroad Commission in evidence, which order was based on an evaluation and consideration of appellee's system as a whole and the income from and the expenses on said system, erred [fol. 93] in holding that appellee did not make out a prima facie case of the unjustness and unreasonableness of said order by showing that if said order had been in effect for the years in question appellee would not have earned a six (6%) per cent annual return even on the commission's rate base, and after giving effect to the commission's depreciation allowance and operating expenses.

48

The court erred in holding that the evidence with respect to the question of rate of return merely presented the dif-

ference of opinion of experts and that their opinion or opinions could not be substituted for the finding of the commission that a 6% rate of return was fair and reasonable.

49

The Honorable Court of Civil Appeals erred in holding that the testimony and evidence of appellee as to the proper annual sum to be allowed for credit to a reserve to provide for depreciation, depletion and amortization was speculative, at war with actual experience and plainly excessive, because the undisputed evidence shows that such calculations and estimates were based upon a study of the appellee's history, its past experience and its probable future requirements for depreciation, depletion and amortization.

[fol. 94]

50

The evidence showing that the calculations of appellee's witnesses as to the annual sum which should be accrued for depreciation, depletion and amortization were based upon the history of appellee, its past experience and future requirements, it was error for the Honorable Court of Civil Appeals to hold that such evidence was contrary to the experience of the company and of no probative force as a matter of law.

51

The evidence showing that the appellants' estimates for reserve accruals to provide for depreciation and amortization did not include any allowance for the depletion of gas reserves, or the depreciation and amortization of appellee's property in Oklahoma that is used in the production and transmission of gas to points in Texas and certain pipe lines located in Texas, and that same was inadequate to meet the future requirements of the appellee for removals, abandonments, replacements, depletion and amortization, the Honorable Court of Civil Appeals erred in holding that appellants' estimates were adequate and that the commission's order was shown thereby to be just, reasonable and valid.

52

The evidence showing that the commission's allowance for annual reserve accruals to provide for depreciation and [fol. 95] amortization was computed on a sinking fund basis

which required the existence and use of a sum in excess of $5,000,000.00 in said reserve account at the date of inquiry, and which allowance was admittedly insufficient for the future requirements of appellee without the use of said credit balance in the reserve account, the Honorable Court of Civil Appeals erred in holding that said allowance would be adequate for future requirements and that the order of the commission based thereon was just, reasonable and valid, such holding denying to appellee the right to earn a reasonable return on the fair value of its property used in the public service, in violation of appellee's rights under the Texas and National Constitutions.

53

The court erred in holding that the depreciation allowance of appellee's experts was speculative, at war with the actual experience of the company and plainly excessive, because said finding of fact is a finding based on conflicting testimony and on the weight to be given to the testimony of the witnesses and the credibility of the witnesses, all of which matters are matters for the determination of the jury and not for the determination of this court, and which this court has no power or authority to determine.

* * * * * * *

[fol. 96]

56

There being no evidence establishing or showing that $50,000.00 per annum would be a sufficient sum to allow appellee for Federal Income taxes, the Honorable Court of Civil Appeals erred in so finding.

57

The undisputed evidence showing that appellee actually expended in acquiring or attempting to acquire new busi-
[fol. 97] ness by way of advertising, solicitation and otherwise, the following sums, to-wit: $126,125.98 in 1931, $87,528.94 in 1932, $99,793.94 in 1933, and $101,308.68 during the twelve months' period ending March 31, 1934, and the undisputed evidence further showing that such expense was incurred in the exercise of the best judgment of appellee, and there being no evidence of inefficiency or improvidence

on the part of the appellee's management, the Honorable Court of Civil Appeals erred in holding that said expense was not supported by the quantum and character of evidence required in order for it to be allowed as an expense of operation in fixing appellee's rates.

58

The undisputed evidence showing that the amount charged by appellee as an expense of operation for gas leases acquired but cancelled and surrendered was the actual amount paid for such leases as reflected on the books of appellee, and the undisputed evidence further showing that such expenditures were made by appellee in the exercise of the best judgment of its management, and there being no evidence of inefficiency or improvidence on the part of appellee's management, the Honorable Court of Civil Appeals erred in holding that said expense was not supported by the quantum and character of evidence required in order for it to be allowed as an expense of operation in fixing appellee's rates, such holding denying to appellee [fol. 98] its rights under the 14th Amendment to the Federal Constitution.

59

There being no evidence of inefficiency or improvidence on the part of appellee's management, the Honorable Court of Civil Appeals erred in holding that it was proper to eliminate as an expense of operation in the computation of appellee's rates, the sums actually expended by appellee annually in the due course of its business for gas production expense, drilling and tool expense, and dry hole expense, such holding denying to appellee its rights under the 14th Amendment to the Federal Constitution.

60

The Honorable Court of Civil Appeals erred in holding that, "The reproduction cost new value, as determined in the instant case, allows for all overhead expense, which together with the reasonable operating expenses allowed, fully compensate appellee for all development costs which have been incurred, and are ample to cover items entering into and forming a part of what is referred to as 'going concern value'."

61

The undisputed facts showing that appellee began operations in 1909 as a small concern with comparatively few consumers, and that as of the date of this inquiry it was [fol. 99] rendering an efficient and dependable natural gas service to distributing companies who in turn serve 202,882 customers who are well educated in the use of natural gas, that appellee's said business has been gradually built up over a long period of years and is adequate to give appellee a reasonable return on the fair value of its property under rates which are reasonable to the public, the Honorable Court of Civil Appeals erred in holding that it was improper to allow for going concern value under the facts of the instant case, such holding denying to appellee its rights under the 14th Amendment to the Federal Constitution.

62

The Honorable Court of Civil Appeals erred in finding and holding that appellee offered no evidence which even tended to show that a six (6%) per cent rate of return would confiscate its property, or was unreasonable or unjust.

63

There being ample evidence showing that a return of from eight to ten per cent would be just, fair and reasonable for appellee to earn, the court erred in holding that as a matter of law the trial court and jury were without power to say that a six (6%) per cent return is unjust and unreasonable as to appellee.

[fol. 100]

64

The court having found that there was evidence that an eight or ten per cent per annum net return would be fair and reasonable for appellee to earn and that there was a difference of opinion among the witnesses who testified on that point, erred in holding that, "This evidence merely presented the difference of opinion of experts * * * and their opinions cannot be substituted for the finding of the commission that a six (6%) per cent rate of return was fair and reasonable."

65

The appellee having alleged that the order of the Railroad Commission was unjust and unreasonable as to it and

confiscatory of its property, and appellee's evidence having clearly shown that the rate prescribed in the commission's order would not afford appellee the net return of 6% per annum on the fair value of its public service property which the commission found was the minimum return to which appellee is entitled, the court erred in holding that because there was a conflict in the evidence and that the appellants' evidence sustained the commission's order the trial court was required as a matter of law to sustain appellants' motion for an instructed verdict and that he erred in not doing so.

66

The appellants having eliminated from their estimates of the fair value of appellee's property, property actually used [fol. 101] and useful in supplying natural gas to the points served by appellee in Texas, and having eliminated large sums from appellee's expenses of operation and having added to appellee's operating revenues more than $300,000.00 for temperature adjustments and which money appellee never received, the Honorable Court of Civil Appeals in holding that appellants' evidence was sufficient, as a matter of law, to establish the validity of the commission's said order deprived appellee of the right to earn a reasonable return on the fair value of its property used and useful in the public service, and the right to manage its property and business in violation of appellee's rights under the 14th Amendment to the Constitution of the United States and said holding is therefore erroneous.

67

The court erred in approving the segregation of property testified to by appellants' witnesses, such segregation being based upon the value of property located in Texas only, excepting appellee's production system properties and certain pipe lines, because such evaluation failed to give any consideration to or value appellee's properties located in Oklahoma and actually and necessarily used and useful in transporting to Texas gas purchased or produced in Oklahoma, and to the extent that appellee's properties located in Oklahoma are used in the Texas public service, appellee, under [fol. 102] the holding of the court, is denied just compensation for such use, in violation of its rights under Section 17,

Article I of the Texas Constitution and the 14th Amendment to the Federal Constitution.

* * * * * * *

[fol. 103] 72

The trial court having instructed the jury that before it could find that the order of the Railroad Commission was unreasonable and unjust to defendant, it must so appear by clear and satisfactory evidence, and the jury having found that such order was unjust and unreasonable to defendant, and said jury finding, as well as the judgment of the trial [fol. 104] court rendered thereon, being supported by competent evidence, the Honorable Court of Civil Appeals erred in reversing the cause and rendering judgment for appellants.

* * * * * * *

74

The court erred in holding that "where, as in the instant case, the evidence is conflicting and the conclusion to be drawn therefrom in respect of this or that item uncertain or speculative the court should not interfere with gas rates in advance of any actual experience of the practical result of such new rates."

75

The court erred in holding that "Manifestly this evidence in absence of actual experience under the rate, does not meet the quantum and character of proof necessary to set aside the rate order as being confiscatory or unreasonable and unjust as to appellee."

[fol. 105] 76

The court erred in holding that "we are clear in the view that where a state commission fixes a utility rate so as to allow a 6% rate of return on the property used in the public service, the courts will not, prior to a fair test of such rate, declare same void unless the evidence establishes that it is confiscatory or invalid as a matter of law."

77

The Honorable Court of Civil Appeals erred in holding that the reduction of eight cents per thousand cubic feet in

the city gate pipe line charge ordered by the Railroad Commission could and should be passed on to the ultimate consumers for the reason that the several distributing companies to whom appellee supplies gas are not parties to this suit and there is no evidence in this case upon which such issue can be considered and determined, there being no evidence in this case of the property values and earnings of any of the distributing companies, either under the existing rates or any lesser rates, and this is true even though appellee and its distributing companies be regarded as one common concern, for as much as a utility such as appellee is entitled to a reasonable return on every branch and part of its property, whether it be a transmission or distribution system.

78

The court erred in holding that the Railroad Commission [fol. 106] of Texas may without further notice or hearing require the distributing companies purchasing gas from appellee to cease paying appellee a rate for gas purchased by them in excess of 32¢.

79

The court erred in holding that "If the 32¢ rate is declared valid herein appellee can have no further interest in any order the commission may make with regard to requiring the various distributing companies to pay in excess of such rate and to pass the eight (8¢) cent reduction on to the ultimate consumer," because under the holding of the court that corporate entities are to be ignored and that appellee is to be deemed to be engaged in the business of distributing gas locally to domestic consumers, appellee has a most vital interest in law and in fact, in the burner tip rates.

80

The Railroad Commission having found and held that appellee's property and business used and useful in the public service, is an integrated system, and the Honorable Court of Civil Appeals having found and held that appellee is not engaged in interstate commerce in transporting and supplying natural gas at any of the cities and towns served by it in the State of Texas, and appellee having introduced evidence showing that the order of the Commission would not permit it to receive, in any of the years involved or in

[fol. 107] the future, as much as a six (6%) per cent return on the fair value of its public service property, and such evidence being uncontradicted and undisputed by any evidence offered by appellants, the Honorable Court of Civil Appeals erred in holding that the evidence was insufficient as a matter of law to make a jury issue as to the unjustness and unreasonableness of the commission's order and that the trial court erred in not granting appellants' motion for an instructed verdict.

81

The Honorable Court of Civil Appeals having held that appellee is not engaged in the transportation of gas in interstate commerce and that the gas which appellee produces in Oklahoma and transports and delivers at the city gates of cities and towns in Texas is intrastate commerce, and appellee having introduced uncontradicted, competent evidence showing that the rate prescribed in the order of the Railroad Commission would not permit it to receive an annual return of six (6%) per cent but a much lesser return on the fair value of appellee's public service property, the Honorable Court of Civil Appeals erred in holding that appellee had failed as a matter of law in showing that the order of the Railroad Commission was unjust and unreasonable as to it because appellee failed to make a [fol. 108] proper segregation between its intrastate and interstate property and business.

82

The Honorable Court of Civil Appeals having held that the order of the Railroad Commission was prima facie valid and said order being based on an evaluation of appellee's system as a whole and the income from and expenses of the entire property, erred in holding that appellee did not make out a case for the jury by showing that if said order had been in effect for the years in question appellee would not have earned a six (6%) per cent return on the property as a whole even on the commission's rate base, depreciation allowance and operating expenses, appellee's evidence being the only evidence as to said property and business as a whole.

83

The court having held that because of appellee's failure to make a proper segregation of interstate and intrastate

properties, appellee did not adduce the quantum and character of proof necessary to establish the invalidity of the rate complained of, erred in not affirming the judgment of the trial court inasmuch as the record conclusively shows that the commission based its said order upon a consideration of appellee's interstate property and business.

[fol. 109]

84

The court erred in reversing and rendering this case, because the issue raised by appellants in their second amended original petition was the reasonableness of the rate promulgated by the commission for gas delivered at the city gates of the various towns and cities served by appellee in intrastate commerce and this court's holding that appellee was not engaged in interstate commerce in Texas has deprived appellee of an opportunity to develop facts in the case under the law as it has been announced for the first time by this decision.

85

The court erred in holding that it was necessary to allocate or segregate the property used in Texas in order to determine the fair value of the property used in the Texas public service because if appellee was not engaged in interstate commerce there was no occasion or necessity for any segregation of property.

86

The court erred in holding that the testimony of appellee's witnesses based upon a segregation as between property used in interstate and intrastate commerce proved nothing material in this case.

87

The court erred in holding "that appellee offered no other proof upon a correct segregation or allocation of the [fols. 110-111] property and the trial court erred in refusing the commission's motion for an instructed verdict and for judgment declaring the rate order appealed from to be valid in every respect."

88

The court erred in holding that "the burden was upon appellee to show by clear and satisfactory evidence a proper segregation of interstate and intrastate properties and

business, and to show the value of the property employed in intrastate business or commerce and the compensation it would receive under the rate complained of upon such valuation."

89

The court erred in holding that "having failed to make a proper segregation of interstate and intrastate properties, appellee did not adduce the quantum and character of proof necessary to establish the invalidity of the rate as being confiscatory, or unreasonable and unjust."

* * * * * * *

[fol. 112] 93

The court erred in reversing and rendering this case in favor of appellants and against the appellee in view of its holding that the issue of confiscation was not submitted to the jury inasmuch as appellee plead that its property would be confiscated through the order of the commission and proved such confiscation if its testimony were accepted as the more credible and entitled to the most weight, and requested that the issue be submitted by the trial court, and excepted and objected to the failure and refusal of the trial court to submit the same; and if it be true as held by this court that the issue was not submitted, then by reversing and rendering the case this court has deprived appellee of the right to a judicial determination of the question of confiscation inasmuch as this court has no power or authority under the Texas laws as an appellate court to determine that issue.

94

The court erred in giving any consideration to the cor-
[fol. 113] porate relation between Lone Star Gas Company, appel-ee, and various affiliated distributing companies in connection with its determination of the issue of interstate commerce.

95

Inasmuch as the commission treated appellee and the affiliated distributing companies as separate and distinct corporations engaged in different kinds of business and predicated its opinion and order on a recognition of those

facts, the court erred in holding and in basing its judgment in whole or in part on the holding that "when viewed in the light of the facts and the aforesaid rule it becomes apparent that appellee and its affiliated distributing companies were engaged in an integrated but single business enterprise of producing, purchasing, transporting, selling and delivering natural gas for domestic or other use to the ultimate consumer", thus deciding this case on an entirely different theory from that upon which the opinion and order of the commission was based.

96

The court erred in its holding stated in the preceding paragraph of this motion because irrespective of the theory upon which the commission proceeded in its hearing, the facts and circumstances appearing of record and relied [fol. 114] upon by the court, if true, are not sufficient in law to justify disregarding the corporate existence of the various companies which are in law separate, distinct corporations, one of which is engaged in the transportation and sale of gas at wholesale and others of which are engaged in the business of selling and distributing gas at retail.

97

The court erred in holding that "by permitting or recognizing such intercorporate set-up the Texas corporations have, considering their entire operations as a whole, created a single and integrated business enterprise."

98

The court erred in holding that with respect to the jurisdiction of the commission to regulate and control appellee's business and particularly for the purpose of fixing the rates for which it might sell gas to the public in Texas, the corporation must be regarded as being engaged in the single business enterprise of producing, purchasing, transporting, delivering and selling natural gas to the ultimate consumer or user in Texas, because there is no legal justification for ignoring the actual corporate existence of the corporations in question and because recognition of the existence of the corporations as separate and distinct entities in no way operates to impair or defeat the jurisdiction of the Railroad Commission.

[fol. 115] 99

The court erred in holding "the fact that separate corporate entities were formed which represent different departments of the integrated but single business enterprise does not affect the question, because the court must look beyond the corporate form to the purpose of the unified organization and to the officials who are identified with that purpose" because there is no lawful justification for ignoring the separate corporate existence of the various companies.

101

The court erred in holding that to permit Texas corporations to dispose of their capital stock and form a separate entity of their own and to surrender the management and control of their business to the holding corporation which has no permit to do business in Texas, would enable them to defeat the jurisdiction of the commission over them as Texas public utilities, because as a matter of law the Railroad Commission has the same power and jurisdiction over the business now carried on by appellee and the separate, though affiliated corporations purchasing gas from it, considering the corporations as separate and distinct entities, as it would have if the corporate entities be ignored and the distributing companies and the pipe line companies treated as simply departments of one corporation.

102

The court erred in holding that "it is conceded that the [fol. 116] commission after a hearing at which the reasonableness of the city gate rate charged by the appellee for gas was inquired into could have required the various distributing companies to pay appellee a rate not in excess of 32¢ even though the gas sold and delivered by appellee moved in interstate commerce to the city gate."

103

The court erred in holding that "it would seem from these recitations of facts and circumstances that the commission consolidated all the appeals and cases pending before it in which the determination of the city gate rate charged by the appellee for gas was necessarily involved

as a step preliminary to reviewing or fixing the local or burner tip rates for gas", because such conclusion is not substantiated by the record in this case, it appearing that the investigation in question was a separate, distinct investigation of appellee which the commission throughout the investigation treated as a separate and distinct corporate entity engaged in a different kind and character of business from that engaged in by the distributing companies.

104

The court erred in holding that the transportation of gas from Wheeler County through the State of Oklahoma [fol. 117] and through Texas under the facts and circumstances shown in the record is not interstate commerce as a matter of fact.

105

The court erred in holding that "except for the right to authorize the construction of the pipe line within its boundary the State of Oklahoma has no concern whatever with the transaction", and in basing its judgment in whole or in part thereon.

106

The court erred in holding and in giving any consideration to the holding that "it (the town of Hollis, Oklahoma) could have been as well served by a direct pipe line from Texas to it and such service is in no manner affected by the rate order in suit."

107

The court erred in holding and in basing its judgment in whole or in part thereon that "but one practical conception can be drawn from the whole transaction involved; that is, the gas produced in Texas and intended to be delivered, sold and used in Texas is intrastate commerce."

108

The court erred in holding that "the mere fact that [fol. 118] appellee has selected a route through Oklahoma as an aid to the transportation of its Texas business cannot work a change in the nature of the business, nor does it affect the character of the business."

109

The court erred in holding that the transportation of gas through Oklahoma is merely a method of delivery and is a negligible circumstance in determining the interstate commerce issue.

110

The court erred in holding that "neither the Texas Statutes nor the rate order interfere in any manner with the transportation of gas from Texas through Oklahoma and back into Texas."

• • • • • • •

112

The court erred in holding that "this circuitous route of delivery of gas through Oklahoma cannot and does not affect the exercise of the police power of Texas to make or [fol. 119] fix reasonable rates for such gas sold to its citizens."

113

The court erred in holding that the facts show that the gas produced or purchased by appellee in Oklahoma and transported by its pipe lines to Texas does not move in interstate commerce when it reaches the city gates for delivery.

114

The court erred in holding that the interstate transportation of gas purchased or produced by appellee in Oklahoma ceased when such gas passed through appellee's gasoline plant in Gainesville, Texas.

115

The court erred in holding and in giving any consideration to the holding that "the amount of Oklahoma gas as a whole is small, and as divided and redivided before delivery to the various city gates, its amount is negligible in comparison with the amount of the Texas gas with which it is mixed or commingled.

116

The court erred in holding that the composition of appellee's gas purchased or produced in Oklahoma and trans-

[fol. 120] ported into Texas is and must be changed by extracting hydrocarbons and volatile gasoline before it is ready for delivery and use by the consumer, and in giving such consideration to such holding.

117

The court erred in holding that "thus the state commission may validly, by the indirect process of prescribing reasonable rates for local distributing companies, control and fix the city gate rate for gas moved in interstate commerce.

118

The court erred in holding that under the circumstances in this case, the amount of the rate or price to be charged for gas is primarily for the determination of the state in which the gas is consumed, and in giving any consideration to such holding.

119

The court erred in failing to hold that appellee was engaged in interstate commerce in transporting and selling gas purchased or produced by it in Wheeler County, Texas, and transported through Oklahoma and thence back into the State of Texas up to the city gates where delivery is made.

120

The court erred in holding that "where the rates are [fol. 121] reasonable and are fixed according to some uniform, fair and practical standard, they constitute no burden on interstate commerce" and in giving any consideration to such holding as applied to gate rates under the facts and circumstances in this case.

121

The court erred in holding that "it is within the police power of the state to fix reasonable rates for which gas may be sold to its citizens, even though such rates may indirectly or incidentally affect the interstate transportation of such gas, or may so affect interstate commerce in the same", and in giving any consideration to such holding.

122

The court erred in holding that the rate order in this suit does not in any manner interfere with, restrain or burden the free transportation of gas between Texas and Oklahoma.

123

The court erred in holding that "absent legislation by Congress, and since the Interstate Commerce Act expressly excepted the regulation of transportation of 'natural or artificial gas by pipe lines' from the jurisdiction of the Interstate Commerce Commission, the State Commission in the exercise of the police power of the State to regulate [fol. 122] and control public gas utilities had the power to fix reasonable rates for gas delivered by appellee to distributing companies at the city gate, although interstate commerce may be indirectly or incidentally affected thereby."

124

The court erred in holding that because the 32¢ gate rate was reasonable it did not operate to obstruct or interfere with interstate commerce because the question of whether or not the Railroad Commission of Texas can regulate the gate rate to be charged for interstate gas is a question of power and not of the reasonableness of the particular rate.

125

The Honorable Court of Civil Appeals erred in failing to hold that appellee is engaged in interstate commerce at the city gates of various towns and cities in Texas and that the order of the Railroad Commission prohibiting appellee from collecting in excess of 32¢ for all gas sold and delivered by it to various distributing companies at the city gates including gas transported and delivered in interstate commerce directly interfered with and constituted a burden upon interstate commerce and appellee's right to engage therein in violation of the commerce clause of the Constitution of the United States and in not holding the order of the Railroad Commission void and unenforceable [fol. 123] insofar as appellant sought to enforce the same as against such gas transported and sold by appellee in interstate commerce.

The court erred in failing and refusing to sustain appellee's cross-assignment of error No. 2 as follows:

"The court erred in overruling and in refusing to give defendant's request for a peremptory instruction duly and timely presented at the conclusion of all the evidence in the case, and after both plaintiffs and defendant had rested, because it appeared from the statement of the Railroad Commission of Texas attached to the opinion and order of the said commission, marked Exhibit "a" and referred to in plaintiffs' Second Amended Original Petition, that defendant was engaged in the production and sale at wholesale of natural gas, engaging in both interstate and intrastate commerce in the sale of gas to some 300 cities and towns in the State of Oklahoma and Texas. The order of the Railroad Commission undertook to fix a reasonable rate for all the gas supplied by the defendant to the various distributing companies. A part of the gas being delivered by the defendant at the city gates of various towns and cities in Texas at the time of the investigation of the Railroad Commission, and at all times in question was being transported uninterruptedly through defendant's high-pressure pipe lines from and through the State of Oklahoma into the State of Texas. The business of transporting natural gas uninterruptedly through defendant's high-pressure pipe lines from the State of Oklahoma into the State of Texas, and from the State of Texas through Oklahoma and back into the State of Texas is national in character and constitutes interstate commerce and transportation, and also constitutes a substantial portion of defendant's entire natural gas business. The order of the Railroad Commission was intended to and did, in fact, prescribe the rate to be charged for all gas sold by the defendant, including interstate gas, and thereby prevented the defendant from charging and receiving the price for interstate gas which it was charging and receiving, and, therefore, [fols. 124-125] was a burden upon and a direct regulation of interstate commerce. The order of the Railroad Commission therefore was void in so far as it related to interstate commerce, and gas sold by the defendant moving in interstate commerce under the Commerce Clause of the Federal Constitution, and, being void in part, and being

indivisible in character, it was void in its entirety and could not be enforced in whole or in part by the plaintiffs in this suit."

127

The Honorable Court of Civil Appeals erred in finding as a fact that all of the gas transported by appellee in interstate commerce is commingled with intrastate gas before delivery at the city gates.

* * * * * * *

[fol. 126] 133

The court erred in holding that a considerable amount of gas purchased or produced in Oklahoma and transported into Texas is run through and stored in appellee's wells at the extraction plants in Texas for future use as needed.

* * * * * * *

[fol. 127] 136-A

The court erred in holding that about 17% of the total amount of gas supplied by appellee is purchased or pro-
[fol.128] duced by it in Wheeler County, Texas.

137

The court erred in holding that the gas reserves in Texas are more than sufficient to supply all Texas' needs and that the gas supply of Oklahoma would likewise supply all of its needs.

* * * * * * *

[fol. 129] 143

The court erred in failing and refusing to sustain appellee's first cross-assignment of error as follows:

"The court erred in overruling and in refusing to give defendant's request for a peremptory instruction duly and timely presented at the conclusion of all the evidence in the case, and after both plaintiffs and defendant had rested. (Defendant's Cross-Assignment of Error No. 14, Transcript 587)."

144

The court erred in failing and refusing to sustain appellee's Fourth Cross-Assignment of Error as follows:

"The court erred in overruling and in refusing to give defendant's request for a peremptory instruction duly and timely presented at the conclusion of all the evidence in the case, and after both plaintiffs and defendant had rested, because it appeared from the undisputed evidence, as a matter of law, that the rate of 32 cents prescribed by the commission in its order of September 13, 1933, was unjust, unreasonable and confiscatory in this, that said rate was based on a determination of the value of defendant's public service property as of December 31, 1931, considering labor and material prices substantially less than those prevailing on the date of the inquiry; and [fol. 130] even though it be assumed that the Railroad Commission correctly valued such property as of December 31, 1931, nevertheless, if effect be given to such increased labor and material prices, the Railroad Commission's valuation would be materially increased as of the date of the inquiry; and if said rate of 32 cents had been in effect during 1931 and subsequent accounting periods, defendant would not have earned and would not have been able to earn anything like the minimum net rate of return to which the commission found it was entitled upon the fair value of its public service property at the time of the inquiry.

"Wherefore, defendant was entitled to an instructed verdict and to judgment based thereon. (Defendant's Cross-Assignment of Error No. 16, Transcript 588.)"

145

The court erred in holding that the rate fixed by the Commission was presumptively just and reasonable and non-confiscatory as applied to appellee's so-called Texas or intra-state business inasmuch as no presumption of validity attends the rate order not supported by any evidence and inasmuch as it appeared from the undisputed evidence that the rate fixed by the commission was based upon an evaluation of appellee's properties both in Texas and in Oklahoma and a determination of gross revenues, expenses, etc. in connection with the operation of appellee's entire pipe

line properties both in Oklahoma and in Texas, and not upon an evaluation of the appellee's properties physically located in the State of Texas and a determination of grass revenues, expenses, etc. applicable to the sale of gas in Texas.

[fols. 131-132] 146

The court erred in giving any effect or consideration to the order of the commission and in predicating its judgment in whole or in part on the presumptive validity of such order in so far as the order is applied to the so-called Texas business of the defendant inasmuch as the order is void as so applied, because it is not supported by any evidence before the commission based upon a segregation of defendant's properties as between that situated in Oklahoma and Texas, and a segregation of revenues and expenses allocable to appellee's business in the respective states.

* * * * * * *

[fol. 133] 153

The court erred in eliminating as an expense of operation the expenses actually charged by appellee for cancelled and surrendered leases and in finding and holding in respect thereto that "in view of its admitted large gas reserves, which will last for 40 years, and in view of the fact that it is a matter of judicial knowledge that gas by the multiplied millions of cubic feet is being wasted daily because of the lack of a market, we think these large charges are unjustified."

154

The court erred in holding in effect that appellants' estimates for depreciation and amortization reserve accruals [fol. 134] were sufficient to show that the commission's order was just, reasonable and valid in view of the undisputed evidence showing that appellants' estimates made no allowance for the depletion of appellee's wasting assets (gas reserves) and made no allowance for depreciation and amortization on a part of appellee's pipe line situated in Texas, nor on any of appellee's property in Oklahoma that is used and useful in producing and transporting gas to points in Texas for the reason that such holding takes appellee's property for public use without just compensa-

tion in violation of its rights under the 14th Amendment to the Constitution of the United States.

* * * * * * *

156

The Honorable Court of Civil Appeals erred in failing to give any consideration to appellee's testimony respecting the value of its public service property located both in Texas and in Oklahoma and its income and expenses allocable thereto.

* * * * * * *

[fol. 135] 158

The judgment of the Honorable Court of Civil Appeals herein in affirming the order of the Railroad Commission which was declared to be unjust, unreasonable and invalid by the District Court, takes appellee's property without due process of law and without affording to appellee an opportunity to earn a reasonable return upon the fair value of its property used in the public service contrary to appellee's right under the 14th Amendment to the Federal Constitution in so far as said judgment approves and adopts the estimates of appellants' witnesses as to the fair value of appellee's property used in the public service.

159

The judgment of the Honorable Court of Civil Appeals herein affirming the order of the Railroad Commission which was declared to be unjust, unreasonable and invalid by the District Court, takes appellee's property without due process of law and without affording to appellee an opportunity to earn a reasonable return upon the fair value of its property used in the public service and denies to [fol. 136] appellee the equal protection of the law in violation of appellee's rights under the 14th Amendment to the Federal Constitution in so far as said judgment fixes the operating expenses of appellee or approves the method of fixing such operating expenses by the witnesses for appellants.

160

The judgment of the Honorable Court of Civil Appeals herein in affirming the order of the Railroad Commission

which was declared to be unjust, unreasonable and invalid by the District Court, takes appellee's property without due process of law and without affording to appellee an opportunity to earn a reasonable return upon the fair value of its property used in the public service and denies to appellee the equal protection of the law in violation of appellee's rights under the 14th Amendment to the Federal Constitution in so far as said judgment holds that 6% per annum is a reasonable rate of return to be allowed appellee.

161

The judgment of the Honorable Court of Civil Appeals in disapproving appellee's present gate rate and in approving and holding as valid the rate prescribed in the order of the Railroad Commission takes appellee's property without due process of law and denies to appellee the equal [fol. 137] protection of the law and denies to appellee the opportunity of earning a reasonable return upon the fair value of its public service property all in violation of appellee's right under the 14th Amendment to the Federal Constitution.

162

The judgment of the Honorable Court of Civil Appeals herein in affirming the order of the Railroad Commission which was declared to be unjust, unreasonable and invalid by the District Court, takes appellee's property without due process of law and without affording to appellee an opportunity to earn a reasonable return upon the fair value of its property used in the public service and denies to appellee the equal protection of the law in violation of appellee's rights under the 14th Amendment to the Federal Constitution in so far as said judgment approves the allowance made by the appellants' witnesses for annual accruals to a reserve for depreciation and amortization.

163

The judgment of the Honorable Court of Civil Appeals herein in affirming the order of the Railroad Commission which was declared to be unjust, unreasonable and invalid by the District Court, takes appellee's property without due process of law and without affording to appellee an [fol. 138] opportunity to earn a reasonable return upon the

fair value of its property used in the public service and denies to appellee the equal protection of the law in violation of appellee's rights under the 14th Amendment to the Federal Constitution in so far as said judgment approves the inclusion of approximately $334,000.00 per annum as operating income on account of temperature adjustments which appellee is shown by the evidence in this case never to have received.

The residences and names of counsels for appellants are as follows: William McCraw, Attorney General of Texas, Austin, Texas; Alfred M. Scott, Assistant Attorney General of Texas, Austin, Texas; A. R. Stout, Houston, Texas; F. L. Kuykendall, Chief Examiner, Gas Utilities Division, Railroad Commission of Texas, Austin, Texas.

[fol. 139] IN COURT OF CIVIL APPEALS OF TEXAS

[Title omitted]

OPINION ON APPELLEE'S MOTION FOR REHEARING—Filed September 25, 1935

On motion for a rehearing appellee makes the claim that the record does not sustain some of our findings of fact. Most of the asserted discrepancies relate to the valuation of the property used in the public service, or to alleged necessary operating expenses. We held that as a matter of law appellee failed to establish by clear and satisfactory evidence the ultimate fact issue, to-wit: Whether the rate fixed by the Commission was so low as not to afford a reasonable return on the fair value of the property used in the Texas public service. Appellee was afforded a seven months hearing before the Commission and a three months trial on appeal to the Court. It made no segregation as between its Texas and Oklahoma properties and opera-
[fol. 140] tions; and did not prove the fair value of the property used in the Texas public service. The question of the value of such property determines the reasonableness of the rate and probably, in the ultimate analysis, adequacy of service and principles of financing. Valuation of such public service property is in the main a matter of estimate or opinion, and closely resembles discretion as regards the finding of value by an administrative commission. In

any event, a scientific or statutory standard of absolute value is unattainable; and because of this uncertainty of value, except where the evidence clearly shows gross over or under valuation, or mistake, inequality or fraud in the appraisal, the finding of value by an administrative commission is generally given finality. Especially is this the rule in absence of an actual test under the new rate. In addition to the authorities cited in the original opinion, see the following: People v. Board of Assessors, 39 N. Y. 81 Taylor v. L. & N. R. Co., 88 Fed. 350; Chicago v. Burtice, 24 Ill., 489; State Railroad Tax Case, 92 U. S. 575; Hilton v. Meritt, 110 U. S. 97; People v. State Board of Tax Com., 196 N. Y. 39.

Motion overruled.

On Application for Writ of Error

Application No. 21,600

Lone Star Gas Company, Plaintiff in Error,

vs.

The State of Texas et al., Defendants in Error

Entry on the Application Docket: Travis County, Third District. Application No. 21,600, Lone Star Gas Company vs. The State of Texas, et al.

Filed November 2, 1935. Refused October 7, 1936.
(Names of attorneys omitted.)

[fol. 143] IN SUPREME COURT OF TEXAS

[Title omitted]

APPLICATION FOR WRIT OF ERROR—Filed November 2, 1935

To The Honorable The Supreme Court of Texas:

Lone Star Gas Company, a corporation, being the appellee in a certain cause pending in the Court of Civil Appeals in and for the Third Supreme Judicial District of Texas, at Austin, Texas, Number 8238 on the docket of said Court and entitled thereon State of Texas, et al., Appellants, vs. Lone Star Gas Company, Appellee, comes now and complaining of the State of Texas, the Railroad Commission of Texas and the members thereof, Ernest O. Thompson, Lon A. Smith and C. V. Terrell, and of James V. Allred, former Attorney General of Texas, a party to this cause, all being appellants in said cause, and of William McCraw, now Attorney General of Texas; and said Lone Star Gas Company respectfully applies to this Honorable Court to issue its writ of error in this cause directed to the Court of Civil Appeals in and for the Third Supreme Judicial District of Texas, at Austin, Texas, to the end that [fol. 144] this case may be removed from said Court of Civil Appeals to this Court and the record and proceedings herein may be fully reviewed by this Court and the judgment of the said Court of Civil Appeals rendered herein may be reversed and that of the District Court affirmed; and so that this plaintiff in error may be accorded any and all other relief to which it may be entitled under the law.

The errors hereinafter assigned were all duly assigned and presented in a motion for rehearing filed by plaintiff in error in said Court of Civil Appeals within the time required by law and overruled by that Court on, to-wit, the 25th day of September, 1935.

For convenience and to prevent confusion the parties hereto will be referred to as they appeared and were designated in the district court; the defendants in error as plaintiffs and the plaintiff in error as defendant.

I

Introductory Statement of the Nature and Result of the Suit

This suit involves the validity of an order of the Railroad Commission of Texas prescribing maximum rates to

be charged and collected by Lone Star Gas Company for gas sold by it wholesale to distributing companies operating in various towns and cities in the State of Texas and the power of the Commission and the State to enforce same. The order of the Railroad Commission in question reduced Lone Star Gas Company's prevailing city gate rate 20%, and, if enforced, will result in a loss in its net earnings, on the basis of the Company's past experience, [fol. 145] exceeding $1,000,000.00 annually.

Upon a trial of the case in the District Court of Travis County, 53rd Judicial District, a jury found that the order of the Railroad Commission under attack was unjust and unreasonable, and a judgment in favor of the Company enjoining the enforcement of the order was entered on the verdict. The Court of Civil Appeals reversed and rendered the judgment of the District Court.

A historical statement of the progress of the litigation is essential. In giving it we will be as brief as the nature of the suit permits.

Various phases of the controversy have been considered by the Railroad Commission of Texas, by the United States District Court for the Western District of Texas, Austin Division, by the 53rd Judicial District Court of Travis County, Texas, and by the Court of Civil Appeals for the Third Supreme Judicial District of Texas. It will be convenient to trace the development of the case from the time of the initiation of the investigation of Lone Star Gas Company's rates by the Railroad Commission of Texas, through the various courts.

1. Proceedings Before the Railroad Commission of Texas:

The defendant Lone Star Gas Company was incorporated under the laws of the State of Texas on June 4, 1909. Pursuant to its corporate powers, defendant acquired and now owns, holds and operates not only pipe lines, compressor stations and other equipment necessary for the transportation and sale of natural gas, but also owns and operates gas leases, gas wells, well and drilling equipment and other property used and useful as a part of its gas production system.

[fol. 146] Since the date of its incorporation defendant has been continuously engaged in carrying out its corporate purposes, and now operates approximately four thousand

miles of high pressure pipe lines, through and by means of which it transports natural gas to the city gates of some 300 cities and towns situated in the States of Oklahoma and Texas where it sells such gas in wholesale quantities to various natural gas distributing companies. The distributing companies then deliver the gas to the ultimate consumers through low pressure systems. The only exception to the above mentioned practice is the City of Fort Worth, wherein defendant also owns and operates the distributing system and delivers the gas to the ultimate consumer through low pressure mains.

The delivery and sale of the gas at the city gates to the distributing companies, as aforesaid, is governed by long term contracts between defendant and the distributing companies and the price is uniformly $0.40 per thousand cubic feet, with negligible exceptions.

The defendant's pipe line system crosses the State line between Oklahoma and Texas eight times. Three of these lines transport gas from Oklahoma to Texas. Three of them transport gas from Texas to Oklahoma. Another line extends from the Shamrock Gas Field in Wheeler County, Texas, into Oklahoma and then runs south approximately parallel to the west line of Oklahoma, and then again crosses the State line, coming into Texas near Quanah, Texas. After this line reaches Texas it is tapped by a branch line running north into Oklahoma and serving various Oklahoma towns. The line carries, therefore, gas de-
[fol. 147] livered both at Texas and Oklahoma towns.

On October 14, 1932, the Railroad Commission of Texas, in exercise of the power delegated to it by Title 102, and particularly Article 6050, et seq., of the Revised Civil Statutes of Texas for 1925, began an investigation of defendant's rates and charges for the purpose of determining a reasonable rate or price for the gas delivered by defendant at the city gates of the cities and towns served by it.

This investigation encompassed all of defendant's properties and business except the distributing business in the City of Fort Worth, Texas, and certain other non-public service operations which defendant was carrying on. After an extended hearing the Railroad Commission prepared certain findings of fact and an elaborate written opinion upon which it based and issued the following order dated September 13, 1933. (Book of Exhibits 7, page 3926).

2. Order of the Commission:

The Railroad Commission having instituted a proceeding upon its own motion inquiring into the rates charged by the Lone Star Gas Company for domestic gas sold to distributing companies at the city gate station, hereby finds as a fact that the rate of $0.40 per thousand cubic feet as now charged by Lone Star Gas Company is unfair, unjust and unreasonable.

Basing its order on the foregoing finding of fact and on such other findings and statements of facts as are set out in the opinion next preceding this order, or in this order.

It is Ordered, Adjudged and Decreed that effective as of the next billing date the Lone Star Gas Company shall charge, bill and receive for domestic gas at the city gate from all distributing companies served by it, a rate not to exceed $0.32 per thousand cubic feet.

It is Further Ordered, Adjudged and Decreed that a [fol. 148] rate not to exceed $0.32 per thousand cubic feet at the city gate is hereby fixed, approved and promulgated and found and declared to be fair, just and reasonable and shall remain in force and effect until the Commission shall have otherwise determined, pursuant to other proceedings in respect to the fixing of city gate rates for domestic gas on said Lone Star Gas Company's lines.

It is Further Ordered, Adjudged and Decreed that this proceeding shall be kept open for such further orders as may be proper.

The foregoing opinion and order are hereby approved and ordered filed as the opinion and order of the Railroad Commission of Texas.

Dated at Austin, Texas, this 13th day of September, A. D., 1933.

It will be noted that the above order states that it is based upon the findings of fact contained in the order "and on such other findings and statements of fact as are set out in the opinion next preceding this order". The opinion "next preceding this order", and made a part of the order, contains elaborate findings of fact stating in detail how the Commission valued the defendant's property, what property was included in the valuation, what operating revenues were considered, and what expense items were allowed as proper deductions from the operating revenues.

The findings referred to include the following:

"The Lone Star Gas Company, a Texas corporation, is engaged in the production, transportation and sale at wholesale of natural gas, it operates an integrated pipe line system of approximately 4,000 miles and engages in both interstate and intrastate commerce in the selling of gas to some 300 cities and towns within the States of Oklahoma and Texas.

"The company's Texas properties and its Oklahoma properties constitute parts of an integrated operating system. For that reason we have considered the Oklahoma properties and operations and the effect thereof on the revenues and the expenditures within Texas. On this basis we have fixed a rate for application within the jurisdiction of Texas". (Book of Exhibits 7, page 3844). (Our italics.)

[fol. 149] Having made this finding, the Commission then proceeded to value the defendant's property as a whole and to consider its operating revenues and operating expenses as a whole.

The findings referred to also contain the following:

"We find 6 per cent to be the minimum fair rate of return and we find this rate to be applicable to the year 1931." (Book of Exhibits 7, page 3915).

3. Proceedings in the United States District Court:

On the 22nd day of September, 1933, defendant filed its bill of complaint in the United States District Court for the Western District of Texas at Austin and sought to temporarily and permanently enjoin the Railroad Commission, the individual members thereof, and the Attorney General of Texas, from enforcing the above mentioned order. It was alleged in the bill of complaint that said order would operate to confiscate the properties of defendant; would impair the obligations of defendant's contracts; and that it was unjust to defendant and otherwise offended against defendant's rights under the Constitution of the United States. (S. F. 24, Book of Exhibits 7, p. 3712).

On September 22, 1933, the said United States District Court issued a temporary restraining order as prayed for in defendant's said bill of complaint. (S. F. 25, Book of Exhibits 7, p. 3838).

After the issuance of the aforesaid restraining order, this suit was filed by the plaintiffs in the 53rd District Court of Travis County, Texas, in order to cast jurisdiction in that court under the provisions of Section 266 of the Judicial Code of the United States. (28 U. S. C. A., Sec. 380).

The 53rd District Court of Travis County, Texas, after the filing of plaintiffs' suit and pursuant to plaintiffs' [fol. 150] prayer and motion, made an order staying all proceedings having for their object the enforcement of the Railroad Commission's order against defendant. The plaintiffs were restrained and enjoined from instituting or prosecuting any proceedings against defendant under said order, or from attempting to enforce the duties, obligations, and requirements imposed upon defendant by said order, pending final determination of the issues in this suit. (Tr. 20-22.)

Thereafter, to-wit, on the 11th day of November, 1933, the said United States District Court, in conformity with what it deemed to be the proper procedure under Section 266 of the Judicial Code, entered an order staying the proceedings in that court until final determination of this cause. The Federal Court's decree in this connection recited in detail the provisions of the stay order issued by the State Court and referred to statements made in open court by plaintiffs' attorneys to the effect that the State of Texas, the Railroad Commission of Texas, and the Attorney General did not desire to, and would not enforce said order of the Railroad Commission, or collect penalties for violation thereof, at any times before the final determination of the suit in the 53rd District Court of Travis County, Texas; and the Railroad Commission of Texas and the individual members thereof and the Attorney General of the State of Texas and their successors in office, were restrained and enjoined from enforcing, or attempting to enforce, or from giving any effect to said order, at any time prior to final judgment in this suit, then pending in the 53rd District Court. (S. F. 21, Book of Exhibits 6, p. 3584; Tr. 20-25.)

[fol. 151] 4. Proceedings in the State District Court:

Plaintiffs' original petition herein sought to restrain defendant from charging and collecting for gas sold by it to the various distributing companies in excess of $0.32 per thousand cubic feet. It will be seen from the order of the

Commission (page 5, supra) that the rate fixed therein by the Commission was made applicable to all gas sold and delivered at the various city gates; and plaintiffs sought to enforce the order as to all gas.

In the opinion of the Railroad Commission, upon which its order was based, it was recited that Lone Star Gas Company was engaged "in the production, transportation and sale, at wholesale, of natural gas, * * *" operating— "an integrated pipe line system of approximately 4,000 miles, * * *" and engaging "in both interstate and intrastate commerce in the selling of gas to some 300 cities and towns in the States of Oklahoma and Texas." (Tr. 19.) It was defendant's theory that the order of the Railroad Commission could not be enforced as against that part of its business which it contended was interstate in character, and the general demurrer contained in its original answer was, upon a hearing, sustained. (S. F. 341.)

Thereafter, plaintiffs in their first and second amended original petitions sought the enforcement of the Commission's order to prevent defendant from charging or collecting any rates at the city gates of the various towns and cities served by it in intrastate commerce in Texas, except those prescribed by the order of the Railroad Commission. (Tr. 15.) The case went to trial in the District Court on plaintiffs' second amended original petition, (Tr. 2, et seq.), and second supplemental petition, (Tr. 146, et seq.), and [fol. 152] on defendant's second amended original answer (Tr. 31, et seq.), and second supplemental answer, (Tr. 162, et seq.)

Defendant's pleadings raised issues as to whether or not the order of the Railroad Commission was unjust and unreasonable and confiscatory of its property in violation of its rights under the Fourteenth Amendment to the Constitution of the United States; as to the present fair value of its public service property; as to the proper amount of money which it was entitled to set aside annually in its depreciation reserve; as to what constituted a fair and reasonable rate of return, and other matters of fact going into the ultimate question at issue, to-wit: Would the enforcement of the order of the Railroad Commission operate unjustly and unreasonably on defendant and confiscate its property without due process of law? (Tr. 125.)

The pleadings of the parties raised the issue of whether defendant was engaged in interstate commerce in Texas, and, if so, whether the order of the Railroad Commission, if enforced, would result in a direct burden upon and interference with interstate commerce.

Upon the trial of the case before a jury, plaintiffs offered in evidence the order of the Railroad Commission, the stay order granted by the Federal Court, and after an agreed stipulation that defendant was charging $0.40 per thousand cubic feet for gas instead of $0.32 per thousand cubic feet, as required by the Railroad Commission's order, the plaintiffs rested their case. (S. F. 22.) The Commission's order, it will be noted, states that the order is based upon the findings contained in it and also on such "other findings and [fol. 153] statements of fact as are set out in the opinion next preceding this order." The opinion of the Commission thus referred to in the order contains a finding that the defendant is engaged in the "production, transportation and sale at wholesale of natural gas" and that it operates "an integrated pipe line system of approximately 4,000 miles and engages in both interstate and intrastate commerce in the selling of gas to some 300 cities and towns in the States of Oklahoma and Texas," and also that "the Company's Texas properties and its Oklahoma properties constitute parts of an integrated operating system." (Commission Opinion, p. 2.) The Commission's opinion also shows that as a basis for its order it undertook to make an over-all valuation of defendant's pipe line system as a unit.

Defendant's motion for an instructed verdict was duly and timely presented and overruled, and defendant then introduced evidence showing the actual cost of its public service properties in Texas and Oklahoma as reflected by its books, treating its properties as an "integrated system" as they had been dealt with by the Railroad Commission.

In this connection the defendant offered evidence to prove the reproduction cost new and present value of such properties; the annual sum which should be credited to a reserve for depreciation, depletion and/or amortization; the gross revenues, operating expenses and the amounts available for return during several accounting periods beginning with the twelve months ending December 31, 1931, and extending through the twelve months period ending April 30, 1934. Defendant also showed by proper accounting testimony the

amount available to it for return under the forty cent gate [fol. 154] rate and the amount that would have been available to it during each of the several accounting periods mentioned if the order of the Commission had been in effect. The testimony offered by defendant in that connection appears on pages 24 to 2356 of the Statement of Facts, and the documentary evidence in defendant's Exhibits 1 to 44.

After the introduction of the above mentioned evidence, defendant proceeded to show that it was engaged in both interstate and intrastate business in Texas, and in that connection it offered evidence to establish the value of its public service property used and useful in the conduct of its intrastate business and the revenues and expenses properly allocable thereto. (S. F. 2356-2542; Defendant's Exhibits 45 and 46.)

Plaintiffs then proceeded with their rebuttal testimony and offered evidence for the purpose of showing the value of defendant's public service property located in Texas and the revenues and expenses which they thought should be allocated to its Texas business, adopting in general simply a georgraphical division of its property and business as between Texas and Oklahoma. (S. F. 2542-3195; Plaintiffs' Exhibit 4 to 10.)

Plaintiffs' evidence disclosed the cost of defendant's public service properties located both in Texas and Oklahoma, but plaintiffs offered no evidence of the reproduction cost new of defendant's properties located both in Texas and Oklahoma (upon which basis the Railroad Commission of Texas had determined the present fair value of defendant's public service properties in fixing the rate promulgated by it). Plaintiffs in their evidence undertook to make a geographical segregation of the property and business of [fol. 155] the defendant between Oklahoma and Texas, treating all sales of gas made in Oklahoma as Oklahoma gas, regardless of the origin of the gas or gas supply; and applying the same treatment to the gas sold in Texas. (S. F. 2686-2688.) Abandoning, or at least disregarding, the manner in which the Railroad Commission had proceeded in valuing the property, and the findings of the Railroad Commission made the basis of its order, the plaintiffs in their testimony undertook to fix the value of the property located in Texas and, with the minor exceptions hereinafter pointed out, refused to give any consideration to the pro-

ducing and transporting properties located in Oklahoma and used by defendant in producing and transporting gas to Texas.

At the conclusion of all the evidence, both plaintiffs and defendant moved for an instructed verdict. These motions were overruled by the court, and the case having been submitted to the jury, a verdict was returned by the jury to the effect that the rate prescribed by the Railroad Commission was unjust and unreasonable as to the defendant Lone Star Gas Company. The judgment followed as a matter of course, decreeing that the order of the Commission fixing the rate hereinbefore mentioned was unjust, unreasonable, invalid and unenforceable. Plaintiffs were also denied relief in their suit against the defendant; and were permanently enjoined from enforcing the order in suit.

An appeal from the judgment was duly taken by plaintiffs. Defendant filed various cross-assignments of error in the trial court, which, in connection with plaintiffs' assignments of error, were presented to the Court of Civil Appeals.

[fol. 156] Upon a consideration of the case the Court of Civil Appeals reversed the judgment of the District Court and rendered judgment declaring that the order was in all respects valid and directing its enforcement. A motion for rehearing was duly filed and overruled. Hence this application for writ of error.

(Statement of Grounds of Jurisdiction and Questions Decided omitted.)

First Assignment of Error

The Honorable Court of Civil Appeals erred in holding that the transportation of gas from Wheeler County through the State of Oklahoma into Texas, under the facts and circumstances shown in the record, did not constitute interstate commerce. (104th ground of Motion for Rehearing.)

Second Assignment of Error

The Honorable Court of Civil Appeals erred in failing to hold that defendant was engaged in interstate commerce in transporting and selling gas produced or purchased by it in Wheeler County, Texas, and transported in its high pressure line through Oklahoma and thence back into the State

of Texas up to the city gates in Texas, where delivery is made. (119th ground of Motion for Rehearing.)

Third Assignment of Error

The Honorable Court of Civil Appeals erred in holding (having reference to the transportation of the gas from Wheeler County through the State of Oklahoma back into Texas for delivery at city gates in Texas) that "but one practical conception can be drawn from the whole transaction involved; that is, that the gas produced in Texas and intended to be delivered, sold and used in Texas is in-
[fols. 157-160] trastate commerce". (107th ground of Motion for Rehearing.)

Fourth Assignment of Error

The Honorable Court of Civil Appeals erred in holding that the rate order in question, fixing the sale price of the Wheeler County gas when sold and delivered at wholesale at the city gates in Texas after it had been transported from the State of Oklahoma, did not interfere in any manner with the transportation of gas from Texas through Oklahoma and back into Texas and did not burden or amount to a regulation of interstate commerce. (110th ground of Motion for Rehearing; also 105th and 108th grounds of Motion for Rehearing.)

Fifth Assignment of Error

The Honorable Court of Civil Appeals erred in holding that the transportation of gas through the State of Oklahoma amounted to merely a method of delivering the gas in Texas and was a negligible circumstance in determining the interstate commerce issue. (109th ground of Motion for Rehearing.)

* * * * * * *

[fol. 161] Sixth Assignment of Error

The Honorable Court of Civil Appeals erred in holding that the facts show that the gas produced or purchased by defendant in Oklahoma and transported by its pipe lines to Texas does not move in interstate commerce when it reaches the city gates in Texas for delivery. (113th ground of Motion for Rehearing.)

[fols. 162-163] Seventh Assignment of Error

The Honorable Court of Civil Appeals erred in holding that the interstate transportation of gas purchased or produced by appellee in Oklahoma ceased when such gas passed through appellee's gasoline plant at Gainesville, Texas. (114th ground of Motion for Rehearing.)

Eighth Assignment of Error

The Honorable Court of Civil Appeals erred in holding and in giving any consideration to its holding that "the amount of Oklahoma gas as a whole is small and after dividing and re-dividing before delivery to the various city gates its amount is negligible in comparison with the amount of the Texas gas with which it is mixed or commingled." (115th ground of Motion for Rehearing.)

* * * * * * *

[fol. 164] Ninth Assignment of Error

The Court of Civil Appeals erred in holding that defendant did not meet the burden of showing by clear and satisfactory evidence that the thirty-two cent rate would [fol. 165] not afford a reasonable return on its property used in Texas public service, and that the trial court erred in overruling the plaintiffs' motions for an instructed verdict because plaintiffs' own evidence, if believed (and the credibility of the witnesses and the weight to be given their testimony were matters to be determined by the jury), proved clearly and satisfactorily that the rate was unjust, unreasonable and confiscatory; and such testimony if it did not prove as a matter of law that the rate fixed by the Railroad Commission was unjust, unreasonable and confiscatory, at least raised an issue of fact to be submitted to the jury. (29th ground of Motion for Rehearing.)

Tenth Assignment of Error

The Honorable Court of Civil Appeals erred in holding in effect that after allowing defendant the well head price, paid by it to independent producers, for all gas produced by defendant from its own gas reserves, it was proper to eliminate from the rate base the value of gas reserves, gas wells and all production equipment, and also to eliminate

from consideration all of defendant's actual production expenses, including expenses of cancelled and surrendered leases, dry hole expense, drilling and tool expense, depreciation and depletion and the amount required to yield defendant a fair return on the fair value of its production system properties. (39th, 41st and 42nd grounds of Motion for Rehearing.)

Eleventh Assignment of Error

The Honorable Court of Civil Appeals erred in holding [fols. 166-171] that the fair value of defendant's property, undepreciated, used in public service was $40,256,862.39. (31st ground of Motion for Rehearing.)

* * * * * * *

Fourteenth Assignment of Error

[fols. 172-176] The Honorable Court of Civil Appeals erred in holding, in substance and effect, that under Article 6059, R. C. S. 1925, the order of the Railroad Commission fixing a rate should be sustained, upon a de novo trial in the District Court, if the evidence is merely conflicting and there is substantial evidence supporting the order of the Commission, because the statute, as thus construed and applied, denies to the defendant in this case the right to a judicial review of the rate order wherein the reviewing court may exercise its independent judgment in respect to both the facts and the law, a right that is guaranteed to the defendant by the Due Process Clause of the Fourteenth Amendment to the Constitution of the United States. (1st, 2nd, 3rd, 5th, 6th, and 25th grounds of Motion for Rehearing.)

* * * * * * *

Fifteenth Assignment of Error

[fol. 177] The Honorable Court of Civil Appeals, having held in effect that the Railroad Commission made out a prima facie case by introducing the order of the Railroad Commission in evidence, which order was based on an evaluation and consideration of defendant's system as a whole and the income from and the expenses of said system, erred in holding that defendant did not make out a

prima facie case of the unjustness and unreasonableness of said order by showing that if said order had been in effect for the years in question defendant would not have earned a six (6%) per cent annual return even on the Commission's rate base, and after giving effect to the Commission's depreciation allowance and operating expenses. (47th ground of Motion for Rehearing.)

* * * * * * *

Sixteenth Assignment of Error

[fol. 178] The Railroad Commission having found and held that defendant's property and business used and useful in the public service, is an integrated system, and the Honorable Court of Civil Appeals having found and held that defendant is not engaged in interstate commerce in transporting and supplying natural gas at any of the cities [fol. 179] and towns served by it in the State of Texas, and defendant having introduced evidence showing that the order of the Commission would not permit it to receive, in any of the years involved or in the future, as much as a six (6%) per cent return on the fair value of its public service property, and such evidence being uncontradicted and undisputed by any evidence offered by plaintiffs the Honorable Court of Civil Appeals erred in holding that the evidence was insufficient as a matter of law to make a jury issue as to the unjustness and unreasonableness of the Commission's order and that the trial court erred in not granting plaintiffs' motion for an instructed verdict. (80th ground of Motion for Rehearing.)

Seventeenth Assignment or Error

The judgment of the Honorable Court of Civil Appeals in disapproving defendant's present gate rate and in approving and holding as valid the rate prescribed in the order of the Railroad Commission takes defendant's property without due process of law and denies to defendant the equal protection of the law and denies to defendant the opportunity of earning a reasonable return upon the fair value of its public service property, all in violation of defendant's right under the Fourteenth Amendment to the Federal Constitution. (161st ground of Motion for Rehearing.)

* * * * * * *

[fol. 180] Eighteenth Assignment of Error

The witnesses for plaintiffs having eliminated from their computation of the value of defendant's property in Texas, natural gas reserves, including producing as well as non-producing, gas wells and gas well equipment, having an actual book cost of approximately $4,500,000.00 and pipe lines of the value of many thousands of dollars, all of which the undisputed evidence in this case shows were used and useful in the public service, in order to show that the rate prescribed in the Commission's order permitted defendant to earn approximately the six (6%) per cent return which [fol. 181] the Commission held was the minimum return to which defendant was entitled, the Honorable Court of Civil Appeals erred in holding that plaintiffs' computation of value represented the fair value of Defendant's property in Texas and that the trial court should have instructed a verdict for plaintiffs because there was substantial evidence to support the Commission's order allowing defendant a return of 6% per annum, the effect of which holding was to deny to defendant just compensation for the use of its property in the public service in violation of defendant's rights under the Texas and Federal Constitutions. (39th ground of Motion for Rehearing.)

Nineteenth Assignment or Error

The Honorable Court of Civil Appeals erred in holding in effect that after allowing defendant the wellhead price paid by defendant to independent producers for all gas produced by defendant from its own gas reserves, the elimination from the rate base of gas reserves, gas wells and equipment which cost defendant approximately four million, five hundred thousand ($4,500,000.00) dollars, and of defendant's actual expenses of operation for cancelled and surrendered leases, dry hole expense, gas production expense and drilling tool expense was justified, inasmuch as the uncontradicted evidence shows that said allowance would be insufficient to provide for the depletion of said gas reserves, allow for the aforesaid expenses of operation and provide any return to defendant on the fair value of its gas reserves, gas wells and gas well equipment. (41st ground of Motion for Rehearing.)

• • • • • • •

[fol. 182] Twentieth Assignment of Error

The Court erred in approving the segregation of property testified by plaintiffs' witnesses, such segregation being based upon the value of property located in Texas only, [fol. 183] excepting defendant's production system properties and certain pipe lines, because such evaluation failed to give any consideration to or value defendant's properties located in Oklahoma and actually and necessarily used and useful in transporting to Texas gas purchased or produced in Oklahoma, and to the extent that defendant's properties located in Oklahoma are used in the Texas public service, defendant, under the holding of the court, is denied just compensation for such use, in violation of its rights under Section 17, Article I of the Texas Constitution and the Fourteenth Amendment to the Federal Constitution. (67th ground of Motion for Rehearing.)

The foregoing assignment of error is adopted as a proposition.

* * * * * * *

[fol. 184] Twenty-First Assignment of Error

The Honorable Court of Civil Appeals erred in eliminating as an expense of operation the expense actually paid and charged by defendant for cancelled and surrendered leases, and in finding and holding in respect thereto that: "In view of its admitted large gas reserves, which will last for 40 years, and in view of the fact that it is a matter of judicial knowledge that gas by the multiplied millions of cubic feet is being wasted daily because of the lack of a market, we think these large charges are unjustified." (153rd ground of Motion for Rehearing.)

The foregoing assignment of error is adopted as a proposition.

Twenty-Second Assignment of Error

The undisputed evidence showing that the amount charged by defendant as an expense of operation for gas leases acquired but cancelled and surrendered was the actual amount paid for such leases as reflected on the books of the defendant, and the undisputed evidence further showing that such expenditures were made by defendant in the exercise of the best judgment of its management, and there

[fol. 185] being no evidence of inefficiency or improvidence on the part of defendant's management, the Honorable Court of Civil Appeals erred in holding that said expense was not supported by the quantum and character of evidence required in order for it to be allowed as an expense of operation in fixing defendant's rates, such holding denying to defendant its rights under the Fourteenth Amendment to the Federal Constitution. (58th ground of Motion for Rehearing.)

The foregoing assignment of error is adopted as a proposition.

* * * * * * *

[fol. 186] Twenty-Third Assignment of Error

The undisputed evidence showing that defendant actually expended in acquiring or attempting to acquire new business by way of advertising, solicitation and otherwise, the following sums, to-wit: $126,125.98 in 1931, $87,528.94 in 1932, $99,793.94 in 1933, and $101,308.68 during the twelve months' period ending March 31, 1934, and the undisputed evidence further showing that such expense was incurred in the exercise of the best judgment of defendant, and there being no evidence of inefficiency or improvidence on the part of defendant's management, the Honorable Court of Civil Appeals erred in holding that said expense was not supported by the quantum and character of evidence required in order for it to be allowed as an expense of opera-
[fol. 187] tion in fixing defendant's rates. (57th ground of Motion for Rehearing.)

The foregoing assignment of error is adopted as a proposition.

* * * * * * *

[fol. 188] Twenty-Fourth Assignment of Error

There being no evidence establishing or showing that $50,000.00 per annum would be a sufficient sum to allow defendant for Federal Income Taxes, the Honorable Court of Civil Appeals erred in so finding. (56th ground of Motion for Rehearing.)

* * * * * * *

[fols. 189-190] Twenty-Fifth Assignment of Error

The Honorable Court of Civil Appeals erred in holding that the testimony and evidence of defendant as to the proper annual sum to be allowed for credit to a reserve to provide for depreciation, depletion and amortization was speculative, at war with actual experience and plainly excessive, because the undisputed evidence shows that such calculations and estimates were based upon a study of the defendant's history, its past experience and its probable future requirements for depreciation, depletion and amortization. (49th ground of Motion for Rehearing.)

Twenty-Sixth Assignment of Error

The court erred in holding that the depreciation allowance of defendant's experts was speculative, at war with the actual experience of the company and plainly excessive, because said finding of fact is a finding based on conflicting testimony and on the weight to be given to the testimony of the witnesses and the credibility of the witnesses, all of which matters are matters for the determination of the jury and not for the determination of this court, and which this court has no power or authority to determine. (53rd ground of Motion for Rehearing.)

* * * * * * *

[fol. 191] Twenty-Seventh Assignment of Error

The Honorable Court of Civil Appeals erred in finding and holding that defendant offered no evidence which even tended to show that a six (6%) per cent rate of return would confiscate its property, or was unreasonable or unjust. (62nd ground of Motion for Rehearing.)

Twenty-Eighth Assignment of Error

There being ample evidence showing that a return of from eight to ten per cent would be just, fair and reasonable for defendant to earn, the Court erred in holding that as a matter of law the trial court and jury were without power to say that a six (6%) per cent return is unjust and unreasonable as to defendant. (63rd ground of Motion for Rehearing.)

Twenty-Ninth Assignment of Error

The Court having found that there was evidence that an eight or ten per cent per annum net return would be fair and

reasonable for defendant to earn and that there was a difference of opinion among the witnesses who testified on that point, erred in holding that, "This evidence merely presented the difference of opinion of experts * * * and their [fol. 192] opinions cannot be substituted for the finding of the Commission that a six (6%) per cent rate of return was fair and reasonable." (64th ground of Motion for Rehearing.)

* * * * * * *

[fol. 193-194] Thirtieth Assignment of Error

The Honorable Court of Civil Appeals erred in holding that, "The reproduction cost new value, as determined in the instant case, allows for all overhead expense, which together with the reasonable operating expenses allowed, fully compensate defendant for all development costs which have been incurred, and are ample to cover items entering into and forming a part of what is referred to as 'going concern value.'" (60th ground of Motion for Rehearing.)

Thirty-First Assignment of Error

The undisputed facts showing that defendant began operations in 1909 as a small concern with compar-tively few consumers, and that as of the date of this inquiry it was rendering an efficient and dependable natural gas service to distributing companies who in turn serve 202,882 customers who are well educated in the use of natural gas, that defendant's said business has been gradually built up over a long period of years and is adequate to give defendant a reasonable return on the fair value of its property under rates which are reasonable to the public, the Honorable Court of Civil Appeals erred in holding that it was improper to allow for going concern value under the facts of the instant case, such holding denying to defendant its rights under the Fourteenth Amendment to the Federal Constitution. (61st ground of Motion for Rehearing.)

* * * * * * *

[fols. 195-196]

Thirty-Second Assignment of Error

The Court erred in holding that the testimony of appellee's (defendant's) witnesses based upon a segregation as

between property used in interstate and intrastate commerce proved nothing material in this case. (86th ground of Motion for Rehearing.)

Thirty-Third Assignment of Error

The Court erred in holding "that appellee offered no other proof upon a correct segregation or allocation of the property, and the Trial Court erred in refusing the Commission's order for an instructed verdict and for judgment declaring the rate order appealed from to be valid in every respect." (87th ground of Motion for Rehearing.)

Thirty-Fourth Assignment of Error

The Court erred in holding that "having failed to make a proper segregation of interstate and intrastate properties, defendant did not adduce the quantum and character of proof necessary to establish the invalidity of the rate as being confiscatory, or unreasonable and unjust." (89th ground of Motion for Rehearing.)

* * * * * * *

[fol. 197] Thirty-Fifth Assignment of Error

The evidence showing that the Commission's allowance for annual reserve accruals to provide for depreciation and amortization was computed on a sinking fund basis which required the existence and use of a sum in excess of $5,000,000.00 in said reserve account at the date of inquiry, and which allowance was admittedly insufficient for the future requirements of defendant without the use of said credit balance in the reserve account, the Honorable Court of Civil Appeals erred in holding that said allowance would be adequate for future requirements and that the order of the Commission based thereon was just, reasonable and valid, such holding denying to defendant the right to earn a reasonable return on the fair value of its property used in the public service, in violation of defendant's rights under the Texas and National Constitutions. (52nd Ground of Motion for Rehearing.)

Thirty-Sixth Assignment of Error

The judgment of the Honorable Court of Civil Appeals herein in affirming the order of the Railroad Commission

which was declared to be unjust, unreasonable and invalid by the District Court, takes defendant's property without due process of law and without affording to defendant an opportunity to earn a reasonable return upon the fair value of its property used in the public service and denies to de-
[fols. 198-201] fendant the equal protection of the law in violation of defendant's rights under the 14th Amendment to the Federal Constitution in so far as said judgment approves the allowance made by the plaintiff's witnesses for annual accruals to a reserve for depreciation and amortization. (162nd Ground of Motion for Rehearing.)

* * * * * * *

[fol. 202] Forty-Third Assignment of Error

The Honorable Court of Civil Appeals having held that the scope of judicial review of the Railroad Commission's order by the district court under the Texas statutes, on defendant's claim that said order is unjust, unreasonable and confiscatory, is merely corrective and that such review is limited to a determination of whether the Commission's order is supported by substantial evidence, erred in failing to declare said order void as being in conflict with the due process requirements of the Fourteenth Amendment to the Federal Constitution, which entitles defendant to a judicial review of said order before a court with power to exercise an independent judgment as to both the facts and law involved. (1st ground of Motion for Rehearing.)

Forty-Fourth Assignment of Error

The court having held in effect that in suits filed pursuant to the provisions of Article 6059, R. S., 1925, the courts may not exercise an independent judgment in determining whether rate orders of the Railroad Commission are unjust and unreasonable or confiscatory, but that the courts must affirm such orders if there is substantial evidence to support them notwithstanding the evidence is conflicting, erred in holding the Railroad Commission's order valid for the reason that such holding denies to defendant a judicial review of the rate order in question on the constitutional issue of
[fols. 203-205] confiscation to which defendant is entitled under the Fourteenth Amendment to the Constitution of the United States. (3rd ground of Motion for Rehearing.)

Forty-Fifth Assignment of Error

Inasmuch as the Honorable Court of Civil Appeals holds that this suit, or defendant's answer herein, is in effect an appeal from the order of the Railroad Commission pursuant to the provisions of Article 6059 Revised Civil Statutes of Texas, and inasmuch as the court has construed that statute as withholding from and denying to the district court the right and power to exercise an independent judgment on the facts underlying the issue of the unreasonableness, unjustness and confiscatory character of the order of the Commission and has held that the order of the Commission must be sustained if there is any substantial evidence offered upon the trial de novo supporting it, and inasmuch as the statutes and constitution of Texas as construed deny to this court and the Supreme Court of Texas such power and authority, and inasmuch as defendant has been compelled to follow the procedure which has been followed against its wishes and over its objection, defendant has not obtained that due process of law to which it is entitled under the Fourteenth Amendment to the Constitution of the United States. Accordingly, the order of the Commission was void and the court erred in failing to so hold. (8th ground of Motion for Rehearing.)

* * * * * * *

[fols. 206-207]

Forty-Seventh Assignment of Error

The Court of Civil Appeals erred in holding that defendant obtained a trial de novo on the question of confiscation, or on the question of the reasonableness and justness of the order of the Commission, in view of its holding that the order of the Commission must be upheld as a matter of law, if there is any substantial evidence to support it, the latter holding denying, in substance, the right recognized by the former holding. (10th ground of Motion for Rehearing.)

* * * * * * *

[fol. 208] Fiftieth Assignment of Error

The Court erred in holding that "where, as in the instant case, the evidence is conflicting, and the conclusion to be

drawn therefrom in respect of this or that item uncertain or speculative, the Court should not interfere with gas rates in advance of any actual experience of the practical result of such new rates." (74th ground of Motion for Rehearing.)

Fifty-First Assignment of Error

The Court erred in holding that "'We are clear in the view that where a State Commission fixes a utility rate so as to allow a 6% rate of return on the property used in the public service, the Courts will not, prior to a fair test of such rate, declare same void, unless the evidence establishes that it is confiscatory or invalid as a matter of law." (76th ground of Motion for Rehearing.)

* * * * * * *

[fol. 209] Fifty-Second Assignment of Error

The Court erred in reversing and rendering this case, because the issue raised by plaintiffs in their Second Amended Original Petition was the reasonableness of the rate promulgated by the Commission for gas delivered at the city gates of the various towns and cities served by defendant in intrastate commerce and this Court's holding that defendant was not engaged in interstate commerce in Texas has deprived defendant of an opportunity to develop facts in the case under the law as it has been announced for the first time by this decision. (84th ground of Motion for Rehearing.)

The foregoing assignment of error is adopted as a proposition.

* * * * * * *

[fol. 210] Fifty-Third Assignment of Error

The Court erred in holding that with respect to the jurisdiction of the Commission to regulate and control defendant's business and particularly for the purpose of fixing the rates for which it might sell gas to the public in Texas, the corporation must be regarded as being engaged in the single business enterprise of producing, purchasing, transporting, delivering and selling natural gas to the ultimate consumer or user in Texas, because there is no legal justification for ignoring the actual corporate existence of the

corporations in question, and because recognition of the existence of the corporations as separate and distinct entities in no way operates to impair or defeat the jurisdiction of the Railroad Commission. (98th ground of Motion for Rehearing.)

The foregoing assignment of error is adopted as a proposition.

Fifty-Fourth Assignment of Error

The Court erred in holding that to permit Texas corporations to dispose of their capital stock and form a separate entity of their own and to surrender the management and [fol. 211] control of their business to the holding corporation, which has no permit to do business in Texas, would enable them to defeat the jurisdiction of the Commission over them as Texas Public Utilities, because as a matter of law the Railroad Commission has the same power and jurisdiction over the business now carried on by the defendant, and the separate though affiliated corporations purchasing gas from it, considering the corporations as separate and distinct entities, as it would have if the corporate entities be ignored and the distributing companies and the pipe line companies treated as simply departments of different corporations. (101st ground of Motion for Rehearing.)

The foregoing assignment of error is adopted as a proposition.

(Supporting Statement, Authorities and Argument omitted.)

Fifty-Fifth Assignment of Error

The Honorable Court of Civil Appeals erred in holding that the reduction of 8 cents per thousand cubic feet in the city gate pipe line charge ordered by the Railroad Commission, could and should be passed on to the ultimate consumers, for the reason that the several distributing companies to whom defendant supplies gas are not parties to this suit and there is no evidence in this case upon which such issue can be considered and determined, there being no evidence in this case of the property values and earnings of any of the distributing companies, either under the existing rates or any lesser rates, and this is true, even though appellee and its distributing companies be regarded as one common concern, for as much as a utility such as [fol. 212] defendant is entitled to a reasonable return on

every branch and part of its property, whether it be a transmission or a distribution system. (77th ground of Motion for Rehearing.)

Fifty-Sixth Assignment of Error

The Court erred in holding that the Railroad Commission of Texas may, without further notice or hearing, require the distributing companies purchasing gas from appellee to cease paying appellee a rate for gas purchased by them in excess of 32 cents. (78th ground of Motion for Rehearing.)

Fifty-Seventh Assignment of Error

The Court erred in holding that "if the 32 cent rate is declared valid herein, defendant can have no further interest in any order the Commission may make with regard to requiring the various distributing companies to pay in excess of such rate and to pass the 8 cent reduction on to the ultimate consumers," because under the holding of the Court that corporate entities are to be ignored and that defendant is to be deemed to be engaged in the business of distributing gas legally to domestic consumers, defendant has a most vital interest in law and in fact in the burner tip rates. (79th ground of Motion for Rehearing.)

The above Assignments of Error are submitted as Propositions.

* * * * * * *

[fol. 213] Fifty-Eighth Assignment of Error

The Court of Civil Appeals erred in failing to hold that defendant is engaged in interstate commerce at the city gates of various towns and cities in Texas, and that the order of the Railroad Commission prohibiting defendant from collecting in excess of thirty-two cents for all gas sold and delivered by it to various distributing companies at the city gates including gas transported and delivered in inter-
[fol. 214] state commerce, directly interfered with and constituted a burden upon interstate commerce and defendant's right to engage therein in violation of the Commerce Clause of the Constitution of the United States, and in not holding the order of the Railroad Commission void and unenforceable insofar as plaintiffs sought to enforce the same

as against such gas transported and sold by defendant in interstate commerce. (125th ground of Motion for Rehearing.)

* * * * * * *

Fifty-Ninth Assignment of Error

The Court erred in failing and refusing to sustain defendant's Cross-Assignment of Error No. 2, as follows:

"The Court erred in overruling and in refusing to give defendant's request for a peremptory instruction duly and [fol. 215] timely presented at the conclusion of all the evidence in the case, and after both plaintiffs and defendant had rested, because it appeared from the statement of the Railroad Commission of Texas attached to the opinion and order of the said Commission, marked Exhibit "a" and referred to in Plaintiffs' Second Amended Original Petition, that defendant was engaged in the production and sale at wholesale of natural gas, engaging in both interstate and intrastate commerce in the sale of gas to some 300 cities and towns in the States of Oklahoma and Texas. The order of the Railroad Commission undertook to fix a reasonable rate for all of the gas supplied by the defendant to the various distributing companies. A part of the gas being delivered by the defendant at the city gates of various towns and cities in Texas at the time of the investigation of the Railroad Commission, and at all times in question was being transported uninterruptedly through defendant's high pressure pipe lines from and through the State of Oklahoma into the State of Texas. The business of transporting natural gas uninterruptedly through defendant's high pressure pipe lines from the State of Oklahoma into the State of Texas, and from the State of Texas through Oklahoma and back into the State of Texas is national in character and constitutes interstate commerce and transportation, and also constitutes a substantial portion of defendant's entire natural gas business. The order of the Railroad Commission was intended to and did, in fact, prescribe the rate to be charged for all gas sold by the defendant, including interstate gas, and thereby prevented the defendant from charging and receiving the price for interstate gas which it was charging and receiving, and, therefore, was a burden upon and a direct regulation of

interstate commerce. The order of the Railroad Commis-
[fol. 216] sion therefore was void insofar as it related to interstate commerce, and gas sold by the defendant moving in interstate commerce under the Commerce Clause of the Federal Constitution, and, being void in part, and being indivisible in character, it was void in its entirety and could not be enforced in whole or in part by the plaintiffs in this suit." (126th ground of Motion for Rehearing.)

* * * * * * *

Sixtieth Assignment of Error

The Court erred in rendering judgment for plaintiffs because not only does Article 6059 of the Revised Civil Statutes of Texas, as construed, deny to defendant due process of law in violation of its rights under the Fourteenth Amendment to the Constitution of the United States, and not only does the Court treat this case and answer of defendant as an appeal thereunder, but defendant has been compelled to follow the procedure outlined thereunder upon
[fol. 217] representations by plaintiffs that every constitutional and legal right to which it might be entitled would be fully safeguarded, and that it would be entitled to the same sort of trial to which it would have been entitled in its suit in the Federal Court upon the basis of which representations the Federal Court stayed proceedings therein with the result that not only does defendant fail to get the kind of trial to which it would have been entitled in the Federal Court but is denied the opportunity of ever obtaining the same. (12th ground of Motion for Rehearing.)

* * * * * * *

Sixty-First Assignment of Error

The judgment of the Honorable Court of Civil Appeals herein in affirming the order of the Railroad Commission which was declared to be unjust, unreasonable and invalid by the District Court, takes appellee's property without due process of law and without affording to appellee an opportunity to earn a reasonable return upon the fair value of its property used in the public service and denies to appellee the equal protection of the law in violation of appellee's rights under the Fourteenth Amendment to the
[fol. 218] Federal Constitution in so far as said judgment

approves the inclusion of approximately $334,000.00 per annum as operating income on account of temperature adjustments which appellee is shown by the evidence in this case never to have received. (163rd ground of Motion for Rehearing.)

The foregoing assignment of error is adopted as a proposition.

(Supporting Statement, Authorities and Argument omitted.)

Sixty-Second Assignment of Error

The Court erred in reversing and rendering this case in favor of the plaintiffs and against the defendant, in view of it holding that the issue of confiscation was not submitted to the jury, inasmuch as defendant plead that its property would be confiscated through the order of the Commission and proved such confiscation if its testimony were accepted as the more credible and entitled to the most weight, and requested that the issue be submitted to the trial court, and excepted and objected to the failure and refusal of the trial court to submit the same; and if it be true, as held by this Court, that the issue was not submitted, then by reversing and rendering the case this Court has deprived defendant of the right of a judicial determination of the question of confiscation inasmuch as this Court has no power or authority under the Texas laws as an appellate court to determine that issue. (93rd ground of Motion for Rehearing.)

The foregoing assignment of error is adopted as a proposition.

(Supporting Statement, Authorities and Argument omitted.)

* * * * * * *

[fol. 219] The defendants in error (hereinbefore designated as plaintiffs) are represented herein by their attorneys of record Honorable William McCraw, Attorney General of Texas, Honorable Scott Gaines, First Assistant Attorney General, Hon. Alfred M. Scott, Assistant Attorney General, and Honorable F. L. Kuykendall, all of whom reside at Austin, Texas, and by Honorable A. R. Stout, a former Assistant Attorney General, now residing at Houston, Texas. They have been notified in writing of the filing

of this Application for Writ of Error and a duplicate copy of same has been deposited with the Clerk for their use on demand.

* * * * * * *

[fol. 220] (The above Application for Writ of Error bears endorsements showing that same was filed in the Court of Civil Appeals on October 25, 1935, and in the Supreme Court of Texas on November 2, 1935.)

[fol. 221] IN SUPREME COURT OF TEXAS

App. No. 21600

LONE STAR GAS CO.

vs.

STATE OF TEXAS et al.

From Travis County, 3rd District

ORDER DENYING APPLICATION FOR WRIT OF ERROR—October 7, 1936

This day came on to be heard the application of plaintiff in error for a writ of error to the Court of Civil Appeals for the Third District, and the same having been duly considered, it is ordered that the application be refused; that applicant, Lone Star Gas Company, pay all costs incurred on this application.

(No opinion filed.)

[fol. 222] IN SUPREME COURT OF TEXAS

[Title omitted]

ENTRY ON MOTION DOCKET SHOWING FILING OF MOTION FOR REHEARING OF THE APPLICATION FOR WRIT OF ERROR

Motion for Rehearing of Application No. 21,600.
Filed October 22, 1936.

[fol. 223] IN SUPREME COURT OF TEXAS

[Title omitted]

MOTION FOR REHEARING OF APPLICATION FOR WRIT OF ERROR —Filed October 22, 1936

To the Honorable the Supreme Court of Texas:

Comes now Lone Star Gas Company, a corporation, being plaintiff in error in the above styled and numbered cause, and files this its Motion for Rehearing of its Application for Writ of Error, and in this behalf prays that the order of the Court refusing said Application be set aside and that the Application be granted on rehearing, and that plaintiff in error be accorded the relief prayed for in the Application.

To prevent confusion, the parties to this cause will be referred t as they appeared and were designated in the district court and in the Application for Writ of Error; the defendants in error as plaintiffs and the plaintiff in error as defendant.

[fol. 224] We shall not enter upon a reargument of all of the questions presented in the Application. Instead, we shall select a few of the more important questions and discuss these briefly, citing additional authorities and presenting additional and new points of argument, in an effort to demonstrate that the Court erred in refusing the Application for Writ of Error.

Some of these questions are so important and have such intrinsic merit that we feel that we must have failed to present them as clearly in the Application for Writ of Error as they should have been presented; only in that way are we able ot explain the refusal of the writ of error.

First Assignment of Error

This Honorable Court erred in failing to grant the Application for Writ of Error on the First Assignment of Error presented in the Application, which asserts that the Court of Civil Appeals erred in holding that the transportation of gas from Wheeler County through the State of Oklahoma back into Texas did not constitute interstate commerce.

Second Assignment of Error

This Honorable Court erred in failing to grant the Application for Writ of Error on the Second Assignment of Error presented in the Application, which asserts that the Court of Civil Appeals erred in failing to hold that de-
fols. 225-226] fendant was engaged in interstate commerce in transporting and selling gas produced or purchased by it in Wheeler County, Texas, and transported by it in its high pressure line through the State of Oklahoma and thence back into the State of Texas up to the city gates in Texas, where sale and delivery are made.

Third Assignment of Error

This Honorable Court erred in failing to grant the Application for Writ of Error on the Fourth Assignment of Error presented in the Application, which asserts that the Court of Civil Appeals erred in holding that the rate order in question fixing the sales price of the Wheeler County gas when sold and delivered at wholesale at the various city gates in Texas after it had been transported through the State of Oklahoma, did not interfere in any manner with the transportation of gas from Texas through Oklahoma and back into Texas, and did not burden or amount to a regulation of interstate commerce, in violation of the Commerce Clause of the Constitution of the United States.

* * * * * * *

fol. 227] Fourth Assignment of Error

This Honorable Court erred in holding, in effect, that the prescribing of the price that might be charged and collected in the first sale and delivery in Texas of this Wheeler County gas, transported in interstate commerce into Texas, does not constitute a direct regulation of said commerce, in violation of Article I, Sec. 8, Cl. 3, of the Federal Constitution.

Fifth Assignment of Error

This Honorable Court erred in approving, in effect, by fol. 228] refusing the writ of error, the holding of the Court of Civil Appeals that the prescribing of the alleged reasonable city gate rates to be charged for sale and delivery of this gas transported in interstate commerce did

not amount to a direct regulation of interstate commerce, in violation of the Commerce Clause of the National Constitution, but only to an indirect or incidental burden upon such commerce.

Sixth Assignment of Error

This Honorable Court erred in approving, in effect, the holding of the Court of Civil Appeals that defendant's segregation of its properties and business, as between intrastate and interstate commerce, which treated this Wheeler County gas as interstate gas, was improper. The Wheeler County gas was plainly interstate gas and defendant therefore correctly allocated to its interstate business the properties used in producing and transporting it, as well as the revenues and expenses received and incurred in handling it.

(Statement, Authorities, and Argument omitted.)

Seventh Assignment of Error

This Honorable Court erred in failing to grant the writ of error on account of the Sixth Assignment of Error presented in the Application for Writ of Error, which asserts that the Court of Civil Appeals erred in holding that the [fol. 229] gas produced or purchased by defendant in the State of Oklahoma and transported by its pipe lines to Texas does not move in interstate commerce when it reaches the city gates in Texas for delivery.

Eighth Assignment of Error

This Honorable Court erred in failing to grant the Application for Writ of Error on account of the Seventh Assignment of Error presented in the Application, which asserts that the Court of Civil Appeals erred in holding that the interstate transportation of gas purchased or produced by the defendant in the State of Oklahoma ceased when such gas passed through defendant's gasoline plant at Gainesville, Texas, such holding involving an erroneous construction of the Commerce Clause of the Constitution of the United States. (Art. I, Sec. 8, Cl. 3.)

Ninth Assignment of Error

This Honorable Court erred in failing to grant the Application for Writ of Error on the Eighth Assignment of

Error presented in the Application, which asserts that the Court of Civil Appeals erred in holding, and in giving effect to such holding, that "the amount of Oklahoma gas as a whole is small and after dividing and redividing before delivery to the various city gates its amount is negligible in comparison with the amount of the Texas gas with which it is mixed or commingled."

Tenth Assignment of Error

[fols. 230-231] This Honorable Court erred in refusing the Application for Writ of Error and thereby holding, in effect, that the Application of the prescribed city gates rate to the first sales in Texas of the gas produced or purchased by the defendant in the State of Oklahoma and transported to Texas did not involve a direct regulation of interstate commerce, in violation of the Commerce Clause of the Constitution of the United States (Art. I, Sec. 8, Cl. 3), but only an indirect regulation or incidental regulation of such commerce.

* * * * * * *

[fol. 232] Eleventh Assignment of Error

This Honorable Court erred in failing to grant the Application for Writ of Error on the Ninth Assignment of Error in the Application, which asserted that the Court of Civil Appeals erred in holding that defendant did not meet the burden of showing by clear and satisfactory evidence that the thirty-two cent rate would not afford a reasonable re-[fol. 233] turn on its properties used in the public service in Texas, and in further holding that the evidence offered by the plaintiffs themselves did not prove clearly and satisfactorily that the prescribed rate was unjust, unreasonable and confiscatory, and violative of defendant's property rights under the State Constitution and under the Fourteenth Amendment to the Federal Constitution.

Twelfth Assignment of Error

This Honorable Court erred in failing to grant the Application for Writ of Error on the Tenth Assignment of Error presented in the Application for Writ of Error, which asserted, in effect, that the Court of Civil Appeals erred in holding that after allowing the defendant, for all gas

produced by defendant from its own gas reserves, the well head price paid by defendant for gas sold to it by independent producers, it was proper to eliminate from the rate base the value of defendant's gas reserves, its gas wells, and all of its production equipment property, and also to eliminate from consideration all of defendant's actual expenses incurred in the handling and operating of its producing property, including expenses of canceled and surrendered leases, dry hole expense, drilling and tool expense, operating expense, depreciation and depletion, as well as the amount required to yield defendant a fair return on the fair value of its production system properties; such ruling depriving the defendant of its property without due process of law, in violation of the Due Process Clause of the Four-
[fol. 234] teenth Amendment to the Constitution of the United States.

Thirteenth Assignment of Error

This Honorable Court erred in failing to grant the Application for Writ of Error on the Eleventh Assignment of Error presented in the Application, which asserted that the Court of Civil Appeals erred in holding that the fair value of defendant's property, undepreciated, used in the public service, was $40,256,862.39.

Fourteenth Assignment of Error

This Honorable Court erred in failing to grant the Application for Writ of Error on the Nineteenth Assignment of Error presented in the Application, which asserted that the Court of Civil Appeals erred in holding that after allowing to defendant, on account of all gas produced by defendant from its own gas reserves, the well head price paid by defendant to independent producers, it was proper to then eliminate from the rate base the value of all gas reserves, the value of gas wells and equipment costing the defendant approximately $4,500,000.00, and valued by the Commission at $4,674,285.91, and to also eliminate from consideration defendant's actual expenses of operating its said production system properties, aggregating, under the Commission's findings, the sum of $247,732.86; such holding denying to the defendant due process of law and depriving it of its property without due process of law, in violation of the Due Process Clause (Sec. 1) of the Fourteenth

[fols. 235-237] Amendment to the Constitution of the United States.

Fifteenth Assignment of Error

This Honorable Court erred in failing to grant the Application for Writ of Error on the Eighteenth Assignment of Error presented in the Application, which assignment complains of the error of the Court of Civil Appeals in holding that it was proper to eliminate from the rate base and from consideration the entire value of defendant's production system properties, as well as all operating expenses incurred and paid by the defendant in the handling and operating of said properties, and to substitute therefor the application of an arbitrary formula under which defendant was allowed for the gas produced by it the well head price per thousand cubic feet paid by it to other producers. The effect of the substitution of said arbitrary formula was to deprive the defendant of its property without due process of law, in violation of the Fourteenth Amendment to the Constitution of the United States.

* * * * * * *

[fol. 238] Seventeenth Assignment of Error

This Honorable Court erred in overruling and in failing to grant the Application for Writ of Error on the Fourteenth Assignment of Error presented in the Application, which asserts that the Court of Civil Appeals erred in holding, in substance and effect, that under Article 6059, Revised Civil Statutes of 1925, the order of the Railroad Commission fixing a rate should be sustained, upon a de novo trial in the district court, if the evidence is merely conflicting and there is substantial evidence supporting the [fol. 239] order, because this statute, as thus construed and applied, denies to the defendant in this case the right to a judicial review of the rate order, wherein the reviewing court may exercise its independent judgment in respect to the facts as well as the law, a right guaranteed to the defendant by the Due Process Clause (Sec. 1) of the Fourteenth Amendment to the Constitution of the United States.

Eighteenth Assignment of Error

This Honorable Court erred in overruling and in failing to grant the Application for Writ of Error on the Forty-

third Assignment of Error presented in the Application, the same being as follows:

"The Honorable Court of Civil Appeals having held that the scope of judicial review of the Railroad Commission's order by the district court under the Texas statutes, on defendant's claim that said order is unjust, unreasonable and confiscatory, is merely corrective and that such review is limited to a determination of whether the Commission's order is supported by substantial evidence, erred in failing to declare said order void as being in conflict with the due process requirements of the Fourteenth Amendment to the Federal Constitution, which entitles defendant to a judicial review of said order before a court with power to exercise an independent judgment as to both the facts and law involved."

Nineteenth Assignment of Error

This Honorable Court erred in overruling and in failing [fols. 240-241] to grant the Application for Writ of Error on the Forty-fourth Assignment of Error presented in the Application and in thereby holding that under the provisions of Article 6059 the courts may not exercise an independent judgment in determining whether rate orders are confiscatory, but must affirm and approve such orders if there is any substantial evidence to support them, such holding denying to the defendant an independent judicial review of the rate order in question on the constitutional issue of confiscation, to which the defendant is entitled under the Due Process Clause of the Fourteenth Amendment to the Constitution of the United States.

* * * * * * *

[fol. 242] Twentieth Assignment of Error

This Honorable Court erred in failing to grant the Application for Writ of Error on the Eighth Proposition submitted under the Ninth, Tenth and Eleventh Assignments of Error presented in the Application (p. 89), said proposition being as follows:

"The Railroad Commission having refused to segregate defendant's properties and operations in fixing this rate and having expressly found that in determining a fair rate it was necessary to consider all of defendant's properties

and all of its operations, the holding of the Court of Civil Appeals, to the effect that defendant in assailing the rate was required to segregate its properties and operations, contrary to the express finding of the Railroad Commission, [fols. 243-244] and to establish, under Article 6059, by 'clear and satisfactory' evidence that the segregation was proper and that the rate was confiscatory as applied to such segregated properties, deprives the defendant of due process of law, in violation of the Fourteenth Amendment to the Constitution of the United States because said holding, as applied to the facts of this case, deprives the defendant of a fair opportunity to test in a judicial proceeding the validity and reasonableness of the rate as it was fixed by the Commission, and deprives the defendant of the kind of judicial review to which it is entitled under the Due Process Clause of the Fourteenth Amendment."

* * * * * * *

[fol. 245] Twenty-First Assignment of Error

This Honorable Court erred in failing to grant the Application for Writ of Error on the Fifteenth Assignment of Error presented in the Application, which asserts that the Court of Civil Appeals erred in holding that defendant did not make out a prima facie case against the validity of the prescribed rate by showing that if said rate had been in effect for the years in question defendant would not have earned a six per cent annual return even on the Commission's rate base, and after giving effect to the Commission's [fol. 246] depreciation allowance and allowance for operating expenses.

Twenty-Second Assignment of Error

This Honorable Court erred in overruling, in effect, the First Proposition under the Fifteenth Assignment of Error presented in the Application, (Application, p. 105), which asserts that the Court of Civil Appeals erred in holding that defendant failed as a matter of law to prove any invalidating fact against the Commission's rate order because it failed to make a proper segregation as between the property employed and the business done in intrastate and interstate commerce, which segregation the Railroad Commission had held to be unnecessary.

* * * * * * *

[fol. 247] Twenty-Third Assignment of Error

This Honorable Court erred in overruling and in failing to grant the Application for Writ of Error on the Sixteenth Assignment of Error presented in the Application for Writ of Error. (Application, p. 11.)

Twenty-Fourth Assignment of Error

This Honorable Court erred in overruling the Seventeenth Assignment of Error presented in the Application for Writ of Error and in thereby holding that the judgment of the Court of Civil Appeals approving and holding valid the rate prescribed in the order of the Railroad Commission did not take defendant's property without due process of law, and did not deny to the defendant the equal protection of the laws, and did not deny [fol. 248] to it the opportunity of earning a reasonable return on the fair value of its property used in the public service, all in violation of Section 1 of the Fourteenth Amendment to the Constitution of the United States.

(Statement, Authorities, and Argument omitted.)

Twenty-Fifth Assignment of Error

This Honorable Court erred in overruling and in failing to grant the Twentieth Assignment of Error presented in the Application, which asserts that the Court of Civil Appeals erred in approving the segregation of property sponsored by plaintiffs' witnesses, such segregation being based upon the value of the property located in Texas only (excepting, however, defendant's production system properties and certain pipe lines which were not included) because such valuation failed to give any consideration to or value to defendant's properties located in Oklahoma and actually used and useful in transporting to Texas gas purchased or produced in Oklahoma, and to the extent that defendant's properties located in Oklahoma are used in rendering public service in Texas, defendant, under the holding of the Court is denied just compensation for such use, in violation of Section 17, Article I, of the Texas Constitution, and in violation of the Due Process Clause of the Fourteenth Amendment to the Federal Constitution.

[fol. 249] Twenty-Sixth Assignment of Error

This Honorable Court erred in overruling the Second Proposition under the Twentieth Assignment of Error presented in the Application, reading as follows:

"What plaintiffs' witnesses called the 'Texas-Oklahoma Gas Sales Adjustment' was a purely arbitrary bookkeeping allowance created by these witnesses (and not referred to in the findings of the Railroad Commission) as a substitute for actual values and actual outlays greatly exceeding the allowance. The practical effect of this 'adjustment' was to deny defendant's right to a fair return on its Oklahoma properties used and useful in producing and bringing gas to Texas; the allowance did not even amount to operating expenses,"

and in thereby approving the holding of the Court of Civil Appeals in respect to said Texas-Oklahoma Gas Sales Adjustment.

Twenty-Seventh Assignment of Error

This Honorable Court erred in holding, in effect, that it was proper to substitute the arbitrary book-keeping allowance called the "Texas-Oklahoma Gas Sales Adjustment" for an actual valuation of defendant's Oklahoma properties used and useful in the rendering of service in Texas, as well as for the actual revenues and expenses received and incurred by defendant in the use of its Oklahoma properties for the rendering of public service in Texas. This holding deprived the defendant of due process of law and deprived it of its property without due process of law, in [fol. 250] violation of the Due Process Clause of the Fourteenth Amendment to the Federal Constitution.

* * * * * * *

[fol. 251] Twenty-Eighth Assignment of Error

This Honorable Court erred in overruling and in failing to grant the Application for Writ of Error on the Thirty-fourth Assignment of Error as presented in the Application for Writ of Error, and in thereby holding that the Court of Civil Appeals did not err in holding that defend-

ant failed to make a proper segregation of its interstate and intrastate properties and therefore failed to adduce the quantum and character of proof necessary to establish the invalidity of the rate as being confiscatory or unreasonable and unjust.

Twenty-Ninth Assignment of Error

This Honorable Court erred in overruling and in failing to grant the Application for Writ of Error on the Thirty-third Assignment of Error presented in the Application, which asserts that the Court of Civil Appeals erred in holding that the trial court erred in refusing the Commission's motion for an instructed verdict and for judgment declaring the rate order appealed from to be valid in every respect, because defendant offered no proof showing a correct segregation or allocation of its property as between interstate and intrastate commerce.

Thirtieth Assignment of Error

This Honorable Court erred in overruling the Thirty-second Assignment of Error presented in the Application and in holding that the testimony of defendant's witnesses showing a segregation as between defendant's property [fol. 252] used in interstate commerce and its property used in intrastate commerce proved nothing that was material in this case.

* * * * * * *

Thirty-First Assignment of Error

This Honorable Court erred in overruling the Second Proposition under Assignments of Error Thirty-second to Thirty-fourth, inclusive, presented in the Application, which is as follows:

"Plaintiffs were not entitled to an instructed verdict even if defendant's segregation was improper, in this: The segregation made by the plaintiffs was obviously improper, being based in main upon an arbitrary geographical standard giving no effect to the manner in which the defendant's [fol. 253] property was used and its business conducted. The Railroad Commission found that in the fixing of a reasonable rate the property and business were to be consid-

ered as a unit; in other words that no segregation was required in fixing a fair and reasonable rate. If the defendant's segregation was wrong and the plaintiffs' segregation was also wrong, then the case stood upon the finding of the Railroad Commission to the effect that no segregation was required in fixing a reasonable rate, and with the Commission's valuation of defendant's property on that basis rebutted by nothing except the evidence offered by the defendant dealing with its property and business as a whole."

(Statement, Authorities, and Argument omitted.)

Thirty Second Assignment of Error

If a segregation of defendant's property and business as between interstate and intrastate commerce was required, then the rate order here in question was void because promulgated by the Commission upon a fundamentally wrong theory, in fact and in law, and this Honorable Court erred in holding, in effect, the contrary by refusing the writ of error.

(Statement, Authorities, and Argument omitted.)

[fol. 254] Thirty-Third Assignment of Error

This Honorable Court erred in overruling and in failing to grant the Application for Writ of Error upon the Twenty-first Assignment of Error presented in the Application, which asserts that the Court of Civil Appeals erred in eliminating as an expense of operation the expense actually paid and charged by the defendant for canceled and surrendered leases, and further erred in making the finding referred to in the assignment.

Thirty-Fourth Assignment of Error

This Honorable Court erred in overruling and in failing to grant the Application for Writ of Error on the Twenty-second Assignment of Error presented therein, which complains of the ruling of the Court of Civil Appeals in holding that the expense charged by defendant for canceled and surrendered leases was not sustained by the quantum and character of evidence required in order for it to be allowed as an expense of operation in fixing defendant's rates—

such holding denying to defendant its rights secured to it under the Due Process Clause of the Fourteenth Amendment to the Federal Constitution.

[fol. 255] (Statement, Authorities, and Argument omitted.)

Thirty-Fifth Assignment of Error

This Honorable Court erred in overruling and in failing to grant the Application for Writ of Error on the Twenty-third Assignment of Error presented in the Application for Writ of Error, which complains of the ruling of the Court of Civil Appeals in respect to defendant's right to deduct as part of its operating expense outlays on account of advertising and soliciting of business.

(Statement, Authorities, and Argument omitted.)

Thirty-Sixth Assignment of Error

This Honorable Court erred in overruling and in failing to grant the Application for Writ of Error on the Twenty-fourth Assignment of Error presented therein, which asserts that the Court of Civil Appeals erred in holding that $50,000.00 per annum would be a sufficient sum to allow defendant for Federal income taxes.

(Statement, Authorities, and Argument omitted.)

[fol. 256] Thirty-Seventh Assignment of Error

This Honorable Court erred in overruling and in failing to grant the Application for Writ of Error on the Thirty-fifth Assignment of Error presented in the Application, said assignment being as follows:

"The evidence showing that the plaintiffs' allowance for annual reserve accruals to provide for depreciation and amortization was computed on a sinking fund basis which required the existence and use of a sum in excess of $5,000,000.00 in said reserve account at the date of inquiry, and which allowance was admittedly insufficient for the future requirements of defendant without the use of said credit balance in the reserve account, the Honorable Court of Civil Appeals erred in holding that said allowance would be adequate for future requirements and that the order of the Commission based thereon was just, reasonable and valid, such holding denying to defendant the right to earn a rea-

sonable return on the fair value of its property used in the public service, in violation of defendant's rights under the Texas and National Constitutions."

Thirty-Eight Assignment of Error

This Honorable Court erred in overruling and in failing to grant the Application for Writ of Error on the Thirty-[fol. 257] sixth Assignment of Error presented in the Application, said assignment reading as follows:

"The judgment of the Honorable Court of Civil Appeals herein in affirming the order of the Railroad Commission which was declared to be unjust, unreasonable and invalid by the District Court, takes defendant's property without due process of law and without affording to defendant an opportunity to earn a reasonable return upon the fair value of its property used in the public service and denies to defendant the equal protection of the laws in violation of defendant's rights under the 14th Amendment to the Federal Constitution in so far as said judgment approves the allowance made by the plaintiffs' witnesses for annual accruals to a reserve for depreciation and amortization."

* * * * * * *

[fol. 258] Thirty-Ninth Assignment of Error

This Honorable Court erred in overruling and in failing to grant the Application for Writ of Error on the Twenty-fifth Assignment of Error presented in the Application, which asserts that the Court of Civil Appeals erred in holding that the evidence offered by defendant relating to the proper sum to be annually allowed for credit to a reserve to provide for depreciation, depletion and amortization was speculative and at war with actual experience, and plainly excessive because the undisputed evidence shows that such estimates were based upon a study of defendant's history and experience and a consideration of its probable future [fol. 259] requirements for depreciation, depletion and amortization.

Fortieth Assignment of Error

This Honorable Court erred in overruling and in failing to grant the Application for Writ of Error on the Twenty-

sixth Assignment of Error presented in the Application, which asserts that the Court of Civil Appeals erred in holding that the depreciation allowance sponsored by defendant was at war with actual experience and plainly excessive, this ruling being erroneous because it amounts to a fact finding by the Court of Civil Appeals, based on conflicting testimony and on the weight to be attached to the testimony of witnesses and other matters properly determinable by the jury and not by the Court of Civil Appeals.

Forty-First Assignment of Error

This Honorable Court erred in overruling and in failing to grant the Application for Writ of Error on the Thirtieth Assignment of Error presented in the Application, which asserts that the Court of Civil Appeals erred in holding that the reproduction cost new value, as determined in this case, allows for all overhead expense, which together with the reasonable operating expense allowed fully compensated [fol. 260] the defendant for all development costs which have been incurred, and are ample to cover items entering into and forming a part of what is referred to as "going concern value."

Forty-Second Assignment of Error

This Honorable Court erred in overruling and in failing to grant the Application for Writ of Error on the Thirty-first Assignment of Error presented in the Application, which asserts that the Court of Civil Appeals erred in holding that it was improper to allow anything for "going concern value" under the facts of the instant case, such holding denying to defendant its constitutional rights under the Fourteenth Amendment to the Federal Constitution.

Forty-Third Assignment of Error

This Honorable Court erred in overruling and in failing to grant the Application for Writ of Error on the Twenty-seventh Assignment of Error presented in the Application, which asserts that the Court of Civil Appeals erred in holding that defendant offered no evidence which even tended to show that a six per cent rate of return would confiscate its property, or was unreasonable or unjust.

[fol. 261] Forty Fourth Assignment of Error

This Honorable Court erred in overruling and in failing to grant the Application for Writ of Error on the Twenty-eighth Assignment of Error presented in the Application, which asserts that since there was evidence showing that a return of from eight to ten per cent would be just, fair and reasonable, the Court of Civil Appeals erred in holding as a matter of law that the finding of the Commission was conclusive.

In this connection, the defendant submits that the rulings here complained of deprived the defendant of the exercise of the independent judgment of the trial court and jury as to what would constitute a reasonable return on the fair value of its property and denied to it the independent judicial review to which it was entitled under the Fourteenth Amendment to the Federal Constitution.

(Statement, Authorities, and Argument omitted.)

Forty-Fifth Assignment of Error

This Honorable Court erred in overruling the Twenty-ninth Assignment of Error presented in the Application, reading as follows:

"The Court having found that there was evidence that an eight or ten per cent per annum net return would be fair and reasonable for defendant to earn and that there was a difference of opinion among the witnesses who testified on [fol. 262] that point, erred in holding that, 'This evidence merely presented the difference of opinion of experts • • • and their opinions cannot be substituted for the finding of the Commission that a six (6%) per cent rate of return was fair and reasonable.'"

(Statement, Authorities, and Argument omitted.)

• • • • • • •

[fol. 263] Forty-Ninth Assignment of Error

This Honorable Court erred in overruling the Forty-fourth Assignment of Error presented in the Application, reading as follows:

[fol. 264] "The court having held in effect that in suits filed pursuant to the provisions of Article 6059, R. S., 1925,

the courts may not exercise an independent judgment in determining whether rate orders of the Railroad Commission are unjust and unreasonable or confiscatory, but that the courts must affirm such orders if there is substantial evidence to support them notwithstanding the evidence is conflicting, erred in holding the Railroad Commission's order valid, for the reason that such holding denied to defendant a judicial review of the rate order in question on the constitutional issue of confiscation to which defendant is entitled under the Fourteenth Amendment to the Constitution of the United States."

Fiftieth Assignment of Error

This Honorable Court erred in overruling the Forty-fifth Assignment of Error presented in the Application, reading as follows:

"Inasmuch as the Honorable Court of Civil Appeals holds that this suit, or defendant's answer herein, is in effect an appeal from the order of the Railroad Commission pursuant to the provisions of Article 6059, Revised Civil Statutes of Texas, and inasmuch as the court has construed that statute as withholding from and denying to the district court the right and power to exercise an independent judgment on the facts underlying the issue of the unreasonableness, unjustness and confiscatory character of the order of the Commission and has held that the order of the Commis- [fol. 265] sion must be sustained if there is any substantial evidence offered upon the trial de novo supporting it, and inasmuch as the statutes and Constitution of Texas as construed deny to this court and the Supreme Court of Texas such power and authority, and inasmuch as defendant has been compelled to follow the procedure which has been followed against its wishes and over its objection, defendant has not obtained that due process of law to which it is entitled under the Fourteenth Amendment to the Constitution of the United States. Accordingly, the order of the Commission was void and the court erred in failing to so hold."

(Statement, Authorities, and Argument omitted.)

Fifty-First Assignment of Error

This Honorable Court erred in holding, in effect, that in determining the question of whether the order of the Rail-

road Commission was confiscatory of defendant's property used in the public service the district court was confined to a determination of whether or not there was substantial evidence to support the order of the commission, and that if there was such evidence the order of the Commission must be upheld, because such holding operates to deny to defendant the right to the independent judgment of the court on both the facts and law and to deny to defendant the right to a determination of the reasonableness of the order based [fol. 266] upon the weight to be given to conflicting testimony, in violation of defendant's rights under the due process clause of the Fourteenth Amendment to the Constitution of the United States."

Fifty-Second Assignment of Error

This Honorable Court erred in overruling the Fiftieth Assignment of Error presented in the Application and in holding that the Court of Civil Appeals did not err in holding that "where, as in the instant case, the evidence is conflicting, and the conclusion to be drawn therefrom in respect of this or that item uncertain or speculative, the Court should not interfere with gas rates in advance of any actual experience of the practical result of such new rates."

Fifty-Third Assignment of Error

This Honorable Court erred in overruling the Fifty-first Assignment of Error presented in the Application, which asserts that the Court of Civil Appeals erred in holding that "We are clear in the view that where a State Commission fixes a utility rate so as to allow a 6% rate of return on the property used in the public service, the Court will not, prior to a fair test of such rate, declare same void, unless the evidence establishes that it is confiscatory or invalid as a matter of law."

(Statement omitted.)

[fol. 267] Fifty-Fourth Assignment of Error

This Honorable Court erred in overruling the Fifty-second Assignment of Error presented in the Application, which asserts that the Court of Civil Appeals erred in reversing and rendering this case, because the issue raised by plaintiffs in their Second Amended Original Petition

was the reasonableness of the rate promulgated by the Commission for gas delivered at the city gates of the various towns and cities served by defendant in intrastate commerce, and this Court's holding that defendant was not engaged in interstate commerce in Texas has deprived defendant of an opportunity to develop facts in the case under the law as it has been announced for the first time by this decision.

(Statement omitted).

Fifty Fifth Assignment of Error

This Honorable Court erred in overruling the Fifty fifth Assignment of Error presented in the Application which asserts that the Court of Civil Appeals erred in holding that the reduction of 8 cents per thousand cubic feet in the city gate pipe line charge ordered by the Railroad Commission, could and should be passed on to the ultimate consumers, for the reason that the several distributing companies to whom defendant supplies gas are not parties to this suit and there is no evidence in this case upon which such issue can be considered and determined, there being no evidence in this case of the property values and earnings [fol. 268] of any of the distributing companies, either under the existing rates or any lesser rates, and this is true, even though defendant and its distributing companies be regarded as one common concern, for as much as a utility such as defendant is entitled to a reasonable return on every branch and part of its property, whether it be a transmission or a distribution system.

Fifty-Sixth Assignment of Error

This Honorable Court erred in overruling the Fifty-sixth Assignment of Error presented in the Application, which asserts that the Court of Civil Appeals erred in holding that the Railroad Commission of Texas may, without further notice or hearing, require the distributing companies purchasing gas from defendant to cease paying defendant a rate for gas purchased by them in excess of 32 cents.

Fifty-Seventh Assignment of Error

This Honorable Court erred in overruling the Fifty-seventh Assignment of Error presented in the Application,

which asserts that the Court of Civil Appeals erred in holding that "if the 32 cent rate is declared valid herein, defendant can have no further interest in any order the Commission may make with regard to requiring the various distributing companies to pay in excess of such rate and to pass the 8 cent reduction on to the ultimate consumers," because under the holding of the Court that corporate entities are to be ignored and that defendant is to be deemed [fol. 269] to be engaged in the business of distributing gas locally to domestic consumers, defendant has a most vital interest in law and in fact in the burner tip rates.

(Statement omitted).

Fifty-Eighth Assignment of Error

This Honorable Court erred in overruling the Fifty-ninth Assignment of Error presented in the Application, which asserts that the Court of Civil Appeals erred in failing and refusing to sustain defendant's Cross-Assignment of Error No. 2 presented in the Court of Civil Appeals, and copied in full in the Fifty-ninth Assignment of Error in the Application. (Application, pp. 303-304.)

(Statement omitted).

Fifty-Ninth Assignment of Error

This Honorable Court erred in overruling the Sixtieth Assignment of Error presented in the Application, which asserts that the Court of Civil Appeals erred in rendering judgment for plaintiffs because not only does Article 6059 of the Revised Civil Statutes of Texas, as construed, deny to defendant due process of law in violation of its rights under the Fourteenth Amendment to the Constitution of the United States, and not only does the Court treat this [fol. 270] case and answer of defendant as an appeal thereunder, but defendant has been compelled to follow the procedure outlined thereunder upon representations by plaintiffs that every constitutional and legal right to which it might be entitled would be fully safeguarded and that it would be entitled to the same sort of trial to which it would have been entitled in its suit in the Federal Court upon the basis of which representations the Federal Court stayed proceedings therein with the result that not only does defendant fail to get the kind of trial to which it would have been en-

titled in the Federal Court but is denied the opportunity of ever obtaining the same.

(Statement omitted).

Sixtieth Assignment of Error

This Honorable Court erred in overruling the Sixty-first Assignment of Error presented in the Application, which complains of the action of the Court of Civil Appeals in approving the exclusion of approximately $334,000.00 per annum as operating income on account of temperature adjustments which the evidence in this case shows that the defendant never received.

[fol. 271] Sixty First Assignment of Error

This Honorable Court erred in overruling the Sixty-second Assignment of Error presented in the Application. (Application, p. 307.)

Certificate of Clerk

I, S. A. Philquist, Clerk of the Supreme Court of Texas, do hereby certify that the 132 pages immediately preceding

this page contain true and correct copies of entries on the Application Docket of the Supreme Court of Texas and on the Motion Docket of said Court, and of orders of said Court showing the refusal of the Application for Writ of Error, Number 21,600, styled Lone Star Gas Company, Plaintiff in Error, vs. The State of Texas, et al., Defendants in Error, from Travis County, Third District, and the overruling of the Motion for Rehearing filed by plaintiff in error. I further certify that the portions of the Application for Writ of Error and the Motion for Rehearing hereinbefore copied have been correctly copied from the originals thereof.

I further certify that on the 30th day of December, 1936, the entire record in said cause, excepting only the Application for Writ of Error, the reply thereto, and the Motion for Rehearing and copies of the orders of the Court of Civil Appeals, was by me returned to R. E. Moore, Clerk of the Court of Civil Appeals for the Third Supreme Judicial District of Texas.

In Testimony Whereof, witness my hand and the seal of the Supreme Court of Texas, this 30th day of April, A. D. 1937.

S. A. Philquist, Clerk, Supreme Court of Texas.

[Title omitted]

Order of the Chief Justice Denying Petition for Appeal to the Supreme Court of the United States—Filed February 10, 1937

On this the 9th day of February, A. D. 1937, came the Lone Star Gas Company, appellee in the above styled and numbered cause, through its counsel, and presented to me its Petition for Appeal to the Supreme Court of the United States, its Assignments of Error, its Prayer for Reversal, its Statement as to the Jurisdiction of the Supreme Court on Appeal, and forms of an Order Allowing the Appeal, Citation and Cost Bond on Appeal; all being presented in connection with said Petition for Appeal; and said Petition

for Appeal and other papers presented therewith being duly considered, I, James W. McClendon, Chief Justice of the Court of Civil Appeals for the Third Supreme Judicial [fol. 276] District of Texas, hereby decline to allow said appeal.

Dated at Austin, Texas, this the 10th day of February, A. D. 1937.

(Signed) James W. McClendon, Chief Justice, Court of Civil Appeals for the Third Supreme Judicial District of Texas. (Seal.)

IN SUPREME COURT OF THE UNITED STATES

[Title omitted]

PETITION FOR APPEAL, ASSIGNMENT OF ERRORS, AND PRAYER FOR REVERSAL—Filed February 17, 1937

Submitted February 12, 1937, Benjamin N. Cardozo, Justice

[fol. 279] PETITION FOR APPEAL

Considering itself aggrieved by the final judgment entered in the above entitled cause on July 10, 1935, by the Court of Civil Appeals for the Third Supreme Judicial District of Texas, wherein the Supreme Court of Texas on October 6, 1936, denied appellant's Petition for a Writ of Error and on December 30, 1916, overruled appellant's Motion for Rehearing of said Petition, and wherein the Chief Justice of said Court of Civil Appeals on February 10, 1937, declined to allow an appeal to the Supreme Court of the United States, Lone Star Gas Company, appellee in said Court of Civil Appeals, plaintiff in error in seeking a review of said cause by the Supreme Court of Texas, and now appellant in this appeal from said judgment, prays that an appeal be allowed to the Supreme Court of the United States herein to the end that the case may be reviewed by that Court, and for an order fixing the amount of the bond on such appeal.

The case is one wherein appellant challenges on grounds arising under the Constitution of the United States the validity of a rate order, of a legislative nature, of the Railroad Commission of Texas, dated September 13, 1933, as-applied and sought to be enforced against appellant, reducing appellant's rates from 40¢ to 32¢ per thousand cubic feet applicable to appellant's trunk line transportation of natural gas and its sale and delivery at wholesale to distributing companies at city gates in Texas.

The grounds of attack duly pleaded in the court of first instance are: First, that the transportation and delivery [fol. 280] through high pressure lines to distributing companies at city gates in Texas of gas originating on appellant's lines in the State of Oklahoma as well as of gas produced or purchased by appellant in Wheeler County, Texas, and brought into and across the State of Oklahoma into Texas constitutes interstate commerce and that the attempted regulating and fixing of appellant's rates of charges for gas thus transported and delivered violates the Interstate Commerce Clause of the United States Constitution; and, second, that the prescribed rate is confiscatory and repugnant to the Due Process Clause of the Fourteenth Amendment to the United States Constitution.

The litigation originated in a suit filed September 22, 1933, by appellant, in the United States District Court for the Western District of Texas, seeking to enjoin the enforcement of the rate order upon the grounds before mentioned arising under the Constitution of the United States. The Commission, joined by the State of Texas and the Attorney General thereof, then filed this suit against the appellant in the State court in an effort to bring appellant within the jurisdiction of the State court, as provided in Section 266 of the Judicial Code (28 U. S. C. A., Sec. 380), alleging in their Second Amended Original Petition, upon which the trial was had, that they desired to have the constitutional questions raised by appellant in its attack on the rate order determined in the courts of the State.

In the State court suit appellees sought an injunction upon final hearing restraining appellant from violating the rate order and further asked that the enforcement of said [fol. 281] order be stayed pending final judgment. The stay order was entered in the State court and subsequently the Federal Court, conforming to what it deemed proper procedure under Section 266, entered an order staying all

proceedings in that Court and restraining the enforcement of the rate until final determination of this cause.

Appellant, after unsuccessfully resisting this procedure and reserving its exceptions, answered in the State court setting up its defenses before mentioned grounded on the Federal Constitution, and the trial was there had. On jury findings favorable to appellant judgment was entered in its favor permanently enjoining the enforcement of the rate order.

On appeal the Court of Civil Appeals, after stating that appellant's defenses based on the Commerce and Due Process Clauses had been pleaded and after considering same, held that appellant was not engaged in interstate commerce in transporting, delivering and selling gas at wholesale at city gates of cities and towns in Texas, that the rate order was not void as a direct burden on interstate commerce, and that its enforcement would not confiscate appellant's property and that it was valid in every particular.

Thereupon, in due time, appellant filed its Motion for Rehearing assigning therein as error the holding and judgment of the Court of Civil Appeals enforcing the rate order as against its charges of conflict with the Commerce and Due Process Clauses of the Federal Constitution, and other rulings made initially by the Court of Civil Appeals which were claimed to result in a denial of due process in violation of the Fourteenth Amendment to the Federal Constitution.

[fol. 282] Said Motion being overruled, it then, in due time, as permitted by the State law, filed its Petition for Writ of Error asking the Supreme Court of Texas to review the judgment of the Court of Civil Appeals. This Petition having been refused on October 6, 1936, appellant then, in due time, as permitted by law, filed its Motion for Rehearing of said Petition, which Motion was entertained and overruled by the Supreme Court of Texas on December 30, 1936. Whereupon the judgment of the Court of Civil Appeals here sought to be reviewed became final.

It therefore appears that this is a suit wherein there has been drawn in question an Act of the State of Texas, legislative in character, upon the ground that the same is repugnant to the Constitution of the United States and in which the decision of the highest court of the State, in which a decision in the suit could be had, has been in favor

of the validity thereof. The case is clearly one falling within the jurisdiction of this Court.

Appellant submits herewith its statement, in accordance with Rule 12 of the rules of this Court, more particularly disclosing the basis upon which it is contended that the Supreme Court of the United States has jurisdiction to review this cause on appeal.

Assignment of Errors

Appellant Lone Star Gas Company assigns the following errors committed by the Court of Civil Appeals in entering its judgment, affirming and sustaining the validity of said rate order, as against appellant's attack thereon based on [fol. 283] the Commerce Clause of the Federal Constitution and the Due Process Clause of the Fourteenth Amendment to the Federal Constitution; and it shows that in making each of the rulings complained of in sections I to VI of this Assignment of Errors the Court of Civil Appeals denied to appellant rights secured to it by the Commerce Clause of the Federal Constitution; and that each of the rulings complained of in sections VII to XV of this Assignment of Errors deprives appellant of its property without due process of law in violation of the Due Process Clause of the Fourteenth Amendment to the Constitution of the United States.

I

The Court of Civil Appeals erred in holding that appellant pipe line company was not engaged in interstate commerce in transporting and selling gas produced or purchased by it in Wheeler County, Texas, and transported in its high pressure line through Oklahoma and thence back into the State of Texas to the city gates in Texas where delivery is made to local distributing companies.

II

The Court of Civil Appeals erred in holding that the rate order did not interfere with and constitute a direct burden upon interstate commerce and appellant's right to engage therein, in violation of Article I, Section 8, Paragraph 3 of the Constitution of the United States, and was not void and unenforceable in so far as it was sought to be enforced

as to gas produced or purchased in Wheeler County, Texas, transported in appellant's high pressure pipe line A [fol. 284] through Oklahoma and ultimately delivered in wholesale quantities at city gates in Texas.

III

The Court of Civil Appeals erred in holding that the gas produced or purchased by appellant in Oklahoma and transported by its pipe lines to Texas does not move in interstate commerce when it reaches the Texas city gates for delivery.

IV

The Court of Civil Appeals erred in holding that the rate order did not interfere with and constitute a direct burden upon interstate commerce and appellant's right to engage therein, in violation of Article I, Section 8, Paragraph 3 of the Constitution of the United States, and was not void and uneforceable in so far as it was sought to be enforced as to gas purchased and produced in Oklahoma, transported in appellant's high pressure pipe lines from Oklahoma and ultimately delivered in wholesale quantities at city gates in Texas.

V

The Court of Civil Appeals erred in upholding the rate order in question as against appellant's attack thereon grounded upon the claim that it operated as a direct regulation of interstate commerce, in which appellant was engaged, in violation of the Commerce Clause of the Constitution of the United States.

[fol. 285]

VI

The Court of Civil Appeals erred in failing to hold that the order of the Railroad Commission was void and the rate therein prescribed unenforceable as to all gas sold by appellant pipe line company in Texas inasmuch as the same was void and unenforceable in part (as to gas sold and delivered in interstate commerce) and inasmuch as the same was indivisible.

VII

The Court of Civil Appeals having held that the courts of this State, in this suit involving the validity of the rate

rder in question, challenged as being confiscatory and for at reason violative of the Due Process Clause of the ourteenth Amendment, are without power to weigh the idence and settle the conflicts in the evidence and pass eir independent judgment on the facts as well as the law, lating to the tendered issue of confiscation, erred in hold- g that the rate order was valid. This ruling of the Court enied to appellant that adequate judicial review granted it by the Due Process Clause of the Fourteenth Amend- ent to the Federal Constitution, and the enforcement of e rate order against appellant under such circumstances ill deprive it of its property without due process of law, violation of the Fourteenth Amendment to the Federal onstitution.

ol. 286] VIII

The Court of Civil Appeals erred in refusing to consider, d in holding to be immaterial, appellant's evidence as the value of its integrated pipe line properties, located th in Texas and in Oklahoma, and its revenues and ex- nses incident to the operation of such properties ap- llant thereby being deprived of its right to attack the te and the findings of the Commission upon which it was sed on the same theory and by the same character of idence underlying the promulgation of the rate, and us being denied an adequate judicial review of the rate der and deprived of due process of law, contrary to the ovisions of the Fourteenth Amendment to the Constitu- on of the United States.

IX

The Commission, having found that appellant's property d business was an integrated system and having valued e same as such and the Court of Civil Appeals having und that appellant was not engaged in interstate com- erce in transporting and supplying gas at the city gates of ies and towns in Texas, and appellant having introduced idence showing that the order of the Commission would t permit it to receive in any of the years involved as uch as a six per cent (6%) return on the fair value of integrated public service properties, the Court of Civil ppeals erred in holding that the evidence was insufficient a matter of law to raise an issue of fact as to the con- catory character of the rate.

[fol. 287] X

The Court of Civil Appeals, having held that appellant is not engaged in interstate commerce in the transportation and delivery of gas at the city gates in Texas, erred in holding that it was necessary to segregate appellant's integrated pipe line property and business as between interstate and intrastate commerce in order to test the validity of the rate.

XI

The Court of Civil Appeals erred in holding that appellant failed to make a proper segregation of its properties and operations as between interstate and intrastate commerce.

XII

The Court of Civil Appeals erred in holding that the evidence introduced by appellant based upon a segregation of its properties and operations as between interstate and intrastate commerce proved nothing material to the case.

XIII

The Court of Civil Appeals erred in holding that, since appellant failed to make a proper segregation of its properties as between interstate and intrastate commerce, it did not adduce the quantum and character of proof necessary to establish the invalidity of the rate as being confiscatory.

[fol. 288] XIV

The Court of Civil Appeals erred in approving a segregation of appellant's properties and operations as between interstate and intrastate commerce that was based merely on geographical location of the property and not upon the way in which the property was used and the business conducted.

XV

The Court of Civil Appeals erred in upholding the validity of the rate order as against appellant's claim that same was confiscatory in its operation and was violative of appellant's rights under the Due Process Clause of the Fourteenth Amendment to the Constitution of the United

States in the following particulars, and in each of said particulars appellant was deprived of its property without due process of law, in violation of the Fourteenth Amendment to the Constitution of the United States:

(a) In adopting a rate base of $40,256,862.39 which did not include the value of appellant's production system property consisting of natural gas reserves, both producing and non-producing, gas wells, gas well equipment, drilling tools and equipment used and useful in the public service in Texas, all of such property costing approximately $5,200,000.00.

(b) In approving the elimination of all operating expenses actually incurred in good faith in the operation of appellant's production system property amounting to the [fol. 289] sum of $232,759.70 for 1933, and $222,752.66 for the twelve months period ended March 31, 1934.

(c) In adopting appellees' estimate of $831,946.08 per annum for depreciation, depletion and amortization reserve accruals, which did not embrace any sum for depreciation, depletion or amortization on appellant's production system property, gas wells, gas well equipment, drilling tools and equipment used and useful in the Texas public service.

(d) In adopting a formula in lieu of actual operating expenses and an allowance for annual accruals to reserve for depreciation, depletion and amortization and a fair return on appellant's gas reserves, gas wells, gas well equipment and other production system property, consisting of an addition to operating expenses of a sum of money arrived at by applying the average well head price paid by appellant to independent producers to the volume of gas produced by appellant from its own Texas gas reserves, such substituted sum being insufficient by approximately $426,000.00 to provide for operating expenses, the necessary annual reserve accrual for depreciation, depletion and amortization (as estimated by appellees' witnesses) and a 6% return which the Commission held was the minimum to which appellant was entitled) on the actual cost of such property.

(e) In adopting a rate base of $40,256,867.39, which did not include the value of appellant's property located in

Oklahoma actually and necessarily used and useful in transporting to Texas for sale and delivery therein gas purchased and produced in Oklahoma.

[fol. 290] (f) In approving the elimination from operating expenses of all expenses actually and in good faith incurred in the operation of appellant's properties located in Oklahoma, actually and necessarily used and useful in transporting to Texas for sale and delivery therein, gas purchased and produced in Oklahoma and the disallowance of any depletion or amortization of such properties.

(g) In adopting an arbitrary addition to appellant's actual revenues of $441,240.12 for the year 1933, and $268,829.64 for the twelve months ended March 31, 1934, to compensate for assumed deficiencies in actual gas sales due to abnormally warm weather.

(h) In adopting an annual allowance for depreciation, depletion and amortization reserve accruals of $831,946.08, which amount was insufficient for current and future requirements without being supplemented by an assumed credit balance in the reserve account of $5,000,000. at the date of inquiry.

(i) In adopting a rate base containing no allowance to cover the item of going concern value.

(j) In failing to hold that a six per cent return was confiscatory.

(k) In approving a rate which would not permit appellant to earn the six per cent return which the Railroad Commission held was the minimum to which it was entitled on the fair value of its Texas public service pro-[fol. 291] perties as determined by appellees' witnesses upon the trial if appellant's production system property be included in said evaluation and actual operating expenses and revenues be allowed, and if effect be given to a 2% per annum reserve accrual for depreciation, depletion and amortization allowed by the Commission.

(l) In approving a rate which appellant's unrebutted evidence showed would not permit it to earn the minimum

pon the fair value of its integrated properties as deter-
ined by the Commission after computing accruals to the
eserve for depreciation, depletion and amortization at the
ate approved by the Commission.

(m) In approving a rate which appellant's uncontra-
icted evidence clearly showed would not permit it to earn
n excess of 3.78% on its fair value, and 4.65% on the
ctual cost of its properties used and useful in intrastate
ommerce in Texas as determined by appellant's segrega-
ion between interstate and intrastate commerce, based upon
se, after allowing for annual accruals to the reserve for
epreciation, depletion and amortization at the rate of
%, being the rate adopted by the Commission.

(n) In holding immaterial and refusing to consider or
ermit the trial court to consider appellant's evidence show-
ng that the depreciated fair value of its integrated pro-
erties was $69,738,021.16, whereas the Commission found
he undepreciated value of such property to be $46,246,617.-
3.

(o) In holding that appellant's evidence showing that
fair annual allowance for accruals to the depreciation,
fols. 292-293] depletion and amortization reserve was not
ess than $3,465,123.36, as compared with the Commission's
llowance of only $983,697.98, for its entire integrated pro-
erty and business, was of no probative force.

PRAYER FOR REVERSAL

For which errors appellant Lone Star Gas Company
rays that said judgment entered in the above entitled
ause by said Court of Civil Appeals on July 10, 1935, be
eversed.

Dated this the 10th day of February, 1937.

Lone Star Gas Company, by Roy C. Coffee, Marshall Newcomb, Ogden K. Shannon, Jr., Ben H. Powell, Charles L. Black, Its Attorneys.

C.

Miscellaneous matters:

1. Appellee's counter propositions, cross assignments of error and propositions based thereon contained in appellee's original brief filed in the Court of Civil Appeals.

2. Opinion, order and judgment of the Court of Civil Appeals, showing the date of its rendition.

3. Appellee's motion for rehearing filed in the Court of Civil Appeals showing the date on which it was filed.

[fol. 320] 4. Opinion, order and judgment of the Court of Civil Appeals overruling appellee's motion for rehearing showing the date of its rendition.

5. Docket entry and any other entries and orders of the Court of Civil Appeals showing the filing of appellee's application for writ of error to the Supreme Court of Texas, showing the date of its filing and that the same together with the certified record in this cause were duly transmitted to the Supreme Court of Texas and show the date on which such transmittal occurred.

6. All orders certified to the Supreme Court of Texas by and from the Court of Civil Appeals in connection with the application for writ of error except those hereinabove specifically designated.

7. Transcript of all proceedings had and done in the Supreme Court of Texas in this cause, which transcript ap-

pellee has requested from the Clerk of said Supreme Court and which has been or will be filed with you. Such transcript shall include, inter alia, the following:

(a) All orders and docket entries of the Supreme Court of Texas showing that the application for writ of error and record certified from this court were received and filed therein, giving the date of such filing.

[fol. 321] (b) The following parts of said Application for Writ of Error: (1) Beginning with the title of the cause (page 1) and extending to the end of the "Introductory Statement of the Nature and Result of the Suit," near the bottom of page 11 (printed copy); (2) all assignments of error and propositions thereunder contained in said Application; and (3) the prayer with signatures of counsel, appearing on page 309 (printed copy).

(c) Order and judgment of the Supreme Court of Texas overruling the application for writ of error showing the date thereof.

(d) Docket entries and notations showing the filing by plaintiff in error of a motion for rehearing of the application for writ of error showing the date thereof.

(e) The following parts of said motion for rehearing: (1) Beginning with the title of the cause (page 1) and extending to the heading "Part I" on page 2 (printed copy); (2) all assignments of error and propositions thereunder contained in said motion for rehearing; and (3) the prayer of said motion and signatures of counsel (page 111, printed copy).

(f) Order and docket entries of the Supreme Court of Texas showing that said motion for rehearing was entertained and overruled by the Supreme Court of Texas, showing the date thereof.

8. Docket entries and any other orders or notations of the Court of Civil Appeals showing receipt by the Court of Civil Appeals from the Supreme Court of Texas of the record in this cause. In this connection showing that the entire record in this cause is now in the possession of the Court of Civil Appeals and yourself.

9. Order of the Chief Justice of the Court of Civil Appeals refusing appellant's request for the allowance of an appeal to the Supreme Court of the United States, showing the date of its filing in this court.

[fol. 322] 10. This præcipe and acknowledgment of service thereof by appellees' counsel, showing the date same was filed in this court.

D

Appeal papers:

1. The original of appellant's petition for appeal, assignments of errors and prayer for reversal with all endorsements appearing thereon and showing the date same was filed in this court.

2. Statement as to jurisdiction on appeal with all endorsements appearing thereon and showing the date same was filed in this court.

3. Order allowing appeal and fixing security for cost with all endorsements appearing thereon and showing the date same was filed in this court.

4. Citation signed by Mr. Justice Cardozo on February 12, 1937, directed to appellees herein with all endorsements appearing thereon and showing the date same was filed in this court.

5. Bond for cost executed February 9th, 1937, and approved by Mr. Justice Cardozo with all endorsements appearing thereon and showing the date same was filed in this court.

6. Notice and statement required by paragraph 2, Rule 12, of the Rules of the Supreme Court of the United States with all endorsements appearing thereon and showing the date same was filed in this court.

[fol. 323] 7. Acknowledgment of service of appeal papers required to be served on appellees' counsel by paragraph 2, Rule 12 of the Rules of the Supreme Court of the United States signed by counsel for appellees on February 17, 1937, showing the date of such acknowledgment and with all endorsements appearing thereon and showing the date same was filed in this court.

E

Clerk's certificates:

1. Your separate certificate as to the papers designated in Section D, Nos. 1 to 7, inclusive, thereof.

2. Your general certificate as to the record, papers and documents designated by this entire præcipe.

Witness the execution hereof on this the 8th day of March, A. D. 1937.

Roy C. Coffee, Marshall Newcomb, Ogden K. Shannon, Ben H. Powell, Charles L. Black, Attorneys for Appellant, Lone Star Gas Company.

[fol. 324] Service of a copy of this præcipe is hereby acknowledged on this, the 11th day of March, 1937.

Scott Gaines, First Assistant Attorney General and Acting Attorney General and Attorney for the Appellees.

[Title omitted]

APPELLEES' COUNTER PRÆCIPE FOR TRANSCRIPT—Filed May 17, 1937

In accordance with Section 2 of Rule 10 of the Supreme Court of the United States, Appellees hereby request you

to include in the transcript of record to be filed in the Supreme Court of the United States pursuant to an order of appeal allowed on February 12, 1937 in the above entitled cause by Mr. Justice Cardozo, the following portions from the record on file in your Court in this cause:

[fol. 327] A. Appeal Papers:

1. The order signed by Mr. Justice Cardozo on March 13, 1937, and filed in your Court on March 16, 1937 extending for a period of sixty days the time provided by rule within which Appellees may file their counter præcipe designating additional matters to be included in the transcript.

2. Copy of this counter præcipe.

B. The Record from the District Court:

Include all portions of the record, proceedings, oral testimony, exhibits, and documentary evidence not already designated by Appellant in its præcipe served upon Appellees herein on March 11, 1937, contained in the Volumes and parts hereinafter described or referred to in Cause No. 53,033 in the 53rd District Court of Travis County, Texas, and the same Cause on appeal, being No. 8,238 in your Court and Application No. 21,600 in the Supreme Court of Texas; so that the portions of such record heretofore designated by Appellant, plus the portions hereby designated, shall make the transcript embrace the whole of such record herein below referred to in this subdivision (B), and in subdivision "C" hereof:

I. The statement of facts made in the hearing on pleas in abatement and pleas to the jurisdiction in the District Court; such statement of facts consisting of one Volume of 160 pages, plus three pages of certificates and agreement, including all exhibits therein, to-wit:

Plaintiff's Exhibits Nos. 1 to 6, inclusive; and Defendant's Exhibits Nos. 1 to 5, inclusive; and the index, covers, and file marks.

II. The transcript of pleadings and proceedings in the District Court consisting of one Volume, index, and pages numbered 1 to 600, inclusive, together with Exhibits therein included and thereto attached.

III. The oral testimony taken and transcribed in the trial in the District Court, consisting of Books 1, 2, 3, 4, and

5, and indexes; containing besides the indexes, pages 1 to 3560, inclusive; plus the six pages of final certificates, agreements, etc. at the conclusion of Book 5, and the certificates at the end of each Volume.

[fol. 328] IV. All Exhibits admitted in evidence and excluded from evidence in the trial in the District Court, and consisting of:

1. Book 6, Plaintiff's Exhibits 1 to 11, inclusive, the pages of which are numbered in red serially from 3561 to 3710, inclusive, together with indices, certificates, etc.

2. Book 7, Defendant's Exhibits 1 to 27, inclusive, the pages thereof being numbered in red serially from 3711 to 4102, inclusive, together with indices, certificates, etc.

3. Defendant's Exhibit No. 28 consisting of Books 8-A, 8-B, 8-C, 8-D, 8-E, 8-F, 8-G, and 8-H, the pages thereof being numbered in red serially from 4103 to 8608, inclusive; said Volumes being likewise numbered Volumes I to VIII, inclusive, the pages thereof being likewise numbered in black serially in each volume.

V. Book 9-A, being Defendant's Exhibit 29, the pages thereof being numbered in red serially 8609 to 8610-A, inclusive.

VI. Book 9-B, being Defendant's Exhibit 30, the pages thereof being numbered in red serially 8611 to 8856, inclusive.

VII. Book 10, being Defendant's Exhibits Nos. 31 to 41, inclusive, the pages thereof being numbered in red serially 8857 to 9257, inclusive.

VIII. Book 11, being Defendant's Exhibit No. 42, the pages thereof being numbered in red serially from 9258 to 9583, inclusive.

IX. Book 12, being Defendant's Exhibits 43 to 51, inclusive, the pages thereof being numbered in red serially 9584 to 9798-A, inclusive, plus other certificates.

C. The Record Made Before the Railroad Commission of Texas, and Excluded from Evidence by the Judge of the District Court, and Consisting of the Following Volumes of Oral Testimony and Exhibits:

I. Oral Testimony:

Index consisting of one Volume, the pages being num-
[fol. 329] bered serially 1 to 32, inclusive; also Volumes 1

to 89, inclusive, the pages of said Volumes 1 to 89, inclusive being numbered serially 1 to 11,232, inclusive.

II. Exhibits:

Exhibit 1—Sponsored by D. A. Hulcy, entitled "Public Service Property and Amount Available for Depreciation and Return—Twelve Months ended December 31st, 1931."

Exhibit 2—Sponsored by D. A. Hulcy, entitled "Public Service Property and Amount Available for Depreciation and Return—Twelve Months ended April 30th, 1932."

Exhibit 3—Sponsored by D. A. Hulcy, entitled "Public Service Property and Amount Available for Depreciation and Return—Twelve Months ended June 30th, 1932."

Exhibit 4—Sponsored by D. A. Hulcy, entitled "Public Service Property and Amount Available for Depreciation and Return—Twelve Months ended July 31st, 1932."

Exhibit 5—Sponsored by D. A. Hulcy, entitled "Public Service Property and Amount Available for Depreciation and Return—Twelve Months ended August 31st, 1932."

Exhibit 6—Consisting of nine Volumes, each bound in black Morocco, numbered Volumes I to IX, inclusive, sponsored by E. A. Steinberger and Ed C. Connor, and being entitled "Lone Star Gas Company—Appraisal—Cost of Reproduction New and Present Value—January 1st, 1932—Public Service Plant, Property and Business";

Volume I thereof containing pages numbered serially from 1 to 554, inclusive;

Volume II thereof containing pages numbered serially from 555 to 1129, inclusive;

Volume III thereof containing pages numbered serially from 1130 to 1710, inclusive;

Volume IV thereof containing pages numbered serially from 1711 to 2266, inclusive;

[fol. 330] Volume V thereof containing pages numbered serially from 2267 to 2739, inclusive;

Volume VI thereof containing pages numbered serially from 2740 to 3381, inclusive;

Volume VII thereof containing pages numbered serially from 3382 to 4031, inclusive;

Volume VIII thereof containing pages numbered serially from 1 to 544, inclusive; and

Volume IX thereof containing pages numbered serially from 545 to 682, inclusive.

Exhibit 7—Sponsored by E. A. Steinberger, pages 1 to 27, inclusive, entitled "Lone Star Gas Company—Leaseholds—Undeveloped—Determination of Present Value as of January 1, 1932."

Exhibit 8—Sponsored by F. E. Kendrick and J. H. Dunn, being list of gas reserves as of January 1, 1932. (It is our understanding that this Exhibit has become lost in some way; if you are unable to locate it, let the transcript go without including it.)

Exhibit 9—Sponsored by D. A. Hulcy, pages 1 to 36, inclusive, entitled "Lone Star Gas Company—Appraisal of Gas Reserves—January 1st, 1932."

Exhibit 10—Sponsored by Ed C. Connor, one page chart, entitled "Chart showing growth of Properties and Business under Basis of Reproduction."

Exhibt 11—Sponsored by Witness Smith of Sanderson & Porter, consisting of five Volumes bound in brown Morocco, designated parts I to V, inclusive, entitled "Lone Star Gas Company—Exclusive of Fort Worth Division," and being a finding of Reproduction Cost New as of January 1st, 1932, the pages thereof being numbered serially from 1 to 2244, inclusive.

Exhibit 12—Sponsored by Witness Smith of Sanderson & Porter, pages 1 to 16, inclusive, entitled "General Costs".

Exhibit 13—Sponsored by Witness Smith of Sanderson & Porter, pages 1 to 23, inclusive, entitled "Going Value".

Exhibit 14—Sponsored by Witness Smith of Sanderson & Porter, pages 1 to 206, inclusive, entitled "Inspection of Condition of Physical Property, as of January 1, 1932".

[fol. 331] Exhibit 15—Sponsored by Witness Smith of Sanderson & Porter, being a map showing location of test holes for observing the Physical Deterioration of pipe lines. (It is our understanding that this Exhibit was lost in some way before the record was transmitted to Court of Civil Appeals; if you are unable to locate it, then let the transcript go without including it.)

Exhibit 16—Sponsored by Witness Smith of Sanderson & Porter, one page, entitled "Summaries—Reproduction Cost, Reproduction Cost less Depreciation, as of January 1, 1932".

Exhibit 17—Sponsored by P. McDonald Biddison, pages 1 to 224, inclusive, and map, entitled "Report on Condition of Property, as of January 1, 1932".

Exhibit 18—Sponsored by Ed C. Connor, pages 1 to 175, inclusive, entitled "Depreciation Analysis—Determination of Annual Reserve Accruals for Various Items of Depreciable Property".

Exhibit 19—Sponsored by Ed C. Connor, pages 1 to 53, inclusive, entitled "Depreciation Analysis—Replacements, Removals and Abandonments—Steel Pipe, December 31, 1931".

Exhibit 20—Sponsored by Ed C. Connor, pages 1 to 6, inclusive, entitled "Depreciation Analysis—Relati-n of Failures of Original Units, and Replacements of Original Units, and Replacements of Replacements".

Exhibit 21—Sponsored by Ed C. Connor, pages 1-2, inclusive, entitled "Depreciation Analysis—Application of Annual Reserve Rates to Reproduction Cost New of the Public Service Property—Exclusive of Fort Worth Division".

Exhibit 22—Sponsored by Ed C. Connor, pages 1 to 17, inclusive, entitled "Current Quotations on Bonds and Other Senior Securities Natural Gas, Manufactured Gas, and Electric Utilities".

Exhibit 23—Sponsored by D. A. Hulcy, one page entitled "Calculation of Depreciation on Autos and Drill Tools—Charged to Expenses—Twelve Months ended December 31, 1931".

Exhibit 24—Sponsored by D. A. Hulcy, one page entitled "Public Service Property—Statement showing Property Account and Net Additions to Property Account by Years". [fol. 332] Exhibit 25—Sponsored by D. A. Hulcy, pages 1 to 3, inclusive, entitled "Public Service Property and Amount Available for Depreciation and Return—Twelve Months ended December 31st, 1932".

Exhibit 26—Sponsored by J. A. Phillips, entitled "Report on Special Investigation of Records of Lone Star Gas Company, December 31, 1932—Volume I", and containing pages numbered serially 1 to 95, inclusive.

Exhibit 27—Sponsored by S. W. Freese, entitled "Report on Gas Leaseholds of Lone Star Gas Company, December 31, 1931—Volume II", and containing pages numbered serially 1 to 37, inclusive.

Exhibit 28—Sponsored by S. W. Freese, entitled "Report on Reproduction Cost New Appraisal of Physical Properties of Lone Star Gas Company, December 31, 1931—Volume III", and containing pages numbered serially 1 to 111, inclusive.

Exhibit 29—Sponsored by S. W. Freese, entitled "Report on Properties, Business, Rate Base, and Annual Requirement for Depreciation, Obsolescence, Replacements, and Amortization of Lone Star Gas Company, December 31, 1931—Volume IV", and containing pages numbered serially 1 to 48, inclusive.

Exhibit 30—Sponsored by S. W. Freese, pages 1 to 8, inclusive, entitled "Miscellaneous Studies Lone Star Gas Company—Investigation".

Exhibit 31—Sponsored by Edgar G. Hill of Ford, Bacon and Davis Construction Corporation, pages 1 to 19, inclusive, containing data on Excavation and Backfilling Cost.

Exhibit 32—Sponsored by Ed C. Connor, containing two pages of charts of Graphic Mortality Curves.

Exhibit 33—Sponsored by D. A. Hulcy, one page containing Degree Day Deficiency Data, Dallas, Texas, 1931 and 1932.

Exhibit 34—Sponsored by D. A. Hulcy, pages 1-3, entitled "Public Service Property and Amount Available for Depreciation and Return—Twelve Months ended April 30th, 1933".

[fol. 333] Exhibit 35—Sponsored by D. A. Hulcy, two pages, entitled "Statement of Pipe Purchases—Through Pittsburgh Office".

Exhibit 36—Sponsored by S. W. Freese, pages 1 to 23, inclusive, entitled "Corrections to Exhibits 27, 28, and 29—Lone Star Gas Company Investigation".

D. From the Record in the Court of Civil Appeals and in the Supreme Court of Texas:

1. Original brief filed in the Court of Civil Appeals by State of Texas, et al., appellants in that Court.

2. Original brief filed in the Court of Civil Appeals by Lone Star Gas Company, appellee in that Court.

3. Printed copy of Application for Writ of Error filed by Lone Star Gas Company in the Court of Civil Appeals and later transmitted to and filed in the Supreme Court of Texas in this cause.

Dated at Austin, Texas, this 17th day of May, A. D., 1937.

Wm. McCraw, Attorney General of Texas; Alfred M. Scott, Assistant Attorney General, Counsel for Appellees.

Service of a copy of the above counter præcipe is hereby acknowledged on this the 17th day of May, 1937.

Roy C. Coffee, Marshall Newcomb, O. K. Shannon, Jr., Ben H. Powell, Charles L. Black, Attorneys for Appellant Lone Star Gas Company.

[fol. 335] IN SUPREME COURT OF THE UNITED STATES

[Title omitted]

STIPULATION AS TO RECORD—Filed June 17, 1937

[fol. 336] Whereas, on February 17, 1937, appellant Lone Star Gas Company obtained acknowledgment of service of and duly filed its præcipe with the Clerk of the Court of Civil Appeals for the Third Supreme Judicial District of Texas, designating certain portions of the record to be typed and incorporated into a transcript of the record to be certified by the Clerk of the Court of Civil Appeals to the Supreme Court of the United States, and practically all of the portions thus designated have been typed by said Clerk; and,

Whereas, on March 13, 1937, appellees applied for and secured sixty days' extension of time within which to file their counter præcipe and have duly filed said counter præcipe on May 17, 1937; and,

Whereas, in their said counter præcipe appellees have designated the entire State Court record, including all of the record made before the Railroad Commission of Texas, to be included in the record certified to the Supreme Court of the United States; and,

Whereas, the record thus designated by the appellees is very lengthy, consisting of thousands of pages, and must be filed with the Clerk of the Supreme Court of the United [fol. 337] States at Washington not later than July 5, 1937, and it is impossible for the Clerk of the Court of Civil Appeals, with the force he has available, to complete the typing of said record and have the same in Washington within the time mentioned;

Therefore it is stipulated:

1. That the parties hereto will attempt to secure an order from the Court of Civil Appeals permitting its Clerk to duly certify and forward to the Clerk of the Supreme Court of the United States for filing in said Court the original record in this cause, consisting of the Transcript and the Statement of Facts and also the Railroad Commission Record as filed in the Court of Civil Appeals.

2. That if said order is obtained the Clerk of the Court of Civil Appeals may duly certify to the Supreme Court of the United States as being the transcript of the record on this appeal the following:

(a) The original record above described together with the Railroad Commission Record as filed in the Court of Civil Appeals;

(b) All matters, orders, opinions, judgments and proceedings in the Court of Civil Appeals as designated in section C of appellant's præcipe. Also all orders and proceedings in the Supreme Court of Texas on appellant's [fol. 338] Application for Writ of Error and Motion for Rehearing thereof as designated in section C of appellant's præcipe. Certified copy of the orders and proceedings in the Supreme Court of Texas has been filed with the Clerk of the Court of Civil Appeals. The intent is to include under this heading all of the matters, orders, opinions, judgments and proceedings designated in section C of appellant's præcipe;

(c) All appeal papers filed with the Clerk of the Court of Civil Appeals and designated in section D of appellant's præcipe;

(d) Appellant's præcipe and appellees' counter præcipe together with copy of order extending time to file counter præcipe; and copy of orders extending time to file record and docket cause;

(e) The following documents called for in appellees' counter præcipe:

(1) Brief filed in the Court of Civil Appeals by State of Texas, et al., appellants in that Court;

(2) Copy of brief filed in the Court of Civil Appeals by Lone Star Gas Company, appellee in said Court;

(3) Copy of Application for Writ of Error filed by Lone Star Gas Company in the Supreme Court of Texas.

[fols. 339-342] (f) This stipulation.

(g) Copy of order of the Court of Civil Appeals permitting original record to be forwarded to the Supreme Court of the United States in lieu of transcript thereof.

3. This stipulation is not intended as a waiver either by appellant or appellees of the right to seek a finding and order as to the costs incurred in supervising and printing the record in case either party causes unnecessary parts of the record to be printed.

Dated 17th day of June, 1937.

Roy C. Coffee, Marshall Newcomb, O. K. Shannon, Jr., Ben H. Powell, Charles L. Black, Attorneys for Appellant. Wm. McCraw, Attorney General of Texas, Alfred M. Scott, Assistant Attorney General, Attorneys for Appellees.

[fol. 343] In Court of Civil Appeals of Texas

Clerk's Certificate

I, R. E. Moore, Clerk of the Court of Civil Appeals for the Third Supreme Judicial District of Texas, at Austin, do hereby certify as follows:

That the following described volumes and documents, transmitted by me to the Clerk of the Supreme Court of the United States on the appeal prosecuted by the Lone Star Gas Company from the judgment of said Court of Civil Appeals in cause No. 8238, entitled the State of Texas, et al, Appellants, vs. Lone Star Gas Company, Appellee, comprise the entire record on appeal designated by the præcipe of appellant and counter præcipe of appellees and by the stipulation of the parties dated May 17, 1937, said stipulation appearing on pages 334-339 of the volume entitled "Final Volume containing Proceedings in the Court of Civil Appeals and in the Supreme Court of Texas and on Appeal to the Supreme Court of the United States:"

1. Transcript certified by the clerk of the District Court of Travis County, Texas, on September 6, 1934, and filed in the Court of Civil Appeals on September 12, 1934, consisting of 600 pages;

2. Statement of Facts consisting (a) of 5 volumes of oral testimony, Numbered 1 to 5, inclusive, and containing 3560 pages; and (b) of 15 books of exhibits, Numbered 6, [fol. 344] 7, 8-A, 8-B, 8-C, 8-D, 8-E, 8-F, 8-G, 8-H, 9-A, 9-B, 10, 11 and 12, all of said 20 volumes of oral testimony and exhibits having been filed in the District Court of Travis County, on September 7, 1934, and in the Court of Civil Appeals on September 12, 1934.

3. Statement of facts on hearing of plea in abatement and pleas to jurisdiction, September 7, 1934, in the District Court, and September 12, 1934, in the Court of Civil Appeals.

4. The following documents called for in the appellees' counter præcipe and in the stipulation of the parties: (a) Brief of Appellants, State of Texas, et al, filed in the Court of Civil Appeals; (b) Brief of Appellee Lone Star Gas Company filed in the Court of Civil Appeals; and (c) Application for Writ of Error filed by the Lone Star Gas Company in the Supreme Court of Texas; these being identified by the file marks of the Clerk of the Court of Civil Appeals and the Clerk of the Supreme Court, respectively.

5. Railroad Commission Record, consisting of 89 volumes, containing Transcript of Testimony before the Railroad Commission of Texas, filed in the Court of Civil Appeals on September 12, 1934; also 41 books and documents constituting exhibits used in hearing before the Railroad Commission, and filed in the Court of Civil Appeals on September 12, 1934.

[fol. 345] 6. Volume entitled "Final Volume Containing Proceedings in the Court of Civil Appeals and the Supreme Court of Texas, and on Appeal to the Supreme Court of the United States," containing 342 pages immediately preceding this certificate, and containing record of all proceedings had and done in said Court of Civil Appeals in said cause and all proceedings had and done in the Supreme Court of Texas on the Application for Writ of Error filed in said Court and on motion for rehearing thereof as certified to me by the Clerk of the Supreme Court of Texas; and all appeal papers filed in my office on the appeal of appellant Lone Star Gas Company to the Supreme Court of the United States, except the "Statement as to Jurisdiction on Appeal."

The original "Statement as to Jurisdiction on Appeal," filed in the Court of Civil Appeals on February 17, 1937, is transmitted by me with the record aforesaid to the Clerk of the Supreme Court of the United States. No opposing statement was filed in my office.

7. I further certify that after this Court had overruled the motion for rehearing filed by the appellant Lone Star Gas Company, said appellant, on October 25, 1935, duly filed its Application for Writ of Error, and thereupon the said Application together with the entire record in said cause and a transcript of the proceedings in the Court of Civil Appeals were immediately forwarded by me to the [fol. 346] Clerk of the Supreme Court of Texas; and that on the 30th day of December, 1936, the Clerk of the Supreme Court of Texas filed with me certified copies of the orders of said Court refusing the Application for Writ of Error and overruling the motion for rehearing thereon, and at the same time the entire record in said cause, excepting only the Application for Writ of Error, the reply thereto, the motion for rehearing of said Application for Writ of Error, and the certified copies of the orders of the Court of Civil Appeals previously forwarded by me to the Supreme Court, was returned to this Court where it now permanently remains. All of which facts duly appear from docket entries and the files in my office.

In Testimony Whereof, witness my hand and the seal of the Court of Civil Appeals for the Third Supreme Judicial District of Texas, at Austin, this 10th day of August, A. D. 1937.

R. E. Moore, Clerk of the Court of Civil Appeals for the Third Supreme Judicial District of Texas.
(Seal.)

[fol. 347] IN COURT OF CIVIL APPEALS OF TEXAS

EXCERPTS FROM BRIEF FOR APPELLANTS

Appellants' Assignments of Error

1

The Court erred in defining the term "used and useful" in paragraph 3 of the Court's main charge. Such error was

duly and seasonably objected and excepted to by plaintiffs and was pointed out to both the Court and adverse counsel prior to the Court's reading of his main charge to the jury. Plaintiffs' objection and exception and the Court's error in defining said terms are again pointed out. Such definition was very prejudicial to plaintiffs, an incorrect statement of the law, and on the weight of the evidence, all of which entitles plaintiffs to a new trial.

2

The Court erred in giving the third paragraph of his charge to the jury, reading as follows:

"By the term 'used and useful' is meant the property of the defendant actually being used by the defendant in the production, transportation, sale and delivery of natural gas to its customers; and also such property as has been acquired by defendant in good faith and now held for use in the reasonably near future in order to enable it to supply and furnish adequate and uninterrupted gas service,"

because the above and foregoing charge and definition was upon the weight of the evidence, an incorrect statement of law, and necessarily caused the jury to include certain items and property in their evaluation of the defendant's property about which there was a sharp controversy on both sides without in any way giving the jury any right of applying [fol. 348] their independent judgment or being allowed to consider the same as a fact question.

Plaintiffs would show to the Court in this connection that by appropriate objection and exception, the above and foregoing erroneous definition was duly and pointedly brought to the Court's attention, and to the attention of adverse counsel, prior to the Court's reading of his main charge to the jury.

3

The Court erred in refusing to permit the record plaintiffs to introduce the record and statement of facts in the hearing of this case before the Railroad Commission. Said record and statement of facts were duly proved up as being true and correct and were offered in evidence by plaintiffs, in their rebuttal testimony, to show that the order of the Railroad Commission was not unreasonable and unjust to

the defendant, and the Court sustained the defendant's objection thereto and excluded the same from the jury.

4

The Court erred in sustaining the defendant's objection to the offer by plaintiffs to introduce the record and statement of facts adduced in the hearing of this cause before the Railroad Commission of Texas, to which action of the court plaintiffs duly excepted.

5

The Court erred in permitting the witness Ed C. Connor to testify over plaintiffs' objection and exception that the Railroad Commission of Texas had never before fixed a rate of return lower than seven per cent upon the fair value or [fol. 349] rate base of a natural gas company in any hearing that had been theretofore held by such Railroad Commission.

6

The Court erred in sustaining the objection made by defendant to the plaintiffs' proffer of evidence from the witness D. A. Hulcy on cross-examination that the temperature conditions caused a loss of business in the year of 1933, and the two years immediately preceding. Such testimony was relevent to explain why defendant's revenues had decreased during an abnormal period of time, and was excluded over plaintiffs' exception.

7

The Court erred in sustaining the defendant's objection to plaintiffs' effort to prove on cross-examination by the defendant's witness, D. A. Hulcy, the condition of the temperature during the years of 1931, 1932, 1933, and in sustaining such objection by stating in the presence of the court and jury:

"Yes, sir, the objection is sustained. That hasn't a thing to do with this case,"

because such language constituted a comment on the weight of the evidence by the Court and was calculated to, and did mislead and prejudice the jury.

8

The Court erred in stating from the bench during the course of the trial, and while the witness D. A. Hulcy, a witness for the defendant, was being cross-examined by the plaintiffs in regard to the dummy set of books held by the Lone Star Gas Company in the city of Dallas, Texas, by [fol. 350] stating in the presence and hearing of the jury that counsel should not make any further statement or ask any more questions in regard to said set of dummy books, because every lawyer knew that the State or the Attorney General either had the right or did not have the right of access to the same, and that counsel should not attempt to go any further into the matter or interrogate said witness Hulcy any further in regard to the same, because such action was calculated to and did prejudice the jury against the plaintiffs.

9

The Court erred in refusing to set aside the verdict of the jury and grant plaintiffs a new trial herein on account of the closing argument made in the case by attorney Karl F. Griffith for the defendant, as is fully shown by plaintiffs' bill of exceptions Number One.

10

The Court erred in refusing to set aside the verdict of the jury and grant plaintiffs a new trial herein on account of the closing argument made in the case by Attorney Karl F. Griffith for the defendant, as is fully shown by plaintiffs' bill of exceptions number two.

11

The Court erred in refusing to set aside the verdict of the jury and grant plaintiffs a new trial herein on account of the closing argument made in the case by Attorney Karl F. Griffith for the defendant, as is fully shown by plaintiffs' bill of exceptions number three.

12

The Court erred in refusing to set aside the verdict of the [fol. 351] jury and grant plaintiffs a new trial herein on account of the closing argument made in the case by Attor-

ney Karl F. Griffith for the defendant, as is fully shown by plaintiffs' bill of exceptions number five.

13

The Court erred in admitting in evidence, over the plaintiffs' objections and exception, defendant's styled volumes 7 and 8 of Exhibit 28, sponsored by the witness Ed C. Connor, and having to do with the overhead expenses that would be incured by the defendant on a reconstruction cost new basis.

14

The Court erred in admitting in evidence, over the plaintiffs' objection and exception, defendant's styled exhibit No. 42, sponsored by the witness Ed C. Connor, which said exhibit contained various data and purported information, as prepared by said witness, on the annual reserve accruals for said defendant, Lone Star Gas Company.

15

The Court erred in allowing the defendant to introduce in evidence defendant's styled Exhibit No. 4, sponsored by the witness D. A. Hulcy, over the objection and exception of plaintiffs, which same showed certain operating expenses calculated by said witness, and made comparisons with the order of the Railroad Commission of Texas.

16

The Court erred in admitting in evidence the defendant's styled Exhibit No. 5, sponsored by the witness D. A. Hulcy, over the objection and exception of plaintiffs, said exhibit reflecting certain bookkeeping figures and comparisons to [fol. 352] the order of the Railroad Commission, as made by said witness.

17

The Court erred in admitting in evidence defendant's styled Exhibit No. 6, sponsored by the witness D. A. Hulcy, over objection and exception of the plaintiffs, said exhibit reflecting certain bookkeeping figures and comparisons, as made by said witness.

18

The Court erred in admitting in evidence defendant's styled exhibit No. 7, sponsored by the witness D. A. Hulcy,

over the objection and exception of the plaintiffs, said exhibit reflecting certain bookkeeping fixtures and comparisons, as made by said witness.

19

The Court erred in admitting in evidence defendant's styled Exhibit No. 8, sponsored by the witness D. A. Hulcy, over the objection and exception of the plaintiffs, said exhibit reflecting certain bookkeeping figures and comparisons, as made by said witness.

20

The Court erred in admitting in evidence defendant's styled Exhibit No. 9, sponsored by the witness D. A. Hulcy, over the objection and exception of the plaintiffs, said exhibit reflecting certain bookkeeping figures and comparisons, as made by said witness.

21

The Court erred in admitting in evidence defendant's styled Exhibit No. 10, sponsored by the witness D. A. Hulcy, [fol. 353] over the objection and exception of the plaintiffs, said exhibit reflecting certain bookkeeping figures and comparisons, as made by said witness.

22

The Court erred in admitting in evidence defendant's styled Exhibit No. 11, sponsored by the witness D. A. Hulcy, over the objection and exception of the plaintiffs, said exhibit reflecting certain bookkeeping figures and comparisons, as made by said witness.

23

The Court erred in admitting in evidence defendant's styled Exhibit No. 12, sponsored by the witness D. A. Hulcy, over the objection and exception of the plaintiffs, said exhibit reflecting certain bookkeeping figures and comparisons, as made by said witness.

24

The Court erred in admitting in evidence defendant's styled Exhibit No. 13, sponsored by the witness D. A. Hulcy, over the objection and exception of the plaintiffs, said exhibit reflecting certain bookkeeping figures and comparisons,

to the order of the Railroad Commission, as made by said witness.

25

The Court erred in admitting in evidence defendant's styled Exhibit No. 14, sponsored by the witness D. A. Hulcy, over the objection and exception of the plaintiffs, said exhibit reflecting certain bookkeeping figures and comparisons, as made by said witness.

[fol. 354]

26

The Court erred in admitting in evidence defendant's styled Exhibit No. 32, offered in evidence over the plaintiff's objection and exception, and sponsored by the witness E. A. Steinberger, because same included undeveloped gas leaseholds, which showed upon the face of said exhibit to not be used or useful in the public service.

27

The Court erred in sustaining the special exceptions of the defendant, Lone Star Gas Company, to paragraph 11 of plaintiffs' second amended original petition, wherein it was sought by plaintiffs to recover the difference between the higher forty cent (40c) rate, now in effect, and the lower thirty-two (32c) cent rate, which was promulgated by said order of the Railroad Commission of Texas, because under the law, plaintiffs in this case, in the event that they should be finally successful, have a right to recover this difference for the use and benefit of the domestic consumers and users of such gas.

28

The Court erred in sustaining the defendant's special exception to the next to the last paragraph of the prayer of plaintiffs' second amended original petition, relative to the refund to the domestic consumers of gas, in the event the lower rate should finally be put in force and effect and the order of the Railroad Commission of Texas finally unheld.

29

The Court erred in not requiring the defendant to make a proper segregation of the value of its property in Texas, and the value of its property in Oklahoma, as same applied to the amount of business done in each of said states.

[fol. 355] 30

The Court erred in not requiring the defendant to make a proper segregation of the value of its property, as same applied to interstate and intrastate commerce.

31

The trial court erred in not setting aside the verdict of the jury and granting a new trial herein, because said defendant wholly failed to segregate its Oklahoma and Texas property and the business done by it, insofar as same applied to interstate and intrastate commerce.

32

The trial court erred in not setting aside the verdict of the jury and granting a new trial herein, because the defendant failed to discharge the burden of proof resting upon it to make a proper segregation of its interstate and intrastate business and property.

33

The trial court erred in admitting in evidence over plaintiffs' objections and exceptions defendant's styled exhibits numbered four to fourteen, inclusive, all prepared by the defendant's witness D. A. Hulcy, and reflecting certain bookkeeping figures, purporting to show the receipts and disbursements of said defendant, and certain comparisons with the order of the Railroad Commission, because such exhibits applied to all of the defendant's operations, both in Texas and Oklahoma as a whole, without any segregation being made to show what amount of the expenses reflected by such exhibits were applicable to interstate and intrastate commerce, or the amount of business done in each of said States.

[fol. 356] 34

The trial court erred in admitting in evidence, over plaintiffs' objection and exception, volumes one to six of defendant's exhibit No. 28, all prepared by the witness E. A. Steinberger, such exhibit purporting to show an inventory with unit prices of all of said defendant's property, both

in Texas and Oklahoma, because there was no segregation or allocation between the two states or between interstate and intrastate commerce.

35

The trial court erred in admitting in evidence over plaintiffs' proper objection and exception, defendant's styled exhibit No. 31, estimating the value of defendant's gas leaseholds and sponsored by the witness, D. A. Hulcy, because such exhibit applied to the entire property of defendant as a whole, and did not show any segregation between Oklahoma and Texas property or business.

36

The court erred in admitting in evidence, over plaintiffs' proper objection and exception, volumes seven and eight of defendant's styled exhibit No. 28, sponsored by the witness C. Connor, and purporting to show overhead values in the aggregate sum of twenty-four million dollars, which same were based upon a reproduction cost new of defendant's property, because said exhibits included the property of the defendant located both in Texas and Oklahoma without any segregation or allocation between the two states or between the amount of business done in each of said State.

37

The court erred in admitting in evidence, over plaintiffs' [fol. 357] proper objection, and exception, defendant's styled exhibit No. 37, relating to the percent condition of defendant's property, and sponsored by the witness P. MacDonald Biddison, because such exhibit did not show any segregation of any kind between interstate and intrastate commerce, Oklahoma and Texas property or business.

38

The court erred in admitting in evidence, over plaintiffs' objection and exception, defendant's styled exhibit No. 40, sponsored by the witness E. A. Steinberger, and having to do with the reproduction cost new of all of defendant's property, because no segregation was shown in such exhibit between the business done in Texas and Oklahoma and between the property located or used in each State.

39

The trial court erred in admitting in evidence, over plaintiffs' objection and exception, defendant's styled exhibit No. 41, with reference to the annual rate of reserve accrual, as applied to the estimated cost of reproduction and sponsored by the witness Ed C. Connor, because such exhibit did not contain or show any segregation between Texas and Oklahoma property or business.

40

The trial court erred in admitting, over plaintiffs' objection and exception, the defendant's styled exhibit No. 42, sponsored by the witness Ed C. Connor, and dealing with the annual reserves accruals required for said defendant upon the basis of a reproduction cost new of defendant's property, because such exhibit did not show any segregation between Oklahoma and Texas property or business.

[fol. 358]

41

The trial court erred in refusing to grant the plaintiffs' first requested motion for an instructed verdict in plaintiffs' favor and against the defendant. Said motion was duly requested and presented to the court after the defendant had finished with all of its direct testimony in chief and rested. At the time of the presentation of such motion, said defendant had failed to prove by clear and satisfactory evidence that the order of the Railroad Commission of Texas was unreasonable and unjust as to it and the court erred in not granting such first requested motion for an instructed verdict.

42

The court erred in refusing to grant the plaintiffs' timely requested motion for an instructed verdict which was duly presented after both sides had finally rested and after all of the evidence in the case had been finished. At the time of the request of such motion, the defendant had wholly failed to prove by clear and satisfactory evidence that the order of the Railroad Commission of Texas was unreasonable and unjust as to it.

43

The court erred in overruling and in refusing to grant the timely motion and request of the plaintiffs for the court

to render judgment in plaintiffs' favor and against the defendant, notwithstanding the verdict of the jury. Such motion was duly presented to the court after the verdict of the jury had been returned into the court and prior to the time of any action thereon by the court. It was clearly pointed out in such motion that the defendant had wholly failed to prove, by clear and satisfactory evidence, that such [fol. 359] order of the Railroad Commission was unreasonable and unjust as to it, and that no fact issue for the jury to pass upon was shown or proved by defendant during the trial of the case, and that consequently plaintiffs were entitled to a judgment in their favor, notwithstanding such verdict.

44

The court erred in not setting aside the verdict of the jury and granting plaintiffs a new trial herein, because all of the evidence introduced during the trial of the case clearly showed that said verdict of the jury did not have any competent, legal or relevant facts to support it. Such verdict was contrary to all of the competent evidence introduced during the trial of said cause, and being without the support of any competent or legal evidence, the court should have set the same aside and granted plaintiffs' amended motion for a new trial.

45

The court erred in not setting aside the verdict of the jury and granting plaintiffs a new trial herein, because all of the facts introduced during the trial of this cause clearly show that the defendant failed and refused to prove, by clear and satisfactory evidence, that the order of the Railroad Commission of Texas was unreasonable and unjust as to it.

46

The court erred in not setting aside the verdict of the jury and granting plaintiffs a new trial herein, because the verdict of the jury was so against the great weight of the competent evidence introduced during the trial of the case and so opposed to the great preponderance of the testimony that the same should have been set aside. Under all of the [fol. 360] competent evidence introduced during the trial of this cause, including even the evidence of the defendant

alone, the verdict of the jury, upon its face, clearly shows that it did not properly apply or consider the facts of the case, and that the verdict returned into court by it was clearly against the great weight of all evidence introduced during the trial of this cause.

Respectfully submitted, James V. Allred, Attorney General of Texas; Elbert Hooper, First Assistant Attorney General; William C. Fitzhugh, Assistant Attorney General; A. R. Stout, Assistant Attorney General, Attorneys for Appellants.

[fol. 361] In Court of Civil Appeals of Texas

Excerpts from Brief for Appellee

* * * * * * *

Defendant does not deny the power and jurisdiction of the Railroad Commission to determine the reasonableness of the gate rate to be charged by it for gas which it sells in intrastate commerce, as it understands that term as applied to the facts in this case, and, subject to its rights under the Constitution of the United States and that of the State of Texas, to promulgate an order applicable to such business, fixing the price so determined to be reasonable as the gate rate to be charged.

It may even be that defendant, in the absence of plaintiffs' attempt to enforce the same, coud not have obtained injunctive relief against the order of the Commission in this case, the order applying as it does to both intrastate and interstate gas, if the Commission had stopped with a finding of a reasonable rate without undertaking to prevent defendant from charging in excess thereof. State Corporation Commission vs. Wichita Gas Company, 290 U. S. 561, 78 L. ed. 500.

Defendant, when it offered its evidence before the Commission had no reason to assume that it would do more.

But when the Commission went further and in its order undertook to directly regulate defendant's interstate business by prohibiting it from charging in excess of 32 cents for its interstate gas, and undertook to enforce the same as to such gas it usurped powers not conferred upon it by law, in conflict with the Commerce Clause of the United

States Constitution, and in the face of clear and repeated decisions of the Supreme Court condemning such action.

[fols. 362-363] There is a legal way in which the Commission could have accomplished the result sought to be achieved in this case, if just—through the regulation of local rates. Advisedly, it has sought to accomplish the same thing by a prohibited short cut.

* * * * * * *

[fols. 364-365] IN SUPREME COURT OF TEXAS

EXCERPTS FROM APPLICATION FOR WRIT OF ERROR

* * * * * * *

It is quite true that the Commission, because of the corporate affiliation between the defendant and the distributing companies, has authority to consider, in fixing the local rates of the distributing companies, what such companies may reasonably pay and charge for the gas sold to them by defendant at the city gates. The Commission has authority to review these contracts because of the affiliation between the parties; it is assumed that because of corporate affiliation the parties in making these contracts are not dealing at arm's length. But because the Commission in fixing local distribution rates may consider what would be a reasonable charge for the gas delivered at the city gates does not imply authority to determine and fix the rate as against pipe line companies transporting the gas in interstate commerce.

* * * * * * *

[fols. 366-367] If these arbitrary additions to the actual revenues had not been made, the prescribed rate would have shown a return of 5.77 per cent for the year 1933 instead of 6.76 per cent—even with all of the eliminations of property and operating expenses above noted.

* * * * * * *

[fols. 368-369] The witness Freese admitted that with this item eliminated—an item not allowed by the Commission—defendant's return under the prescribed rate would be only 5.77 per cent.

* * * * * * *

[fols. 370-371] Argument

It is clear from the opinions of the Railroad Commission (Tr. 19, Book of Exhibits 7, p. 3842) and the Court of Civil Appeals that the fixing of the gate rate to be charged by defendant for natural gas delivered by it to the distributing companies was an initial step in the work of the Commission which had for its ultimate object the fixing of rates for the distributing companies to charge for natural gas at the burner tip of the consumer. It was and is necessary for the Commission in the fixation of distributing rates to include as an expense of operation the sum paid by the local distributing companies for the gas which they receive from defendant at the city gates.

* * * * * * *

[fol. 372] If, however, the commission had only indicated an intent and purpose to determine what would be a reasonable gate rate for the distribution companies to set up as an expense of operation for gas purchased as a preliminary step in aid of the fixation of distributing rates, instead of fixing the maximum rates which defendant could charge and collect for gas delivered at the city gates, no question of interstate commerce could properly have been [fol. 373] raised (Western Dist. Co. vs. Pub. Serv. Com. of Kan., 285 U. S. 119, 76 L. ed. 655; State Corporation Commission vs. Wichita Gas Co., 290 U. S. 561, 78 L. Ed. 500) and a segregation of property between that used in interstate and intrastate commerce would have been unnecessary.

* * * * * * *

[fol. 374] Supreme Court of the United States

Order Extending Time for Docketing of Case and Filing of Transcript of Record—Filed March 13, 1937

Upon consideration of the application of Appellant herein for an extension of time within which to docket the above cause and to file the transcript thereof with the Clerk of this Court, and being of the opinion that good cause has been shown for the extension of such time,

It is Ordered that the time within which Appellant is required to docket the above cause, and to file the record

thereof, with the Clerk of this Court be and it hereby is extended to and including July 5th, 1937.

Benjamin N. Cardozo, Associate Justice of the Supreme Court of the United States.

Dated at Washington, D. C., March 13th, 1937.

[fol. 374½] [File endorsement omitted.]

[fol. 375] SUPREME COURT OF THE UNITED STATES

ORDER EXTENDING TIME FOR DOCKETING OF CASE AND FILING OF TRANSCRIPT OF RECORD—Filed June 19, 1937

Upon consideration of the joint request of counsel for appellant and appellees herein for an extension of time within which to docket the above cause and to file the transcript thereof with the Clerk of this Court, and being of the opinion that good cause has been shown for the extension of such time,

It is Ordered that the time within which Appellant is required to docket the above cause, and to file the record thereof, with the Clerk of this Court be and it hereby is extended to and including August 20th, 1937.

Benjamin N. Cardozo, Associate Justice of the Supreme Court of the United States.

Dated this 19th day of June, 1937.

[File endorsement omitted.]

[fol. 376] IN SUPREME COURT OF THE UNITED STATES

STATEMENT OF THE POINTS UPON WHICH APPELLANT INTENDS TO REPLY AND DESIGNATION OF PARTS OF THE RECORD TO BE PRINTED—Filed August 16, 1937

Comes now the appellant Lone Star Gas Company and adopts its assignments of error as its statement of the points to be relied upon, and represents that only the hereinafter designated parts of the record as filed in this Court need be printed by the clerk for the hearing of the case.

[fol. 377] The record certified to and filed in this Honorable Court in this case consists generally of proceedings had and done (a) before the Railroad Commission of Texas; (b) in the trial court, the 53rd Judicial District Court of Travis County, Texas; (c) in the Court of Civil Appeals for the Third Supreme Judicial District of Texas, the intermediate

appellate court; (d) in the Supreme Court of the State of Texas; and (e) proceedings incident to the perfecting and filing of this appeal in the Supreme Court of the United States. Therefore, this designation of portions of the record to be printed will be accordingly so classified.

A

The Railroad Commission Record

Appellant does not designate for printing any portion of the record made before the Railroad Commission of Texas.

B

The District Court Record

The proceedings in the trial court, the 53rd Judicial District Court of Travis County, Texas, are incorporated into:

(1) What is called a Transcript under the State practice, consisting of pages 1 to 600, inclusive, and containing all of [fol. 378] the pleadings, charge of the trial court, verdict of the jury, orders and judgment of the trial court, and all matters filed in the trial court, except exhibits introduced in evidence;

(2) What is called the Statement of Facts under the State practice, consisting of 5 separately bound volumes of the testimony of witnesses in Q and A form, being all of the testimony introduced in the trial court; and

(3) Books of exhibits described as follows:

(a) Five separately bound books of exhibits described as Book 6 (containing plaintiffs' Exhibits 1 to 11, inclusive); Book 7 (containing defendant's Exhibits 1 to 27, inclusive); Book 9-A (containing defendant's Exhibit 29); Book 10 (containing defendant's Exhibits 31 to 41, inclusive); Book 12 (containing defendant's Exhibits 43 to 51, inclusive);

(b) Eight separately bound red leather volumes, each styled "Lone Star Gas Company—Appraisal—Cost of Reproduction New, January 1, 1933. Public Service Plant, Property and Business," (containing defendant's Exhibit 28);

(c) One separately bound red leather volume styled "Report and Findings of Gas Reserves—Jan. 1, 1933," being defendant's Exhibit 30; and

(d) One separately bound red leather volume styled "Annual Reserve Accruals Required for Lone Star Gas Co. Jan. 1, 1933," being defendant's Exhibit 42.

[fol. 379] Appellant requests the printing of the following portions of said record made in the 53rd Judicial District Court of Travis County, Texas:

From Transcript

(as described in Section B, page 3 hereof)

	Page of Transcript
1. Plaintiffs' Second Amended Original Petition.....	2–25
But eliminating the following parts thereof:	
(a) Paragraph XI (page 13 through first paragraph on page 15);	
(b) Third paragraph on page 16;	
(c) Exhibit "A" and "B" attached to said petition.	
2. Order of Court staying proceedings.....	26–28
3. Second Amended Answer of appellant Lone Star Gas Company.....	31–144
But eliminating the following parts thereof:	
(a) Subsections 1 and 2 under Section A, pages 31 to 36;	
(b) Subsection 5 under Section A, pages 42 to 43, down to last paragraph on page 43;	

[fol. 380]

(c) Subsections 1, 2, 3, 4, and 5 under Section B, pages 45 to 53;
(d) Subsection 7, (pages 56 to 57), under Section B;
(e) Subsections 9 and 10 (pages 61 to 63), under Section B;
(f) Subsections 1, 2, 3, 4, 5, 6, 7, and 8, under Section C (pages 66 to 72);
(g) Subsection 10 under Section C (page 73);
(h) Subsections 1 to 27, both inclusive, under Section D (pages 74 to 114);
(i) Subsections 29 and 30 under Section D (pages 117–118);
(j) The sentence, beginning 14 lines from the top of page 120, with the words "the said City gate price;"
(k) The sentence beginning in the 3rd line from the top of page 131 and continuing to the end of the paragraph;
(l) Section (d) page 136;
(m) The clause beginning with the words "and operates" in the 13th line on page 139 and ending with the

[fol. 381]

words "United States" in the 16th line from top of the page;

Transcript
Page of

(n) All of page 140, except the first sentence consisting of six lines;
(o) The language "will deny to defendant freedom of contract and will impair the obligation of contract," in lines 11 and 12 of Paragraph XII, page 141.

4. Plaintiffs' Second Supplemental Petition..... 146–161

But eliminating therefrom the following:

(a) Paragraphs I to V, inclusive, on pages 146 to 149;
(b) The next to the last paragraph on page 151, beginning with the word "Plaintiffs" and ending with the word "developed";
(c) All of Section IX on page 152;
(d) The sentence beginning in the 12th line from the bottom of page 153;
(e) The last 8 lines in Section X, page 154, beginning with the words "which would have made" and ending with the words "as herein alleged";

[fol. 382]

(f) The clause beginning with the word "that" in the 7th line from the top of page 158 and ending with the word "and" in the 11th line from the top, on the same page;
(g) The clause beginning with the words "one-half" and ending with the word "Texas" in the 12th and 13th lines on page 159;
(h) The clause beginning with the words "and during" and ending with the words "Twenty per cent" in the 16th, 17th and 18th lines from the top of page 159;
(i) The clause beginning with the words "and upon" and ending with the words "through it" in the 20th, 21st and 22nd lines from the top of page 159.

5. Defendant's Second Supplemental Answer..... 162–196

But eliminating the following:

(a) Paragraphs I, II (pages 162–167), V, VI (pages 170–175), VIII, IX (a, b, c, and e), X, XI (pages 177–181), XIII (page 183), XVI, XVII, XVIII, XIX (pages 186–191), XXI, XXII, and XXIII (pages 192–194).

[fol. 383]

6. Order Overruling Defendant's Pleas to the Jurisdiction and Pleas in Abatement..... 200–201
7. Order Overruling Exceptions and Demurrers of the Defendant Lone Star Gas Company..... 203–206

But eliminating the following:

(a) Beginning with Section II on page 203 down to the last paragraph on page 206, said last paragraph beginning with the word "accordingly."
(b) File endorsement, p. 206.

Transcript Page of

8. Defendant's Request for a Peremptory Instruction and Order of the Court refusing same..... 215–216
(Eliminating file endorsement, p. 216).
9. Plaintiffs' Motion for an Instructed Verdict, filed July 5, 1934, and Order of the Court refusing same.... 217–219
(Eliminating file endorsement, p. 219).
10. Defendant's Motion to Strike Plaintiffs' Exhibit 8, and order of the Court overruling same..... 220–225

But eliminating the following therefrom:

(a) Paragraph I (page 220), Paragraph VI (page 222), and Paragraph X (page 224).
(b) Eliminating file endorsement, page 225.

[fol. 384]

11. Plaintiffs' Motion for an Instructed Verdict filed July 16, 1934, and Order of the Court overruling same..... 226–228
(Eliminating file endorsement, page 228).
12. Defendant's Request for a Peremptory Instruction at the close of all the testimony, and Order of the Court denying same..... 229–230
(Eliminating file endorsement, page 230).
13. Defendant's Exceptions to the Court's Charge..... 238–274

But including only the following parts of said exceptions:

(a) Sections I, II, III, and IV (pages 238–241);
(b) First 3 lines of Section XV, page 260; also subsections (f), (k), (n), (o), and (q) of Section XV, (pages 262, 264, 265, 266);
(c) Section XVI-a (pages 268–269);
(d) Subsections (a), (c), and (d) of Section XVI-b (pages 269–270; 1st two lines of 271);
(e) Sections XVII and XVIII (pages 271 and first five lines of 272);
(f) Order of Court on Exceptions (page 274).

[fol. 385]

14. Charge of the Court..... 515–518
(Eliminating file endorsement, page 518).
15. Verdict of the Jury..... 519
16. Judgment of the Trial Court..... 526–531

But eliminating the following:

(a) The portion thereof beginning with the quoted matter on page 526 and continuing to the words "It is therefore ordered, adjudged and decreed," etc., on page 529.
(b) Eliminating file endorsement and docket entry, pages 531–532.

17. Plaintiffs' First Amended Motion for New Trial..... 535–554

But including only the following:

(a) Paragraphs 4 and 5, page 536;

Transcript Page of

(b) Paragraphs 15, 16, 17, 18, 19, and 20, pages 539–540.

18. Order Overruling Plaintiffs' First Amended Motion for New Trial 560
(Eliminating file endorsement and docket entry, pages 560–561).

[fol. 386]

19. Defendant's Cross Assignments of Error 585–596

But including only the following:

(a) Paragraph 5 (page 586); paragraphs 15, 16, 17, 18, 19, 20, and 21 (pages 587–593); and paragraphs 23 and 24 (pages 595–596).

(b) Eliminating file endorsement, page 596.

[fol. 413] Acknowledgment of Service

The undersigned, being the attorneys of record for the Appellees in Lone Star Gas Company, Appellant, vs. State of Texas, et al, Appellees, pending on appeal in the Supreme Court of the United States, hereby acknowledge due service of copy of the foregoing "Statement of the Points upon which Appellant Intends to Rely and Designation of Parts of the Record to be Printed."

Dated at Austin, Texas, this the 14th day of August, 1937.

Wm. McCraw, Attorney General of Texas; Alfred M. Scott, Assistant Attorney General, Attorneys for the Appellees, State of Texas, et al.

[fol. 414] [File Endorsement Omitted.]

[fol. 415] In Supreme Court of the United States

Appellee's Designation of Additional Parts of the Record to be Printed—Filed August 18, 1937

Having been served on the 14th day of August, A. D., 1937, with copy of appellant's Designation of Points Intended to be Relied Upon and of Parts of the Record to be Printed, appellees now designate the following additional parts of the record to be printed.

For convenience appellees will designate from the various parts of the record in the same order, and under the same lettered subdivisions, as used by appellant in its said designation.

[fol. 416] All double references are intended to be "both inclusive," unless a contrary intention is indicated.

A

From the Record Made Before the Railroad Commission of Texas

Attorneys for appellant, Lone Star Gas Company, have stated to counsel for appellees that in view of the fact that in the trial in the 53rd District Court of Travis County, Texas, the appellees (State of Texas et al.) tendered in evidence the entire original record, including oral testimony and exhibits, made before the Railroad Commission of Texas, and the appellant, Lone Star Gas Company, made objections to the admissibility thereof, which objections the trial court sustained and excluded from evidence over the exceptions of appellees the entire Railroad Commission Record (S. F. 2545-2559); and in view of the further fact that neither the Court of Civil Appeals nor the Supreme Court of Texas passed upon the appellees' assignments of error complaining of the exclusion of said Railroad Commission record from evidence; that appellant, Lone Star Gas Company, considers itself foreclosed and estopped from attempting to present or argue in this appeal in this court any assignments or contentions as to what the evidence did or did not show before the Railroad Commission of Texas, except insofar as the evidence admitted by the District Court reflected in certain particulars what the evi- [fol. 417] dence was as certain points before the Railroad Commission of Texas; and in view of the representations of attorneys for appellant, Lone Star Gas Company, that they do not intend to advert in any way to the evidence and record before the Railroad Commission, except as above indicated, appellees, in reliance upon said representations, at this time designate no part of said Railroad Commission record for printing.

B

From the Record Made in the 53rd Judicial District Court of Travis County, Texas

I

From the transcript of pleadings, orders, and other proceedings in the District Court:

Page of Transcript

1. From plaintiffs' Second Amended Original Petition.. 2–25

Defendant's Exhibit No. 4	148–153, inclusive, and map on p. 153A

III.

From the Exhibits before the 53rd Judicial District Court of Travis County, Texas, in the trial upon the merits, print the following:

	Book of Exhibits	Pages
Plaintiffs' Exhibits:		
Exhibit No. 2	6	3564–3569
Exhibit No. 3	6	3572–3573
Exhibit No. 4	6	3576–3591
Print only p. 3576.		
Exhibit No. 5	6	3593–3618
Print only the following pages: 3593, 3597–3609, inclusive; 3612–3616, inclusive.		
Exhibit No. 6	6	3620–3662
Print only the following pages: 3621, 3622, 3625–3642, inclusive; 3646–3662, inclusive.		

[fol. 423]

Exhibit No. 7	6	3664–3678
Print only the following pages: 3665, 3666, 3675–3678, inclusive.		
Exhibit No. 8	6	3680–3696
Print only the following pages: 3680, 3682, 3687–3696, inclusive.		
Exhibit No. 9	6	3698
Exhibit No. 10	6	3700–3707
Exhibit No. 11	6	3709
Defendant's Exhibits:		
Exhibit No. 13	7	3792–4037
Print only the following pages: 3972; 3980-3984, inclusive; 3986–3988, inclusive; 3994–3998, inclusive; 4000; 4007–4011, inclusive; 4017–4021, inclusive.		

	Book of Exhibits	Pages
Exhibit No. 15	7	4043–4046
Print all of the remainder of this Exhibit not designated for printing by appellant.		
Exhibit No. 16	7	4048–4052
Print all of the remainder of this Exhibit not designated for printing by appellant.		
Exhibit No. 17	7	4054–4057
Print all of the remainder of this Exhibit not designated for printing by appellant.		
Exhibit No. 18	7	4059–4062
Print all of the remainder of this Exhibit not designated for printing by appellant.		

[fol. 424]

Exhibit No. 19	7	4064–4067
Print all of the remainder of this Exhibit not designated for printing by appellant.		
Exhibit No. 20	7	4069
Exhibit No. 21	7	4071
Print all of the remainder of this Exhibit not designated for printing by appellant.		
Exhibit No. 22	7	4073–4077
Print all of the remainder of this Exhibit not designated for printing by appellant.		
Exhibit No. 23	7	4079–4083
Print all of the remainder of this Exhibit not designated for printing by appellant.		
Exhibit No. 24	7	4085–4089
Print all of the remainder of this Exhibit not designated for printing by appellant.		
Exhibit No. 25	7	4091–4093
Exhibit No. 26	7	4095
Print all of the remainder of this Exhibit not designated for printing by appellant.		
Exhibit No. 27	7	4097–4101
Print all of the remainder of this Exhibit not designated for printing by appellant.		
Exhibit No. 28	8-A to 8-H (inclusive)	4104–8608

From Volume II (Book 8-B) print only the following pages or portions as indicated:

5238

[fol. 425]

From Volume III (Book 8-C) print only the following pages or portions as indicated:

5562; 5563; 5573; 5574; 5583-5585, inclusive; 5587–5589, inclusive; 5591–5599, inclusive; 5603; 5607–5612, inclusive;

Book of Exhibits Pages

5619; 5621; 5622; 5623; 5625; 5635–5640, inclusive; 5649–5651, inclusive; 5672; 5673; 5680–5682, inclusive; 5688; 5689; 5695; 5696; 5705; 5706; 5714; 5733; 5742; 5750; 5759–5762, inclusive; 5763–5765, inclusive; 5771; 5779–5782, inclusive; 5792; 5793; 5812; 5813; 5825–5828, inclusive; 5844; 5851; 5852; 5858–5860, inclusive; 5870; 5873–5875, inclusive; 5877; 5878; 5912-5914, inclusive; 5916; 5917; 5920; 5927–5936, inclusive; 5963–5965, inclusive; 5977–5993, inclusive.

From Volume IV (Book 8-D) print only the following pages or portions as indicated:

6012; 6026; 6032–6035, inclusive; 6062; 6063; 6075; 6076; 6087; 6089–6091, inclusive; 6103; 6104; 6107; 6113–6115, inclusive; 6124–6132, inclusive; 6146–6148, inclusive; 6109; 6175; 6176; 6206–6208, inclusive; 6222; 6231; 6232 down to and through "total line E 4 $6,395.26"; 6266; 6275; 6306; 6337; 6354; 6389; 6431; 6432; 6449; 6450; 6468; 6470; 6478–6480, inclusive; 6482–6484, inclusive; 6490; 6507; 6510; 6515; 6523; 6611; 6612; 6621; 6622; 6632; 6633; 6636–6640, inclusive; 6642–6644, inclusive.

From Volume VII (Book 8-G) print only the following pages or portions as indicated:

[fol. 426]

7857; 7869–7874, inclusive; 7877–7938, inclusive; 7942–7947, inclusive; 7950–7951, inclusive; 7953–7963, inclusive; 7965–7985, inclusive; 7987–9789, inclusive; 7991–8010, inclusive; 8012–8013, inclusive; 8015–8023, inclusive; 8025–8026, inclusive; 8028–8037, inclusive; 8039–8046, inclusive; 8048–8053, inclusive;

[fol. 427]

8055–8071, inclusive; 8073–8083, inclusive; 8085–8090, inclusive; 8092–8094, inclusive; 8097–8103, inclusive; 8106; 8110–8128, inclusive; followed by the following notation: "(Note: Here follow pp. 8129–8192, inclusive, omitted

	Book of Exhibits	Pages
in printing, setting forth detail similar to that just above shown)"; 8193, 8195–8226, inclusive, followed by the following notation: "(Note: Here follow pp. 8227–8263, inclusive, omitted in printing, setting forth detail similar to that just above shown); 8264–8300, inclusive, followed by the following notation: "(Note: Here follow pp. 8301–8334, inclusive, omitted in printing, containing detail detail similar to that just above shown)"; 8335–8368, inclusive; 8370–8402, inclusive; 8405–8446, inclusive.		
From Volume VIII (Book 8-H) print only the following pages or portions as indicated: 8450; 8459–8475, inclusive; 8479–8511, inclusive; 8514–8521, inclusive; 8524–8532, inclusive; 8535–8557, inclusive, followed by the following notation: "(Note: Here follow pp. 8558–8563, inclusive, omitted in printing, showing detail similar to that last above shown); 8564–8586, inclusive, followed by the following notation: "(Note: Here follow pp. 8587–8591, inclusive, omitted in printing, containing detail similar to that last above shown)"; 8592–8603, inclusive; 8606–8607.		
Exhibit No. 29 (Map of System).....	9-A	8610
[fol. 428]		
Exhibit No. 30.....	9-B	8612–8856
Print only the following pages and portions indicated: 8614; 8619; 8622; 8626; 8627; 8630; 8637; 8639; 8642; 8662; 8663, lines 1, 2, and 3; 8663, line 16, through line 7, p. 8664; 8665–8666, inclusive; 8668; 8670; 8706; 8712; 8717; 8736; 8742; 8743, lines 1, 2, 3, and 19-24 through the word "decline"; 8747; 8748, lines 1–6, inclusive; 8749, lines 2–4, inclusive; 8751; 8765, lines 1–7, inclusive, followed by following notation: "(Note: The remainder of p. 8765 down to and including line 27, p.		

3537

	Book of Exhibits	Pages
8772, contains data similar to that above shown and are omitted in printing)"; 8772, line 28, only, followed by the following notation: "(Note: p. 8773 through line 9, p. 8799, contain detail similar to that just above shown and are omitted in printing)"; 8799, print totals in line 10, only; 8800, print lines 1–7, inclusive, followed by the following notation: "(Note: From line 8, p. 8800, through 13, p. 8805, data are set forth similar to that above shown, and are omitted in printing)"; and on p. 8805, print only lines 14–16, inclusive.		
Exhibit No. 31	10	8858–8864
Print only the following pages: 8858; 8861–8864, inclusive.		
Exhibit No. 32	10	8866–8895
Print only the following pages and portions indicated: 8866; 8867, lines 1–9 inclusive, followed by the following notation: "(Note: From line 10, p. 8867, through line 19, p. 8870,		

[fol. 429]

follow data similar to that above shown, omitted in printing)"; print p. 8870, line 20, only, followed by following notation: "(Note: from line 21, p. 8870, through line 12, p. 8879, follow data similar to that above shown, omitted in printing)"; p. 8879, print line 13, only, followed by following notation: "(Note: From line 14, p. 8879, through line 14, p. 8891, are shown data similar to above, omitted in printing)"; p. 8891, print line 15, only, followed by the following notation: "(Note: From line 16, p. 8891, through line 23, p. 8895, follow data similar to above, omitted in printing)"; p. 8895, print lines 24 and 25, only.

Exhibit No. 33	10	8897–8937
Print only pp. 8897 and 8901, lines 1–10, inclusive.		
Exhibit No. 37	10	8974–9226
Print only the following pages: 8981; 8988; 9003; 9035; 9054; 9121; 9219.		

	Book of Exhibits	Pages (Inclusive)
Exhibit No. 40	10	9240–9250
Print only pp. 9249–9250, inclusive.		
Exhibit No. 42	11	9259–9582
Print only following pages and portions: 9271 from "Purpose of the Investigation" to bottom of page; 9272–9277, inclusive; 9278–9281, inclusive; 9295–9300, inclusive; 9314, line 1–22, inclusive; 9322–9323, inclusive; 9334; 9339–9344, inclusive; 9403–9404, inclusive; 9407–9408, inclusive; 9428–9436, inclusive; 9446–9453, inclusive; 9463–9465, inclusive; 9480; 9498–9500, inclusive; 9503; 9514; 9525; 9529–9530, inclusive; 9532–9537, inclusive; 9554; 9556; 9559; 9561–9562, inclusive; 9574–9575, inclusive.		
Exhibit No. 45	12	9600–9721
Print only the following pages: 9600; 9720–9721, inclusive.		
Exhibit No. 46	12	9723–9771
Print only the following pages: 9723; 9736–9755, inclusive; 9757–9764, inclusive.		
Exhibit No. 48	12	9777–9783
Print only the following pages: 9777 and 9779–9783, inclusive.

C

From the Record in the Court of Civil Appeals

1. Assignments of Error Nos. 1-46, inclusive, filed by State of Texas et al. (appellants in the Court of Civil Appeals, appellees here) and set forth at pages 251-264 of the original brief filed in the Court of Civil Appeals by the State of Texas et al.

2. Excerpt from the original brief filed in the Court of Civil Appeals by the Lone Star Gas Company, appellee in said court, appellant herein, beginning with the words "defendant does not deny" in the third paragraph on p. 218, and extending through the words "by a prohibited short cut" in the first paragraph on p. 219 of said brief.

D

From the Record and Proceedings in This Cause in the Supreme Court of Texas

1. The following excerpts from the Application for Writ of Error filed by the Lone Star Gas Company in the Court

of Civil Appeals and transmitted to and filed in the Supreme Court of Texas:

(a) The third paragraph on p. 47 of said Application, beginning with the words "It is quite true" and ending with the words "in interstate commerce."

(b) Beginning with the words, "If, however," beginning on the eighth line from the bottom of p. 217 and extending through the words "would have been unnecessary" in the [fol. 439] fourth line from the top of p. 218.

(c) Beginning with the words "It is clear from the opinions" on p. 121, under the heading "Argument" and extending through the words "defendant at the city gates" in the eleventh line of said argument.

2. The following excerpts from the above mentioned application for Writ of Error filed by Lone Star Gas Company.

(a) The second paragraph on p. 79, beginning with the words "If these arbitrary additions" and ending with the words "expenses above noted."

(b) The third paragraph on p. 95, beginning with the words "The witness Freese" and extending through the words "only 5.77 per cent."

SUPREME COURT OF THE UNITED STATES

OCTOBER TERM, 1937

No. 313

LONE STAR GAS COMPANY,

Appellant,

vs.

STATE OF TEXAS ET AL.

APPEAL FROM THE COURT OF CIVIL APPEALS, THIRD SUPREME JUDICIAL DISTRICT, STATE OF TEXAS.

STATEMENT AS TO JURISDICTION ON APPEAL.

Lone Star Gas Company, the above named appellant, submits this statement in accordance with Rule 12 of the Rules of this Court, as amended March 2, 1936, particularly disclosing the basis upon which it is contended that the Supreme Court of the United States has jurisdiction to review this cause on appeal from the final judgment entered herein by the Court of Civil Appeals for the Third Supreme Judicial District of Texas sustaining a rate order of the Railroad Commission of Texas, challenged as being repugnant to the Commerce Clause and to the Due Process Clause of

the Fourteenth Article of Amendment to the Constitution of the United States, as hereinafter more fully pointed out.[1]

I.

Statutory Provisions Sustaining Jurisdiction.

1. This Court has jurisdiction of this appeal under Section 237 of the Judicial Code, as amended (U. S. C. A., Title 28, Sec. 344a), which provides that,

> "(a) A final judgment or decree in any suit in the highest court of a State in which a decision in the suit could be had, * * * where is drawn in question the validity of a statute of any State, on the ground of its being repugnant to the Constitution, treaties, or laws of the United States, and the decision is in favor of its validity, may be reviewed by the Supreme Court upon a writ of error. * * *"

2. Pursuant to the Act of January 31, 1928 (45 Stat. 54; U. S. C. A., Title 28, Sec. 861a), as amended by the Act of April 26, 1928 (45 Stat. 466; U. S. C. A., Title 28, Sec. 861b), the present appeal is brought in lieu of a writ of error.

II.

Statute of the State the Validity of Which is Involved.

The statute of Texas, the validity of which is herein involved, consists of an order of the Railroad Commission of Texas, of a legislative nature,[2] prescribing the maximum rates to be charged and collected by appellant, operating an integrated system of trunk pipe lines in both Oklahoma and

---

[1] The Opinion of the State Court (copied as Appendix "A" hereto) expressly shows that these Federal questions were raised and were duly considered and decided by the Court.

[2] See *King Mfg. Co.* v. *Augusta*, 277 U. S. 100; *Sultan Ry. Co.* v. *Department of Labor*, 277 U. S. 135. The Texas courts hold that rate orders of the Commission "have the force and effect of statutes." *M. K. & T. R. Co.* v. *Commission*, 3 S. W. (2d) 489, 494.

Texas, for gas sold and delivered by it at wholesale at city gates to distributing companies in approximately 270 cities and towns in the State of Texas. This rate order is as follows:

> "The Railroad Commission having instituted a proceeding upon its own motion inquiring into the rates charged by the Lone Star Gas Company for domestic gas sold to distributing companies at the city gate station, hereby finds as a fact that the rate of $0.40 per thousand cubic feet, as now charged by Lone Star Gas Company is unfair, unjust and unreasonable.
>
> "Basing its order on the foregoing finding of fact and on such other findings and statement of facts as are set out in the opinion next preceding this order, or in this order
>
> "It is Ordered, Adjudged and Decreed that effective as of the next billing date the Lone Star Gas Company shall charge, bill and receive for domestic gas at the city gate from all distributing companies served by it, a rate not to exceed $0.32 per thousand cubic feet.
>
> "It is Further Ordered, Adjudged and Decreed that a rate not to exceed $0.32 per thousand cubic feet at the city gate is hereby fixed, approved and promulgated and found and declared to be fair, just and reasonable and shall remain in force and effect until the Commission shall have otherwise determined, pursuant to other proceedings in respect to the fixing of city gate rates for domestic gas on said Lone Star Gas Company's lines.
>
> "It is Further Ordered, Adjudged and Decreed that this proceeding shall be kept open for such further orders as may be proper.
>
> "The foregoing opinion and order are hereby approved and ordered filed as the opinion and order of the Railroad Commission of Texas.
>
> "Dated at Austin, Texas, this 13th day of September, A. D. 1933."

An applicable State statute subjects gas pipe lines to the "jurisdiction, control and regulation" of the Railroad

Commission (Art. 6050, Revised Civil Statutes of Texas, 1925). The Commission is authorized to fix reasonable prices and rates "for producing, transporting, selling and delivering gas by such pipe lines." (Art. 6053, Revised Civil Statutes of Texas, 1925.)[3]

The opinion of the Railroad Commission containing its findings of fact, and expressly made a part of the above order, appears in the record. Pertinent portions of the Commission's findings are summarized as follows:

(a) The Commission found that appellant is engaged "in the production, transportation and sale at wholesale of natural gas. It operates an integrated pipe line system of approximately 4,000 miles and is engaged in both interstate and intrastate commerce in the selling of gas to some 300 cities and towns within the States of Oklahoma and Texas. The Company's Texas properties and its Oklahoma properties constitute parts of an integrated operating system."

The Commission directed the reduced rate to be applied to all sales and deliveries to distributing companies at city gates in Texas, drawing no distinction between interstate and intrastate commerce.

(b) The Commission valued appellant's "integrated pipe line system", located in both States, as a whole, arriving at a value or rate base of $46,246,617.53.

(c) In determining the amount of appellant's annual revenues and expenses the Commission treated its properties and operations as an integrated whole.

(d) The Commission adopted the sinking fund method for determining what amount would be a reasonable annual accrual to the depreciation and amortization reserve. It

[3] In Texas a rate order of the Railroad Commission is a final legislative act; the courts do not participate in the rate making process.

fixed the amount of $968,066.98, or approximately two per cent of its rate base, as applied to the entire properties.

(e) It found that appellant was entitled to a minimum rate of return of six per cent per annum and that a uniform city gate rate of 32¢ per thousand cubic feet would yield a return of slightly more than six per cent on the value of all of appellant's public service properties as fixed by the Commission.

III.

Date of Judgment and Date of Presentation of Application for Appeal.

1. The judgment of the Court of Civil Appeals for the Third Supreme Judicial District of Texas, sought to be here reviewed, was entered on July 10, 1935. Appellant's Motion for Rehearing was filed within fifteen days, as authorized by Art. 1877, Revised Civil Statutes of Texas, 1925. The Motion was entertained and overruled on September 25, 1935. Thereupon, within the time limited by applicable statutes (Arts. 1728, 1729 and 1742, Revised Civil Statutes of Texas, 1925), appellant petitioned the Supreme Court of Texas to grant a writ of error and review the case. The Petition was refused by the Supreme Court on October 6, 1936.

Appellant thereupon, within fifteen days, as is authorized by Rule 4 of the Rules of the Supreme Court of Texas, filed its Motion for Rehearing of the Application for Writ of Error. This Motion for Rehearing was entertained by the Supreme Court of Texas and was overruled on December 30, 1936. Whereupon the judgment of the Court of Civil Appeals, here sought to be reviewed, became final under the State law.[4]

---

[4] When a Petition for Writ of Error is filed, the Petition and the original record are forwarded by the Clerk of the Court of Civil Appeals to the Clerk of the Supreme Court (*Art.* 1743, *Revised Civil Statutes of Texas,*

The Court of Civil Appeals has possession of the record and is the "highest court of the State in which a decision in the suit could be had." The following are examples of cases brought here from courts of civil appeals in Texas: *T. & N. O. R. Co.* v. *Sabine Tram Co.*, 227 U. S. 111; 113; *St. L., S. F. & T. R. Co.* v. *Seale*, 229 U. S. 156; *San Antonio & Aransas Pass R. Co.* v. *Wagner*, 241 U. S. 476; *Zucht* v. *King*, 260 U. S. 174.

2. The date on which this application for appeal is presented is February 12, 1937.

IV.

The Nature of the Case and of the Rulings of the State Court Bringing This Case Within the Jurisdiction of This Court.

Under this heading will also be shown *when* and *how* the Federal questions sought to be reviewed were raised; the method of raising them; and the way in which they were passed upon by the State Court, as required by *Amended Rule* 12.

Nature of the Case.

In this suit appellant challenges, on grounds arising under the Federal Constitution, the rate order of the Texas Railroad Commission, copied under heading II.

The litigation originated in a suit filed September 22, 1933, by appellant in the United States District Court for

---

1925). The record is retained in the Supreme Court for fifteen days after the Petition is refused, awaiting the filing of a Motion for Rehearing, and then until the Court has overruled any such motion that may be filed. It is then returned to the Court of Civil Appeals (Rule 4, Supreme Court). The mandate of that Court cannot be issued until the record has been returned and that Court has been properly advised of the action of the Supreme Court on the Petition (Rule 66, Court of Civil Appeals).

True copies of the court rules here referred to are appended as Appendix "C".

the Western District of Texas seeking to enjoin the enforcement of the rate order in question as being violative of the Federal Constitution in the respects hereinafter pointed out. The Commission, joined by the State of Texas and the Attorney General thereof, then filed this suit against the appellant in the State court in an effort to bring appellant within the jurisdiction of the State court, as provided in Section 266 of the Judicial Code (28 U. S. C. A., Sec. 380), alleging in their Second Amended Original Petition, upon which the trial was had, that they desired to have the constitutional questions raised by appellant in its attack on the rate order determined in the courts of the State. (Paragraph IX.)

In the State court suit appellees sought an injunction, upon final hearing, restraining appellant from violating the rate order and further asked that the enforcement of said order be stayed pending final judgment. The stay order was entered in the State court and subsequently the Federal Court, conforming to what it deemed proper procedure under Section 266, entered an order staying all proceedings in that Court and restraining the enforcement of the rate until final determination of this cause. (Order of Federal Court Staying Proceedings.)

Appellant, after unsuccessfully resisting this procedure and reserving its exceptions, answered in the State court setting up its defenses to and attack upon the rate order, grounded on the Federal Constitution, and the trial was there had.

The grounds of attack on the rate order are, first, that the transportation, sale and delivery at wholesale to local distributing companies, through high pressure lines, at city gates in Texas, of gas originating on appellant's lines in the State of Oklahoma, as well as of gas produced in Wheeler County, Texas, and brought into and across Oklahoma into Texas, constitutes interstate commerce and

that the attempted regulating and fixing of appellant's rates of charges for gas thus transported and delivered violates the Interstate Commerce Clause of the United States Constitution; and, second, that the rates are confiscatory and repugnant to the Due Process Clause of the Fourteenth Amendment to the United States Constitution.

The case was tried to a jury, the Court submitting to the jury the following special issue:

> "Do you find from the evidence in this case that, as applied to points in Texas, the order of the Railroad Commission of Texas bearing date of September 13, 1933, providing for a rate of not exceeding 32¢ per thousand cubic feet of gas sold to the distributing companies at the gates of points served, is unreasonable and unjust as to the defendant Lone Star Gas Company? Answer this question yes or no."

The jury answered: "Yes."

In submitting this issue the trial court instructed the jury that appellant was entitled to "a fair return at this time on the present fair value of its property that is used and useful in the public service after first deducting all necessary operating expenses and a fair and reasonable amount for depreciation of said property." The court further instructed the jury that "an unreasonable and unjust rate" was one "so low as to have not provided for a fair return upon the fair value of defendant's property used and useful in supplying the service furnished by said defendant."

The charge further defined the terms "fair value," "fair return," "used and useful," "operating expenses," "annual depreciation," "reproduction cost new," and "going value."

The jury's verdict, interpreted in the light of the charge, imports that the prescribed rate would not yield a fair

return on the fair value of appellant's public service properties and is therefore confiscatory.

On this verdict the trial court rendered judgment enjoining the prescribed rate.

On appeal, the Court of Civil Appeals, after stating and discussing at length appellant's attacks on the rate order, based on the Commerce and Due Process Clauses (Appendix "A", overruled same, reversed the judgment of the trial court and sustained the validity of the Commission's rate order in all respects. The Court's opinion was not based upon any non-federal ground.

Certain other questions arose initially in the Court of Civil Appeals in connection with that Court's disposition of the constitutional issue of confiscation tendered by the appellant, and its rulings in that connection are challeged by appellant as amounting to a violation of the Due Process Clause of the Fourteenth Amendment to the United States Constitution.

NATURE OF THE RULINGS OF THE STATE COURT BRINGING THIS CASE WITHIN THE JURISDICTION OF THIS COURT.

1. *Questions Arising and Rulings Made in Connection With Appellant's Defense Grounded on the Commerce Clause.*

Appellant owns and operates 4,000 miles of high pressure trunk pipe lines located in Oklahoma and Texas, through which it transports natural gas to the city gates of approximately 300 cities and towns in Oklahoma and Texas. At the city gates it sells and delivers the gas in wholesale quantities to distributing companies, most of which are affiliated with it. The distributing companies then sell and deliver the gas to domestic consumers through low pressure lines. The title passes to the distributing companies at the city gate measuring stations.

The sale of the gas at the city gates is governed by long term contracts between appellant and the distributing companies, and the contract price for domestic gas is uniformly 40¢ per thousand cubic feet, with negligible exceptions.

(a) *Gas Produced in Texas Panhandle and Transported Across Western Oklahoma to City Gates in Texas.*—Appellant's pipe line system crosses the State line between Oklahoma and Texas at eight points.[5] Three of these lines, designated as lines "H", "2H", and "G", transport gas from Oklahoma to Texas. Three lines transport gas from Texas to Oklahoma. Another line, designated as line "A", extends from the Shamrock gas field in Wheeler County, Texas, eastward into the State of Oklahoma and thence runs south approximately parallel to the west line of Oklahoma (supplying Hollis, Oklahoma), and again crosses the State line, entering Texas near Quanah. Thence it extends southeastward in Texas and furnishes the exclusive gas supply, without any commingling, for the Texas cities of Wichita Falls, Iowa Park, Electra, Harrold, Oklaunion, Vernon, Tolbert and Chillicothe. A branch of this line extends from Oklaunion, Texas, back into the State of Oklahoma and furnishes the exclusive gas supply of Davidson, Manitou, Frederick, Tipton, Snyder, and Mountain Park, in Oklahoma.[6]

The gas moves to the city gates through line "A" without any interruption. The quantity transported through this line across western Oklahoma is definitely known and was found by the Court of Civil Appeals to be seventeen

---

[5] A map of appellant's pipe line system is attached hereto and designated as Appendix "D".

[6] The Court of Civil Appeals states in its opinion that this Wheeler County gas furnishes the gas supply for only one Oklahoma town, Hollis. The finding is erroneous because it ignores the towns on the branch line extending from Texas into Oklahoma (see Map, Appendix "D").

per cent of the total annual sales of gas made by appellant at Texas cities and towns.

After passing Wichita Falls this line is tapped at Petrolia, Texas, by trunk lines "H" and "2H" transporting gas produced or purchased in Oklahoma. Further south and east the line is tapped by other lines lying wholly in Texas and transporting intrastate gas. The commingled gas is then transported and delivered to other Texas cities and towns. The amount of gas originating in line "A" and becoming thus commingled is definitely known.

(b) *Gas Originating in Oklahoma and Transported to Texas.*—In addition to the Wheeler County gas transported through Oklahoma, appellant produces or purchases gas in Oklahoma gas fields and transports same in a southeasterly direction through its 16" high pressure trunk line "G", entering the State of Texas at a point north of Gainesville. Other Oklahoma gas produced or purchased by appellant is transported in its high pressure 16" trunk lines "H" and "2H", entering Texas near Petrolia. The Oklahoma gas transported to Texas in these three lines is sold and delivered to local distributing companies at city gates in Texas.[7]

This gas is run through gasoline plants, part of it at Petrolia and part of it at Gainesville. The forward movement of the gas is not interrupted or arrested when it passes through the plants. The gas enters the bottom of large cylindrical tanks and comes in contact with a mineral oil having a high attraction for hydrocarbons and, by this contact, the hydrocarbons are absorbed and the gas passes out of the absorbers directly into the lines with no interruption in movement.[8]

---

[7] The part of the gas brought to Texas in line "G" is carried back to Oklahoma on a branch line extending north from Gainesville and serving the cities of Durant, Caddo and Achille, in Oklahoma.

[8] No part of the Wheeler County gas, transported across western Oklahoma through line "A", is run through gasoline plants in Texas.

The gas transported into Texas through lines "H" and "2H" is compressed at Petrolia and the gas transported into Texas through line "G" is compressed at Gainesville. The compression is merely for the purpose of boosting the pressure and increasing the forward movement of the gas through the trunk lines to the city gates.

As written and as interpreted and enforced in this suit, and otherwise, by the Commission and by the Court of Civil Appeals, the rate order applies to all sales of gas by appellant at city gates in Texas.

(c) *The Interstate Commerce Defense Was Expressly Pleaded.*—Appellant duly pleaded in the court of first instance, and throughout the progress of the case has contended, that it was engaged in interstate commerce in transporting, selling and delivering gas at wholesale to local distributing companies in Texas and that the rate order was void because amounting to a direct regulation of interstate commerce, in violation of the Commerce Clause of the National Constitution; and, further, that said order, being indivisible, was void in its entirety.

Appellant averred that the Commission in its findings and order had considered and valued its entire properties as an integrated whole, making no effort to distinguish as between interstate and intrastate properties or business of appellant (Sec. E, subsec. 3); and that the rate order was unconstitutional and void because the Commission was undertaking to fix its rates "in relation to all of its business including its interstate business" and that a substantial portion of the natural gas sold and delivered by it to distributing companies was gas transported "by defendant in interstate commerce, national in its character," and that the rate order of the Commission

> "unlawfully denies to defendant the free right to sell from its transportation system its natural gas so continuously transported in interstate commerce and un-

lawfully deprives defendant of the rights guaranteed to it by Article 1, Section 8, Clause 3 of the Constitution of the United States, and imposes upon defendant an unreasonable regulation, and places an undue and direct burden upon, and constitutes a direct interference with interstate commerce." (Sec. E, subsecs. 10(b), 10(c).)

Appellant further asserted that said order was void in its entirety, alleging in this connection:

"The said opinion and order were entered and promulgated by the Railroad Commission of Texas and the members thereof, with the intent and purpose of fixing the city gate price which defendant could charge all distributing companies for all domestic gas transported and sold by defendant, whether in interstate or intrastate commerce. That said order in respect of defendant's interstate business is void, as being violative of the Commerce Clause of the Constitution of the United States; and that said order being void in part and indivisible, is therefore void in its entirety, and is not capable of being enforced against the defendant in respect of its intrastate business only." (Sec. E, subsec. 10(j).)

The trial court rendered judgment in favor of appellant on a jury finding that the rate was "unreasonable and unjust."[9]

The present appellees then prosecuted their appeal to the Court of Civil Appeals. Appellant (being then appellee) submitted its counter-proposition in its brief, in conformity to the State practice, asserting that the rate order was void because amounting to a regulation of interstate commerce (Counter-Prop. No. 15); and also its cross-assignment of error asking that the judgment of the trial court, enjoin-

[9] As hereinbefore pointed out, this finding, interpreted in the light of the Court's charge, was in effect a finding that the rate was confiscatory, pp. 8-9, *supra*.

ing the rate order, be affirmed because that court erred in denying appellant's request to instruct a verdict in its favor upon the ground that the rate order was void in its entirety, being violative of the Commerce Clause (Cross-Assignment No. 2).

The Court of Civil Appeals affirmatively found that appellant's defenses based on the Commerce Clause were duly raised. We quote from its opinion:

> "Appellee alleged that the rate order was violative of the commerce, the due process, the equal protection, and the freedom of contract clauses of the Federal Constitution (article 1, sec. 8, cl. 3; Amend. 14); and was confiscatory and unreasonable and unjust because it would not afford a reasonable return on the fair value of its property used in the public service." (Appendix "A", p. 40).

The Court further said:

> "1. Three constitutional objections are urged against the 32¢ rate order as follows:
> "(a) Interference with interstate commerce.
> "(b) Interference with the right to contract.
> "(c) Confiscation of property." (Appendix "A", p. 41.)

(d) *Rulings of the State Court on Appellant's Interstate Commerce Defense.*—The Court of Civil Appeals upheld the rate order as against appellant's attack thereon, duly pleaded and based on the Commerce Clause of the Federal Constitution. Error was duly assigned as to this ruling of the Court in appellant's Motion for Rehearing (Assignments Nos. 125 and 126; see also 104, 107, 108, 110, 113 and 119). The Motion being overruled, the ruling was then complained of in the Petition for Writ of Error filed in the Supreme Court of Texas. (Petition, Assignments Nos. 58 and 59; see also, 1, 2, 3, 4, and 6). The Petition being refused, the same ruling was complained of in the motion for

Rehearing filed in the Supreme Court of Texas (Motion, Assignment No. 58; also 1, 2, 3, 4, 5, 6, 7, 8, and 10).

In overruling appellant's attack on the rate order grounded on the Commerce Clause of the Federal Constitution, the Court of Civil Appeals made the following other rulings, which were duly complained of as is now shown:

(1) That the transportation of gas by appellant from Wheeler County, Texas, across the State of Oklahoma to city gates in Texas "is not interstate commerce as a matter of fact." (Appendix "A", pp. 52-54). Appellant in its Motion for Rehearing specifically assailed as erroneous the ruling of the Court of Civil Appeals that the transportation of gas from Wheeler County, Texas, through Oklahoma into Texas "is not interstate commerce as a matter of fact." (Motion, Assignment 104); the same point was raised in other grounds of the Motion (Assignments 119, 108, 125, 126; in Assignments 125 and 126 the Commerce Clause was expressly referred to.) The Motion for Rehearing being overruled, the same question was raised in the Petition for Writ of Error filed in the Supreme Court of Texas (Petition, Assignments 1, 2, 3, 4, 58, 59). The Petition being denied, the question was again raised in the Motion for Rehearing filed in that Court (Motion, Assignments 1, 2, 58).

(2) That the gas "produced or purchased by appellee (now appellant) in Oklahoma and transported by its pipe line to Texas does not move in interstate commerce when it reaches the city gates of delivery." (Appendix "A", p. 55. Appellant in its Motion for Rehearing specifically assigned error complaining of this ruling that "the gas produced or purchased by appellant in Oklahoma and transported by its pipe lines to Texas does not move in interstate commerce when it reaches the city gates in Texas for

delivery." (Motion, Assignment 113). The same question was raised in other grounds of the Motion, (Motion, Assignments 114, 115, 125, 126; the Commerce Clause being expressly invoked in 125 and 126). The same question was raised in the Petition for Writ of Error filed in the Supreme Court of Texas (Petition, Assignments 6, 7, 8, 58, 59); and in the Motion for Rehearing filed in that Court (Motion, Assignments 7, 8, 9, 10, 58).

(3) The State Court further held that the State of Texas might validly fix reasonable rates to be charged upon the sale and delivery of this gas at the city gates in Texas, even if it should be regarded as interstate gas; and that the fixing of such rates did not amount to a direct burden upon, or regulation of, interstate commerce. (Appendix "A", pp. 53-55, and 59-60.) This ruling was duly complained of in the Motion for Rehearing as involving a Federal question (Motion, Assignments Nos. 120, 121, 122, 125 and 126). The Motion being overruled, the same question was raised in the Petition for Writ of Error filed in the Supreme Court (Petition, Assignments Nos. 58, 59; also 4); and in the Motion for Rehearing filed in that Court (Motion, Assignments Nos. 5, 4, 10 and 58).

2. *Ruling Involving a Denial of Adequate Judicial Review of the Rate Order.*

The Court of Civil Appeals held, in effect, that, in a judicial review of the rate order in question, it was the duty of the reviewing court to sustain the rate order if any substantial evidence was offered at the trial in support of the order; the court thus, in effect, holding that the reviewing court was without power to weigh the evidence and settle the conflicts in the evidence and pass its independent judgment on the facts as well as the law relating to and underlying the issue of confiscation. (Appendix "A", pp.

65-66, 71-72, 77-79.) This ruling of the court was duly challenged as involving a denial to the appellant of the right to that adequate judicial review of the rate order that is secured to it by the Due Process Clause of the Fourteenth Amendment to the Federal Constitution; and further upon the ground that, with adequate judicial review thus denied, the order became void and its enforcement against appellant will deprive it of its property without due process of law in violation of the Fourteenth Amendment to the Federal Constitution (Motion for Rehearing, Assignments Nos. 1, 2, 3, 5, 6, 8 and 12; Petition for Writ of Error filed in the Supreme Court of Texas, Assignments Nos. 14, 43, 44, 45 and 60; Motion for Rehearing of said Petition for Writ of Error, Assignments Nos. 17, 18, 19, 50, 51).

3. *Questions Arising and Rulings Made in Connection With the Issue of Confiscation.*

(a) *Rulings Relating to Appellant's Alleged Failure to Make a Proper Segregation of its Properties and Operations as Between Interstate and Intrastate Commerce.*— In valuing appellant's properties located in Oklahoma and Texas and in considering and determining its proper operating revenues and expenses and proper annual reserve accrual for depreciation and amortization the Commission dealt with appellant's properties and operations as an "integrated system" and made no segregation as between interstate and intrastate commerce. Similarly, the Commission ordered the reduced rate to be applied to all deliveries by appellant in Texas, making no segregation as between interstate and intrastate commerce. The Commission's findings have already been summarized, pages 4-5, *supra*.

In the court of first instance, appellant pleaded, and throughout the progress of the case has contended, that the enforcement of the rate order would deny to it a fair re-

turn on the fair value of its public service properties and deprive it of its said properties without due process of law, in violation of Section I of the Fourteenth Amendment to the United States Constitution, and that accordingly said rate order was unconstitutional and void. (Second Amended Answer, Sec. E, subsecs. 10, 12.)

After setting out its specific grounds of attack on the rate order, appellant in its Answer averred that "for each and every one of the reasons aforesaid, the rate or price that the said order of the Railroad Commission of Texas requires it to charge the various distributing companies * * * is confiscatory of its property used and useful in the public service * * * and the enforcement of said order necessarily will deprive defendant of its property devoted to public service and used and useful therein without due process of law * * *, all in violation of its rights under the Constitution of the United States and especially in violation and contravention of the Fourteenth Amendment." (Sec. E, subsec. 12.)

The State court, after stating that appellant had assailed the order as confiscatory, thus interpreted its pleadings:

> "The rate was alleged to be so because it would not afford a reasonable return on the fair value of the property used in the public service of delivering gas to the various city gates, and amounted to taking the property without just compensation or due process of law, in violation of the Fourteenth Amendment to the Federal Constitution." (State Court's Opinion, Appendix "A", p. 61.)

In showing that the rate was confiscatory appellant alleged specifically:

(1) That the present fair value of its entire properties to which the Commission had assigned an over-all value of $46,246,617.53, was more than $70,000,000.00, or approxi-

mately $23,000,000.00 in excess of the value found by the Commission. (Second Amended Answer, Sec. E, subsecs. 6, 8.)

(2) That a sum of not less than $3,400,000.00 was a "fair minimum annual allowance for a depreciation, depletion and amortization reserve charge" as against the allowance of only $983,698.43 in the Commission's findings. (Sec. E, subsecs. 6(f), 8.)

(3) That the appellant was not earning a fair return on the fair value of its property above set out, after making a proper allowance for depreciation, depletion and amortization, under the prevailing 40¢ rate and that at the reduced rate of 32¢ its property would be further confiscated, in violation of its rights under the Fourteenth Amendment to the United States Constitution. (Sec. E, subsec. 8.)

(4) That said order was confiscatory under the Commission's own findings; here the Answer sets forth the details. (Sec. E, subsec. 6.)

(5) That the Commission in its findings had refused to include in the rate base certain described items of property used and useful by the appellant in its public service business and had excluded certain operating expenses actually and normally incurred by the appellant in the conduct of its business, with the effect of depriving it of its property without due process of law, in violation of the Fourteenth Amendment to the Federal Constitution. (Sec. E, subsec. 10(h).)

(6) That the Commission had failed to include in its rate base, as shown by its order and opinion, any amount of "going value." (Sec. E, subsec. 6(d).)

(7) That a six per cent rate of return is confiscatory.

Appellant introduced evidence directly responsive to and assailing the Commission's findings as these findings were

made. This evidence fully supported the allegations of its pleadings just above set out as to the (a) fair value of its properties; (b) proper annual depreciation reserve accrual; (c) proper operating expenses; (d) proper rate of return; and (e) the confiscatory operation of the rate order.[10] This evidence clearly negatived the correctness of the Commission's findings and, if accepted as true, established that the reduced rate was confiscatory.

Appellees offered no rebuttal evidence applicable to the over-all properties and operations covered by the Commission's findings and by appellant's evidence just referred to. The issue here was drawn simply between the Commission's findings and the appellant's evidence relating to the properties and operations in both Oklahoma and Texas considered as a unit.

Having introduced the evidence just referred to, assailing the Commission's findings as these findings were made, appellant then introduced evidence segregating its properties and operations between interstate and intrastate commerce, basing the segregation on the way in which the properties were used and its business conducted. From this evidence, showing the fair value of the segregated properties and operating revenues and expenses applicable thereto and adopting the Commission's allowance for reserve accruals, it appeared that the prescribed rate was confiscatory, yielding an annual return of only 3.78 per cent on the present fair value, and 4.65 per cent on the actual cost, of the segregated properties employed in intrastate commerce.

Appellees offered no evidence in rebuttal of appellant's evidence last referred to as applied to the properties and

---

[10] This evidence showed an over-all fair value of properties amounting to $69,738,021.16 against the Commission's rate base of $46,246,617.53, and an annual depreciation reserve accrual of $3,465,123.36 against the Commission's estimate amounting to $983,698.43.

operations identified by appellant's segregation. Instead, appellees attempted to sustain the rate order by showing an entirely different segregation of appellant's properties and operations—a segregation based on geographical location of properties. They assigned the properties located in Texas to Texas and the properties located in Oklahoma to Oklahoma, with unimportant exceptions. (Appendix "A", p. 69-70.)

On appeal the Court of Civil Appeals held that appellant's evidence relating to its over-all properties and operations "proved nothing material to this case" and that said evidence was of no legal value and was insufficient as a matter of law "to establish the invalidity of the rate as being confiscatory (Appendix "A", p. 70-71) because said evidence was not based on a proper segregation of appellant's properties and operations as between interstate and intrastate commerce.[11]

Such being the view of the court, it made no findings settling the conflict between appellant's evidence, relating to its properties and operations considered as a whole, and the Commission's findings relating to the same properties and operations.

The court further held that appellant's evidence tendered on the issue of confiscation, and showing a segregation of its properties and operations as between interstate and intrastate commerce, was immaterial to any issue involved in the case because, in the view of the court, the segregation was erroneous in that it was based upon the assumption that the Wheeler County gas was interstate gas as well as on the assumption that the Oklahoma gas transported to Texas was interstate gas, whereas, under the court's dis-

[11] The Court here, in effect, condemned the Commission's findings made in support of the rate order as being insufficient to support the order because these findings were not based on any segregation, and the prescribed rate applied to all sales of gas in Texas whether made in interstate or in intrastate commerce.

position of the interstate commerce issue, all of this gas was intrastate gas. (Appendix "A", pp. 70-71.)

The court further approved the segregation of appellant's properties and operations under the geographical standard sponsored by appellees, assigning the Texas properties to Texas and the Oklahoma properties to Oklahoma. It approved the rate base of $40,256,862.39 applicable to the Texas properties thus segregated, same being approximately $5,000,000.00 lower than the rate base of the Commission. (Appendix "A", p. 69-70.)

In its Motion for Rehearing appellant assigned error as to the ruling of the Court of Civil Appeals that its evidence, introduced to show confiscation of its properties, "proved nothing material to this case" and that it had failed to furnish the "quantum and character of proof necessary to establish the rate as being confiscatory"; and also assigned error as to the ruling of said court that its segregation of its properties and operations as between interstate and intrastate commerce was erroneous and that the evidence it introduced on the issue of confiscation, based upon such segregation, "proved nothing material to this case" and did not constitute the "quantum and character of proof necessary to establish the invalidity of the rate as being confiscatory" (Motion, Assignments Nos. 89, 80, 81, 83, 85, 86, 87, 47, 156). The same rulings were complained of in the Petition for Writ of Error filed in the Supreme Court of Texas (Petition, Assignments Nos. 32, 33, 34, 15, 16); and in the Motion for Rehearing filed in the Supreme Court of Texas (Motion, Assignments Nos. 21, 28, 29, 30, 31).

Appellant further assigned error as to the holding of the court approving the rate base of $40,256,862.39 and the geographical segregation of appellant's properties and operations sponsored by appellees' witnesses (Motion, Assignments Nos. 31 and 67). The same ruling was com-

plained of in the Petition for Writ of Error filed in the Supreme Court of Texas (Petition, Assignments Nos. 11 and 20); and in the Motion for Rehearing filed in the Supreme Court of Texas (Motion, Assignments Nos. 13, 25).

(b) *Additional Rulings on Confiscation Issue.*[12]—In upholding the rate fixed by the Commission as against appellant's charge of confiscation under the Due Process Clause of Section I of the Fourteenth Amendment to the Constitution of the United States the Court of Civil Appeals

(1) Adopted the results obtained by appellees' witnesses on the trial based, in the main, upon the geographical segregation of appellant's property and business as between Texas and Oklahoma, and adopted the determination of property value, operating expenses and revenues made by such witnesses, thereby approving:

a. The elimination from the rate base of the value of appellant's production system property consisting of natural gas reserves, both producing and non-producing, gas wells, gas well equipment, drilling tools and equipment used and useful in the public service in Texas, all of such property costing approximately $5,200,000.00; which ruling was complained of in the Motion for Rehearing (Motion, Assignments Nos. 39, 66 and 158); and in the Petition for Writ of Error filed in the Supreme Court of Texas (Petition, Assignments Nos. 10, 18); and in the Motion for Rehearing filed in the Supreme Court of Texas (Motion, Assignments Nos. 12, 15, 20).

---

[12] These rulings were complained of at the earliest opportunity by appellant in its Motion for Rehearing in the Court of Civil Appeals, and its assignments of error based thereon, and on the judgment of the Court sustaining the rate, were perpetuated in its Petition for Writ of Error in the Supreme Court of Texas and in its Motion for Rehearing in that Court, as hereinafter shown in each instance.

b. The elimination of all expense actually incurred in good faith in the operation of such property amounting to the sum of $232,759.70 for 1933 and $222,752.66 for the twelve months period ended March 31, 1934; which ruling was complained of in the Motion for Rehearing (Assignments Nos. 59, 159); and in the Petition for Writ of Error filed in the Supreme Court of Texas (Assignments Nos. 18, 19); and in the Motion for Rehearing filed in the Supreme Court (Assignments Nos. 14, 15).

c. The failure to make any allowance for depreciation, depletion and amortization of such properties, although appellees' own testimony showed that $94,000.00 per annum would be required; which ruling was complained of in the Motion for Rehearing (Motion, Assignments Nos. 154, 162, and 41); and in the Petition for Writ of Error filed in the Supreme Court of Texas (Petition, Assignments Nos. 36, 10 and 19); and in the Motion for Rehearing filed in the Supreme Court (Motion, Assignments Nos. 12 and 38).

d. An addition to operating expenses, in lieu of items a, b and c above, of $212,031.46 for the year 1933 and $232,644.75 for the twelve months ended March 31, 1934, such sums being arrived at by applying the average well head price paid by appellant to independent producers to the volume of gas produced by appellant from its own Texas gas reserves during said periods. The sum arrived at by the use of this arbitrary formula was insufficient by approximately $426,000.00 to provide for actual operating expenses, depreciation, depletion and amortization (the latter three items as estimated by appellees' witnesses) and a six per cent return (which the Commission held was the minimum to which appellant was entitled) on the actual cost of such property; which ruling was complained of in the Motion for Rehearing (Motion, Assignments Nos. 41, 42); and in the Petition for Writ of Error filed in the Supreme Court

of Texas (Petition, Assignments Nos. 10, 19); and in the Motion for Rehearing in the Supreme Court (Motion, Assignments Nos. 12, 14).

e. The elimination from the rate base of appellant's property located in Oklahoma actually and necessarily used and useful in transporting to Texas for sale and delivery therein, gas purchased and produced in Oklahoma, being more than fifty per cent of all of appellant's property in Oklahoma actually costing in excess of $6,000,000.00; which ruling was complained of in the Motion for Rehearing (Motion, Assignments Nos. 37, 67); and in the Petition for Writ of Error filed in the Supreme Court (Petition, Assignment No. 20); and in the Motion for Rehearing filed in the Supreme Court (Motion, Assignment No. 25).

f. The elimination of all expenses actually and in good faith incurred in the operating of such properties and the failure to make any allowance whatever for depreciation, depletion and amortization on such properties; which ruling was complained of in the Motion for Rehearing (Motion, Assignments Nos. 51, 154, 162); and in the Petition for Writ of Error filed in the Supreme Court of Texas (Petition, Assignment No. 36); and in the Motion for Rehearing in the Supreme Court of Texas (Motion, Assignment No. 38).[13]

g. The arbitrary addition to appellant's actual revenues of $441,240.12 for the year 1933 and $268,829.65 for the twelve months ended March 31, 1934, to compensate for assumed deficiencies in actual gas sales due to alleged abnormally warm weather; which ruling was complained of in the Motion for Rehearing (Motion, Assignments Nos. 40, 163);

---

[13] In lieu of e and f above, the Court approved an addition to operating expenses for the year 1933 of $29,617.92 (a so-called Texas-Oklahoma gas sales adjustment), which sum was insufficient to cover actual operating expenses on such property much less provide for depreciation, depletion, amortization and a fair return.

and in the Petition for Writ of Error filed in the Supreme Court of Texas (Petition, Assignment No. 61); and in the Motion for Rehearing in the Supreme Court of Texas (Motion, Assignment No. 60).

The reduced rate would have permitted appellant to earn not more than five per cent on the fair value of its Texas public service properties, as determined by appellees' witnesses upon the trial, if appellant's production system property be included in said evaluation and if actual operating expenses thereon and revenues therefrom be allowed, and if effect be given to appellees' estimate for annual reserve accruals for depreciation, depletion and amortization, and thus was shown to be confiscatory by appellees' own evidence.

(h) An annual reserve accrual for depreciation, depletion and amortization of $831,946.08, insufficient for future requirements without making use of an assumed credit balance in the reserve account of $5,000,000 at the date of the inquiry; which ruling was complained of in the Motion for Rehearing (Motion, Assignment No. 52); and in the Petition for Writ of Error filed in the Supreme Court of Texas (Petition, Assignment No. 35); and in the Motion for Rehearing filed in the Supreme Court of Texas (Motion, Assignment No. 37).

(2) Approved an allowance of $831,946.08, sponsored by appellees' expert witnesses, same being applicable only to appellant's Texas properties, and being approximately $150,000 less than the Commission's allowance of $983,698.43 applicable to appellant's Texas and Oklahoma properties as a whole.[14] Appellant's evidence showed that an allowance

[14] In its Opinion the Court refers to this as being the Commission's estimate. (Appendix "A", p. 72. The statement is erroneous. This estimate was made, not by the Commission, but by certain witnesses testifying for the Commission at the trial. The Commission made no findings as to what the depreciation allowance should be as applied to appellant's

of $3,465,123.36 was necessary. The Court's rulings in respect to an annual allowance for depreciation, depletion and amortization were duly challenged in appellant's Motion for Rehearing (Motion, Assignments Nos. 49, 50, 52, 53, 162); and in the Petition for Writ of Error filed in the Supreme Court of Texas (Petition, Assignments Nos. 25, 26, 35, 36); and in the Motion for Rehearing filed in the Supreme Court of Texas (Motion, Assignments Nos. 37, 38, 39, 40).

(3) Approved the elimination from the rate base of an allowance to cover going concern value. This ruling was duly challenged in appellant's Motion for Rehearing as involving a denial of due process of law in violation of the Fourteenth Amendment (Motion, Assignments Nos. 60, 61); and in the Petition for Writ of Error filed in the Supreme Court of Texas (Petition, Assignments Nos. 30, 31); and in the Motion for Rehearing filed in the Supreme Court of Texas (Motion, Assignments Nos. 41, 42).

(4) Approved a six per cent return as nonconfiscatory. Appellant introduced evidence showing clearly and conclusively that a much higher rate of return was reasonable and actually required, considering the hazards of the natural gas business. This ruling of the Court was duly challenged in the Motion for Rehearing (Motion, Assignments Nos. 62, 63, 64, 160); and in the Petition for Writ of Error filed in the Supreme Court of Texas (Petition, Assignments Nos. 27, 28, 29); and in the Motion for Rehearing filed in the Supreme Court of Texas (Motion, Assignments Nos. 43, 44, 45).

---

properties located in Texas. None of the Commission's findings related simply to the Texas properties; all of its findings related to the entire properties. In other connections the Court in its opinion refers to the Commission when, under the record, the reference is applicable only to expert witnesses testifying for the Commission.

V.

The Federal Questions Relied on as Sustaining This Court's Jurisdiction are Substantial.

1. *Questions Arising Under the Commerce Clause.*

(a) The gas produced in Wheeler County, Texas, and transported in a high pressure line into and through Oklahoma back into Texas for sale and delivery at wholesale at city gates in Texas is interstate gas; its transportation, sale and delivery constitute interstate commerce in fact, and, therefore, in law. The interstate character of the transportation and sale of this gas is not affected by the fact that the point of origin and point of terminus lie in the same State. The opinion of the State Court is in direct conflict with the opinion of this Court in *Hanley* v. *K. C. S. R. Co.*, 187 U. S. 617; and also *Western Union Telegraph Co.* v. *Speight*, 254 U. S. 17; *Missouri Pacific R. Co.* v. *Stroud*, 267 U. S. 404; *State Tax Commission* v. *Interstate Natural Gas Co.*, 284 U. S. 41.

Lehigh Valley Ry. Co. v. *Pennsylvania*, 145 U. S. 192, on which appellees rely, is distinguishable for the reasons pointed out in *Hanley* v. *K. C. S. R. Co.*, 187 U. S. 617, 621.[15]

It is immaterial to inquire whether it was necessary for appellant to construct this line through Oklahoma or to consider its reasons for doing so. *Western Union Telegraph Co.* v. *Speight*, 254 U. S. 17; *Missouri Pacific R. Co.* v. *Stroud*, 267 U. S. 404.

(b) The interstate transportation of this gas in high pressure lines does not end until the gas is delivered by appellant at the city gates into the low pressure local lines

---

[15] All the later decisions have carefully confined *Lehigh Valley Ry. Co. v. Pa., supra*, to cases involving questions of *taxation*, as distinguished from questions of *regulation*. *Yohn* v. *United States* (2 C. C. A.), 280 Fed. 511; *Willoughby on the Constitution*, Vol. 2, p. 1002; *Gavit, The Commerce Clause*, p. 109.

of the distributing companies purchasing same. *Missouri* v. *Kansas Natural Gas Co.*, 265 U. S. 298; *State Corporation Commission* v. *Wichita Gas Co.*, 290 U. S. 561, 563, 564; *Public Utilities Comm.* v. *Landon*, 249 U. S. 236; *East Ohio Gas Co.* v. *Tax Comm. of Ohio*, 283 U. S. 465.

(c) The State is without power to fix the price that appellant may collect for this gas when delivered at the city gates to distributing companies. The prescribed rate is a direct regulation of interstate commerce. *Missouri* v. *Kansas Natural Gas Co.*, 265 U. S. 298; *State Corporation Comm.* v. *Wichita Gas Co.*, 290 U. S. 561, 563, 564.[16] That the price may be reasonable is immaterial. The question is one of *power*, not of *reasonableness*. *Minnesota Rate Cases*, 230 U. S. 352, 401; *Smith* v. *Illinois Tel. Co.*, 282 U. S. 133, 148. It is enough that the regulation imposed is a direct one. *Cudahy Packing Co.* v. *Hinkle*, 278 U. S. 460, 466; *Alpha Portland Cement Co.* v. *Mass.*, 268 U. S. 203.

The State court erroneously assumed that the fixing of the city gate rate is merely a local police regulation and valid, unless it discriminates against interstate commerce. (Appendix "A", pp. 54-55.) The fixing of the city gate rate is the fixing of the compensation that the utility may exact for the use of interstate facilities. It is a regulation of a matter of national and not merely of local concern. *East Ohio Gas Co.* v. *Tax Comm.*, 283 U. S. 465, 470, 472; *Missouri* v. *Kansas Natural Gas Co.*, 265 U. S. 298, 309.

(d) The failure of Congress to act is immaterial because the rate operates as a direct regulation of interstate commerce. *Missouri* v. *Kansas Natural Gas Co.*, 265 U. S. 298; *State Corporation Comm.* v. *Wichita Gas Co.*, 290 U. S. 561; *Public Utilities Comm.* v. *Landon*, 249 U. S. 236; *Public Utilities Comm.* v. *Attleboro Co.*, 273 U. S. 83, 90.

---

[16] The rate order here involved is unlike that involved in *State Corporation Comm.* v. *Wichita Gas Co., supra*, because it fixes the rate and prohibits the pipe line company from charging or collecting any higher rate.

For this reason, the Federal statute, providing that the Interstate Commerce Act shall not apply to gas pipe lines, has no application. That was directly held in *Missouri* v. *Kansas Natural Gas Co.*, 265 U. S. 298.[17]

(e) Corporate affiliation between appellant and the distributing companies (excepting two) does not change the interstate character of the transportation to which the rate directly applies. Transporting the gas to the city gates is interstate commerce in fact without regard to ownership of the facilities used in transporting it. The fixing of the city gate wholesale rate fixes the amount of compensation that the public utility may collect for the use of its property in rendering a public service in interstate commerce. This is none the less true even though the pipe line company and the distributing company may be affiliated. *State Corporation Comm.* v. *Wichita Gas Co.*, 290 U. S. 561, 563, 564 (where the companies were affiliated); *East Ohio Gas Co.* v. *Tax Comm.*, 283 U. S. 465, 470 (where one company owned the trunk line and the distributing facilities).

Western Distributing Company v. *Public Service Comm.*, 285 U. S. 119, 124, is distinguishable because it did not involve any effort to directly fix the city gate rate; it involved only the burner tip rate. The rate order here applies directly against the interstate pipe line and prohibits it from charging any other rate. Its application does not even depend upon corporate affiliation.

Pennsylvania Gas Co. v. *Public Service Commission*, 252 U. S. 23, is not in point because there was involved only the burner tip rate. The business regulated was local and not national in character; that was the ground upon which the

---

[17] In that case the State Court held, as did the State Court here, that since Congress had not acted the State had the power to regulate "the sale of natural gas in this State by the Kansas Natural Gas Company." *State* v. *Kansas Natural Gas Co.*, 111 Kansas 809. The decision was reversed in this Court, 265 U. S. 298.

decision was based, as was explained in *Missouri* v. *Kansas Natural Gas Co.*, 265 U. S. 298, 309, and in *Public Utilities Comm.* v. *Attleboro Co.*, 273 U. S. 83, 89. As to that case, see also *East Ohio Gas Co.* v. *Tax Comm.*, 283 U. S. 465, 472.

(f) The commingling of a part of this Wheeler County gas, transported across Oklahoma, with intrastate gas after it arrives in Texas is immaterial since the total quantity transported across Oklahoma into Texas is definitely known—being seventeen per cent of the total amount sold in Texas, as found by the State court. *Peoples Natural Gas Co.* v. *Public Service Comm.*, 270 U. S. 550, 554, 555; *United Fuel Gas Co.* v. *Hallanan*, 257 U. S. 277, 281; *Board of Trade* v. *Olsen*, 262 U. S. 1, 33, 34.

No commingling of this Wheeler County gas takes place until after it has passed Wichita Falls, Texas, going south. It furnishes the exclusive source of supply, uncommingled, for Wichita Falls and the Texas cities and towns lying to the north and west, as well as for Hollis, Oklahoma, and other Oklahoma cities and towns located on the branch line extending north into Oklahoma from Oklaunion, Texas. The rate order is indivisible and applies as well to the uncommingled deliveries made at Wichita Falls and the other Texas cities just mentioned as it does to commingled deliveries made after the gas passes Wichita Falls.

(g) That the amount of this gas (17% of the total amount sold in Texas) may be less than the amount transported by appellant in intrastate commerce is not material for the amount is known and the prescribed rate falls on all gas sold in Texas including this gas. *Peoples Natural Gas Co.* v. *Public Service Comm.*, 270 U. S. 550, 554, 555; *Public Utilities Comm.* v. *Attleboro*, 273 U. S. 83.

Since the rate places a direct burden upon interstate commerce "it is none the less beyond the power of the State

bcause this may be a smaller part of the general business." *Public Utilities Comm.* v. *Attleboro Co.*, 273 U. S. 83, 90. If quantity is controlling, then seventeen per cent is enough; only three per cent was involved in *Public Utilities Comm.* v. *Attleboro Co., supra.*

(h) As written and as interpreted and applied by the Commission and as upheld and enforced by the Court of Civil Appeals, the rate order applies to all city gate sales in Texas whether made in interstate or intrastate commerce. The rate order is an indivisible legislative act. "The order is in terms single and indivisible." *Illinois Central R. R. Co.* v. *McKendree*, 203 U. S. 514, 529. The result is that the order may not be limited to intrastate transactions; to do this would remake it. *Butts* v. *Merchants, etc., Transportation Co.*, 230 U. S. 126, 135; *Employers' Liability Cases*, 207 U. S. 463, 502; *Baldwin* v. *Franks*, 120 U. S. 686, 688; *The Trade Mark Cases*, 100 U. S. 82, 99.

(i) What has been said thus far under this heading has related to the Wheeler County gas. It is now submitted that the gas produced or purchased in Oklahoma and transported to Texas is interstate gas. *Missouri* v. *Kansas Natural Gas Co.*, 265 U. S. 298; *State Corporation Comm.* v. *Wichita Gas Co.*, 290 U. S. 561, 563. None of the grounds relied upon by the State court in support of the rate order, as applied to this case, are tenable.

Running this gas through gasoline extraction plants in Texas does not change its character as interstate gas. This process does not even interrupt its movement. *Carson Petroleum Co.* v. *Vial*, 279 U. S. 95; *Stafford* v. *Wallace*, 258 U. S. 495; *Board of Trade* v. *Olsen*, 262 U. S. 1; *Ohio R. R. Comm.* v. *Worthington*, 225 U. S. 101; *Southern Pacific Terminal Co.* v. *Interstate Commerce Comm.*, 219 U. S. 498, 526 (converting cotton seed cake into meal).

The temporary storage of a small part of the gas, produced or purchased in Oklahoma, in gas wells does not change its character. Furthermore, the rate order is indivisible and applies to all of this Oklahoma gas delivered at city gates whether stored or not; and the State court finds that only a part of it is stored. The fact that a part of the gas might have become intrastate gas because stored will not support an order fixing a city gate rate applicable to all of it, including that not stored.

Inability to trace a known quantity of this gas, after commingling, to any particular city is without effect. At what city in Texas a given quantity may be delivered is not material because it is known that the entire amount is moving in interstate commerce to city gates in Texas and it is all subjected to the same rate operating as a direct burden on interstate commerce. *Peoples Natural Gas Co.* v. *Public Service Comm.*, 270 U. S. 550; *United Fuel Gas Co.* v. *Hallanan*, 257 U. S. 277, 281; *Ohio R. R. Co.* v. *Worthington*, 225 U. S. 101, 107, 108.

(j) The use of a compressor station at Petrolia, Texas, to increase the movement of that part of the gas not delivered at other Texas city gates before reaching Petrolia did not bring the gas "to rest." *Ozark Pipe Line Co.* v. *Monier*, 226 U. S. 555; *Peoples Natural Gas Co.* v. *Public Service Comm.*, 270 U. S. 550; *State Tax Comm.* v. *Interstate Natural Gas Co.*, 284 U. S. 41, 44.

2. *Denial of Adequate Judicial Review.*

To impose on the reviewing court the duty to render judgment upholding the rate order, merely because of the existence of a conflict in the evidence on the issue of confiscation, the court being without power to settle the conflict, is to deny the court the power to pass its independent judgment on the facts as well as the law relating to the

constitutional issue of confiscation. *Ohio Water Co.* v. *Ben Avon Borough,* 253 U. S. 287; *St. Joseph Stock Yards Co.* v. *United States,* 298 U. S. 38 (Preliminary Print); *Baltimore & Ohio R. Co.* v. *United States,* 298 U. S. 349 (Preliminary Print). With the right of judicial review thus defined and limited, the order becomes void and its enforcement operates to deprive appellant of its property without due process of law, in violation of the Fourteenth Amendment to the Constitution of the United States.

3. *Questions Arising Under the Due Process Clause of the Fourteenth Amendment.*

(a) *Necessity for Segregation of Appellant's Properties and Operations as Between Interstate and Intrastate Commerce.*—To deny, as did the Court of Civil Appeals, the right to introduce evidence responsive to, and in conflict with, the findings of the Commission was, in effect, to deny the right to introduce evidence assailing the rate based upon the findings; it was a denial of due process of law, in violation of appellant's rights under the Due Process Clause of the Fourteenth Amendment to the Federal Constitution. *I. C. C.* v. *L. & N. R. R. Co.,* 227 U. S. 88; *West* v. *C. & P. Tel. Co.,* 295 U. S. 662, 667; *West Ohio Gas Co.* v. *Comm.,* 294 U. S. 63, 67.

Appellant, assailing the order, had the burden of showing specifically the invalidating facts. *Ætna Insurance Co.* v. *Hyde,* 275 U. S. 440, 447. It could not do this and ignore the specific findings made by the Commission in support of the order.

Smith v. *Illinois Tel. Co.,* 282 U. S. 133, 148, cited by the State Court, is not applicable in support of the Court's ruling. If appellant is engaged only in intrastate commerce, as held by the Court of Civil Appeals, then no segregation of its properties and operations was necessary. Thus viewing the case, the Commission properly valued all

of its properties, wherever situated, used in furnishing the service to which the rate applied—a service that the State Court held was a local one. *Smith* v. *Illinois Tel. Co.* has no application except where the utility is engaged locally in both interstate and intrastate commerce. On the other hand, if the State Court wrongly decided the interstate commerce question, as appellant contends, then *Smith* v. *Illinois Tel. Co.* is applicable here, but only in support of appellant's segregation of its properties and business—a segregation conforming to the test defined in that case because based upon actual use of the property and conduct of the business.

Smith v. *Telephone Company* is further distinguishable because in that case the rate as prescribed applied only to intrastate transactions, while here the prescribed rate applies to all sales of gas made by appellant in Texas including any sales made in interstate commerce.

Whether a segregation was practical or was necessary was for the Commission to decide in the first instance. It was a question of fact falling within the administration field. *Groesbeck* v. *Duluth S. S. & A. R. Co.*, 250 U. S. 607, 608; *S. W. Bell Tel. Company* v. *San Antonio*, 75 F. (2d) 880, 883, 885.

(b) *Refusal to Approve Appellant's Segregation of Its Properties and Business Operations as Between Interstate and Intrastate Commerce.*—Appellant's segregation of its properties and business as between interstate and intrastate commerce was based upon the manner in which the properties were used and the business conducted. It therefore met the controlling test defined by this Court. *Simpson* v. *Sheppard* (*Minn. Rate Cases*), 230 U. S. 352; *Smith* v. *Illinois Tel. Co.*, 282 U. S. 133; *Missouri Rate Cases*, 230 U. S. 474; *Allen* v. *St. Louis I. M. S. R. Co.*, 230 U. S. 553; *Groesbeck* v. *Duluth S. S. & A. R. Co.*, 250 U. S. 607, 608.

The only objection to appellant's segregation made by the Court of Civil Appeals was one grounded upon the assumed correctness of its rulings in respect to the interstate commerce question. If these rulings were wrong, then the Court's disapproval of appellant's segregation was wrong.

(c) *Elimination From Rate Base of Production System Properties.*—Appellant's production system property consisting of gas wells, gas well equipment, producing and non-producing leases and drilling tools and equipment and appellant's property, located in Oklahoma, but used and useful in producing, transporting and delivering gas to points in Texas being actually used and useful in the rendition of public service in Texas should have been included in the rate base approved by the Court of Civil Appeals. The exclusion of all of such property from the rate base approved by the Court denied appellant a reasonable return upon the fair value thereof and hence denied to appellant due process of law and just compensation, in violation of its rights under the Due Process and Equal Protection Clauses of the Fourteenth Amendment to the Federal Constitution. *McCardle* v. *Ind. Water Co.*, 272 U. S. 400; *Bluefield Water Co.* v. *Public Service Comm.*, 262 U. S. 679; *Board of Commissioners* v. *N. Y. Tel. Co.*, 271 U. S. 23; *West* v. *C. & P. Tel. Co.*, 295 U. S. 662.

(d) The approval by the Court of Civil Appeals of an allowance for annual accruals to depreciation, depletion and amortization reserve which wholly failed to provide anything for depletion of appellant's producing gas reserves—wasting assets—was a denial to appellant of due process of law, in violation of its rights under the Due Process Clause of the Fourteenth Amendment to the Federal Constitution. *Columbus Gas & Fuel Co.* v. *Public Service Comm.*, 292 U. S. 398, 404, 405.

(e) The approval by the Court of Civil Appeals of arbitrary formulas in substitution for an evaluation of, and an

allowance of operating expenses, depreciation, depletion and amortization and a fair return on, appellant's Texas production system properties and properties located in Oklahoma used and useful in the rendition of public service in Texas was a denial to appellant of due process of law and just compensation, in violation of its rights under the Due Process and Equal Protection Clauses of the Fourteenth Amendment to the Federal Constitution. *West* v. *C. & P. Tel. Co.*, 295 U. S. 662; *West Ohio Gas Co.* v. *Comm.*, 294 U. S. 63. Mere calculations and formulas should not be substituted for actual facts and experience; *McCardle* v. *Ind. Water Co.*, 272 U. S. 400, 410, 416, 417; *St. Louis & O'Fallon R. R. Co.* v. *United States*, 279 U. S. 461; *Minn. Rate Cases*, 230 U. S. 352; or actual operating experience and expenses. *West Ohio Gas Co.* v. *Public Utilities Comm.*, 294 U. S. 63.

(f) The addition to appellant's revenues of $441,240.12 for the year 1932, because of assumed abnormal temperature conditions, although the actual weather conditions during the operating period and the actual operating income were known and well established, was arbitrary action, in violation of appellant's rights under the Due Process and Equal Protection Clauses of the Fourteenth Amendment to the Federal Constitution. Preferring prophecy to experience was arbitrary action. *West Ohio Gas Co.* v. *Public Utilities Comm.*, 294 U. S. 79.

(g) The approval by the Court of Civil Appeals of an annual allowance to reserve for depreciation, depletion and amortization, which was based upon the assumed existence and use of a credit balance in the reserve account of approximately $5,000,000.00 at the rate of inquiry, and which allowance was admittedly inadequate unless supplemented by such an assumed reserve, denied to appellant due process and equal protection of the laws, in violation of its rights under the Due Process Clause of the Fourteenth Amendment to the Federal Constitution. *Board of Commissioners*

v. *N. Y. Tel. Co.*, 271 U. S. 23; *Clark's Ferry Bridge Co.* v. *Public Service Comm.*, 291 U. S. 227.

VI.

Cases Believed to Sustain Jurisdiction.

In addition to the cases cited under heading V to show the substantial nature of the Federal questions relied on, the following are cited as sustaining the Court's jurisdiction.

1. *The rate order is a "statute" of the State of Texas.*

King Mfg. Co. v. *Augusta*, 277 U. S. 100, 112;
Lake Erie, etc., R. Co. v. *State Public Utilities Comm.*, 249 U. S. 422, 424.

2. *The appeal is properly taken from the judgment of the Court of Civil Appeals; it is the highest court of the State in which a decision could be had.*

Stanley v. *Schwalby*, 162 U. S. 255, 269;
Sullivan v. *Texas*, 207 U. S. 416, 422;
T. & N. O. R. Co. v. *Sabine Tram Co.*, 227 U. S. 111, 113.

VII.

Opinions Appended.

1. Copy of Opinion of the Court of Civil Appeals (unofficially reported 86 S. W. (2d) 484) is attached as Appendix "A".

2. Copy of Opinion of the same Court on rehearing is attached as Appendix "B".

APPENDIX "A".

Opinion of Court of Civil Appeals.

(Reported 86 S. W. (2d) 484.)

No. 8238.

THE STATE OF TEXAS *et al*, *Appellants*,

vs.

LONE STAR GAS COMPANY, *Appellee*.

Appeal from District Court of Travis County.

Acting under the power conferred by Article 6050, et seq., R. S. 1925, and after a hearing which continued for more than seven months, the Railroad Commission of Texas promulgated its order requiring appellee Lone Star Gas Company to "charge, bill and receive for domestic gas at the city gate from all distributing companies served by it, a rate not to exceed $0.32 per thousand cubic feet", in lieu of the $0.40 rate theretofore charged. Immediately appellee filed a bill of complaint in the Federal District Court, seeking to restrain the enforcement of the rate order on several constitutional grounds, and particularly as being confiscatory of its property. Thereafter, the Commission, Attorney General, and others, herein called Commission, instituted this proceeding in the District Court of Travis County, Texas, in order to bring appellees within the jurisdiction of the state court under the provisions of Sec. 266 of the Judicial Code of the United States (28 U. S. C. A., Sec. 380). The Commission asserted the validity of the order in every particular, and sought to restrain appellee from violating it. In conformity with what was regarded as proper procedure under Sec. 266 of the Judicial Code, both the state and the federal courts temporarily restrained the enforcement of the rate order, and later the federal court ordered all proceedings therein stayed until the final disposition of this cause. Appellee's answer herein, seeking to set aside the rate and restrain its en-

forcement, was in effect an appeal by it under Article 6059, which provides that any gas utility dissatisfied with any rate may petition a court of competent jurisdiction in Travis County and have same set aside, upon showing by "clear and satisfactory evidence that such rate is unreasonable and unjust as to it." Appellee alleged that the rate order was violative of the commerce, the due process, the equal protection, and the freedom of contract clauses of the Federal Constitution; and was confiscatory and unreasonable and unjust, because it would not afford a reasonable return on the fair value of its property used in the public service. In reply, the Commission asserted the validity of the order in every particular, denied that any gas moved in interstate commerce; but that if so, it was negligible in amount and was not affected by the rate; and that in absence of legislation by Congress on the subject, the Commission had the authority under the statutes and in the exercise of the police power of the state to regulate and control public gas utilities, and to fix reasonable rates for gas sold and delivered to its citizens, even though interstate commerce was indirectly or incidentally affected thereby.

The trial court concluded the commerce and all constitutional questions against appellee; but the jury found in answer to the one special issue submitted, that "the order for a rate not to exceed 32 cents per thousand cubic feet of gas sold to the distributing companies at the gates of the points served, is unreasonable and unjust as to the Lone Star Gas Company." Judgment was accordingly rendered setting aside the 32-cent rate order, and perpetually restraining its enforcement.

The special issue submitted, with the definition and instructions given in connection therewith, was in the nature of a general charge, and required the jury to determine all questions of law and fact of the entire case. Under the pleadings of appellee the ultimate question of fact was whether the 32¢ rate would yield a reasonable return on the fair value of the property used in the public service of delivering and selling natural gas to the distributing companies at the city gates of the various Texas cities and towns. Appellee attempted to prove that the 32¢ rate

would not yield a reasonable return, for two reasons, as follows:

1. Because the 32¢ rate would not yield the minimum return of 6% declared to be reasonable by the Commission; and

2. Because if so, a return of 6% was so low as to be confiscatory and unreasonable and unjust.

The burden was heavily upon appellee to show by clear and satisfactory evidence that the 32¢ rate would not afford a reasonable rate of return on the property used in the Texas public service. Appellee did not meet this burden and quantum of proof; and the trial court erred in overruling the Commission's motions for an instructed verdict and for judgment declaring the rate to be valid. In view of this conclusion, the appeal presents two main divisions, as follows:

1. Three constitutional objections are urged against the 32¢ rate order, as follows:

(a) Interference with interstate commerce.

(b) Interference with the right to contract.

(c) Confiscation of property.

2. The legal sufficiency of the evidence adduced by appellee to show that the rate order was confiscatory or unreasonable and unjust as to it.

The Texas statutes, particularly Articles 6050, 6051 and 6053, classify the various kinds of business engaged in producing, transporting, delivering and selling natural gas to the public for domestic or other use, and declare each to be a public gas utility, affected with the public interest and subject to the regulation and control of the Commission. Gas pipe lines engaged in producing, buying, transporting, delivering, or otherwise dealing in natural gas are each declared to be a public utility, affected with the public interest, and in nature and according to the established method of conducting same a monopoly, and subject in respect to all their holdings pertaining to the gas business and in all relations to the public, and in respect to their producing, transporting, receiving and distributing

facilities, to the full and complete control and supervision of the Commission. Authority is also given the Commission to fix, establish and enforce a reasonable rate which pipe lines may charge for gas delivered at the city gate to another distributing company or municipality; to fix a reasonable rate for gas sold and delivered by pipe lines or other distributing companies to the public for domestic or other use; and to fix and establish a fair and equitable division of the proceeds of the sale of natural gas between the producing or transporting companies and the companies distributing or selling it to the ultimate consumer. In the exercise of the power so conferred, the Commission is authorized to act upon its own motion, or upon the petition of any person, corporation, municipality, etc., showing a substantial interest in the subject.

Accordingly the Commission of its own motion, ordered a hearing to investigate the 40¢ city gate rate which appellee uniformly charged the various distributing companies throughout the State for gas. Appellee and each of the approximately 270 cities and towns served by it were given notice of the hearing, after which the Commission made its order fixing the 32¢ gate rate, found to be "fair, just and reasonable", in lieu of the 40¢ rate theretofore charged, found to be "unfair, unjust and unreasonable."

Interstate Commerce Issue.

Appellee obtains its natural gas from two states, which under its system of accounting is allocated to three sources. The first source is gas produced or purchased in Texas and transported and delivered entirely within Texas. As to this gas, appellee admits the authority of the Commission to regulate and fix the price for which it shall be sold at the city gates to the affiliated distributing companies in a proper proceeding; but contends that since the rate order in question also attempts to fix the price of gas transported in interstate commerce, the order is invalid in toto because invalid in part. From this source appellee accounts for about 79% of its total gas supply.

The second source of gas is produced or purchased by appellee in Oklahoma, and transported through its pipe

lines from points of production into Texas. All of this gas is processed and treated in gasoline plants located near Gainesville, Texas, and Petrolia, Texas. At these plants the heating value of this gas is lowered by extracting the gasoline therefrom, and practically all of it is recompressed. When this gas leaves Oklahoma for Texas its exact ultimate destination is not known, and a considerable amount of it is run through and stored in wells at the extraction plants in Texas for future use as needed. Each pipe line transporting this gas has a meter at the State line, for the purpose of measuring the amount thereof. From this source, over the 1927-1933 period considered, appellee accounts for about 4% of its total gas supply. However, the amount of this gas has shown a marked decline until during the last year of the accounting period it amounted to about one-half of 1% of appellee's total gas supply. All of this gas is commingled in storage or pipe lines with appellee's Texas gas before delivery at the city gates. Appellee contends that this gas moved in interstate commerce to the city gates, and is, therefore, not subject to the jurisdiction of the Commission.

The third source of gas is produced or purchased in the Panhandle field in Wheeler County, Texas, and transported by appellee's private pipe line through a corner of Oklahoma (less the amount of deliveries at Hollis, Oklahoma) and back into Texas, uninterruptedly. The Commission alleged and indisputably proved that this pipe line was built through a sparsely settled, rough, rocky region, just within and paralleling the boundary line of Oklahoma, for about 40 miles, recrossing the Texas line at a point on the Prairie-Dog Town Fork of Red River, where an exceedingly expensive crossing was necessary, which would not have been necessary if the pipe line had been constructed by a more direct route within Texas; and that as compared to the Oklahoma route, the Texas route would have been much less expensive, through sandy and less corrosive soil, more direct, and through a more populous region. The Commission contends that the construction of this pipe line was, therefore, fraudulently done for the purpose of attempting to deprive it of jurisdiction over appellee. From

this source of gas appellee accounts for about 17% of the total supply subject to the rate order in question.

The gas reserve of appellee in Oklahoma as compared to those in Texas amounted to about one-fourth of one per cent. The gas reserves in Texas are more than sufficient to supply all Texas needs, and the gas supply of Oklahoma will likewise supply all its needs. The Texas gas used in Oklahoma and the Oklahoma gas used in Texas about strike a balance, and in any event, if the excess should be in favor of Oklahoma, it is negligible. Texas gas is less expensive to produce than Oklahoma gas. Approximately 85% of appellee's property is situated in Texas; and approximately 99% of its gas reserves are in Texas. Gas coming from Oklahoma is so mixed and commingled with Texas gas that it cannot be definitely traced by volume to any particular city gate, because it is divided and redivided into the network of appellee's pipe lines, in amounts which are negligible in comparison with the amount of the Texas gas. Oklahoma produced gas is not served south of Fort Worth or Dallas, nor west of Fort Worth. A very small amount of Oklahoma gas is delivered to independent distributors at Gainesville and Waxahachie. The order does not in any manner interfere with the sale of the Oklahoma gas at the same rate as the Texas gas.

In view of these facts, appellee contends that the order was an attempt to regulate and burden interstate commerce, because a part of the gas affected by the 32¢ rate is produced or purchased in the State of Texas, and transported by the pipe lines of appellee through a corner of the State of Oklahoma and back into Texas, where it is sold and delivered wholesale at the gates of the various Texas cities and towns; and because a part of the gas is produced or purchased in the State of Oklahoma and transported by the pipe lines of appellee uninterruptedly and at high pressure into Texas, where it is sold wholesale at the city gates.

As preliminary and as bearing upon the issues of interstate commerce, the interference with the right to contract, operating expenses, and other issues relating to the jurisdiction of the Commission to regulate and control appellee, it was the theory of the Commission that by reason of an intercorporate setup and affiliation between appellee

and the distributing companies to which it delivered gas at the city gates, an integrated but single business enterprise was established in which appellee and the distributing companies were merely the departments or instrumentalities through which the single business enterprise sold and delivered natural gas to the ultimate consumer or burner tip user. The Commission asserted that the fixing of the gas rate at the city gate under such business setup effectually fixed the rate from the city gate to the burner tip, which was intrastate commerce and subject to the control and regulation of the Commission. It was alleged that the unity or oneness of the business enterprise was accomplished by the combination of property and effort, and through a holding corporation, the Lone Star Gas Corporation, a Delaware chartered corporation, with its principal offices in Pittsburgh, Pa. The facts sustaining this allegation are as follows:

Appellee, Lone Star Gas Company, is in corporate theory a Texas gas pipe line corporation, classified by Article 6050 as a "public utility", and "declared to be affected with a public interest and subject to the jurisdiction, control and regulation of the Commission." By Article 6051, appellee's business is declared to be "a business which in its nature and according to the established method of conducting the business is a monopoly and shall not be conducted unless * * * such business be subject to the jurisdiction herein conferred upon the Commission." In excess of 99% of appellee's common, voting or controlling stock is owned by the Lone Star Gas Corporation, the Delaware chartered corporation, which does not have a permit to do business in Texas.

The affiliated distributing companies material to this case are the Community Natural Gas Company, County Gas Company, Dallas Gas Company, Municipal Gas Company, and Texas Cities Gas Company. Each of these companies is a Texas corporation, and in corporate theory and as classified by Article 6050, each is a "public utility", engaged "in distributing or selling natural gas to the public for domestic or other use," serving one or more of some 270 cities and towns in Texas. The Delaware holding corporation owns in excess of 99% of the common

or voting stock of the affiliated Community Gas Company, County Gas Company, Municipal Gas Company, Texas Cities Gas Company, and, through a subholding corporation, the Dallas Gas Company.

Appellee and all of its affiliated distributing companies have connected offices in Dallas, Texas, and all of these Texas corporations and the Delaware holding corporation have officers and directors common to each corporation, although there is not a majority by number in any instance. Voting by proxy or as attorney in fact is practiced by the interlocking directors and officials of all corporations involved in the intercorporate setup. All Texas corporations confer with and are subject to the management of the Lone Star Gas Corporation, the holding corporation. For these services it exacts a "management fee" of one per cent of the gross annual revenue of appellee, and a "management fee" is also exacted by the holding corporation for each affiliated distributing company. The holding corporation has loaned appellee $17,600,000 on its unsecured note; and loans have been made to each affiliated distributing company either on open account or on unsecured notes. Interest at six per cent. is charged on the $17,600,000 indebtedness of appellee, although the holding corporation borrowed the money at five per cent., and a similar condition exists as to the affiliated distributing companies, notwithstanding some of them are able to borrow large sums from local banks at from four to four and one-half per cent. interest.

All books of all corporations, except the holding corporation, are kept in the offices at Dallas, Texas, and a general or supervising auditor has authority and direction over all books. Accounting services, engineering, financing, purchasing and operating supervision are furnished all Texas corporations by the Delaware holding corporation, and a general counsel represents all the corporations involved in the intercorporate setup.

In its department of the integrated business enterprise, appellee is engaged in producing and purchasing natural gas and in transporting same by its 4000-mile pipe line system from the point of production to the city gates of some

270 cities and towns in Texas, where the gas is delivered to one and the other affiliated distributing companies. A uniform rate of 40¢ at the city gate is made by appellee, which rate it filed with the Commission, and has charged and collected for several years. Appellee has long-term contracts with its affiliated distributing companies for the 40¢ city gate rate.

In their department of the integrated business enterprise, the affiliated distributing companies are engaged in selling and delivering the gas to the burner tips of the consumers, and for which service they charge a fixed rate.

Appellee also furnishes gas at the city gates of Waxahachie and Gainesville, Texas, to two independent distributing companies,—the Waxahachie Gas Company and the Gainesville Gas and Electrical Company; and in Waxahachie, a small amount to its affiliated Municipal Gas Company. The amount of this gas is negligible, in comparison with appellee's total gas business. Each independent distributing company pays the 40¢ city gate rate under long term contracts with appellee.

The cases are legion which deal with the relationship of two or more corporations from the standpoint of ownership of the capital stock in one by another, and from the standpoint of association together for the purpose of carrying on a single or common business enterprise. The rule is well settled that courts will look through the forms to the realities of the relationship between two or more corporations in order to determine whether each is a separate entity or corporation; or whether their commingled affairs are such as to constitute them one integrated and single business enterprise; or whether through intercorporate setup, affiliation or stock ownership, the purpose is to control the subsidiary corporation or corporations so that they are used as the mere instrumentalities or agents of the owning corporation or corporations. In discussing the rule, it has been held that while "ownership alone of capital stock in one corporation by another does not create an identity of corporate interest * * * or create the relation of principal and agent or representative between the two;" still it has been repeatedly held that such rule is not applicable "where

stock ownership has been resorted to, not for the purpose of participating in the affairs of a corporation in the normal and usual manner, but for the purpose * * * of controlling a subsidiary company so that it may be used as a mere agency or instrumentality of the owning company or companies. Chicago Ry. *v.* Minn. Civic Ass'n, 247 U. S., 490, 62 L. Ed. 1229; United States *v.* Lehigh Valley R. R. Co., 220 U. S., 257, 55 L. Ed., 458; United States *v.* Reading Co., 253 U. S., 26, 64 L. Ed., 760; United States v. Delaware L. & W. R. Co., 238 U. S. 516, 59 L. Ed., 1438. Also in discussing the rule the fact that the same persons are directors and managers of two corporations has been given consideration (McCaskill Co. *v.* United States, 216 U. S., 504) and "a growing tendency is therefore exhibited in the courts to look beyond the corporate form to the purpose of it and to the officers who are identified with that purpose." See also Gallatin Gas Co. *v.* Public Service Co., 256 Pac., 373. Where one corporation owns or dominates another it has been often held that "the independent entity of the two companies is so far disregarded that each is considered a part of the invisible whole." Kimberly Coal Co. *v.* Douglas, 45 Fed. (2d) 25; *In re* Kentucky Wagon Mfg. Co., 3 F. Supp. 958; Law *v.* McLaughlin, 2 F. Supp., 601. And "the rule which appears to be established by these cases is that, where the corporate organization and affairs of one railroad company are controlled and dominated by another railroad company through ownership or stock or lease, the roads must be regarded as identical for the purpose of rate making." Pacific Ry. Co. *v.* R. R. Com., 168 N. W., 927, 929.

A somewhat analogous question was decided by this court in A. T. & S. F. Ry. Co. *v.* R. R. Com., 77 S. W. (2d), 773, (writ refused), wherein it was held that subsidiary corporations, owned, controlled and operated by railroads to carry on pickup and delivery service, did not possess separate legal individuality from the parent corporations, as regards the jurisdiction of the Railroad Commission; and wherein it was held as follows:

> "To permit railroads to perform such steps in the process of transportation through other separate legal entities created and owned by them would enable them

to defeat the jurisdiction of the Commission over such transportation. And in such case where the stock of such separate corporation is owned by the railroad company, and its sole function is merely to help conduct the business of the parent corporation under whose complete control it operates, and in the instant case largely, if not wholly, through the same employees, the subsidiary corporation will be treated as if it were a mere department of the railroad itself."

When viewed in the light of the facts and the aforesaid rule, it becomes apparent that appellee and its affiliated distributing companies were engaged in an integrated but single business enterprise of producing, purchasing, transporting, delivering and selling natural gas for domestic or other use to the ultimate consumer. This was accomplished by combination of property and effort, and through ownership of more than 99% of the capital stock of appellee and all affiliated distributing companies by the holding corporation. All corporations are under the common management of the holding corporation, for which service it is paid management fees. The Texas corporations and the holding corporation have officers and directors common to each, who actually manage, supervise and control the entire business enterprise through the intercorporate setup. By permitting or organizing such intercorporate setup, the Texas corporations have, considering their entire operations as a whole, created a single and integrated business enterprise, and with respect to the jurisdiction of the Commission, to regulate and control such business, and particularly for the purpose of fixing the rates for which it might sell gas to the public in Texas, the corporation must be regarded as being engaged in the single business enterprise of producing, purchasing, transporting, delivering, and selling natural gas to the ultimate consumer or user in Texas. The fact that separate corporate entities were formed which represent different departments of the integrated but single business enterprise, does not affect the question, because the court must look beyond the corporate form to the purpose of the unified organization, and to the officials who are identified with that purpose. To otherwise hold, and to permit the

Texas corporations to so dispose of their capital stock and to so form a separate entity of their own, and to surrender the management and control of their business to the holding corporation, which has no permit to do business in Texas, would enable them to defeat the jurisdiction of the Commission over them as Texas public utilities, for which purpose the State of Texas granted them life and the privilege of doing business.

The fact that appellee and the affiliated distributing companies may be engaged in the integrated but single business enterprise of producing, purchasing, transporting and selling natural gas to the ultimate consumer or burner tip user, is not of controlling importance on the commerce issue; because the Commission did not fix the burner tip rate, nor did it require the distributing companies to pay appellee not in excess of the 32¢ city gate rate, and to pass the 8¢ reduction on to the ultimate consumer or burner tip user.

Just why the Commission fixed the 32¢ city gate rate for gas without also requiring the distributing companies to pay not in excess of such rate, and to pass the 8¢ reduction on to the ultimate consumer or burner tip user, is not clear from the order or record. It is conceded that the business of distributing gas from the city gate to the burner tip user was intrastate commerce over which the Commission had jurisdiction; and that it could have, after a hearing at which the reasonableness of the City gate rate charged by appellee for gas was inquired into, required the various distributing companies to pay appellee at each city gate a rate not in excess of the 32¢ rate, even though the gas sold and delivered by appellee moved in interstate commerce to the city gate. Article 1119, R. S. 1925, authorizes cities and towns of over 2000 population to fix local rates for gas sold by a public utility. Texas-Louisiana Power Co. *v.* City of Farmersville (Com. App.), 67 S. W. (2d) 235. The Commission is authorized to originate rates for cities and towns of less than 2000 population; and Article 6053 authorizes it to fix city gate and other rates for natural gas for all cities and towns without regard to population. The order recited that there were then pending some 125 appeals from rates fixed by cities and towns under the provisions of Arti-

cles 1119 and 6058, and that there were also pending before the Commission numerous cases in which the rates to be reviewed or fixed necessarily involved the determination of the reasonableness of the city gate rate charged the distributing companies by appellee, as a step preliminary to the disposition of such appeals and cases, and in order to determine or fix reasonable local or burner tip rates therein. All of these cities and towns were given notice of the hearing before the Commission. It would seem from these recitations of facts and circumstances, that the Commission consolidated all the appeals and cases pending before it in which the determination of the city gate rate charged by appellee for gas was necessarily involved as a step preliminary to reviewing or fixing the local or burner tip rates for gas. The wisdom of the method of procedure adopted cannot be successfully attacked. A separate hearing in the case of each city or town would have presented an insurmountable task; and if the expenses of this hearing are a criterion, no city or town could bear such expense. Separate hearings would not afford appellee any relief to which it is not entitled to receive here. Nor is it "essential that the Commission dispose of the matter before it in a single order, but it may in a proper case make a preliminary disposition of the matter, and reserve for further consideration, and dispose of by subsequent order, other questions or issues involved in the main issue without further notice or hearing." Houston Chamber of Commerce *v.* R. R. Com., 19 S. W. (2d) 586, affirmed 78 S. W. (2d) 591; Magnolia Pet. Co. *v.* Edgar, 62 S. W. (2d) 359 (writ ref.). Moreover, all parties have by court proceedings and otherwise treated the order as a final order fixing the 32¢ city gate rate. Certainly appellee has so treated the order, and if declared valid herein, appellee has no further interest in any order the Commission may make with regard to requiring the various distributing companies to pay not in excess of the 32¢ city gate rate, and to pass the 8¢ reduction on to the ultimate consumer or burner tip user. Furthermore, in its department of the intercorporate setup and affiliation appellee was a gas pipe line utility, engaged in the integrated business of producing, purchasing, transporting by

pipe line, and selling natural gas to the distributing companies at the city gates of some 300 cities and towns in Texas and Oklahoma. Appellee's charter and the books kept under the direction of the auditor of the intercorporate business setup established that it was so engaged. On the hearing before the Commission, all parties proceeded upon the theory that appellee was so engaged. It had contracts with the affiliated as well as the two independent distributing companies for the 40¢ city gate rate uniformly charged throughout the State of Texas by appellee. The Texas statutes authorize the Commission to fix reasonable city gate as well as local or burner tip rates for gas, and appellee states in its brief that "the Railroad Commission of Texas has power and authority to fix and prescribe the charges which defendant may make for gas produced or purchased by it and moving throughout its entire transit, up to the point of delivery at the city gates, wholly within the State of Texas, subject to defendant's right under the 14th Amendment of the Constitution of the United States, and the Bill of Rights of the Texas Constitution; and it has power and authority to determine the rates and charges to be received for the sale of gas to domestic customers in towns and cities in Texas (i. e. local rates), even though a part of the gas so sold has moved continuously in interstate commerce from the points of origin to the points of delivery at the city gates, subject to a similar qualification. But it may not regulate the gate rate to be charged by defendant for the sale of interstate gas." In view of these facts, admissions and proceedings, we will consider the rate order in question as a final appealable order, and pass to a further consideration of the interstate commerce issue.

Whether the conduct of appellee, in constructing and transporting by its private pipe line gas from the Texas Panhandle field through Oklahoma and back into Texas, where it is intended at all times to be delivered, sold and used, constitutes a fraudulent attempt to make such gas move in interstate commerce, and thereby deprive the Commission of the power to regulate the price for which it may be sold, does not appear to be material, because such transportation of the gas is not interstate commerce as a

matter of fact. Except for the right to authorize the construction of the pipe line within its boundary, the State of Oklahoma has no concern whatever with the transaction. Only one town, Hollis, in Oklahoma, is served by the pipe line. It could have been as well served by a direct pipe line from Texas to it, and such service is in no manner affected by the rate order in suit. The mere fact that such town is served with gas delivered from the pipe line does not stop, hinder, affect, or in any manner interrupt or interfere with the continuous flow of the gas from Texas through Oklahoma and back into Texas, where it is intended at all times to be delivered, sold and used.

In 1 Supreme Court Law, 347, the following rule is stated:

> "Interstate commerce is a practical conception drawn from the course of business upon a broad consideration of the substance of the whole transaction. Substance and not form controls. The actual fact, not technical considerations, governs."

The text cites many cases supporting the rule, holding in substance that what is or is not interstate commerce is to be determined upon broad consideration of the substance of the whole transaction. See Federal Trade Com. *v.* Pacific, etc. Ass'n, 273 U. S. 52, 71 L. Ed. 534; Eureka Pipeline Co. *v.* Hallanan, 257 U. S. 265, 66 L. Ed. 227; Swift & Co *v.* United States, 196 U. S. 375, 398, 49 L. Ed. 518; Dozier *v.* State, 218 U. S. 124, 54 L. Ed. 965, 28 L. R. A. (N. S.) 264.

Cases cited by appellee and many others hold that gas produced in one state and transported by pipe line to another state for sale and use is interstate commerce. 1 Supreme Court Law, 367. But no case is cited and none is found by us which would support a holding that the transportation by its private pipe line of gas produced or purchased by appellee in Texas through a corner of Oklahoma and back into Texas, uninterrupted, and with the intention at all times that such gas would be delivered, sold and used in Texas, is interstate commerce. Appellee is a Texas public gas utility corporation. Its primary duty is to serve

Texas citizens with gas produced from Texas soil. Its corporate life and being was granted in consideration of these premises. With this in view, but one practical conception can be drawn from the whole transaction involved, that is, the gas produced in Texas and intended to be delivered, sold and used in Texas is intrastate commerce. The mere fact that appellee has selected a route through Oklahoma as an aid to the transaction of its Texas business can not work a change in the nature of the business, nor does it affect the character of the business. The transportation of gas through Oklahoma is merely a method of delivery and is a negligible circumstance in determining the interstate commerce issue. Heyman *v.* Hays, 236 U. S. 178, 59 L. Ed. 527.

If, however, the delivery of the gas by appellee from Texas through Oklahoma and back into Texas, intended at all times for Texas consumption, be regarded as interstate commerce, such transaction only affects transportation of the gas and as to which only appellee and the Texas consumers are interested. The Interstate Commerce Act, as now amended, expressly excepts from the jurisdiction of the Interstate Commerce Commission the regulation of interstate transportation of "natural or artificial gas by pipe line, or partly by pipe line and partly by railroad and by water." U. S. C. A., Title 49, chap. 1, Sec. 1, subd. (1)(b). And since the regulation of the transportation of gas is expressly excluded from the scope of the interstate commerce statute, it is within the police power of the state to fix reasonable rates for which gas may be sold to its citizens, even though such rates may indirectly or incidentally affect the interstate transportation of such gas, or may so affect interstate commerce in the same. Simpson *v.* Shepard, 230 U. S. 352, 57 L. Ed. 1511, 48 L. R. A. (N. S.) 1151; West *v.* Kansas Natural Gas Co., 221 U. S. 229, 55 L. Ed. 716, 35 L. R. A. (N. S.) 1193; Pennsylvania Gas Co. *v.* Public Service Com., 252 U. S. 23, 64 L. Ed. 434; Manufacturers' Light & Heat Co. *v.* Ott (D. C.) 215 F. 940, 944, 945.

Neither the Texas statutes nor the rate order interfere in any manner with the transportation of gas from Texas

through Oklahoma and back into Texas. The order only attempts to regulate and fix the price for which such gas may be sold in Texas by appellee to its various distributing companies. Manifestly, this circuitous route of delivery of gas through Oklahoma can not and does not affect the exercise of the police power of Texas to make or fix reasonable rates for such gas sold to its citizens.

Appellee contends, however, that there can be no question but that the gas produced or purchased by it in Oklahoma and transported to and sold in Texas, is gas moving in interstate commerce up to the time it reaches the city gates of delivery; and that the fact that the amount of this gas is small does not affect its interstate commerce character, nor its interstate transportation. We do not sustain the contention.

The facts show that the gas produced or purchased by appellee in Oklahoma and transported by its pipe lines to Texas, does not move in interstate commerce, when it reaches the city gates of delivery. All gas coming from Oklahoma is run through extraction plants in Texas, where the heavier hydro-carbons and volatile gasoline are extracted, leaving the residue gas changed in its composition, and with its heating value lowered and changed. Large amounts of it are run through and stored in wells on the Miller farm near the extraction plant in Texas, continuously, and for use later as needed. The Oklahoma gas has no particular Texas city gate destination, but it is first transported to the extraction plants, and after its composition is changed, it is passed into the pipe line system of appellee, mixed and commingled with Texas gas, divided and redivided in the pipe line system until it is impossible to trace or identify it by volume at any city gate of delivery. At various points before delivery its pressure is reduced and the gas allowed to expand. The amount of Oklahoma gas as a whole is small and as divided and redivided before delivery to the various city gates, its amount is negligible in comparison with the amount of the Texas gas with which it is mixed or commingled.

Doubt has been expressed by several courts as to whether gas produced in several states and commingled in pipe

lines from which it is sold, is interstate commerce. This conclusion seems to have been reached on the "original package" doctrine, the courts holding that after the bulk of the imported gas is broken up for indiscriminate distribution to individual purchasers at retail sale, the interstate commerce is at an end. Contrary conclusions seem to have been reached where merely transmission for immediate or practically immediate use, direct from the seller to the consumer, is involved. But a different question arises where the gas transmitted from one state is stored and then distributed as its needs might afterwards develop; and where, as in this case, the composition of the gas is and must be changed by extracting hydrocarbons and volatile gasoline before it is ready for delivery and use by the consumer. As to such transmission of gas, the "original package" theory or doctrine is applicable and should be invoked, even though the transporting company, as did appellee and the affiliated distributing companies through stock ownership and intercorporate setup, actually sells the Oklahoma produced gas as changed to the ultimate consumers in Texas. These questions have been either passed upon or anticipated and discussed in the following cases. Pennsylvania Gas Co. *v.* Public Service Comm., 252 U. S. 23, 64 L. Ed. 434; Id., 225 N. Y. 397, 399, 122 N. E. 260; West *v.* Kansas Natural Gas Co., 221 U. S. 229, 55 L. Ed. 716, 35 L. R. A. (N.S.) 1193; Public Utilities Comm. *v.* Landon, 249 U. S. 236, 63 L. Ed. 577; Id., 249 U. S. 590, 63 L. Ed. 791; State *v.* Flannelly, 96 Kan. 372, 152 P. 22; West Virginia, etc. Co. *v.* Towers, 134 Md. 137, 106 A. 265.

In other cases it has been held that in the exercise of the police power of the state, the state commission has authority to fix the local burner tip rates, even though the gas moved in interstate commerce to the city gate, and particularly so where, as in the instant case, an affiliation exists between the transporting and the distributing companies. Thus the state commission may validly, by the indirect process of prescribing reasonable rates for local distributing companies, control and fix the city gate rate for gas moved in interstate commerce.

The Commission did not expressly require the distributing companies to pay not in excess of the 32¢ city gas rate,

but since this hearing was necessary as a preliminary step to the disposition of the appeals and cases pending, it was not essential that the Commission dispose of the matter before it in a single order; but it may, if the rate herein complained of be held not confiscatory or unreasonable and unjust, subsequently make its order requiring the distributing companies to pay not in excess of such rate, without further notice or hearing. Houston Chamber of Commerce *v.* R. R. Comm., *supra*. Manifestly, if the 32¢ rate is declared valid herein, appellee can have no further interest in any order the Commission may make with regard to requiring the various distributing companies to pay not in excess of such rate, and to pass the 8¢ reduction on to the ultimate consumer. Missouri *v.* Kansas Natural Gas Co., 265 U. S. 298, 68 L. Ed. 1027; Public Utilities Comm. *v.* Landon, *supra;* East Ohio Gas Co. *v.* Tax Com., 283 U. S. 465, 75 L. Ed. 1171; Pennsylvania Gas Co. *v.* Public Service Comm., *supra;* State Corp. Comm. *v.* Wichita Gas Co., 290 U. S. 561, 78 L. Ed. 500; Dayton P. & L. Co. *v.* Public Utilities Comm., 292 U. S. 290, 78 L. Ed. 1267; Gallatin Natural Gas Co. *v.* Public Service Comm., 79 Mont. 269, 256 P. 373.

Final decision, however, in most cases is rested upon the principle that the State may regulate interstate commerce of the character of natural gas in the absence of action by Congress. As hereinabove stated, the Interstate Commerce Act expressly excludes from the scope of the interstate commerce statute the transportation of natural gas. The amount of the rate or price to be charged for gas is primarily for the determination of the State in which the gas is consumed, and it is within the police power of the State to make or fix reasonable rates for gas furnished by a public utility to its citizens. Where the rates are reasonable and are fixed according to some uniform, fair and practical standard, they constitute no burden on interstate commerce. So, if the delivery of the gas by appellee from Texas through Oklahoma and back into Texas, intended at all times for Texas consumption; and if the production and transportation of the small amount of gas from Oklahoma to Texas, where it is sold, be regarded as interstate

commerce, still appellee's business is predominantly a Texas business; and it is within the police power of the State to fix reasonable rates for which gas may be sold to its citizens, even though such rates may indirectly or incidentally affect the interstate transportation of such gas, or may so affect interstate commerce in the same. Simpson *v.* Shepard, 230 U. S. 352, 57 L. Ed. 1511, 48 L. R. A. (N. S.) 1151, wherein it is held as follows:

> "Where the subject is peculiarly one of local concern, and from its nature belongs to the class with which the state appropriately deals in making reasonable provision for local needs, it cannot be regarded as left to the unreasonable will of individuals because Congress has not acted, although it may have such a relation to interstate commerce as to be within the reach of the federal power."

This doctrine has been carefully restated in the recent case of A. L. A. Schechter Poultry Corp. *v.* United States, 55 S. Ct. 837, 850, 79 L. Ed. 1570, 97 A. L. R. 947, as follows:

> "But where the effect of intrastate transactions upon interstate commerce is merely indirect, such transactions remain within the domain of state power. If the commerce clause were construed to reach all enterprises and transactions which could be said to have an indirect effect upon interstate commerce, the federal authority would embrace practically all the activities of the people; and the authority of the state over its domestic concerns would exist only by sufferance of the federal government. Indeed, on such a theory, even the development of the state's commercial facilities would be subject to federal control. As we said in Simpson *v.* Shepard (Minnesota Rate Case), 230 U. S. 352, 410, 33 S. Ct. 729, 745, 57 L. Ed. 1511, 48 L. R. A. (N. S.) 1151, Ann. Cas. 1916A, 18: 'In the intimacy of commercial relations, much that is done in the superintendence of local matters may have an indirect bearing upon interstate commerce. The development of local resources and the extension of local

facilities may have a very important effect upon communities less favored, and to an appreciable degree alter the course of trade. The freedom of local trade may stimulate interstate commerce, while restrictive measures within the police power of the state, enacted exclusively with respect to internal business, as distinguished from interstate traffic, may in their reflex or indirect influence diminish the latter and reduce the volume of articles transported into or out of the state.' See, also, Kidd *v.* Pearson, 128 U. S. 1, 21, 9 S. Ct. 6, 32 L. Ed. 346; Heisler *v.* Thomas Colliery Co., 260 U. S. 245, 259, 260, 43 S. Ct. 83, 67 L. Ed. 237."

It has also been held that "if it be assumed that interstate commerce will be incidentally affected, yet the regulation of the local charges of the Natural Gas Company as a public service corporation is within the police power of the State until the Congress sees fit to act." Manufacturers' Light & Heat Co. *v.* Ott, *supra*. And certainly the State's regulatory power is not denied where it does not interfere with or burden the free interstate flow of gas. Peoples Natural Gas Co. *v.* Public Service Com., 270 U. S. 550, 70 L. Ed. 726. The rate order in this suit does not in any manner interfere, restrain or burden the free transportation of gas between Texas and Oklahoma. Oklahoma gas may be freely transported to Texas and sold in the open market at the same reasonable rate fixed for Texas gas. We therefore conclude that, absent legislation by Congress, and since the Interstate Commerce Act as now amended, expressly excepted the regulation of transportation of "natural or artificial gas by pipe lines" from the jurisdiction of the Interstate Commerce Commission, the State Commission, in the exercise of the police power of the State to regulate and control public gas utilities, had the power to fix reasonable rates for gas delivered by appellee to distributing companies at the city gate, although interstate commerce may be indirectly or incidentally affected thereby.

We further conclude that since the amount of gas produced or purchased by appellee in Oklahoma and transported to and sold in Texas, is negligible; and, if interstate

commerce, the 32¢ rate fixed by the Commission in no manner interfered with, impeded, or burdened the flow of gas from Oklahoma, but such gas may be sold in competition with Texas gas and at the same reasonable price fixed by the Commission.

Freedom of Contract Issue.

The contracts of appellee with the distributing companies for the 40¢ city gate rate were made in the light of the Constitution and laws, and of the jurisdiction of the Commission to regulate such rates. The order changing such rate is therefore not violative of the freedom of contract, or impairment of obligation clauses of either the State or Federal Constitutions. (Const. Tex. art. 1, Secs. 16, 19; Const. U. S. art. 1, Sec. 10, cl. 1; Amend. 14).

The right of the State to regulate the rates and practices of a public utility is referable to the police power of the State, and is a legislative function which cannot be alienated or contracted away by the State or any agency or political subdivision of the State. The Constitution and laws of a state are a part and parcel of the terms of the corporate franchise, and the right of the state in the exercise of its police power to change franchise or contract rates in the protection of the inalienable rights and general welfare of its citizens is settled. Munn *v.* Illinois, 94 U. S. 113, 24 L. Ed. 77; Milwaukee Electric Ry., etc., Co. *v.* R. R. Com., 153 Wis. 592, 142 N. W. 491, L. R. A. 1915F, 744, Ann. Cas. 1915A, 911, affirmed in Id., 238 U. S. 174, 35 S. Ct. 820, 59 L. Ed. 1254; State *v.* Public Serv. Comm., 275 Mo. 201, 204 S. W. 497. The one exception to the rule is with regard to ordinances or contracts fixing rates for a limited period of time. Southern Iowa Electric Co. *v.* Chariton, 255 U. S. 539, 41 S. Ct. 400, 65 L. Ed. 764. Appellee's contracts are all for long periods of time, and do not come within the exception. And where, as in the instant case, there is an intimate alliance between the buyer and seller, and they are not dealing at arm's length because of intercorporate affiliation and transactions, the prices they fix are of no concern to the public, unless they are not within the bonds of reason. Houston *v.* Southwestern Bell Tel. Co., 259 U. S. 318, 323,

42 S. Ct. 486, 66 L. Ed. 961; Missouri ex rel. Southwestern Bell Tel. Co. *v.* Public Service Com., 262 U. S. 276, 288, 43 S. Ct. 544, 67 L. Ed. 981, 31 A. L. R. 807; United Fuel Gas Co. *v.* Railroad Com. of Kentucky, 278 U. S. 300, 320, 49 S. Ct. 150, 156, 73 L. Ed. 390, citing and quoting from Chicago & Grand Trunk Railway *v.* Wellman, 143 U. S. 339, 345, 12 S. Ct. 400, 36 L. Ed. 176, with approval; Smith *v.* Illinois Bell Tel. Co., 282 U. S. 133, 51 S. Ct. 65, 75 L. Ed. 255; Western Distributing Co. *v.* Public Service Comm. of Kansas, 285 U. S. 119, 52 S. Ct. 283, 76 L. Ed. 655; Dayton Power & Light Co. *v.* Public Utility Comm., 292 U. S. 290, 54 S. Ct. 647, 650, 78 L. Ed. 1267.

Confiscation of Property.

The constitutionality of a rate depends upon whether it will yield a fair return for the present and immediate future, on the value of the property used in the public service. In absence of an actual test under a new rate, the question of it will afford a reasonable return is one of fact. The burden rests heavily upon one seeking to set aside a state-made rate to plead and prove the invalidating facts. Ætna Ins. Co. *v.* Hyde, 275 U. S. 440, 48 S. Ct. 174, 72 L. Ed. 357, Beaumont, S. L. & W. Ry. Co. *v.* United States, 282 U. S. 74, 51 S. Ct. 1, 75 L. Ed. 221; Brush Electric Co. *v.* Galveston, 262 U. S. 443, 43 S. Ct. 606, 47 L. Ed. 1076. Appellee failed as a matter of law to plead and prove any invalidating fact as to the rate in suit; to which question we now pass.

Legal Sufficiency of Evidence to Show Rate Confiscatory or Unreasonable and Unjust.

The remaining question concerns the legal sufficiency of the evidence adduced by appellee to show that the 32¢ city gate rate was confiscatory and unreasonable and unjust. The rate was alleged to be so because it would not afford a reasonable return on the fair value of the property used in the public service of delivering gas to the various city gates, and amounted to taking the property without just compensation or due process of law, in violation of the 14th amendment to the Federal Constitution. When viewed in the light of the presumption in favor of the validity of the rate order,

and the quantum and character of the evidence required to overcome such presumption, the evidence adduced by appellee was clearly insufficient to show the rate confiscatory or unreasonable and unjust on the ground alleged.

The rate fixed by the Commission is presumed to be valid, reasonable and just until it is declared otherwise by a court of competent jurisdiction. R. R. Com. *v.* Uvalde Construction Co. (Tex. Civ. App.) 49 S. W. (2d) 1113. In order to overcome this presumption in favor of the validity of the rate on the constitutional ground of confiscation, the burden of proof rests heavily upon appellee. Dayton P. & L. Co. *v.* Pub. Utilities Comm., 292 U. S. 290, 54 S. Ct. 647, 78 L. Ed. 1267. And in order to set aside the rate as being unreasonable and unjust, Article 6059 requires that appellee show by "clear and satisfactory evidence that such rate is unreasonable and unjust as to it." A controversy immediately arises as to the proper interpretation to be given these rules and statutory requirements as to the burden and quantum of proof. The Commission contends that the rate must be sustained against the attack that it is confiscatory and unreasonable and unjust, because it does not allow a reasonable return on the fair value of the property, when it is shown to be based upon substantial evidence adduced before the Commission, and that only the evidence adduced before the Commission on the rate hearing may be considered on appeal to the court. On the other hand, appellee contends that the hearing on appeal to the court of such issues is de novo, and that "due process of law requires submission to a judicial tribunal for determination upon its own independent judgment as to both law and facts according to the settled rules governing judicial action and decision." Otis Elevator Co. *v.* Indus. Comm. 302 Ill. 90, 134 N. E. 19, 21; Ohio Valley Water Co. *v.* Ben Avon Borough, 253 U. S. 287, 40 S. Ct. 527, 64 L. Ed. 908; Reagan *v.* Farmers' Loan & Trust Co., 154 U. S. 363, 14 S. Ct. 1047, 38 L. Ed. 1014. As regards the rate making power of the Commission, the Texas courts have adopted this wider scope of review. R. R. Comm. *v.* H. & T. C. R. R. Co., 90 Tex. 340, 352, 38 S. W. 750; R. R. Comm. *v.* Weld & Neville, 96 Tex. 394, 403, 73 S. W. 529; Gulf, C. & S. F. Ry. Co. *v.* R. R. Com., 102 Tex. 338,

113 S. W. 741, 116 S. W. 795; R. R. Com. *v.* San Antonio Compress Co. (Tex. Civ. App.) 264 S. W. 214 (writ ref. Id., 114 Tex. 582, 278 S. W. 1115); Houston Chamber of Commerce *v.* R. R. Comm. (Tex. Civ. App.) 19 S. W. (2d) 583, affirmed (Tex. Com. App.), 78 S. W. (2d) 591, and Missouri-Kansas & T. Ry. Co. *v.* R. R. Com. (Tex. Civ. App.) 3 S. W. (2d) 489, 494, affirmed Producers' Ref. Co. *v.* Missouri, K. & T. R. Co. (Tex. Com. App.) 13 S. W. (2d) 679, wherein this court said:

> "Rate making is essentially a legislative function, and operates prospectively. Railroad Com. v. Weld & Neville, above; Prentis v. Atlantic Coast Line Co., 211 U. S. (210), 226, 29 S. Ct. 67, 53 L. Ed. (150), 158, 159, and authorities there cited. And the same is true of many rules and regulations within the delegated powers of the commission. Rate making has been delegated to the Railroad Commission alone, and its acts in that regard have the force and effect of statutes, and are subject to review to the extent only that statutes of the same import are so subject, with the additional power which articles 6657 and 6658 confer upon the courts to determine whether a rate, etc. is unreasonable or unjust to the party complaining."

The case of Crowell *v.* Benson, 285 U. S. 22, 76 L. Ed. 598, in determining the scope of review and whether new evidence will be heard on appeal from a state commission's rate order, held as follows:

> "In cases brought to enforce constitutional rights, the judicial power of the United States necessarily extends to the independent determination of all questions, both of fact and law, necessary to the performance of that supreme function.' The case of confiscation is illustrative, the ultimate conclusion almost invariably depending upon the decisions of questions of fact. This court has held the owner to be entitled to 'a fair opportunity for submitting that issue to a judicial tribunal for determination upon its own independent judgment as to both law and facts. * * *.
>
> "Assuming that the Federal court may determine for itself the existence of these fundamental or juris-

> dictional facts, we come to the question—Upon what record is the determination to be made? There is no provision of the statute which seeks to confine the court in such a case to the record before the deputy commissioner or to the evidence which he has taken. * * *
>
> "We think that the essential independence of the exercise of the judicial power of the United States in the enforcement of constitutional rights requires that the Federal court should determine such an issue upon its own record and the facts elicited before it."

See, also, State Corp. Com. *v.* Wichita Gas Co., 290 U. S. 561, 54 S. Ct. 321, 78 L. Ed. 500; Lehigh Valley R. Co. *v.* Com'rs, 278 U. S. 24, 49 S. Ct. 69, 73 L. Ed. 161, 62 A. L. R. 895; Prendergast *v.* N. Y. Tel. Co., 262 U. S. 43, 43 S. Ct. 466, 67 L. Ed. 853.

As regards the statutory appeal authorized by Article 6059, to determine whether a rate order is unreasonable and unjust, it is manifest that the legislature intended for the trial on appeal to be de novo and upon new or additional evidence pertinent to the issue, because the complainant is required to show by "clear and satisfactory evidence that such rate is unreasonable and unjust as to it." Similar statutes regarding railroad rates have been so construed by the above cited Texas cases, and in other states. The scope of judicial appellate review of orders of administrative boards or commissions is usually controlled by legislative enactment. This may be either by a hearing de novo or it may mean merely the correction of non-permissible error. Freund on Administrative Powers over Persons and Property, 278. Statutes which authorize appeals from matters of purely administrative decision or discretion are usually construed to authorize only the correction of non-permissible error, or to favor the merely corrective scope of review. Illustrative of these matters is the question of issuing a license, or the granting of a permit, or determining whether a public necessity or convenience exists for bus or truck operation. In such cases the legislature does not vest in courts the administrative function of determining whether a license, permit, or certificate of convenience

or necessity should issue, but merely gives the courts authority to determine whether the action of the administrative board or commission is (a) beyond the power it could constitutionally exercise, or (b) beyond its statutory power, or (c) based upon substantial evidence.

As to such administrative matters the legal effect of the findings of fact by the administrative body approximates a question of law, and a finding without evidence is, of course, beyond the power of the administrative body. Nor will courts in such cases review conclusions of the administrative body based upon conflicting evidence; but will sustain its order if based upon substantial evidence. Such is the holding in the case of R. R. Comm. *v.* Shupee (Tex. Civ. App.) 57 S. W. (2d) 295, affirmed Id., 123 Tex. 521, 73 S. W. (2d) 505, and R. R. Comm. *v.* Lamb (Tex. Civ. App.) 81 S. W. (2d) 161. But the questions of whether a rate is confiscatory or unreasonable and unjust have been held to be legal or justiciable questions of fact, and as to which the wider scope of judicial appellate review seems to have been adopted by the legislature and courts of this state. The limited scope of judicial review of rates fixed by an administrative commission was first enforced (Peik *v.* Chicago, etc. Ry. Co., 94 U. S. 164, 178, 24 L. Ed. 97) by the courts; but was soon abandoned, and through a process of trial and argument of several cases, the present rule that the 14th Amendment to the Constitution protects the property of citizens from confiscation by an act of the legislature or by a commission to which legislative regulatory power has been delegated, was developed. State *ex rel.* Southwestern Bell Tel. Co. *v.* Pub. Serv. Com. (Mo. Sup.) 233 S. W. 425, 430.

But whether the scope of judicial review is a hearing de novo or the correction of non-permissible error, the appeal is still merely corrective. The question is not whether the court, if the order were originally before it, would make the same order as was made by the Commission, but only whether the commission has acted reasonably upon sufficient evidence, and whether any substantial right of the complaining party has been infringed. In determining the sufficiency of the evidence under the wider scope of judicial review, the question is not whether there is a scin-

tilla of evidence to support the order, but whether the order is fairly and substantially supported by the evidence, when viewed in the light of the presumption in favor of the order, and the quantum and character of the evidence required to overcome such presumption. Particularly is this so with regard to making rates or division of rates, which are legislative and not judicial in character, and necessarily imply a range of legislative discretion, which the courts must recognize, and with which they cannot interfere except where constitutional or statutory rights are violated. The reason for the court appeal being corrective only is well stated in the Bell Telephone case, *supra*, as follows:

> "The statutes declaring rates fixed by the Commission to be prima facie reasonable until that presumption is removed by one seeking their annulment are but a proper recognition of the power and purpose of the Commission, without which its acts would be mere empty declarations, whose effective operation would, in each instance, have to await judicial approval. Such a conception of the nature and powers of the Commission is wholly unauthorized. Organized, as the Statute creating the Commission clearly declares, for the purpose of supervising and regulating public service corporations, the courts, in reviewing its actions, proceed upon the assumption that the experience of the members of the Commission has especially fitted them for dealing with questions concerning the powers and activities of such corporations; and, despite the fact that the entire evidence will be reviewed, much consideration is to be given to the findings of the Commission, which if reasonable, and neither arbitrary nor capricious, will be deferred to. New York *ex rel.* N. Y. & Queens County Gas Co. *v.* McCall, 245 U. S. (345), loc. cit. 347, 38 S. Ct. 122, 62 L. Ed. 337."

In the case of R. R. Commission *v.* Galveston C. of C., 105 Tex. 101, 145 S. W. 573, 580, which construed the similar statutes authorizing appeals from railroad rates fixed by the Commission, and the statutory requirement that complainant show "by clear and satisfactory evidence that the

rates are unreasonable and unjust," the scope of judicial appellate review was held to be as follows:

> "The foregoing statute so guards the Commission from improper interference that the courts must regard its actions, when within the limits of its delegated powers, as being the result of a purpose to do justice between all parties, and as having resulted in just and correct action until it be shown by clear and satisfactory evidence to be otherwise. R. R. Commission *v.* Weld & Neville, 96 Tex. (394), 409, 73 S. W. 529. The language, 'clear and satisfactory evidence,' limits the power of courts in setting aside rates, etc., to cases in which it may be established by evidence which leaves no reasonable doubt in the judicial mind that the rate or rule is unjust and unreasonable. Willis *v.* Chowning, 90 Tex. 617, 40 S. W. 395, 59 Am. St. Rep. 842. It is true that this attributes to the work of the Commission a high degree of verity, but it is the plain language of the law, and is no doubt a wise provision.
>
> "It is not within the language nor the spirit of the law which authorizes the courts to review the action of the Railroad Commission that any court should investigate the methods adopted by the Commission in fixing its rates nor the motives or purposes which prompted such action. The result and its effect upon the rights of railroads and shippers mark the limit of judicial inquiry."

The rules and statutory requirements are general in nature and their applicability necessarily depends upon the facts in each case. No rule can be laid down as to rates which will apply uniformly to all sorts of utilities. In determining whether a rate is confiscatory or unreasonable and unjust because it may not in the future yield a proper return, the basis of calculation is the fair value of the property used in the public service. What may be a fair return for one may be inadequate for another, depending upon circumstances, competition or monopoly, public necessity, speculative and highly profitable enterprises, hazards, locality and risk. And where as in the instant case the evidence is conflicting and the conclusion to be drawn there-

from in respect of this or that item uncertain or speculative, the court should not interfere with gas rates in advance of any actual experience of the practical result of such new rates. Willcox *v.* Consolidated Gas Co., 212 U. S. 19, 29 S. Ct. 192, 53 L. Ed. 382, 48 L. R. A. (N. S.) 1134, 15 Ann. Cas. 1034; Brush Elec. Co. *v.* Galveston, 262 U. S. 443, 43 S. Ct. 606, 67 L. Ed. 1076; N. P. Ry. Co. *v.* North Dakota, 216 U. S. 579, 30 S. Ct. 423, 54 L. Ed. 624; Cedar Rapids Gas Light Co. *v.* Cedar Rapids, 223 U. S. 655, 32 S. Ct. 389, 56 L. Ed. 594; City of Louisville *v.* Telephone Co., 225 U. S. 430, 32 S. Ct. 741, 56 L. Ed. 1151; City of Knoxville *v.* Knoxville Water Co., 212 U. S. 1, 29 S. Ct. 148, 53 L. Ed. 371. Especially is this true where our statutes and the rate order here complained of provide that "this proceeding shall be kept open for such orders as may be proper." Immediately upon the rate in question being fixed, appellee applied to the courts to restrain its enforcement before an actual test was had under the reduced rate.

On the hearing before the Commission as well as on appeal to the court, five primary factors were considered as essential to the correct determination of whether the rate was confiscatory or unreasonable and unjust because it did not allow a reasonable return on the fair value of the property of appellee used in the public service of delivering natural gas to the various city gates, as follows:

1. What was the present fair value of the property of appellee used in the public service?

2. What was a reasonable annual allowance for depreciation of such property?

3. What were the reasonably necessary operating expenses?

4. What were the reasonable operating revenues?

5. What was a reasonable rate of return on the property used?

The fair value of the property used by appellee in the public service was determined by deducting from the reproduction cost new the accrued depreciation of such property. Since appellee was engaged in the integrated business of

producing, purchasing, transporting and selling natural gas to the distributing companies at the city gates of some 300 cities and towns in Texas and Oklahoma, it became necessary to allocate or segregate the property used in Texas as well as that used conjointly in both states, in order to determine the fair value of the property used in the Texas public service, the annual depreciation thereof, and the Texas operating expenses and revenue. In making the segregation and proof of fair value of the property, both the Commission and appellee used calculations, estimates and opinions of expert accountants and engineers. However, different methods of segregation were adopted by the parties. The method of segregation adopted by the Commission provided for allocation to Texas operations, or to intrastate commerce the value of all property located within the physical boundary of Texas. The short section of pipe line from Texas Panhandle field across the corner of Oklahoma and back into Texas was also allocated to Texas operations. Gas sales adjustment was made wherein Texas or intrastate operations were charged with the net amount of Oklahoma produced gas for the six-year (1929-1934) accounting period adopted by the Commission. No charge against Oklahoma or interstate operations was made for the use of the transmission lines and for equipment within Texas; the effect of which was to give free transportation in Texas of all Oklahoma produced gas. Texas and Oklahoma expenses and revenues were allocated in general accord with the segregation of the physical properties. Under this method the fair value of the property undepreciated used in Texas public service was $40,256,862.39, according to the calculations and opinions of the Commission's experts. After deducting the operating expenses and annual depreciation there remained for the last two years of the accounting period, being the two lowest revenue years of the period, Texas net revenue which would yield a return of 6.74% and 6.76%, respectively. The method of segregation used by appellee was materially different. Under its method of segregation all of the gas produced or purchased by appellee in Texas Panhandle field and transported by its private pipe lines across the corner of Oklahoma and back into Texas for sale and use, and all Oklahoma produced

gas were allocated to interstate commerce. The allocation was made by a determination of the specific gravity of the Oklahoma and Texas Panhandle gas on the one hand, and West Texas gas with which it was commingled in pipe lines on the other hand. It seems that the Oklahoma and Panhandle gas had about the same specific gravity. Appellee claimed that by determining the specific gravity of the gas in any particular pipe line, the percentage of Oklahoma-Texas Panhandle gas could be determined and allocated to that line. Appellee allocated operating expenses and revenue between the two states upon substantially the same basis as used for the property. An expert employed by appellee found the fair value of property used in Texas public service, based upon reproduction cost new, less depreciation, to be $38,350,882.32. He excluded from this calculation all property and equipment used in handling the Texas Panhandle field gas. If he had allocated such property to Texas and considered the fair value of the property as undepreciated, there would have been very little difference between his finding of fair value and that found by the Commission's experts. However, in all their elaborate calculations, estimates and opinions, the experts employed by the appellee allocated the Texas Panhandle gas to interstate commerce. We have held that this gas did not move in interstate commerce, and it necessarily follows that the testimony of the experts based upon the erroneous assumption that such gas did move in interstate commerce proved nothing material to this case. Appellee offered no other proof upon a correct segregation or allocation of the property, and the trial court erred in refusing the Commission's motion for an instructed verdict and for judgment declaring the rate order appealed from to be valid in every respect. The burden was upon appellee to show by clear and satisfactory evidence a proper segregation of interstate and intrastate properties and business, and to show the value of the property employed in intrastate business or commerce and the compensation it would receive under the rate complained of upon such valuation. Having failed to make a proper segregation of interstate and intrastate properties, appellee did not adduce the quantum and character of proof necessary to establish the invalidity of the rate as being con-

fiscatory, or unreasonable and unjust. Simpson *v.* Shepard, 230 U. S. 352, 33 S. Ct. 729, 57 L. Ed. 1511, 48 L. R. A. (N. S.) 1151, Ann. Cas. 1916A, 18; Allen *v.* St. Louis, I. & M. S. R. Co., 230 U. S. 553, 33 S. Ct. 1030, 57 L. Ed. 1625; Smith *v.* Illinois Bell Tel. Co., 282 U. S. 133, 51 S. Ct. 65, 75 L. Ed. 255.

Clearly the difference in theory as to whether the gas produced or purchased by appellee in the Texas Panhandle field and transported by its private pipe line across a corner of Oklahoma and back into Texas, where it was intended at all times to be sold and used, accounts for most of the important difference with respect to the fair value of the property used in Texas public service, the annual depreciation thereof, and particularly as to the operating expenses and revenues. For instance, the Texas Panhandle gas cost appellee 2¢ per thousand cubic feet at the well; whereas, the gas from all other sources or fields cost from 6 to 10¢ per thousand cubic feet. The advantage in favor of appellee in excluding this gas from intrastate commerce is apparent. The cost of the 2¢ gas would add only about $125,000 annually to Texas operating expenses, according to appellee's Exhibit No. 46; whereas, according to the same exhibit, which shows the percentage of the total cost of gas transported from the Panhandle field and sold in Texas, the Texas revenue would have been increased for the 1929-1933 period more than $1,500,000 annually; and calculations show that if other proper operating expenses were included and charged against the Panhandle gas, still the profit in such gas was more than in other gas handled by appellee either in Oklahoma or Texas. Thus the double advantage to appellee in freezing this gas from intrastate commerce and from state regulation is shown.

The appraisals also differ as to various units of transmission construction costs, due in a large measure to the difference in theory of segregation. Where they relate to the same property the appraisals are in every way comparable. Appellee used actual cost experiences and arbitrarily added 20% as possible contingencies. The Commission allowed only actual cost experience, which were substantiated by the testimony of contractors engaged in excavation and general construction work. At most the evidence merely presented the difference of opinions of equally

well qualified experts. Manifestly this evidence in absence of actual experience under the rate, does not meet the quantum and character of proof necessary to set aside the rate order as being confiscatory or unreasonable and unjust as to appellee.

The greatest difference between the parties relates to a proper allowance for depreciation and amortization. Appellee estimated that for both Texas and Oklahoma properties, exclusive of gas leasehold depletions, the annual requirement for depreciation and amortization was $3,465,-123.36. The Commission estimated that appellee should be allowed for annual depreciation and amortization of its Texas properties, exclusive of leaseholds, the sum of $831,-946.08. The actual experience of the appellee for the seven-year period as shown by its books, is as follows:

"Jan. 1, 1927, to Dec. 31, 1933, inclusive

Jan. 1st	Balance.	Accrual.	Net Charges.
1927	$8,294,762.08	$1,280,856.10	$245,097.73
1928	9,330,520.45	1,198,192.50	260,768.59
1929	10,267,944.36	1,190,062.06	450,335.00
1930	11,007,671.42	580,022.80	464,875.93
1931	11,122,818.29	1,841,779.61	720,014.28
1932	12,244,583.68	1,841,508.16	(Credit 62,725.18
1933	14,148,817.02	1,882,333.41	335,736.55
1934	15,695,413.88	Total....	$2,414,102.90"

Thus it is shown that the depreciation allowance of appellee's experts is speculative, at war with the actual experience, and plainly excessive. Against $2,414,102.90 for the seven-year period as evidenced by appellee's books, its experts estimate annual depreciation and amortization at approximately $1,000,000.00 per year more. With respect to such proof it was held in the case of Lindheimer *v.* Ill. Bell Tel. Co., 292 U. S. 151, 54 S. Ct. 658, 668, 78 L. Ed. 1182, that:

> "The company has had abundant opportunity to establish its contentions. In seeking to do so the company has submitted elaborate estimates and computations, but these have overshot the mark. Proving too much, they fail of the intended effect. • • •
>
> "Elaborate calculations which are at war with realities are of no avail."

The Commission adopted the sinking fund method for determining annual depreciation, which provides for an annual return on an undepreciated rate base; and which in addition to the annual depreciation of $831,946.08, also allowed 6% per annum on the accumulated depreciation reserve. The calculations and estimates of appellee applied to both Texas and Oklahoma properties, and since such calculations and estimates are so contrary to the experience of the company, they do not meet the quantum and character of proof required with respect to judicial appellate review of utility rates fixed by an administrative commission or board. Dayton P. & L. Co. *v.* Pub. Utilities Comm., *supra.*

With respect to operating expenses, except as to a few controverted items, and with respect to revenues, there is no substantial difference in the testimony as to totals of both Texas and Oklahoma for the years of the accounting period. However, the same controversy arises as to a proper segregation of such expenses and revenues to each state. This difference has already been pointed out, and since appellee failed to make proper segregation of the expenses and revenues, it failed to prove its case.

Many items of operating expense are so contrary to the actual experiences of appellee, or are so large as to be excessive on their face. A few of these will be adverted to as showing that in proving too much appellee's experts proved nothing.

Federal Taxes.

An item of between three and four hundred thousand dollars a year is set aside by the experts as federal income and other taxes. The company has never paid an income tax, and its liability therefor is now in litigation. The only testimony in the record with regard to the amount that should be paid for taxes by appellee in its department of the corporate hook-up was around $50,000 per annum. The testimony indicates that the Lone Star Gas Corporation, the holding company, has paid all of the income taxes for all of its affiliated companies; but if it be assumed that such payment is chargeable back to appellee company, a proper amount would not be more than $50,000 per year, instead

of the three or four hundred thousand dollars charged against it by the experts. Galveston Electric Co. *v.* Galveston, 258 U. S. 388, 42 S. Ct. 351, 66 L. Ed. 678.

Management Fees.

The evidence shows that the holding corporation has charged appellee management fees ranging from $78,000 to around $100,000 per year. These fees appellee claims were earned by four persons, Crawford, Mitchell, Gregory and Simpson. They are directors of one or the other corporations constituting the corporate set-up above referred to. Simpson seems to have rendered service as a purchaser of pipes for appellee. The item of pipes was the greatest of appellee's expenses. The evidence shows that if Simpson rendered any service in purchasing pipes at a discount, that no such discount would be any longer allowed, and that appellee would have to pay the quoted prices like anyone else. Manifestly this service is not worth anything in the future. Besides, he rendered the services prior to 1929, when the management fee was originated, and no compensation was required before that time. Other management fees were charged, as legal fees, accounting fees, and engineering and supervision fees. Appellee was organized in 1909, with a capital stock of $2,500,000, half of which was paid for with gas leases owned by the incorporators. Since then its capital stock has been increased to $12,500,000. It borrowed on its unsecured note or open account $17,600,000 from the holding corporation, which debt with others amounting to $19,000,000, have been gradually reduced. The holding corporation borrowed this money from one-half to two per cent less than it charged appellee. This ought to be sufficient management fees, if any should be demanded by the holding corporation. The holding corporation has been paid fair to large dividends annually on the stock of appellee owned by it. In addition, some of the holding company officers are paid salaries by appellee and the affiliated distributing companies. The proof as to the reasonableness of the management fee was not clear and satisfactory, as required to be under the aforementioned rule.

New Business Expenses.

These advertising or new business expenses vary from $81,000 to $126,000 per annum. Appellee does business with the affiliated corporations. Besides sale of the industrial gas, the affiliated corporations sell to the domestic and local burner tip consumers. Appellee proved only a small amount of advertising, nothing in proportion to the charges made by the experts in their account. Except for a few items, it made no showing how much advertising it did for the affiliated distributing companies; and certainly this $100,000 annual expense for advertising is not supported by the quantum and character of evidence required.

Cancelled and Surrendered Leases.

The undisputed evidence shows that appellee has gas reserves which are adequate for forty years to come. It has gas reserves in the largest gas fields in the world. Beginning in 1929, appellee began to charge off around $200,000 per annum for cancelled and surrendered leases. In view of its admitted large gas reserves, which will last for forty years, and in view of the fact that it is a matter of judicial knowledge that gas by the multiplied millions in cubic feet is being wasted daily because of the lack of a market, we think these large charges are unjustified. The Commission allowed the company for its gas produced from company owned wells the full prevailing price. They eliminated production expenses, drilling and tool expenses, dry holes, and cancelled and surrendered leases, because the method adopted of allowing the full prevailing field price concurrently paid to other gas owners necessarily eliminated such items. The owners of other gas wells bear all of these expenses, and it would seem that the price paid other owners includes all of these items of expense. West Ohio Gas Co. *v.* Public Utilities Comm., 128 Ohio St. 301, 191 N. E. 105. At any event, if appellee was entitled to some charge for leasehold depletions, the amount claimed was clearly too large and excessive. The burden was upon appellee to show that the charge was reasonable.

Regulatory Commission and General Expenses.

The experts employed by appellee charged in excess of $400,000 per annum for regulatory commission and general expenses. The proof did not show the reasonableness of any item of such expense. There was some character of litigation in Oklahoma and this present litigation. If the entire expense should be spread over a period of years since 1909, when the appellee began to do business, it would amount to some $16,000 per year. A witness for appellee testified that such annual amount would be reasonable. It is, therefore, manifest that $50,000 per year or better for such expenses is too much. This defendant began business in 1909, with a comparatively small capital stock. It has now a capital stock of $12,500,000, which is fully paid up. It owes approximately $17,600,000; it has properties in Oklahoma and Texas of the aggregate value of $75,000.000. Allocated to Texas public service is property valued at $40,000,000. Appellee offered evidence covering only about 3½ years next preceding the fixing of the rate as to its operating expenses. These calculations covered the depression years, which, of course, are the worst in its history; and even at that the last year shows an upward trend in its business. It is not shown to have lost money at any time, or to have failed to earn a fair return upon the property allocated to Texas, not even for the year 1933, which was the most abnormal one from the standpoint of temperature and financial depression. Its experts testified that its property is almost 85% perfect. From the very beginning appellee has been favored, enjoying a clear monopoly with all the rights of eminent domain. There is nothing in the history of appellee's business experience which would justify the exorbitant and large account sought to be charged in this item of expense.

Going Value.

In arriving at its rate base appellee included an item of more than $7,000,000 as "going value." Appellee has not experienced any losses on account of inception costs, which are usually included in going value. With the exception of

all items, inception costs of all kinds have been in reproduction cost new calculations. Appellee's was valued as an assembled and going business. ness has been profitable, and all inception costs doubt been long since paid out of rates heretofore and collected. The reproduction cost new value, mined in the instant case, allows for all overhead which, together with the reasonable operating ex- lowed, fully compensate appellee for all develop- ts which have been incurred, and are ample to ms entering into and forming a part of what is to as "going concern value." The following au- show clearly the impropriety of allowing going value under the facts of the instant case. Los Gas & Electric Corp. *v.* R. R. Com., 289 U. S. 287, 637, 77 L. Ed. 1180; Columbus Gas & Fuel Co. *v.* Com., 292 U. S. 398, 54 S. Ct. 763, 78 L. Ed. 1327, R. 1403; Dayton Power & Light Co. *v.* Utility Com., 290, 54 S. Ct. 647, 78 L. Ed. 1267; Galveston Elec- . Galveston, 258 U. S. 388, 42 S. Ct. 351, 66 L. Ed. D. C.) 272 F. 147.

Rate of Return.

he contention of appellee that the jury may have at a 6% rate of return was confiscatory or un- e and unjust. The issue of confiscation was not l to the jury, and we are clear in the view that the adduced by appellee did not raise a jury question ther a 6% rate of return was either confiscatory onable and unjust. The Commission found that of return on the fair value of the property used ublic service after allowing for all reason- ating expenses and for depreciation and amor- was sufficient. The burden was heavily upon o show by clear and satisfactory evidence that of return was confiscatory or unreasonable and o meet this test appellee was required to "estab- idence which leaves no reasonable doubt in the ind that the rate is unjust and unreasonable." m. *v.* Galveston C. of C., *supra*. This appellee

did not do. It offered the testimony of an interested witness and the testimony of experts employed by it to the effect that in their opinion an 8% or 10% rate of return would be reasonable. A disinterested expert testified that under present business conditions a 6% rate of return was entirely fair and reasonable. This evidence merely presented the difference of opinion of experts, and manifestly their opinion or opinions cannot be substituted for the finding of the commission that a 6% rate of return was fair and reasonable, which finding was based upon substantial evidence. In fact, six per cent per annum is the legal or statutory rate of interest in this State, and appellee offered no evidence which even tended to show that a 6% rate of return would confiscate its property, or was unreasonable or unjust. And since the rate order was calculated upon the fair value of the property used in the public service, after allowing very reasonable operating expenses and depreciation and amortization allowances, no reason exists why the 6% rate of return should be declared confiscatory; but to the contrary, it should be held to allow a fair and reasonable rate of return on the property dedicated to the public service by appellee.

A 6% rate of return has been held not confiscatory in the following cases: Willcox *v.* Consolidated Gas Co., 212 U. S. 19, 48, 50, 29 S. Ct. 192, 53 L. Ed. 382, 48 A. L. R. (N. S.) 1134, 15 Ann. Cas. 1034; Cedar Rapids Gas Light Co. *v.* Cedar Rapids, 223 U. S. 655, 670, 32 S. Ct. 389, 56 L. Ed. 594; Des Moines Gas Co. *v.* Des Moines, 238 U. S. 153, 172, 35 S. Ct. 811, 59 L. Ed. 1244. See, also, Stanislaus County *v.* San Joaquin & King's River C. & I. Co., 192 U. S. 201, 216, 24 S. Ct. 241, 48 L. Ed. 406; West Ohio Gas Co. *v.* Public Utilities Com., 128 Ohio St. 301, 191 N. E. 105, 115; State *ex rel.* Capital City Water Co. *v.* Public Service Comm. of Mssiouri, 298 Mo. 524, 252 S. W. 446, 454-459.

We are also clear in the view that where a state commission fixes a utility rate so as to allow a 6% rate of return on the property used in the public service, the courts will not, prior to a fair test of such rate, declare same void, unless the evidence establishes that it is confiscatory or

invalid as a matter of law. Denver Union Stock Yard Co. *v.* United States (D. C.) 57 F. (2d) 735, 752, 753; State *v.* Public Service Com., 298 Mo. 524, 252 S. W. 446, 458; Knoxville *v.* Water Co., 212 U. S. 1, 15, 29 S. Ct. 148, 53 L. Ed. 371; West Ohio Gas Co. *v.* Public Utilities Comm., 128 Ohio St. 301, 191 N. E. 105, 110, Cedar Rapids Gas Light Co. *v.* Cedar Rapids, 223 U. S. 655, 666, 670, 32 S. Ct. 389, 56 L. Ed. 594; Willcox *v.* Consolidated Gas Co., 212 U. S. 19, 51, 29 S. Ct. 192, 53 L. Ed. 382, 48 L. R. A. (N. S.) 1134, 15 Ann. Cas. 1034; Railroad Com. of Louisiana *v.* Cumberland Tel. & Tel. Co., 212 U. S. 414, 426, 29 S. Ct. 357, 53 L. Ed. 577.

The calculations, estimates and opinion of its experts show a studied effort on the part of appellee to charge large items as operating expenses and depreciation, at war with the actual experience of the company, and we find no proof which would authorize the trial court to submit any issue to the jury, but find that appellee wholly failed to meet the burden of proof placed upon it, and to show by clear and satisfactory evidence that the rate was confiscatory, unjust, and unreasonable as to it. Especially is this true in view of the rule that absence actual experience under the rate fixed, the courts will not disturb a rate where the evidence is so conflicting, and the conclusions to be drawn therefrom in respect to this or that item uncertain and speculative; and particularly is this true where, as in the instant case, if it be shown in actual experience that the rate would not afford a reasonable return and was confiscatory, appellee is free to make another application for relief before the Commission.

Judgment of the trial court declaring the rate to be unjust and unreasonable is reversed. The injunction granted by the trial court is dissolved, and the city gate rate of 32¢ fixed by the Commission is declared to be just, reasonable and valid in every particular.

M. B. Blair,
Associate Justice.

Judgment trial court reversed; Injunction Dissolved.
Filed July 10, 1935.

APPENDIX "B".

Opinion of Court of Civil Appeals on Motion for Rehearing.

(Reported 86 S. W. (2d) p. 506)

No. 8238.

Motion No. 8153.

THE STATE OF TEXAS *et al, Appellants,*

vs.

LONE STAR GAS COMPANY, *Appellee.*

ON APPELLEE'S MOTION FOR REHEARING.

On motion for a rehearing appellee makes the claim that the record does not sustain some of our findings of fact. No reference is made to the record in support of such claim. Most of the asserted discrepancies relate to the valuation of the property used in the public service, or to alleged necessary operating expenses. We held that as a matter of law appellee failed to establish by clear and satisfactory evidence the ultimate fact issue, to-wit: Whether the rate fixed by the Commission was so low as not to afford a reasonable return on the fair value of the property used in the Texas public service. Appellee was afforded a seven months hearing before the Commission and a three months trial on appeal to the court. It made no segregation as between its Texas and Oklahoma properties and operations; and did not prove the fair value of the property used in the Texas public service. The question of the value of such property determines the reasonableness of the rate and probably, in the ultimate analysis, adequacy of service and principles of financing. Valuation of such public service property is in the main a matter of estimate or opinion, and closely resembles discretion as regards the finding of value by an administrative commission. In any event, a scientific or statutory standard of absolute value is unattainable; and because of this uncertainty of value, except where the evidence clearly shows gross over or under valuation, or mistake, inequality or fraud in the appraisal,

the finding of value by an administrative commission is generally given finality. Especially is this the rule in absence of an actual test under the new rate. In addition to the authorities cited in the original opinion, see the following: People *v.* Board of Assessors, 39 N. Y. 81; Taylor *v.* L. & N. R. Co. (C. C. A.) 88 F. 350; Chicago *v.* Burtice, 24 Ill. 489; State Railroad Tax Cases, 92 U. S. 575, 23 L. Ed. 663; Hilton *v.* Merritt, 110 U. S. 97, 3 S. Ct. 548, 28 L. Ed. 83; People *v.* State Board of Tax Com'rs, 196 N. Y. 39, 89 N. E. 581.

Motion overruled.

APPENDIX "C".

Court Rules.

1. *Rule 4 of the Supreme Court of Texas:*

When the application shall have been filed for a period of ten days, if the court shall determine to refuse the same, then whether the defendant has answered or not, the clerk of the court will retain the application, together with the transcript and accompanying papers, for fifteen days from the day of rendition of the judgment refusing the writ. At the end of that time, if no motion for rehearing has been filed, or upon the overruling or dismissal of such motion, in case one has been filed, the clerk of this court shall transmit to the Court of Civil Appeals to which the writ of error is sought a certified copy of the orders of this court denying such application and of the order overruling the motion for a rehearing thereof, and shall return the papers which belong to that court to the clerk thereof, but shall retain the petition for writ of error.

A motion for rehearing of an application for writ of error is not a matter of right, but in case such motion shall be filed within fifteen days after the refusal of the application and before the court shall adjourn for the term, the court will consider the same if it be based upon a ground not embraced in the application or contains the citation of authorities not before cited. The presentation of any point

or points presented in the application without urging some new argument or citing some new authority will be deemed a sufficient ground for dismissing the motion.

2. *Rule 66, Texas Courts of Civil Appeals:*

Upon the presentation to him of an application for a writ of error, the clerk of the Court of Civil Appeals shall withhold the mandate until properly advised of the disposition of the case by the Supreme Court.

3. Facts Relating to Claimed Denial of Adequate Judicial Review 51

V. Specification of Errors 51-60

VI. Summary of Argument 60-63

ARGUMENT

Point One—The transportation of the Wheeler County gas through Oklahoma, for sale and delivery at city gates in Texas, constitutes interstate commerce, and the rate order as applied to it violates the Commerce Clause 63-104

1. The interstate character of the movement of this gas is fixed by the fact that it is transported through another State 65-70
2. The motives moving appellant to construct its line through Oklahoma are immaterial 71-74
3. Commingling of a part of this gas is without effect on commerce issue 74-76
4. Size of appellant's interstate business as compared with intrastate business is not material 76-78
5. State court's holding that commission had power to prescribe reasonable rates applicable to interstate deliveries is wrong 79-82
6. Failure of Congress to regulate gas pipe lines 82-83
7. Corporate affiliation between appellant and distributing companies is without effect on commerce issue 83-97
8. The rate order is indivisible; and, being void as to interstate deliveries, it is wholly void 97-104

Point Two—The transportation, sale and delivery in Texas of gas produced or purchased in Oklahoma constitutes interstate commerce, and the order as applied to it violates the Commerce Clause 104-110

1. Various points made by State court in respect to this gas are untenable 105-110

Pages

Point Three—State court's holding that appellant's evidence showing value of its entire "integrated operating system" and revenues and expenses connected therewith was not material to confiscation issue is plainly wrong 110-124

1. This ruling of State court denied appellant fair opportunity to prove that rate was confiscatory 115-119

2. If segregation was necessary, then proper basis was laid in the evidence and, presumptively, jury made segregation 119-124

Point Four—State court's holding that triers of fact were without power to settle conflicts in evidence denied appellant adequate judicial review of order on tendered issue of confiscation 124-134

Point Five—Jury finding that rate was confiscatory is sustained by clear and satisfactory evidence, and judgment of Court of Civil Appeals should be reversed and that of District Court affirmed 134-170

1. Application of the rate considered in the light of the evidence as to appellant's integrated properties and operations 139-158

   (1) Discussion of the State court's criticism of

   (a) Certain expense items 139-144
   (b) Going value 144-147
   (c) Rate of return 147-149
   (d) Depreciation, depletion and amortiaztion reserve accruals 149-158

2. The application of the rate to appellant's intrastate operations as determined by its segregation 158-159

3. The application of the rate to appellant's Texas properties and operations as segregated by the appellees 159-165

4. The application of the rate to appellant's Texas properties and operations, these

Pages

properties being identified by applying appellees' formula of segregation to the entire integrated operating system; and discussion of the application of the rate to various bases of fact supported by the record 165-170

VII. The judgment of the Court of Civil Appeals sustaining the rate order, challenged by appellant as being repugnant to the Constitution of the United States, should be reversed and the rate order adjudged to be void 170

SUPREME COURT OF THE UNITED STATES

October Term, 1937

No. 313

LONE STAR GAS COMPANY, *Appellant*,

vs.

STATE OF TEXAS, ET AL., *Appellees*

Appeal from the Court of Civil Appeals, Third Supreme Judicial District of Texas

---

BRIEF FOR APPELLANT

Introductory Statement.

This is an appeal from a final judgment of the Court of Civil Appeals for the Third Supreme Judicial District of Texas, sustaining a rate order of the Railroad Commission of Texas, challenged by

appellant as being repugnant to the Commerce Clause and to the Due Process Clause of the Fourteenth Article of Amendment to the Constitution of the United States.

The appellant is a gas pipe line company engaged in the business of producing, selling, transporting and delivering gas in wholesale quantities to distributing companies at city gates in Oklahoma and Texas. By the challenged rate order the Railroad Commission reduced appellant's prevailing city gate rate of 40¢ per MCF, applied by it under contracts with the distributing companies, to 32¢ per MCF, and directed that the reduced rate be applied to all city gate delieveries of gas in Texas, including

(a) gas produced or purchased in Wheeler County, Texas, and transported by appellant through the State of Oklahoma and back into Texas for delivery at city gates in Texas; and

(b) gas produced or purchased in Oklahoma and transported by appellant to city gates in Texas.

I.

Opinions of the Court Below.

The opinions of the Courts of Civil Appeals of Texas are no longer officially reported. The opinion of the Court of Civil Appeals in this case is unofficially reported as State of Texas, et al, vs. Lone Star Gas Company, 86 S. W. (2d) 484. The Court's opinion filed in overruling appellant's motion for rehearing is reported under the same title, 86 S. W. (2d) 506.

II.

Jurisdiction of the Court.

This Court has jurisdiction of this appeal under Section 237 of the Judicial Code, as amended; USCA, Title 28, Section 344(a).

Appellant duly filed its Statement as to Jurisdiction, as required by Paragraph 1 of Rule 12, as amended. No opposing statement was filed by appellees. Probable jurisdiction was noted by order entered October 11, 1937.

The specific claims advanced and the rulings made in the State court which are relied upon as the basis of this Court's jurisdiction, together with a specification of such of the assigned errors as are intended to be urged, are hereinafter presented, *infra*, pp. 51-60.

The opinion of the State court expressly shows that the Federal questions presented in this Court were raised in, and were duly considered and decided by, the State court. (V, R. 3334, 3335, 3370.)*

III.

Statement of the Case.

The suit involved the validity of an order of the Railroad Commission of Texas prescribing the maximum rates that may be collected by appellant for gas sold and delivered by it in wholesale quantities to distributing companies at the city gates of

*In making references to the record we shall refer first to the number of the volume and then to the page.

approximately 275 cities and towns in the State of Texas.

Appellant was incorporated under the laws of the State of Texas on June 4, 1909. It has acquired and now owns and operates not only pipe lines, compressor stations, and other equipment necessary for the transportation and sale of natural gas but also gas leases, gas wells, well drilling equipment, and other property used as a part of its production system. It operates approximately 4,000 miles of high pressure pipe lines, located in Oklahoma and Texas, through which it transports natural gas to the city gates of more than 300 cities and towns located in the States of Oklahoma and Texas, where it sells and delivers such gas in wholesale quantities to gas distributing companies operating therein. (I, R. 15.) The distributing companies then deliver the gas to ultimate consumers through low pressure systems. The distributing companies, with the exception of two companies, one operating at Waxahachie and the other at Gainesville, Texas, are corporations affiliated with the appellant, being subsidiaries of the same parent corporation. The appellant makes two city gate deliveries at Waxahachie, one to an independent corporation and the other to an affiliated corporation. (IV, R. 2312, 2342.) The distributing company at Gainesville is an independent corporation. (V, R. 3340.)

The sale and delivery by appellant of gas at city gates to distributing companies is governed by long term contracts between appellant and such companies, and the contract price is 40¢ per MCF, with negligible exceptions. The deliveries to the affiliated

companies are made under substantially the same kind of contracts and in the same manner as are the deliveries made to the independent companies. (IV, R. 2306-2356.)

Appellant's pipe line system crosses the State line between Oklahoma and Texas eight times. A map showing the location of appellant's lines in Oklahoma and Texas is appended hereto.

Three of its lines, designated as Lines H, 2nd H, and G, transport gas from Oklahoma to Texas—gas previously produced or purchased in Oklahoma. (II, R. 1464.) Another line, designated as Line A, extends from the Shamrock gas field in Wheeler County, Texas, (a part of the great Texas Panhandle gas field) into Oklahoma and then runs south through Oklahoma approximately parallel to the west line of Oklahoma and again crosses the State line, coming again into Texas near Quanah, Texas. (II, R. 1465.) The line then extends generally in a southeasterly direction through Texas to Petrolia, Texas, where it joins Lines H and 2nd H coming from Oklahoma. (II, R. 1465.) Line A furnishes the exclusive supply of gas, delivered at city gates, to many cities and towns located on the line, including the important city of Wichita Falls. After this line reaches Texas it is tapped by a branch line extending north again into Oklahoma and serving various Oklahoma cities. (II, R. 1468.) Appellant also has two other lines extending from Texas northward into Oklahoma and serving certain Oklahoma cities and towns, these being designated as Line E-5 and Line E-16. (II, R. 1471, 1476.)

A map showing the location of appellant's lines in Oklahoma and Texas is appended hereto.

An applicable Texas statute subjects gas pipe lines to the "jurisdiction, control and regulation" of the Railroad Commission of Texas *(Art. 6050, Revised Civil Statutes of Texas, 1925)*. The commission is authorized to fix reasonable prices and rates "for producing, transporting, selling and delivering gas by such pipe lines." *(Art. 6053, Revised Civil Statutes of Texas, 1925.)** The challenged order was promulgated under Article 6053.

1. The Challenged Order.

After investigation and hearing the Railroad Commission of Texas, on September 13, 1933, entered its order reducing appellant's wholesale city gate rate, as fixed by its contracts with the distributing companies, from 40¢ to 32¢ per MCF. The order follows:

"The Railroad Commission having instituted a proceeding upon its own motion inquiring into the rates charged by the Lone Star Gas Company for domestic gas sold to distributing companies at the city gate station, hereby finds as a fact that the rate of $0.40 per thousand cubic feet as now charged by Lone Star Gas Company is unfair, unjust and unreasonable.

"Basing its order on the foregoing finding of fact and on such other findings and statements of fact as are set out in the opinion next preceding this order, or in this order

*These and other Texas statutes relating to gas utilities and their regulation are set forth in Appendix "A," *infra*, pp. 171-173.

"IT IS ORDERED, ADJUDGED and DECREED that effective as of the next billing date the Lone State Gas Company shall charge, bill and receive for domestic gas at the city gate from all distributing companies served by it, a rate not to exceed $0.32 per thousand cubic feet.

"IT IS FURTHER ORDERED, ADJUDGED and DECREED that a rate not to exceed $0.32 per thousand cubic feet at the city gate is hereby fixed, approved and promulgated and found and declared to be fair, just and reasonable and shall remain in force and effect until the Commission shall have otherwise determined, pursuant to other proceedings in respect to the finding of city gate rates for domestic gas on said Lone Star Gas Company's lines.

"IT IS FURTHER ORDERED, ADJUDGED and DECREED that this proceeding shall be kept open for such further orders as may be proper.

"The foregoing opinion and order are hereby approved and ordered filed as the opinion and order of the Railroad Commission of Texas." (I, R. 116.)

2. The Commission's Findings.

The opinion "*next preceding this order*," and made a part of the order, contains elaborate findings of fact stating in detail how the commission valued appellant's properties, what property was included in the valuation, and what operating revenues were considered and what expense items were allowed as proper deductions from the operating revenues. (I, R. 14-116.)

Pertinent portions of the commission's findings are stated and summarized as follows:

(1) As to the unified nature of appellant's properties and business operations in Oklahoma and Texas the Commission made this finding:

"The Lone Star Gas Company, a Texas corporation, is engaged in the production, transportation and sale at wholesale of natural gas. It operates an integrated pipe line system of approximately 4000 miles and engages in both interstate and intrastate commerce in the selling of gas to some 300 cities and towns within the States of Oklahoma and Texas.

"The company's Texas properties and its Oklahoma properties constitute parts of an integrated operating system. For that reason we have considered the Oklahoma properties and operations and the effect thereof on the revenues and the expenditures within Texas. On this basis we have fixed a rate for application within the jurisdiction of Texas." (I, R. 15.)

Having made this finding, the Commission then proceeded to value appellant's "integrated operating system" and to consider its operating revenues and expenses incident to its "integrated operating system." (I, R. 14-16.)

The year 1931 was used "as a basis for finding the city gate rate which would earn a fair return." (I, R. 16.)

(2) The Commission directed the reduced rate to be applied to all sales and deliveries made by appellant to distributing companies at city gates in Texas, drawing no distinction between interstate and intrastate commerce. (I, R. 116.) The commission found that appellant "engages in both interstate and intrastate commerce in the selling of gas to some 300 cities and towns in the States of Oklahoma and Texas." Apparently, therefore, the commission, in applying its rate to all Texas deliveries, proceeded on the theory that it had the power to prescribe rates

applicable to all of the deliveries, even though some of the deliveries might constitute interstate commerce.

(3) In respect to a rate base, the commission found "a reproduction cost new as of December 31, 1931, for transmission and production properties, exclusive of leaseholds, of $44,606,337.16"; and "a fair value of leaseholds as of December 31, 1931, of $1,991,613.92"; and a rate base of $46,246;617.53. (I, R. 19.)

The rate base findings of the commission are summarized on pp. 66-67 and 100 of the Record, Volume I. The book cost of appellant's integrated operating system was found by the commission to be $47,696,533.11, as of December 31, 1931. (I, R. 109.) This did not include material and supplies, cash working capital, or going concern value.

(4) The commission found gross revenues for the year 1931 in the amount of $9,301,862.65. Total expenses for the year were found to be $4,174,807.47, leaving $5,127,055.18 available for depreciation, depletion and return on the producing and transmission properties. (I, R. 18.)

(5) Annual reserve accruals for depreciation and depletion were fixed on a 6% sinking fund basis and amounted to $968,066.98 for depreciation and $15,631.45 for depletion. This allowance amounts to approximately 2% of the rate base found by the commission. (I, R. 19.) Detailed findings as to depreciation will be found in I, R. 76-98, and as to depletion, I, R. 99.

(6) Having found $5,127,055.18 available for depreciation, depletion, return and Federal income taxes for the year 1931, the commission deducted therefrom depreciation in the amount of $968,066.98, and thereby found $4,158,988.20 as the amount available for depletion, Federal income taxes and return for the year 1931. By deducting $15,631.45 for depletion, it found $4,143,356.75 as the amount available for return and Federal income taxes for the year 1931, on appellant's integrated operating system. (I, R. 99.)

(7) The commission found "a minimum fair rate of return for the year 1931 to be 6%," and that this amounted to $2,774,797.05 when applied to the rate base as of December 31, 1931. It then computed excess of net earnings over a 6% return at $1,368,559.70, which amounted to 8.039¢ per MCF on the domestic gas sold during 1931. On this basis it was determined that the 40¢ gate rate charged by appellant should be reduced 8¢ per MCF and a rate of 32¢ per MCF established in its place. (I, R. 102-105.)

3. Proceedings in the United States District Court.

The rate order was promulgated September 13, 1933. On September 22, 1933, appellant filed a suit in the District Court of the United States for the Western District of Texas, wherein it sought to enjoin the Railroad Commission and the Attorney General of Texas from enforcing said order, and wherein it attacked the validity of the order on the ground that it amounted to a direct regulation of appel-

lant's deliveries of gas in interstate commerce, in violation of the Commerce Clause of the Federal Constitution, and on the further ground that the prescribed rate was confiscatory and violative of the Due Process Clause of the Fourteenth Amendment to the Federal Constitution. (III, R. 2183-2207.) The United States District Court issued an order temporarily restraining the enforcement of the order.

Thereafter, this suit was filed by appellees in the Fifty-third District Court of Travis County, Texas, in an effort to fix jurisdiction in that court, under the provision of Section 266 of the Judicial Code; the appellees alleging in their pleadings, upon which the trial was had, that they desired to have the constitutional questions raised by appellant in its attack on the rate order determined in the courts of the State. They further sought to have the commission's rate order enforced. (I, R. 12.) In the State court appellees sought an injunction, upon final hearing, restraining appellant from violating the rate order; and further prayed that the enforcing of said rate order be stayed pending final judgment. (I. R. 11.) A stay order was entered in the State court; (I, R. 121); and subsequently the Federal court, following what it deemed to be proper procedure under Section 266 of the Judicial Code, entered an order staying all proceedings in that court and also restraining the enforcement of the rate order pending final determination of the case filed in the State courts. (I, R. 117-121.)

Perforce these stay orders of the State and Federal courts, the 32¢ rate prescribed in the commission's

order has not been put into effect and appellant has continued to charge the 40¢ rate.

4. Proceedings in the State Trial Court.

Appellant, after unsuccessfully resisting the procedure resorted to by appellees to force it to litigate its attack on the commission's order in the State courts, and reserving its exceptions, (I, R. 136), answered in the State court, setting up its defense and grounds of attack upon the rate order and the trial was there had on Appellant's Second Amended Answer (I, R. 122-161) and its Second Supplemental Answer (I, R. 161-170).

(1) *The Pleadings.*

Appellant's grounds of attack on the rate order were:

That the transportation, sale and delivery by appellant at wholesale to local distributing companies, through high pressure lines at city gates in Texas, of gas produced in Wheeler County, Texas, and transported into and through Oklahoma and back into Texas without interruption, constituted interstate commerce, and that the attempted regulating and fixing of appellant's city gate rates for the gas thus transported, sold and delivered violated Cl. 3 of Article I of the Constitution of the United States, vesting in Congress the power to regulate commerce among the several States; and that the same was true of the gas produced or purchased by appellant in the State of Oklahoma and transported in high pressure lines to Texas for sale and delivery at city gates in Texas. (I, R. 123-124; 131-132; 147-151.)

That the prescribed rate was confiscatory and therefore repugnant to the Due Process Clause of the Fourteenth Amendment to the United States Constitution. (I, R. 147-151.) The facts upon which the appellant based its claim that the rate order was confiscatory were specifically alleged.

These allegations cover the value of appellant's property (I, R. 141, 146); the elimination by the commission of property used and useful in rendering the public service for which the rate was charged, including capital additions to such properties made the year 1932 and costing $2,257,682.07 (I, R. 142); the book cost of the property (I, R. 141, 146); the amount required to be annually set aside to reserve for depreciation, depletion and amortization as against the commission's allowance (I, R. 138); and the amount available under the 40¢ rate; and that the amount of revenue available for return, after making all proper deductions, was so low as to show beyond doubt that the prescribed rate was confiscatory. (I, R. 145.)

We deem it unnecessary to go further into the details of appellant's pleadings. That the Federal rights and defense it now claims were expressly and sufficiently pleaded has not been denied. The opinion of the State court expressly shows that the Federal rights and defenses now asserted by appellant were duly asserted in the State courts.

(2) *The Evidence.*

The trial was entirely *de novo*. The record of the evidence heard by the commission was offered in evidence by appellees but was not received by the trial court.

Appellees, as plaintiffs in the trial court, introduced the commission's order; the stay order of the Federal Court; and a stipulation that the prescribed rate had not been put into effect, and rested their case. (I, R. 301-309, 310.) The commission's findings were later introduced in evidence by appellant to show the basis for the commission's order. The order recites that it was based on the findings and they were made a part of it. (I, R. 116.) Appellant's motion for a directed verdict having been overruled, (I, R. 310) it then introduced evidence in support of its attack on the rate order. This included evidence showing the interstate character of its business. This evidence is hereinafter summarized, *infra*, pp. 21-34. It also introduced evidence as to the value of its properties, depreciation reserve accruals, revenues, expenses, rate of return and other facts pertinent to the confiscation issue. This evidence covered appellant's operating experience for the years 1931, 1932, 1933, and the twelve months ended April 30, 1934, the latest date as to which evidence was available at the time of trial.

The evidence thus introduced by appellant dealt, first, with its "integrated operating system"; and was in direct rebuttal of the commission's findings. This evidence is hereinafter summarized, *infra*, pp. 34-43. Appellant's evidence dealt next with its properties and business operations as segregated by the appellant between interstate and intrastate commerce or service; and this evidence is hereinafter summarized, *infra*, pp. 43-44.

Thereafter appellees undertook to demonstrate that the commission's order would afford a reason-

able return. This was done by segregating what the commission had found to be an "integrated operating system" as between Texas and Oklahoma. The evidence in support of appellees' segregation allocated to Texas the property physically located in Texas and to Oklahoma the property physically located in that State. It excluded the value of all of appellant's production system properties located in Texas, having an actual cost of $5,191,539.42, and also excluded all property in Oklahoma used in producing and transporting gas to points in Texas and substituted therefor arbitrary and inadequate expense allowances hereinafter discussed, *infra*, pp. 44-50. Under this segregation, operating revenues and expenses were similarly segregated as between Oklahoma and Texas. No evidence was offered by the appellees relating to the property constituting the appellant's "integrated operating system" or its value or the amount of net revenues accruing therefrom. No evidence was offered in support of the findings of the commission as they were made, these findings covering, as we have already pointed out, all of appellant's properties and operations as an "integrated system."

We hereinafter separately submit summary statements of the facts affecting the issues involved; *infra*, pp. 21-34; p. 51; pp. 34-50.

(3) *Charge, Verdict and Judgment.*

The case was tried by a jury. The court submitted to the jury the following special issue:

"Do you find from the evidence in this case that, as applied to points in Texas, the order of the Rail-

road Commission of Texas, bearing date of September 13, 1933, providing for a rate of not exceeding 32¢ per thousand cubic feet of gas sold to the distributing companies at the gates of the points served, is unreasonable and unjust as to the defendant Lone Star Gas Company? Answer this question yes or no."

The jury answered: "Yes." (I, R. 192-195.)

In submitting the above special issue the trial court further instructed the jury as follows:

"In determining your answer to said issue, you are instructed that the defendant, Lone Star Gas Company, is entitled to receive a fair return at this time on the present fair value of its property that is used and useful in the public service, after first deducting all necessary operating expenses and a fair and reasonable amount for depreciation of said property; and that, in determining what is a fair value of said property, you will take into consideration the reasonable worth of the property at this time that is being used and useful in the public service, including the reproduction cost new of said property, annual depreciation, and the amount of going value, if any, that inheres in said property." (I, R. 194-195.)

The court further instructed the jury that "an unreasonable and unjust rate" was one "so low as to have not provided for a fair return upon the fair value of defendant's property used and useful in supplying the service furnished by said defendant." (I, R. 194.)

The charge further defined the terms "fair value," "fair return," "used and useful," "operating expenses," "annual depreciation," "reproduction cost new," and "going value." (I, R. 193.)

The jury's verdict, interpreted in the light of the charge, imports that the prescribed rate would not yield a fair return on the fair value of appellant's public service properties and is therefore confiscatory.*

On this verdict the trial court rendered judgment annulling the commission's rate order and enjoining the enforcement of the prescribed rate against appellant. (I, R. 197.)

5. Proceedings in the Court of Civil Appeals.

Appellees then prosecuted their appeal to the Court of Civil Appeals for the Third Supreme Judicial District of Texas. By counter propositions presented in its brief and by cross-assignments of error appellant duly presented its contention that the trial court erred in failing to sustain its interstate commerce defenses, as well as its confiscation defense.† (V, R. 3329-3332.)

On appeal, the Court of Civil Appeals, after stating and discussing at length appellant's interstate commerce and confiscation defenses, overruled same, reversed the judgment of the trial court, dissolved the injunction granted by that Court, and declared the rate prescribed by the commission to be "just,

---

*This Court in *United Gas Public Service Company vs. State of Texas, et al.*, (unreported), decided February 14, 1938, interpreted a similar verdict, construed in connection with a similar charge, as expressing a finding on the issue of confiscation. The verdict there was in favor of the commission; here it is in favor of the utility.

†The judgment of the trial court being in favor of appellant, it was not in fact required, under the State practice, to present any cross-assignments of error.

valid and reasonable in every particular." (V, R. 3333-3370.

The Court of Civil Appeals held:

(1) That the transportation by appellant in its high pressure line (designated as Line A) of gas produced or purchased in Wheeler County, Texas, into and through the State of Oklahoma and thence back into Texas for sale and delivery at city gates, in wholesale quantities, "is not interstate commerce as a matter of fact." (V, R. 3345-3348.) In this connection the court further held that appellant's "primary duty is to serve Texas citizens with gas produced from Texas soil" and that "the mere fact that appellee has selected a route through Oklahoma" could not work a change in the character of its business and that "this circuitous route of delivery of gas through Oklahoma" could not affect the police power of Texas "to make or fix reasonable rates" for gas sold in Texas (V, R. 3346-3347); and that, "with this in view but one practical conception can be drawn from the whole transaction involved and that is, the gas produced in Texas and intended to be delivered, sold and used in Texas is intrastate commerce." (V, R. 3346-3347.)

(2) That the transportation in appellant's high pressure Lines H, 2nd H, and G of gas produced or purchased by appellant in the State of Oklahoma and intended for sale and delivery at city gates in Texas does not move in interstate commerce when it reaches the city gates in Texas for delivery. (V, R. 3348-

3352.) In this connection the Court made certain other rulings that will be hereinafter specifically discussed, *infra*, pp. 105-110.

(3) That even though a part of appellant's gas deliveries in Texas may have constituted interstate commerce, the rate order was nevertheless valid as applied to such interstate deliveries because the prescribed rate was, in the view of the court, a reasonable rate; and the court ruled, in this connection, that the prescribing by the State of reasonable rates to be applied to interstate deliveries affects interstate commerce, not directly, but only "incidentally or indirectly." (V, R. 3347, 3350-3352.) The Court held that even if appellant's deliveries constituted interstate commerce, "the 32¢ rate fixed by the Commission in no manner interfered with, impeded or burdened the flow of gas from Oklahoma, but such gas may be sold in competition with Texas gas and at the same reasonable price fixed by the Commission." (V, R. 3352.)

The court, in this connection, emphasized the fact that Congress had not authorized the Interstate Commerce Commission to regulate such rates and had not otherwise provided for their regulation, and held that absent legislation by Congress, "the State Commission, in the exercise of the police power of the State to regulate and control public gas utilities, had the power to fix reasonable rates for gas delivered by appellee to distributing companies at the city gate, although interstate commerce may be indirectly or incidentally affected thereby." (V, R. 3352.)

(4) The court overruled appellant's claim that the prescribed rate was confiscatory, and held, in this connection, that appellant's evidence on the issue of confiscation was legally immaterial and of no probative value because of appellant's alleged failure to make a proper segregation of its properties and business operations as between interstate and intrastate commerce, or as between Oklahoma and Texas operations. The questions arising in this connection and the evidence affecting them are hereinafter discussed, *infra*, pp. 110-124.

(5) The court further made certain rulings relating to the kind of judicial review of rate orders that was available under the State procedure. The court held that the evidence on certain vital issues connected with the ultimate issue of confiscation, including the issue as to the *fair value* of appellant's properties and the issue as to what would be a *fair rate of return*, was merely conflicting and therefore insufficient to sustain the attack on the rate order; that "at most the evidence merely presented the difference of opinions of equally well qualified experts" (V, R. 3363, 3368), and that such evidence was insufficient as a matter of law. The court denied the right of the jury to settle these conflicts in the evidence. These rulings are hereinafter more fully stated and discussed, *infra*, pp. 124-134.

(6) The court made other rulings going to the merits of the issue of confiscation. These are hereinafter stated and discussed, *infra*, pp. 134-170.

More detailed references to the lengthy opinion of

the Court of Civil Appeals will be made in connection with the specific rulings complained of.

6. Proceedings in the Supreme Court of Texas.

Appellant then applied to the Supreme Court of Texas for a writ of error. The application was refused; and motion for rehearing thereon, as authorized by the court's rules, was overruled. (V, R. 3435, 3436.)

This appeal was allowed on February 12, 1937, this being less than three months after the judgment of the State court became final under the State law. (V, R. 3468.) Details as to this were fully presented in Appellant's Statement as to Jurisdiction previously filed and considered by this Court.

IV.

Statement of the Facts Affecting the Questions Raised.

The questions raised on this appeal may be divided into two groups. First, those that grow out of appellant's attack on the rate order on the ground that it amounts to a regulation of *interstate commerce;* and, second, those that relate to appellant's attack on the rate order as being *confiscatory.* Orderly presentation requires that the evidence relating to these two features of the case be separately stated.

1. Statement of the Facts Relating to the Interstate Commerce Questions.

Here there is involved the gas produced or purchased by appellant in Wheeler County, Texas, (hereinafter referred to as the Wheeler County gas) and transported into and through the State of Oklahoma and back into Texas for sale and delivery in wholesale quantities to distributing companies at city gates in Texas. Next there is involved the gas produced or purchased by appellant in the State of Oklahoma and transported to Texas for sale and delivery at city gates to distributing companies.

(a) *The facts relating to the Wheeler County gas transported through Oklahoma into Texas.*

Appellant owns and operates an 18" high pressure gas pipe line, known as Line A, extending from the Shamrock gas field (a part of the Texas Panhandle gas field and referred to in the record either as the Shamrock field or the Wheeler County field), in Wheeler County, Texas, into and through the State of Oklahoma and back into Texas. Through this pipe line appellant transports gas produced or purchased by it in the gas field mentioned to city gates in both Texas and Oklahoma where it is sold and delivered in wholesale quantities to distributing companies operating in said cities. (II, R. 1465-1466.)

This pipe line, starting in the Shamrock gas field in Wheeler County, Texas, follows a southeasterly course, crossing into the State of Oklahoma; and then a southeasterly course through Oklahoma and generally parallel to the western boundary of Oklahoma until it again enters the State of Texas. After entering the State of Texa it extends in a generally southeasterly direction to Petrolia, Texas. The loca-

tion of this line is correctly shown on the map appended to this brief.

The distributing companies operating in the cities of Hollis, in the State of Oklahoma, and Chillicothe, Tolbert, Vernon, Oklaunion, Harrold, Electra, Iowa Park, and Wichita Falls, in the State of Texas, are all supplied directly and exclusively with natural gas transported from the Wheeler County field through this line and delivered at the city gates. (II, R. 1465-1468.) At Oklaunion, Texas, this line is tapped by a branch line that extends northward back into the State of Oklahoma; and this branch line furnishes the sole source of gas supply for distributing companies operating in the cities of Frederick, Tipton, Davidson, Snyder, Manitou, and Mountain Park, in the State of Oklahoma. (II, R. 1466, 1482.)

The Wheeler County gas transported in Line A passes through a gasoline extracting plant at Hollis, Oklahoma. (II, R. 1491.) It does not pass through any gasoline extracting plant in the State of Texas. (II, R. 1478.) The discussion in the opinion of the Court of Civil Appeals relating to the passing of gas through gasoline extracting plants in Texas is applicable, under the undisputed evidence, only to the gas produced or purchased in the State of Oklahoma and transported to Texas in Lines H, 2nd H and G. The facts relating to this gas produced or purchased in Oklahoma and transported to Texas in the three lines mentioned are separately stated, *infra*, pp. 30-34.*

*In stating the facts relating to the interstate commerce issue the Court of Civil Appeals does not clearly separate the facts relating to the Wheeler County gas from the facts relating to the gas produced or purchased in Oklahoma and transported to Texas through Lines H, 2nd H and G.

The Wheeler County gas moves uninterruptedly at high pressure from the time it enters the appellant's main in the Shamrock or Wheeler County field until it is delivered to the various distributing companies purchasing the same at the city gates of the various cities and towns supplied in Oklahoma and Texas. (II, R. 1490.) These deliveries are made under contracts between the appellant and the distributing companies running for a term of five years. These contracts provide for delivery at the city gate measuring stations located at or near the corporate limits of each city or town. These contracts were introduced in evidence. (IV, R. 2306-2362.) They provide that appellant may make deliveries of the gas "at the maximum pressures carried in its pipe line at the various delivery points," and require the distributing companies in each instance to install and operate "such regulators and regulator stations as it may require to regulate the pressure of the gas after delivery thereof by vendor to vendee." These contracts provide that appellant shall in no event be liable for any pressure fluctuation at the delivery points or for the control of gas pressures after delivery. (IV, R. 2308.)*

The movement of the gas, the pressures maintained, and the method of measuring and making delivery of the gas to distributing companies at the city gates are clearly described in the testimony of the witness Schmidt, as follows:

"Q. Mr. Schmidt, will you please relate to the

*We refer to only one of the contracts. The other contracts with distributing companies, both affiliated and independent, contain the same provisions.

jury generally how gas travels from the well to the city gate station where a wholesale delivery is made by the Lone Star Gas Company?

"A. The gas is taken from the well at high pressure and transported through the lines at high pressure to the city gate delivery points. At those points the pressure is reduced through regulators, which are devices for automatically carrying and reducing the high pressure to a low pressure, and at the discharge side of these regulators the gas is measured, and that measurement is the total gas delivered to any particular city. The pressures in the field at the wells and in the pipe lines may vary from 300 to 400 pounds, and at the inlet of the regulators at the city gate stations the pressure varies, depending upon the location or distance of those towns from the source of supply. That pressure will vary from 150 to as high as 300 pounds, or in some cases 350 pounds. The gas travels uninterruptedly from the wells to the delivery points at the city gates.

"Q. To what pressure is the gas transported in the high pressure pipe lines of the company reduced at the city gate measuring stations and for what purpose is that reduction in pressure made?

"A. The pressure is reduced at those city gate stations through the regulators to a pressure there of twenty-five or thirty pounds. This is done in order to supply gas at a pressure which is safe to transport it through the city lines, the city distribution system, and it is done to accommodate the distribution plants in their operations.

"Q. And it is done solely for that purpose, in so far as the Lone Star Gas Company is concerned?

"A. That is correct.

"Q. Where does the title to the gas pass out of or from the Lone Star Gas Company to the local dis-

tributing company at the city gate measuring station?

"A. At the outlet of the meter, which is usually the outlet header of the orifice meter measuring station.

"Q. Is there ever any period of time, Mr. Schmidt, when the gas transported by the company from and through the State of Oklahoma in its high pressure pipe line, when that forward movement of the gas is arrested?

"A. There is not.

"Q. What is the last act of the Lone Star Gas Company in connection with the actual delivery of the gas by it at the city gate to the local distributing company?

"A. The measurement of the gas is the last operation." (II, R. 1469-1470.)

As pointed out by the witness, loss of pressure is an incident of the transportation of the gas. The original pressure decreases as the distance from the point of production increases.

The opinion of the State court refers to the running of gas through gasoline extracting plants and to the use of compressor stations. None of the Wheeler County gas is run through a gasoline extracting plant in Texas. The gasoline content is extracted by running all of it through a plant at Hollis, Oklahoma. (II, R. 1478, 1491.) The discussion in the court's opinion of gasoline plants relates only to the gas produced or purchased in Oklahoma and transported to Texas.

Part, but not all, of this Wheeler County gas is run through a compressor station at Petrolia, Texas. (II, R. 1478.) There is no other compressor station on Line A between the Shamrock field in Wheeler

County, Texas, and Petrolia, Texas. (II, R. 1491.) The original rock pressure is sufficient to transport the gas from the gas field in Wheeler County into and through the State of Oklahoma and, finally, to Petrolia, Texas; a total distance of approximately 185 miles.

The purpose of running gas through a compressor is to boost the pressure and increase the movement of the gas. It is simply a transporting agency. We quote the testimony of the witness Schmidt:

"Q. Now all the gas that comes through Line A goes through the compressor station at Petrolia, does it not?

"A. Not all of it. There are times during the summer time when Petrolia is by-passed, and gas from Line A goes direct down into the lines south of Petrolia.

"Q. But most of the time that gas does go through the compressor plant, doesn't it?

"A. Yes, a good share of the time it does.

"Q. And the pressure is what, when it comes into the plant?

"A. That varies from about 250 pounds to about 100 pounds, or 110, something like that.

"Q. And when it leaves the plant, what is its pressure?

"A. That will vary too, from around 250 pounds to 300 pounds or 325." (II, R. 1478.)

The quantity of the Wheeler County gas transported through Line A for sale and delivery to distributing companies at city gates in Texas, as well as its relation to the total amount of gas transported by appellant, is definitely known. These quantities are shown on appellant's Exhibit 44. (V, R. 3201-

3206.) The evidence shows that city gate deliveries are metered and a record kept.

Appellant's Exhibit 44 gives a five-year summary of the amount of gas transported by Lone Star Gas Company *from* and *through* Oklahoma, beginning with the year 1929 and including the year 1933, as compared with the total gas transported by appellant from all sources. This exhibit shows the percentage for each year of appellant's total deliveries of gas that was transported either from or through Oklahoma as follows:

1929	32.9%
1930	30.7%
1931	26. %
1932	29.6%
1933	23.3%

The weighted average for the five-year period was 28.9%.

The ratio in amount of the gas transported by appellant from the Shamrock field in Wheeler County, Texas, into and through Oklahoma and delivered at Texas city gates to the total amount of gas transported by appellant from all sources for the years 1929 to 1933, inclusive, as can be calculated from the same exhibit, was as follows:

1929	14.8%
1930	16.5%
1931	17. %
1932	23.3%
1933	19.5%

(V, R. 3201-3206.)

It will be noted that, in general, these Wheeler County deliveries are increasing in amount both in Texas and Oklahoma.

This Wheeler County gas is delivered in uncommingled state at all Texas cities on Line A from Chillicothe to Petrolia, including the important city of Wichita Falls; it furnishes the exclusive source of gas supply for these cities. After it reaches Petrolia it is commingled with other gas, some of it coming from Oklahoma and some of it produced in other Texas gas fields. The amount of the Wheeler County gas that is received at Petrolia and is then commingled with other gas is definitely known. (II, R. 1467.)

The commission's rate order fixes a single rate of 32¢ per MCF applicable to all city gate deliveries made on appellant's lines in Texas. The order draws no distinction between interstate and intrastate deliveries at city gates. The commission clearly intended that the order should apply to all deliveries made in Texas. (I, R. 116.) It included all of Line A in the rate base. The State court has directed that the order be so enforced. (V, R. 3333-3370.)

Appellees alleged that appellant's line in Wheeler County, Texas, was routed through Oklahoma for the fraudulent purpose of depriving the Railroad Commission of Texas of the jurisdiction which it would have had over appellant's business if the line had been routed wholly through Texas. (I, R. 156.) The record distinctly negatives the existence of fraud or bad faith in selecting the route for this line; engineering considerations induced the selection of the

route. (Testimony of witness Schmidt, II, R. 1472-1475, 1487-1490, 1493-1496; also *infra*, p. 74.

(b) *The facts relating to the gas produced or purchased by appellant in Oklahoma and transported into Texas.*

Appellant owns and operates a 16" high pressure line, designated as Line G, extending southward from the Loco, Fox, Robertson, and Palacine gas fields, in Stephens and Carter Counties, Oklahoma, and entering the State of Texas at a point north of the City of Gainesville. (II, R. 1464.) The Oklahoma gas produced or purchased in the gas fields referred to is transported in appellant's Line G into Texas for delivery at city gates.

Gas produced or purchased by appellant in the Chickasha, Nellie and Duncan gas fields, in Stephens County, Oklahoma, travels in a southerly direction through appellant's Lines H and 2nd H. These are 12" high pressure lines and enter the State of Texas at a point near Petrolia. (II, R. 1464.)

Gas from Line G is ordinarily the exclusive source of supply of gas for the City of Gainesville (II, R. 1469); and also certain towns north of Gainesville that are supplied from a branch line designated as Line G-3 (II, R. 1468). The towns of Petrolia and Byers are served almost exclusively by Lines H and 2nd H. (II, R. 1468.)

The gas produced and purchased by appellant in Oklahoma and transported to Texas in Line G is run through a gasoline plant at Gainesville, in the State of Texas. (II, R. 1480.) The Oklahoma gas transported in Lines H and 2nd H is run through a gaso-

line absorption plant at Petrolia. (II, R. 1480.) The purpose of this process is to remove certain heavy hydrocarbons. This is done to eliminate operating troubles due to the freezing of these gases and to make the gas more suitable for domestic consumption. (II, R. 1479-1480.)

The treatment to which this gas is subjected in the absorption plants is clearly and accurately stated in the testimony of the witness Schmidt, as follows:

"Q. Now, what is done at the gasoline plants?

"A. At the gasoline plant, certain heavy hydrocarbons are removed and condensed by a method known as an absorption method, and the gas enters the bottom of large cylindrical tanks and comes in touch or in contact with a petroleum oil known as mineral seal oil, which has a high attraction for the hydrocarbons, and by means of this contact the hydrocarbons are then absorbed and the gas passes out of the absorbers directly into the line again, with no interruption.

"Q. Now, after the volatile gasoline, or the heavy hydrocarbons, as you want to call it, is absorbed, the residue gas that is left is of a different composition, isn't it?

"A. The composition is practically the same. There is such a small proportion of these hydrocarbons removed, that the composition is almost identical.

"Q. When you extract gasoline vapors from natural gas, that is present in the line before it goes to the gasoline plant, and then pass on through the residue gas, it has a different heating value, doesn't it?

"A. The heating value is lowered by possibly three per cent, but that is not the entire facts of the matter, because most of the hydrocarbons would con-

dense in the lines anyhow, and you would have the same condition, besides giving us considerable operating troubles; these gases freeze up and cause stoppages in the line." (II, R. 1479.)

The forward movement of the gas is not stopped when it passes through these gasoline plants. We quote the testimony of the witness Schmidt, as follows:

"Q. Now, then, the forward movement is to some extent checked whenever the gas passes through a gasoline plant too; isn't that correct?

"A. It is not.

"Q. Well now, you know that it is stopped to some extent, don't you, Mr. Schmidt?

"A. It does not stop at all.

"Q. Well Mr. Schmidt, does the whole gasoline process not depend upon arresting the forward movement of that gas, and getting it into a static condition, where the vapors can be condensed out?

"A. No, sir; as I said before, the gas enters the bottom of these large tanks, through openings sufficient to carry the capacity of the pipe lines, and that gas passes up through these tanks and out the top, and right back into the pipe line, without any interruption whatever." (II, R. 1484.)

The witness testified that the diameter of these tanks is about 30" and that they allow some expansion of the gas, but that this does not interrupt the forward movement of the gas. (II, R. 1484.)

The gas transported in Lines H and 2nd H is compressed at Petrolia, Texas; and the same is true of part of the gas coming into Texas through Line G; it goes through the compressor station at Gainesville. The compressing of the gas does not interrupt its

forward movement. The purpose is to aid and increase the movement. The gas comes into the compressor plant with the pressure varying from 100 to 250 pounds and leaves the plant with the pressure increased to around 250 to 325 pounds. (II, R. 1478.)

A part, but not all, of the gas produced or purchased in Oklahoma and transported into Texas in Lines H and 2nd H is stored temporarily in the ground on what is referred to in the record as the Miller Lease, near Petrolia, Texas. (II, R. 1477-1482.) None of the Line G gas is thus stored.

The Court of Civil Appeals states in its opinion that, for the period 1929 to 1933, appellant obtained about 4 per cent of its total gas supply from Oklahoma, this, of course, excluding the Wheeler County gas. (V, R. 3337.) This is an erroneous statement. A computation based on appellant's Exhibit 44 will show that the average amount of gas produced or purchased in Oklahoma and transported to Texas was about 11 per cent of the total amount transported by appellant. (V, R., 3201-3205.) There is no evidence in the record disputing the correctness of the quantities shown in appellant's Exhibit 44.

The State court further found that "the gas reserves in Texas are more than sufficient to supply all Texas needs." (V, R. 3337.) If the Court intended to hold that the Oklahoma gas supply available to appellant was not necessary in order to take care of the demands for gas made on appellant in Texas, the finding is without support in the evidence, which shows that the Oklahoma gas and the facilities used to transport it to Texas were necessary in order for

appellant to be able to supply its Texas customers during period of peak demand. (III, R. 2043-2044.)

2. Statement of Facts Affecting the Issue of Confiscation and Related Issues.

We have heretofore summarized the findings of the commission and stated the manner in which they were arrived at. (*Supra*, pp. 7-10.)

Appellant's Evidence.

At the trial appellees, to make out their prima facie case, offered the commission's order, and rested. Appellant then presented a motion for a directed verdict, and this being overruled, proceeded to introduce evidence showing that the order of the commission, as made and sought to be applied, was confiscatory. Appellant first proceeded with evidence rebutting the commission's findings as they were made; that is, with evidence showing the value of the entire "integrated operating system" that had been valued by the commission.

Appellant's evidence relating to a proper annual accrual to the reserve for depreciation, depletion and amortization and relating to operating revenues and expenses followed the same theory followed by the commission in its findings and was in direct rebuttal of the findings. The evidence that appellant thus introduced will be briefly stated.

On the issue as to a proper *rate base*, appellant introduced in evidence an appraisal showing the cost of reproducing its "integrated operating system" as of January 1, 1933. This appraisal was prepared in great detail and consisted of eight volumes, only the summaries of which have been included in

the printed record by appellant. (Appellant's Ex. 28, IV, R. 2363.) It showed $73,983,405.57 as the cost of reproducing the "integrated operating system." The commission's valuation of appellant's "integrated operating system" amounted to $46,246,617.53 (*supra*, p. 9.) Appellant's appraisal was prepared by Biddison, Connor and Steinberger. No question of their qualifications has been raised in this case. They were men thoroughly trained and experienced in their professions. (Biddison's qualifications, I, R. 609-613; Connor's qualifications, II, R. 858-869; Steinberger's qualifications, I, R. 475-481).

The property is well designed, maintained and operated. "It is an excellent property from all viewpoints." (I, R. 656.) The unit costs used in the appraisal were based, to a large extent, upon the experience of appellant in actual construction cost. These costs were determined by an analysis of construction records. (I, R. 638-639.) Labor rates were those currently prevailing (I, R. [illegible]) and the material prices used were the lowest quoted by leading manufacturers for large lot purchases. (I, R. 640-641; II, R. 842-843.)

The method employed in arriving at the reproduction cost new of physical properties was thoroughly explained by the witness Biddison. (I, R. 613-841; II, R. 1141-1226; III, R. 2002-2029.) The manner in which the witness Connor arrived at the collateral construction costs and non-physical values included in the appraisal was fully explained. (II, R. 869, et seq.; Appellant's Ex. 28, IV, R. 2602-3007.)

Gas reserves were determined by appellant's reg-

ularly employed production engineer and geologist. The manner in which the reserves were calculated was carefully explained by the witness Dunn (I, R. 512-544) and the results are shown in exhibit form. (Appellant's Ex. 30, V, R. 3007-3030.) Only proven and developed reserves were included in the appraisal. (I, R. 528, 529.) Those included represented only about one-third of the total gas acreage held by appellant. (I, R. 530.) It was estimated that appellant's gas reserves would be sufficient for approximately twenty years. (I, R. 531.) The value of the reserves included in the appraisal is set forth in exhibit form. (Appellant's Ex. 31, V, R. 3031-3033.)

Accrued depreciation was determined by inspection of the physical property. Fair value was determined by deducting the accrued depreciation thus determined from the reproduction cost new. (II, R. 1141-1171.) In this manner the *fair value* was determined to be $69,738,021.16. (Appellant's Ex. 37, V, R. 3037.) The appraisal was later supplemented to May 1, 1934. (Appellant's Ex. 40, V, R. 3047.) This supplemental appraisal showed an increase in material and construction costs between January 1, 1933, and May 1, 1934, of $1,579,381.72. (Appellant's Ex. 40, V, R. 3052.)

It was also shown that the difference between prices for steel pipe and dresser couplings adopted by the commission and those prevailing at June 11, 1934, amounted to an increase of $3,409,626.91, when applied to appellant's property. (Appellant's Ex. 39, V, R. 3043-3046.)

Costs of the property, as reflected by appellant's

books, were: December 31, 1931, $47,776,749.63, (Appellant's Ex. 5, III, R. 2209); December 31, 1932, $50,034,431.70, (Appellant's Ex. 6, III, R. 2212); December 31, 1933, $49,837,026.06, (Appellant's Ex. 8, III, R. 2215); April 30, 1934, $49,858,751.23 Appellant's Ex. 10, III, R. 2221). The decrease in costs, as reflected by the books, was due to property abandoned or taken out of the public service. The costs, as reflected by the books, did not include overhead construction costs incurred prior to 1927. It was not appellant's policy to capitalize these costs from 1909 to 1927, and a substantial part of the property was constructed prior to 1927. For other reasons explained in the record, the books understated the actual cost of the property. (I, R. 348-352.) The costs, as reflected by the books, did not include working capital, material and supplies, or going concern value. (I, R. 364-365.)

Annual accruals to reserve to provide for *depreciation, depletion and amortization* were estimated by appellant's witness Conner, at $3,465,123.36. This amounts to approximately 5% on the value as appraised by appellant ($3,465,123.36÷$69,738,021.16). The estimate was based on the straight line method of reserve accounting, the method actually used by appellant. (II, R. 1259-1260.) The commission used a sinking fund method. It allowed $968,066.98, or 2.28%, on the depreciable items of property, and approximately 2% on its total rate base, $46,246,617.53. (I, R. 98.) Connor treated this subject thoroughly both in exhibits and oral testimony. (II, R. 1256-1323.) Separate accrual rates for each of the various

classes of property were determined. (Appellant's Ex. 41, V, R. 3055.)

The basis upon which these accrual rates were determined is set forth in detail in exhibit form. (Appellant's Ex. 42, V, R. 3057-3196.) Briefly stated, the reserve accrual rates were based upon an analysis of the history of the various classes of property. The records examined covered a period from 1909 to 1933. (II, R. 1257; V, R. 3057-3060.) This study covered approximately 8,000,000 feet of three inch equivalent diameter pipe which had been removed, replaced and abandoned. (II, R. 1280-1284; V, R. 3073-3080.) All factors bearing upon the life of gas wells were analyzed. The history of over 1,000 gas wells which have been attached to appellant's system was included in this study. The average life of gas wells was thus determined to be four years. (II, R. 1268-1276.) This may be compared with the commission's finding of thirteen and one-half years. (II, R. 1275.) The dates upon which various lines in the system were put into service and the length of their service before replacements were required, were determined. (II, R. 1278-1288, 1295-1296.) All factors contributing to the mortality of the various classes of property were analyzed and given due weight in the ultimate conclusion.

The record shows that more than 60% of all the pipe in the system was installed new during the seven-year period prior to the date of inquiry. (V, R. 3081-3082.) Only 20.45% of the total compressor horse power in service at the date of inquiry had been installed prior to 1922. (V, R. 3175.) The pipe

lines and compressor equipment constitute the major portion of the total value ascribed to the physical property.

The annual rate of growth is shown in appellant's exhibit 42. (V, R. 3081.) The property had a weighted age of only twelve years at the date of inquiry. (III, R. 1860, 2041-2042.) Other facts establish that the system was a comparatively new one at the date of inquiry. Hence, the charges against reserve in past years were not deemed to represent the ultimate retirement liability which would accrue as the property grew older. Charges experienced in the past on the smaller property were no criterion for determining the reserve accruals needed to meet the increasing eventual retirement liability on the larger and newer system.

Operating expenses and revenues were shown in accounting exhibits covering the years 1931, 1932, 1933, and the twelve months ended April 30, 1934. Gross revenues and amounts available for depreciation, depletion and return under the 40¢ rate, after deduction of actual expenses of operation, were:

12 Mos. Ended	Gross Revenues	Amounts Available for Depreciation, Depletion and Return
12-31-31	$9,267,270.80	$4,605,721.83
12-31-32	8,831,205.35	4,658,506.46
12-31-33	7,690,167.01	3,892,748.58
4-30-34	7,923.087.30	4,114,322.81

(Ex. 5, III, R. 2209; Ex. 6, III. R. 2212; Ex. 8, III, R. 2215; Ex. 10, III, R. 2221.)

After allowing for depreciation reserve accruals in the sum estimated by appellant's witness, the sums

remaining would have provided the following amounts for return *under the 40¢ rate* on the fair value of the property as determined by appellant's witnesses: For the year 1931, 1.64%; 1932, 1.71%; 1933, .61% and the twelve months ended April 30, 1934, .93%.

All expenses of operation claimed by appellant were actually incurred in good faith by the management in the exercise of their best judgment. (I, R. 365.) They represent actual outlays. The accounts conform to the classification of accounts prescribed by the American Gas Association. (I, R. 315.) The Railroad Commission of Texas has not prescribed a classification of accounts. (I, R. 375-376.) There was no material dispute between the auditors for appellees and appellant with reference to actual revenues. Appellees' witness so testified. (III, R. 1661-1665.) The State court refers to this fact in its opinion. Said the court:

"With respect to operating expenses, except as to a few controverted items, and with respect to revenues, there is no substantial difference in the testimony as to the totals of both Texas and Oklahoma for the years of the accounting period." (V, R. 3364; 86 S. W. (2d) 503.)

Gross revenues and amounts available for depreciation, depletion, Federal income tax and return *under the 32¢ rate*, after adjusting operating expenses in accordance with the commission's findings, which eliminated management fees paid the holding company, and other items, were:

12 Mos. Ended	Gross Revenues	Amounts Available for Depreciation, Depletion, Federal Income Tax and Return
12-31-31	$7,941,986.82	$3,765,160.24
12-31-32	7,519,397.26	3,908,663.51
12-31-33	6,610,219.85	2,997,969.38
3-31-34	6,813,222.57	3,191,162.50

(III, R. 2270-2271.)

After allowing for depreciation reserve accruals in the sum estimated by appellant's witness, the sums remaining would have provided the following amounts for return *under the 32¢ rate* on the fair value of the property determined by appellant's witnesses:

12-31-31	.43%
12-31-32	.64%
12-31-33	.67% (deficit)
3-31-34	.39% (deficit)

Appellant's evidence also showed that after applying the 32¢ rate ordered by the commission, adjusting the operating expenses to conform to the commission's eliminations therefrom, computing depreciation and depletion reserve accruals as found by the commission, the amount available for return, when expressed as a percentage of the rate base adopted *by the commission* were as follows: For the year 1931, 5.56%; 1932, 5.76%; 1933, 3.97%; and twelve months ended March 31, 1934, 4.31%. Thus it appears that, considered in the light of the commission's own findings, the prescribed rate yields less than the "minimum fair return" as found by the commission—6 per cent. (*supra*, p. 10.) (Appel-

lant's Ex. 13, Sec. 3, III, R. 2233; for details, III, R. 2268, et seq.)

Upon the same basis, except that operating expenses were those actually incurred, it was determined that the prescribed rate would have allowed 3.76% for return on the commission's rate base, for the twelve months ended April 30, 1934. (Appellant's Ex. 14, III, R. 2304, et seq.)

Appellant's evidence showed that a net return of from 8% to 10% was reasonable; that such a return was necessary, considering the hazards of the business, in order for appellant to attract a free flow of capital into its business, insure confidence in the financial soundness thereof, support and maintain its credit, and properly discharge its public service obligations. The commission had never before allowed less than 7% for return to a natural gas utility. (II, R. 1329.) The testimony to this effect was given by appellant's engineers Biddison and Connor and two independent bankers, presidents of two of the larger banking institutions in Texas. These witnesses were familiar with the rates of return commonly demanded and received by investors in the securities of natural gas enterprises. (Connor, II, R. 1324-1330; Biddison, III, R. 2014; Thornton, III, R. 1960-1965; Florence, III, R. 1965-1977.)

(b) Appellant's evidence above summarized was in direct rebuttal of the commission's findings. Appelles objected to the admissibility of this evidence on the ground that it dealt with over-all properties and business operations—the same properties and operations covered by the commission's findings—

and was not based upon segregation of appellant's properties and operations as between interstate and intrastate commerce or as between Oklahoma and Texas. These objections, many times urged, were consistently overruled in the trial court and the evidence admitted.

Appellant, after offering the evidence we have summarized above, then offered additional evidence based upon a segregation of its "integrated operating system" as between interstate and intrastate commerce.

This segregation was based upon the actual use of appellant's properties in the two classes of commerce—upon the actual conduct of its business. The method employed is explained in appellant's Exhibit 45 (V, R. 3207, et seq.) It was also explained in detail by the witness Schmidt. (II, R. 1497-1529.) The basis used in segregating and allocating operating expenses and revenues is explained in appellant's Exhibit 46 (V, R. 3279, et seq.), and also in the oral testimony of the witness Hulcy (II-III, R. 1529-1604). On the basis of this segregation and allocation it was shown that the rate prescribed in the order, when applied to appellant's intrastate deliveries of gas, would yield 6.65% for depreciation and return for the year 1933 on the actual cost (Appellant's Ex. 46, V, R. 3283-3284), and 5.78% on the present value of the property employed in the intrastate public service. (V, R. 3287-3288.) After calculating reserve accruals for depreciation, depletion and amortization at the two per cent rate allowed by the commission, there remained available for return 4.65% on the actual cost, and 3.78% on the fair

value of the intrastate property. (II, R. 1563.) Of the total actual cost of the integrated operating system $32,080,146.32 was allocated to intrastate operations. (V, R. 3284, 3313, "D" Operations, Appellant's Ex. 46.) The fair value of the intrastate property was determined by segregating the appraised value shown in appellant's Exhibits 28 and 37 for the integrated system exclusive of going concern value. The fair value thus determined was $38,350,882.32. (V, R. 3288, 3314, "D" Operations, Appellant's Ex. 46.)

The only criticism made by the State court with respect to appellant's segregation between interstate and intrastate commerce was that Line A, used in transporting gas from Wheeler County, Texas, through Oklahoma and thence into Texas, had been allocated to interstate operations. (V, R. 3361.)

Appellant's evidence above summarized was rejected by the Court of Civil Appeals as not being material to any issue in the case; the evidence covering the entire "integrated operating system" upon the ground that it did not involve any segregation of properties and operations; and the evidence, based upon the segregation mentioned, upon the ground that the segregation, in the view of the State court, was an improper one, it being based upon the assumption that the Wheeler County gas was interstate gas. (V, R. 3361, 3362, 3364.)

Appellees' evidence on the confiscation issue.

Appellees offered no evidence supporting the commission's findings upon which it based its order;

they offered no evidence relating to appellant's "integrated operating system." They offered no evidence controverting the evidence introduced by appellant either with respect to the "integrated operating system" or with respect to appellant's segregation of its properties and operations between interstate and intrastate commerce. Instead of attempting to support the commission's findings and to rebut the evidence offered by the appellant, appellees offered evidence based upon a wholly different segregation of the properties and operations. Their evidence was based upon a segregation which, in the main, as pointed out by the State court, divided the property according to its geographical location and made a similar segregation of the operations. (V, R: 3360.)*

This evidence related to properties and operations that were never separately considered by the commission, as appears from its findings; the findings relate only to the integrated properties and operations. (I, R. 14-16.)

Upon the basis of Appellee's segregation, the State court found that "85 per cent of appellant's

*The Court will note that the State court in this connection refers to "the method of segregation adopted by the *commission*. (V, R. 3360.) This is a misleading and erroneous statement. As we have before pointed out, the commission as an administrative or legislative body made no segregation of the properties and operations in fixing the rate. On the contrary, it expressly found that the properties should be appraised and the operations considered as a "unit"; as an "integrated operating system." *(Supra,* p. 8.) This statement of the State court is correct only when applied to the commission as a *litigant;* certain witnesses testifying for the commission at the trial made the segregation to which the State court refers.

property is situated in Texas; and approximately 99 per cent of its gas reserves are in Texas." (V, R. 3337.)

Appellees' allocation referred to allocated to Oklahoma, or to "interstate commerce" (using their terminology) the properties physically located in that state and the operating revenues and expenses which they deemed to be properly allocable to such properties. They allocated to Texas, or to "intrastate operations," properties physically located in Texas and the revenues and expenses deemed to be allocable thereto. This segregation was based, not upon the actual use of the properties and the conduct of appellant's business operations, but upon a geographical standard unrelated to the actual use of the properties and conduct of the business. (III, R. 1668-1670.)

Appellees excluded from their appraisal of the Texas properties all of the production system property located in Texas and also the expenses incurred in the operation of such properties. (III, R. 1795-1796, 1903-1905.) This property was used and useful in appellant's public service. (III, R. 2044-2045.)

Appellees found a reproduction cost new for appellant's Texas gathering, transmission, compressing and general property of only $40,256,862.39 as of June 15, 1934. (Appellees' Ex. 6, III, R. 2141, et seq.) This figure includes nothing for going concern value. (III, R. 1793-1794; 2108.) The Texas properties thus segregated by appellees had a book cost of $44,053,612.30 as of March 31, 1934. This figure includes the production system properties in Texas, which were eliminated from appellee's appraisal. It

includes net capital additions to Texas properties at actual cost from January 1, 1932, to March 31, 1934, in the sum of $1,500,843.28. (Appellees' Ex. 4, III, R. 2125.) This book cost figure did not include cash working capital, materials and supplies, or going concern value.

Appellees' evidence showed $2,721,854.13 for the year 1933, and $2,714,877.13 for the twelve months ended March 31, 1934, available for return, after application of the 32 cent rate prescribed in the commission's order. This amounted to 6.76% for the former period and 6.74% for the latter period on the value of the Texas properties, as appraised by appellees in the amount and manner hitherto stated. (Appellant's Ex. 8, III, R. 2164.) The amount thus determined to be available for return was arrived at after eliminating all expenses incurred by appellant in the operation of its production system properties and after making an arbitrary addition to actual revenues of $441,240.12 for the year 1933, and $268,829.64 for the twelve months ended March 31, 1934. These additions to revenues were based on the theory that the year 1933 and the twelve months ended March 31, 1934, were abnormally warm periods. They represent appellees' calculation of the additional amount that appellant would have received under the 32 cent rate if the weather had been colder and more gas had been sold. (Appellees' Ex. 8, III, R. 2164-2165.)

Appellees estimated annual reserve accruals to provide for depreciation at $848,546.48. (Appellees' Ex. 7, III, R. 2159, 1843.) This amounted to 2.11% on the value of the Texas property as appraised by

appellees in their Exhibit 6. *(III,* R. 2142-2143.) This estimate was based on the sinking fund method. Appellees' witness testified that if he had used the straigth line method in computing depreciation reserve accruals he would have used the percentage of 4.205 on the physical properties, including the production system properties. He also testified that on the straight line basis he would have used a percentage of 3.0902 on both the physical and non-physical properties. (III, R. 1873-1874.) This would have amounted to approximately $1,404,355.61 upon appellees' valuation of the physical properties in Texas, plus the production system properties at cost. ($40,256,862.39+$5,191,539.42=$45,448,401.81× 3.09%=$1,404,355.61.) Appellees' expert admitted that his estimate would be insufficient to meet the calculated future mortalities unless supplemented by the existence and use of a credit balance in the reserve account at the date of inquiry of $5,000,000.00 for the transmission line equipment alone. It was assumed that this credit balance, together with future accumulations, would be further supplemented by interest at the rate of 6% per annum compounded. (III, R. 1860-1862.) Nothing was included in the estimate for depletion of gas reserves for depreciation on the production system properties. Appellees' expert conceded that at least $94,000.00 would be required for these purposes on the Texas properties. (III, R. 1912-1913.)

The effect of appellees' elimination of appellant's production system properties and expenses and their failure to provide for depletion and return thereon, is thus shown: The commission included in its rate

base $4,674,285.91 for appellant's production system properties. (I, R. 100.) All of these properties were eliminated by appellees. The commission made an allowance for expenses in operating the production system property of $247,732.86 for the year 1931, this being the year upon which the commission made its determination. (I, R. 21, 104.) The commission included approximately $116,000.00 for depreciation and depletion of the production system properties. (III, R. 1912.) The commission determined that it would require $636,533.46 to provide for operating expenses, depreciation, depletion, and a 6% return on the value included by it in the rate base for production system properties. (I, R. 104.) Appellees allowed only $212,031.46 for the year 1933, and $232,644.75 for the twelve months ended March 31, 1934, for the same purpose. (III, R. 2164.) The evidence shows that only approximately 1% of the production system properties are located in Oklahoma. (I, R. 459.)

Appellees' own accounting exhibit shows that the production system expenses amounted to $232,758.70 for the year 1933, and $222,752.66 for the twelve months ended March 31, 1934. (Appellees' Ex. 4, III, R. 2116-A.) These amounts represent expenses actually incurred by appellant.

The production system properties located in Texas, and eliminated by appellees, had an actual cost of $5,191,539.42 at March 31, 1934. (Appellees' Ex. 4, III, R. 2125.) They consisted of leases, mineral rights, gas rights, lands in fee, drilling tools, gas farms, gathering system, and Petrolia field property. The Petrolia Field property is included at

actual cost in the amount of $758,619.23. (Appellees' Ex. 4, III, R. 2125.) Instead of including the production system properties in the appraisal and allowing operating expenses, depletion and return thereon, appellees substituted an arbitrary allowance in lieu thereof. The allowance substituted by appellees amount to $212,031.46 for the year ended December 31, 1933, and $232,644.75 for the twelve months ended March 31, 1934. (Appellees' Ex. 8, III, R. 2164.) These substituted amounts were arrived at by applying to the volume of gas produced by appellant from its own wells in Texas the average prevailing well head price in the field. (III, R. 1903.) The deficiency of appellees' allowance for the year 1933 alone is thus shown:

The operating expenses on the production system properties for the year 1933 were $232,758.70 as heretofore shown. $94,000.00 would be required for depletion, according to appellees' expert witness. A 6% return on the actual cost of the production system properties would be $311,492.36. This makes a total requirement for operating expense, depletion and return of $638,251.06. This sum is to be compared with appellees' allowance of only $212,031.46. The allowance is therefore deficient by $426,219.60.

The foregoing statement is regarded as being sufficient to show, not only the facts affecting confiscation on the merits, but also the facts affecting the various rulings made by the State court in connection with appellant's alleged failure to make a proper segregation of its integrated properties and operations. For that reason a separate statement on the issues mentioned will not be submitted.

3. Statement of the Facts Affecting Appellant's Claim That It Was Denied an Adequate Judicial Review of the Order.

That the evidence was at least sufficient to raise an issue of fact as to whether the rate was confiscatory is shown by the statement previously submitted, *supra*, pp. 34-50. The Court of Civil Appeals held that in respect to certain vital matters affecting the issue of confiscation, including the issue as to the *fair value* of appellant's properties and the issue as to what would be a *fair rate of return*, the evidence was conflicting and at most "merely presented the difference of opinions of equally well qualified experts." (V, R. 3363, 3368.) The court further held that, in these circumstances, the jury had no right to resolve the conflict in the evidence and that appellant's attack on the rate order should be overruled as a matter of law. Appellant has challenged this ruling as involving a denial of adequate judicial review of the rate order.

It has been found more convenient to state the facts and the various rulings of the Court of Civil Appeals affecting this issue of adequate judicial review as a part of the argument hereinafter presented, *infra*, pp. 124-134. For that reason no separate statement is here submitted.

V.

Specification of Errors Intended to Be Urged.

Appellant assigns the following errors committed by the Court of Civil Appeals in entering its judg-

ment, affirming and sustaining the validity of said rate order, as against appellant's attack thereon based on the Commerce Clause of the Federal Constitution and the Due Process Clause of the Fourteenth Amendment to the Federal Constitution; and it shows that in making each of the rulings complained of in Sections I to VI of this Assignment of Errors the Court of Civil Appeals denied to appellant rights secured to it by the Commerce Clause of the Federal Constitution; and that each of the rulings complained of in Sections VII to XV of this Assignment of Errors deprives appellant of its property without due process of law in violation of the Due Process Clause of the Fourteenth Amendment to the Constitution of the United States.

1. The Court of Civil Appeals erred in holding that appellant pipe line company was not engaged in interstate commerce in transporting and selling gas produced or purchased by it in Wheeler County, Texas, and transported in its high pressure line through Oklahoma and thence back into the State of Texas to the city gates in Texas where delivery is made to local distributing companies.

2. The Court of Civil Appeals erred in holding that the rate order did not interfere with and constitute a direct burden upon interstate commerce and appellant's right to engage therein, in violation of Article I, Section 8, Paragraph 3 of the Constitution of the United States, and was not void and unenforceable in so far as it was sought to be enforced as to gas produced or purchased in Wheeler County,

Texas, transported in appellant's high pressure pipe line A through Oklahoma and ultimately delivered in wholesale quantities at city gates in Texas.

3. The Court of Civil Appeals erred in holding that the gas produced or purchased by appellant in Oklahoma and transported by its pipe lines to Texas does not move in interstate commerce when it reaches the Texas city gates for delivery.

4. The Court of Civil Appeals erred in holding that the rate order did not interfere with an constitute a direct burden upon interstate commerce and appellant's right to engage therein, in violation of Article I, Section 8, Paragraph 3 of the Constitution of the United States, and was not void and unenforceable in so far as it was sought to be enforced as to gas purchased and produced in Oklahoma, transported in appellant's high pressure pipe lines from Oklahoma and ultimately delivered in wholesale quantities at city gates in Texas.

5. The Court of Civil Appeals erred in upholding the rate order in question as against appellant's attack thereon grounded upon the claim that it operated as a direct regulation of interstate commerce, in which appellant was engaged, in violation of the Commerce Clause of the Constitution of the United States.

6. The Court of Civil Appeals erred in failing to hold that the order of the Railroad Commission was void and the rate therein prescribed unenforceable as

to all gas sold by appellant pipe line company in Texas inasmuch as the same was void and unenforceable in part (as to gas sold and delivered in interstate commerce) and inasmuch as the same was indivisible.

7. The Court of Civil Appeals having held that the courts of this State, in this suit involving the validity of the rate order in question, challenged as being confiscatory and for that reason violative of the Due Process Clause of the Fourteenth Amendment, are without power to weigh the evidence and settle the conflicts in the evidence and pass their independent judgment on the facts as well as the law, relating to the tendered issue of confiscation, erred in holding that the rate order was valid. This ruling of the Court denied to appellant that adequate judicial review granted to it by the Due Process Clause of the Fourteenth Amendment to the Federal Constitution, and the enforcement of the rate order against appellant under such circumstances will deprive it of its property without due process of law, in violation of the Fourteenth Amendment to the Federal Constitution.

8. The Court of Civil Appeals erred in refusing to consider, and in holding to be immaterial, appellant's evidence as to the value of its integrated pipe line properties, located both in Texas and in Oklahoma, and its revenues and expenses incident to the operation of such properties, appellant thereby being deprived of its right to attack the rate and the findings of the Commission upon which it was based on

the same theory and by the same character of evidence underlying the promulgation of the rate, and thus being denied an adequate judicial review of the rate order and deprived of due process of law, contrary to the provisions of the Fourteenth Amendment to the Constitution of the United States.

9. The Commission, having found that appellant's property and business was an integrated system and having valued the same as such and the Court of Civil Appeals having found that appellant was not engaged in interstate commerce in transporting and supplying gas at the city gates of cities and towns in Texas, and appellant having introduced evidence showing that the order of the Commission would not permit it to receive in any of the years involved as much as a six per cent (6%) return on the fair value of its integrated public service properties, the Court of Civil Appeals erred in holding that the evidence was insufficient as a matter of law to raise an issue of fact as to the confiscatory character of the rate.

10. The Court of Civil Appeals, having held that appellant is not engaged in interstate commerce in the transportation and delivery of gas at the city gates in Texas, erred in holding that it was necessary to segregate appellant's integrated pipe line property and business as between interstate and intrastate commerce in order to test the validity of the rate.

11. The Court of Civil Appeals erred in holding that appellant failed to make a proper segregation

of its properties and operations as between interstate and intrastate commerce.

12. The Court of Civil Appeals erred in holding that the evidence introduced by appellant based upon a segregation of its properties and operations as between interstate and intrastate commerce proved nothing material to the case.

13. The Court of Civil Appeals erred in holding that, since appellant failed to make a proper segregation of its properties as between interstate and intrastate commerce, it did not adduce the quantum and character of proof necessary to establish the invalidity of the rate as being confiscatory.

14. The Court of Civil Appeals erred in approving a segregation of appellant's properties and operations as between interstate and intrastate commerce that was based merely on geographical location of the property and not upon the way in which the property was used and the business conducted.

15. The Court of Civil Appeals erred in upholding the validity of the rate order as against appellant's claim that same was confiscatory in its operation and was violative of appellant's rights under the Due Process Clause of the Fourteenth Amendment to the Constitution of the United States in the following particulars, and in each of said particulars appellant was deprived of its property without due process of law, in violation of the Fourteenth Amendment to the Constitution of the United States:

(a) In adopting a rate base of $40,256,862.39 which did not include the value of appellant's production system property consisting of natural gas reserves, both producing and non-producing, gas wells, gas well equipment, drilling tools and equipment used and useful in the public service in Texas, all of such property costing approximately $5,200,000.00.

(b) In approving the elimination of all operating expenses actually incurred in good faith in the operation of appellant's production system property amounting to the sum of $232,759.70 for 1933, and $222,752.66 for the twelve months period ended March 31, 1934.

(c) In adopting appellees' estimate of $831,946.08 per annum for depreciation, depletion and amortization reserve accruals, which did not embrace any sum for depreciation, depletion or amortization on appellant's production system property, gas wells, gas well equipment, drilling tools and equipment used and useful in the Texas public service.

(d) In adopting a formula in lieu of actual operating expenses and an allowance for annual accruals to reserve for depreciation, depletion and amortization and a fair return on appellant's gas reserves, gas wells, gas well equipment and other production system property, consisting of an addition to operating expenses of a sum of money arrived at by applying the average well head price paid by appellant to independent producers to the volume of gas pro-

duced by appellant from its own Texas gas reserves, such substituted sum being insufficient by approximately $426,000.00 to provide for operating expenses, the necessary annual reserve accrual for depreciation, depletion and amortization (as estimated by appellees' witnesses) and a 6% return (which the Commission held was the minimum to which appellant was entitled) on the actual cost of such property.

(e) In adopting a rate base of $40,256,867.39, which did not include the value of appellant's property located in Oklahoma actually and necessarily used and useful in transporting to Texas for sale and delivery therein gas purchased and produced in Oklahoma.

(f) In approving the elimination from operating expenses of all expenses actually and in good faith incurred in the operation of appellant's properties located in Oklahoma, actually and necessarily used and useful in transporting to Texas for sale and delivery therein, gas purchased and produced in Oklahoma and the disallowance of any depletion or amortization of such properties.

(g) In adopting an arbitrary addition to appellant's actual revenues of $441,240.12 for the year 1933, and $268,829.64 for the twelve months ended March 31, 1934, to compensate for assumed deficiencies in actual gas sales due to abnormally warm weather.

(h) In adopting an annual allowance for depreciation, depletion and amortization reserve accruals of $831,946.08, which amount was insufficient for current and future requirements without being supplemented by an assumed credit balance in the reserve account of $5,000,000 at the date of inquiry.

(i) In adopting a rate base containing no allowance to cover the item of going concern value.

(j) In failing to hold that a six per cent return was confiscatory.

(k) In approving a rate which would not permit appellant to earn the six per cent return which the Railroad Commission held was the minimum to which it was entitled on the fair value of its Texas public service properties as determined by appellees' witnesses upon the trial if appellant's production system property be included in said evaluation and actual operating expenses and revenues be allowed, and if effect be given to a 2% per annum reserve accrual for depreciation, depletion and amortization allowed by the Commission.

(l) In approving a rate which appellant's unrebutted evidence showed would not permit it to earn the minimum 6% return, to which the Commission held it was entitled, upon the fair value of its integrated properties as determined by the Commission after computing accruals to the reserve for depreciation, depletion and amortization at the rate approved by the Commission.

(m) In approving a rate which appellant's uncontradicted evidence clearly showed would not permit it to earn in excess of 3.78% on its fair value, and 4.65% on the actual cost of its properties used and useful in intrastate commerce in Texas as determined by appellant's segregation between interstate and intrastate commerce, based upon use, after allowing for annual accruals to the reserve for depreciation, depletion and amortization at the rate of 2%, being the rate adopted by the Commission.

(n) In holding immaterial and refusing to consider or permit the trial court to consider appellant's evidence showing that the depreciated fair value of its integrated properties was $69,738,021.16, whereas the Commission found the undepreciated value of such property to be $46,246,617.53.

(o) In holding that appellant's evidence showing that a fair annual allowance for accruals to the depreciation, depletion and amortization reserve was not less than $3,465,123.36, as compared with the Commission's allowance of only $983,697.98, for its entire integrated property and business, was of no probative force. (V, R. 3461-3467.)

VI.

Summary of Argument.

I. The Wheeler County gas transported through Oklahoma for sale and delivery at city gates in Texas, constitutes interstate commerce. The rate

order, as applied to it, is void under the Commerce Clause.

1. The interstate character of the movement of this gas is fixed by the fact that it is transported through another State.
2. Appellant's motives in constructing its Line A through Oklahoma are not material.
3. The commingling of a part of this gas is without effect on the interstate commerce issue.
4. Appellant's interstate business may not be subjected to direct regulation on the ground that it is small as compared with its intrastate business.
5. The State court's holding that the rate may be applied to interstate deliveries, provided it is reasonable, is plainly wrong.
6. Discussion of the failure of the Congress to regulate gas pipe lines.
7. Corporate affiliation between appellant and the distributing companies is not material to the correct determination of the interstate commerce issue.
8. The rate order is an indivisible legislative act and, being void as to the interstate deliveries, it is also void as to the intrastate deliveries.

II. The transportation, sale and delivery in Texas of the gas, produced or purchased in Oklahoma, con-

stitutes interstate commerce, and the rate order, as applied to this gas, violates the Commerce Clause.

III. The State court's holding that appellant's evidence, relating to the value of the entire "integrated operating system" and the revenues accruing therefrom and operating expenses incurred in connection therewith, was not material and should not be considered because of appellant's failure to make a proper segregation of its properties and operations, as between interstate and intrastate commerce or between Oklahoma and Texas, is plainly wrong.

1. The ruling of the State court in this connection denied appellant a fair opportunity to prove that the rate order was confiscatory and amounted to a denial of due process.
2. If any segregation was necessary, then a proper basis therefor was laid in the evidence and, presumptively, the jury, following the charge, made the segregation.

IV. The holding of the State court that the triers of fact were without power to settle conflicts in the evidence denied appellant an adequate judicial review of the rate order on the tendered issue of confiscation.

V. The finding of the jury that the rate was confiscatory is sustained by clear and satisfactory evidence. Therefore the judgment of the Court of Civil Appeals should be reversed and that of the District Court affirmed.

1. Discussion of various items criticized by the Court of Civil Appeals.
2. Discussion of actual application of the rate order under various bases of fact supported by the record.

ARGUMENT.

Point One.

The transportation of the Wheeler County gas from Wheeler County, Texas, through Oklahoma and back into Texas, for sale and delivery at city gates in Texas, constitutes interstate commerce, and the rate order fixing the price or rate that appellant may collect upon sale and delivery of this gas at city gates in Texas is unconstitutional and void, because amounting to a direct regulation of interstate commerce.

The facts relating to appellant's high pressure gas pipe line, designated as Line A, and the Wheeler County gas transported in it from the great Panhandle gas field in Wheeler County, Texas, through Oklahoma and back into Texas, for sale and delivery in wholesale quantities at city gates in Oklahoma and Texas, have been stated, *supra*, pp. 22-30. These facts are undisputed; the question arising thereon is simply one of law.

The gas is taken from the wells in Wheeler County, Texas, at high pressure and is transported, without interruption of movement, under the original rock pressure, through Line A and the branch line just mentioned to the city gate delivery points; part of it to city gates in Oklahoma and the remainder to

city gates in Texas. The pressures in the transportation line vary from 300 to 450 pounds. At the city gate delivery points the pressure is reduced to 25 or 30 pounds. This is done solely for the purpose of making the delivery and as a part of the delivery; *supra*, p. 25. The pressures are reduced to a point where the gas may be safely transported through the lines of the distributing company. (*Supra*, p. 25.) The reduction in pressure is accomplished by the use of regulators. These, under the contracts, are installed, maintained and operated by the distributing company. (IV, R. 2308.)

The transporting, selling and delivering of this Wheeler County gas at city gates in Texas and Oklahoma, in the manner shown by the undisputed evidence, constitutes interstate commerce, and the State commission was without authority to regulate this commerce in the way attempted. The case is clearly ruled by *Hanley vs. Kansas City Southern Ry. Co., 187 U. S. 617*, considered in connection with

Missouri vs. Kansas Nautral Gas Co., 265 U. S. 298;

Public Utilities Comm. vs. Attleboro Co., 273 U. S. 83, 90;

Peoples Gas Co. vs. Public Service Comm., 270 U. S. 550, 554;

State Tax Comm. vs. Interstate Natural Gas Co., 284 U. S. 41;

State Corporation Comm. vs. Wichita Gas Co., 290 U. S. 561, 563, 564.

Orderly presentation requires that the various reasons assigned by the State court in support of its ruling be separately discussed.

1. The interstate character of the movement of this Wheeler County gas is fixed by the fact that it is transported through Oklahoma.

The interstate character of the transportation, sale and delivery of this gas is in no way affected by the fact that the point of origin and points of termini where the city gate deliveries are made in Texas are located in the same State—Texas. The holding of the State court on this point is in direct conflict with the holding of this Court in *Hanley vs. Kansas City Southern Railway Co., 187 U. S. 617*, and the following later cases:

Western Union Tel. Co. vs. Speight, 254 U. S. 17;
Missouri Pacific R. Co. vs. Stroud, 267 U. S. 404;
State Tax Comm. vs. Interstate Natural Gas Co., 284 U. S. 41.

The State court in its opinion held that the transportation of this Wheeler County gas across the State of Oklahoma for sale and delivery at city gates in Texas "is not interstate commerce as a matter of fact." (V, R. 3346.)

In this connection the State court further said that:

"The mere fact that appellee has selected a route through Oklahoma as an aid to the transaction of its Texas business cannot work a change in the nature of the business, nor does it affect the character of the business. The transportation of gas through Oklahome is merely a method of delivery and is a negligible circumstance in determining the interstate commerce issue. (V, R. 3347.)

The holding of the State court that the transporting of this gas from one point in Texas to other points in Texas, through the State of Oklahoma, is not "*interstate commerce as a matter of fact*" is in clear conflict with the decision of this Court in *Western Union Tel. Co. vs. Speight, 254 U. S. 17.* That case involved the question whether the sending of a telegraph message from one point in North Carolina to another point in North Carolina, but transmitted through the State of Virginia, was interstate commerce. This Court, in an opinion by Mr. Justice Holmes, held that the transaction constituted "interstate commerce *as a matter of fact.*" (254 U. S. 18; our italics.) And in the same case the Court further said:

"The fact must be tested by the actual transaction."

The Court in *Hanley vs. Kansas City Southern Ry. Co., supra,* approved the following test laid down by Mr. Justice Field sitting on the Circuit:

" 'To bring the transportation within the control of the State, as part of its domestic commerce, the subject transported must be within the entire voyage under the exclusive jurisdiction of the State.' " (187 U. S. 620.)

Part of this Wheeler County gas transported through Line A is sold and delivered by appellant to a distributing company at Hollis, Oklahoma. (V, R. 3346.) Part of it after reaching Texas is transported, without interruption of movement, back into Oklahoma in appellant's branch line extending from

Oklaunion, Texas, northward into Oklahoma. The gas last referred to is delivered by appellant at city gates to distributing companies supplying the following Oklahoma cities: Davidson, Manitou, Frederick, Tipton, Snyder and Mountain Park.* *(Supra,* p. 23.)

We assume that it will not be seriously contended that these Oklahoma city gate deliveries, made at the various cities, located on the branch line extending northward from Oklaunion, Texas, constitute intrastate commerce carried on in the State of Oklahome. Such a contention would be in plain conflict with the holding of this Court in *Missouri vs. Kansas Natural Gas Co., 265 U. S. 298*, approved and followed in later cases. Clearly the power to regulate the rate applicable to these Oklahoma deliveries is exclusively vested in Congress.

Missouri vs. Kansas Natural Gas Co., supra;
Public Utilities Comm. vs. Attleboro Co., 273 U. S. 83;
Peoples Natural Gas Co. vs. Public Service Comm., 270 U. S. 550;
State Corporation Comm. vs. Wichita Gas Co., 290 U. S. 561, 563, 564;
East Ohio Gas Co. vs. Tax Commission of Ohio, 283 U. S. 465.

If Oklahoma has not the authority to regulate the rates applicable to the Oklahoma deliveries made on

*The Court of Civil Appeals states in its opinion that this Wheeler County gas is delivered to only one Oklahoma city, Hollis. (V, R. 3346.) The statement is erroneous because it ignores the Oklahoma cities on the branch line extending from Texas into Oklahoma. (III, R. 1671-1673, 2063.) See map attached hereto.

this line, then Texas has not the authority to regulate the rates applicable to the deliveries made from that part of the line lying in Texas. In *Hanley vs. Kansas City Southern Ry. Co. supra*, this Court said:

"If one could not regulate it the other could not."

The Texas part of the line is being used in the same way as is the Oklahoma part of the line: A part of the gas moves without interruption to the city gates in Oklahoma and the remainder moves, in the same way, to city gates in Texas. All of it is being transported and delivered in interstate commerce. The power of regulating the rates applicable to deliveries made on this line may not be split up between the two States in proportion to the line mileage located in each State.

In *Hanley vs. Kansas City Southern Ry Co., supra*, the State attempted to regulate a rate covering a shipment from one point in Arkansas to another point in Arkansas, the railroad line extending, however, through the Indian Territory. This Court said:

"No one contends that the regulations could be split up according to the jurisdiction of State or Territory over the track, or that both State and Territory may regulate the whole rate, fixed by one authority, whether that authority be Arkansas or Congress." (187 U. S. 620.)

In the same case the Court said that "when a rate is established it must be established as a whole." (187 U. S. 621.)

If the Texas commission has authority to regulate the city gate rate for the deliveries made on Line A, it also has authority to fix the conditions governing the rendering of the service to which the rate is applicable. Let it be supposed that the Wheeler County supply should become inadequate to meet the full city gate demands of Oklahoma and Texas towns on this line; that, in time will inevitably be true. In that situation the prorating of the total supply will become necessary. We assume that it would hardly be contended that the power to prorate the supply as between the Oklahoma and Texas points of delivery would be vested in either the Texas commission or the Oklahoma commission. Undoubtedly, that power would be vested exclusively in Congress. And the same applies to rate regulation. It cannot be true that the power of rate regulation is vested in one authority and the power to regulate the rendering of the service is vested in another authority.

Lehigh Valley R. Co. vs. Pennsylvania, 145 U. S. 192, upon which appellees strongly relied in the State court, is distinguishable upon the grounds pointed out in *Hanley vs. Kansas City Southern Ry. Co., supra.* The case involved a taxing statute and the tax "was determined in respect of receipts for the proportion of the transportation within the State." (145 U. S. 201.) A tax thus proportioned had been previously sustained. *Maine vs. Grand Trunk Ry. Co., 142 U. S. 217.* The case merely holds that the State may require payment of an occupation tax from one engaged in both intrastate and interstate commerce, the tax being properly proportioned. See

Cooney vs. Mountain States Telephone Co., 294 U. S. 384, 392 (footnote).

All later decisions have confined the application of *Lehigh Valley R. Co. vs. Pennsylvania, supra,* to questions of taxation, as distinguished from questions of rate regulation.*

The rule laid down in the Hanley case, and followed in later cases, has been recognized and applied in many Federal statutes regulating interstate commerce. The Transportation Act of 1920 subjects to its provisions all transportation of passengers and property, except that taking place "wholly within one State." *Sec. 1, Subdivision (2) (a).* The National Labor Relations Act defines "commerce" as meaning trade, traffic or transportation among the several States or "between points in the same State but through any other State." *(Sec. 152, 49 Stat. 450.)* Section 2, Paragraph (3) of an act to regulater interstate and foreign commerce in petroleum and its products by prohibiting the shipment in such commerce of petroleum and its products in violation of State law, approved February 22, 1935, defines "interstate commerce" as meaning commerce between "points within the same State but through any place outside thereof." (49 Stat. 30.)

---

*This has been recognized in the lower Federal Courts. See opinion of Judge Learned Hand in *United States vs. Yohn, 275 Fed. 232,* affirmed in *Yohn vs. United States, (C. C. A., 2), 280 Fed. 511,* and by many State courts: *Leibengood vs. Missouri, K. & T. Ry. Co., 88 Kan. 25; Hall vs. Pennsylvania R. Co., 257 Pa. 54.* The same distinction has been recognized by text writers: *Willoughby on the Constitution, (2 ed.), Vol. 2, p. 1002; Gavit, The Commerce Clause, p. 109.*

2. The motives moving appellant to construct Line A through Oklahoma are not material.

Appellees contend that the interstate commerce issue is not involved because appellant in locating and constructing Line A so as to extend through the State of Oklahoma was attempting, fraudulently, to evade the jurisdiction of the rate making authorities in Texas. The State court discussed this contention, without either sustaining or overruling the claim that appellant's motive in constructing Line A through Oklahoma would have controlling effect on the issue of interstate commerce. But it is clear that the State court was influenced by this plainly erroneous contention. The court stated in its opinion that the commission had alleged "and indisputably proved that this pipe line was built through a sparsely settled, rough, rocky region, just within and paralleling the boundary line of Oklahoma," and that its construction was more expensive than would have been its construction wholly within Texas. (V, R. 3337.)

The State court further held that the mere fact that appellant has selected a route through Oklahoma as an aid to the transaction of its Texas business could not change the nature or affect the character of that business. (V, R. 3347.) Said the court:

"Neither the Texas statute nor the rate order interfere in any manner with the transportation of gas from Texas through Oklahoma and back into Texas. The order only attempts to regulate and fix the price for which such gas may be sold in Texas by

appellee to its various distributing companies. Manifestly, this circuitous route of delivery of gas through Oklahoma cannot and does not affect the exercise of the police power of Texas to make or fix reasonable rates for such gas sold to its citizens." (V, R. 3347.)

It is not material to inquire whether it was necessary for appellant to construct this line through Oklahoma or to consider the reasons that moved appellant to so construct it. The character of appellant's business as being interstate commerce is determined by the actual manner of conducting the business, and not by appellant's motives in so conducting it. The business is not divested of its interstate character by showing that its owner deliberately chose to arrange it that way, whatever may have been the owner's motive. *Kirmeyer vs. Kansas, 236 U. S. 568, 572.* One may not be tried and convicted as for negligence or fraud, because of conducting his businses in such a way as that it constitutes interstate commerce.

Western Union Tel. Co. vs. Speight, 254 U. S. 17; Missouri Pacific R. Co. vs. Stroud, 267 U. S. 404; Kirmeyer vs. Kansas, 236 U. S. 568, 572.

In *Western Union Tel. Co. vs. Speight, supra,* it was contended that the sending of a message through the State of Virginia was unnecessary; that it was the duty of the company to confine its transmission to the State of North Carolina; and that the burden devolved upon the company to show that what was done "was not to evade the jurisdiction of the state."

This contention was upheld in the State court (178 N. C. 146). This court held that the character of the transaction as constituting intrastate or interstate commerce must be tested by the actual facts and that "the motive would not have made the business intrastate." (254 U. S. 19.)

To the same effect was the decision of this Court *In Missouri Pacific R. Co. vs. Stroud, 267 U. S. 404.*

Kirmeyer vs. Kansas, 236 U. S. 568, is directly applicable. In that case the State court found, and the finding was approved by this Court, that Kirmeyer adopted a cumbersome and expensive method of conducting a liquor business so that the business would constitute interstate commerce and for the sole purpose of avoiding the liquor laws of Kansas. Overruling the State court, this Court held that Kirmeyer's motives were not material; that whether his business constituted interstate commerce "must be tested by the actual transactions." Said the Court:

"Considered in the light of our former decisions, if the business carried on by plaintiff in error after removal of his office to Stillings had been conducted by a dealer who had always operated from that place we think there could be no serious doubt of its interstate character. And we cannot conclude that a legal domicile in Kansas coupled with a reprehensible past and a purpose to avoid the consequences of the statutes of the State suffice to change the nature of the transactions. Otherwise one of two persons located side by side in the same State and doing the same business in identical ways might be engaged in interstate commerce while the other was not." (236 U. S. 572-573.)

It is further submitted that appellees failed to establish their claim of improper motive in locating Line A through Oklahoma. The evidence shows that appellant's selection of this Oklahoma route was an engineering decision based upon a careful investigation of the relative merits of this and another route located wholly within the State of Texas. These reasons were fully and clearly detailed in the testimony of the witness Schmidt, who acted as appellant's engineer in locating the line. (II, R. 1487-8, 1489.) The locating engineer testified that the matter of constructing the line so that the deliveries made from it would constitute interstate commerce, not subject to State regulation, was never discussed or even mentioned in connection with the selection of the route. (II, R. 1474-5); and that the line "was constructed entirely on engineering principles and nothing else." (II, R. 1475.)

The evidence offered to show that the route was fraudulently selected, in an effort to evade State regulation of deliveries made from it, shows no more than the fact that some other route located wholly within the State might just as well have been selected.

3. The commingling of a part of the Wheeler County gas, after it passes Wichita Falls, Texas, with other gas, before delivery, is without effect on the interstate commerce issue.

A good deal is said in the opinion of the State court about the commingling of gas in appellant's lines. (V, R. 3336-3348.) No commingling of this Wheeler

County gas takes place until after it has passed Wichita Falls, Texas, going south. It furnishes the exclusive source of supply, in *uncommingled* state, for Wichita Falls and all of the Texas cities and towns located to the north and west on the line, as well as for Hollis, Oklahoma, and the Oklahoma cities located on the branch line extending north back into Oklahoma from Oklaunion, Texas. (*Supra*, p. 23.) The rate order as written, and as construed and enforced by the commission and the State court, is an indivisible act, of a legislative nature. (*Infra*, pp. 97-104.) It applies as well to the uncommingled deliveries at Wichita Falls and the other Texas cities just mentioned as it does to the commingled deliveries made after the gas passes Wichita Falls. Being clearly void as to the uncommingled deliveries made at Wichita Falls and the other Texas cities north and west of that place, and being indivisible, it is void as to all of the deliveries.

Furthermore, the commingling of a part of this Wheeler County gas, transported across Oklahoma, with intrastate gas after it passes Wichita Falls, Texas, going south, is not material because the total amount of this Wheeler County gas is definitely known—being 17 per cent of the total amount of gas sold and delivered by appellant at city gates in Texas, as found by the State court (*supra*, V, R. 3337.) Where the quantities commingled are known, the commingling does not mean that all of the gas becomes intrastate gas. The quantity of the interstate gas being known, its interstate character remains, notwithstanding the commingling.

Peoples Natural Gas Co. vs. Public Service Comm., 270 U. S. 550, 554, 555;
United Fuel Gas Co. vs. Hallanan, 257 U. S. 277, 281;
Board of Trade vs. Olsen, 262 U. S. 1, 38, 34.

Commingling or no commingling, the order is void in so far as it fixes the rate for the interstate deliveries, the quantities of which are known. And being indivisible, it is wholly void. (*Infra*, pp. 97-104.)

4. Appellant's interstate business may not be regulated by the State on the theory that it is small in amount as compared with its intrastate business.

That the amount of this Wheeler County gas (17% of the amount sold and delivered by appellant in Texas) may be less than the amount transported and sold in intrastate commerce is not material, for the amount is known and the prescribed rate falls on all gas sold in Texas, including this interstate gas. That appellant's intrastate deliveries exceed in amount its interstate deliveries does not confer power on the State commission to regulate the interstate deliveries as well as the intrastate deliveries in the way attempted.*

Inasmuch as the fixing of the rate imposes a direct burden upon interstate commerce "it is none the less beyond the power of the State because this may be a smaller part of the general business." *Public Utilities Comm. vs. Attleboro Co., 273 U. S. 83.*

---

*To this Wheeler County gas delivered in Texas in interstate commerce should be added the Oklahoma gas, making a total amount of approximately 29% of appellant's total Texas deliveries.

A State statute that imposes a direct burden upon interstate commerce may not be sustained because the burden imposed is relatively small. *Cudahy Packing Co. vs. Hinkle, 278 U. S. 460, 466.*

"The action of the state, as a regulation of interstate commerce, does not depend upon the degree of interference; it is illegal in any degree." *Heisler vs. Thomas Colliery Co., 260 U. S. 245, 259.*

In Looney vs. Crane Co., 245 U. S. 178, 190, the Court said:

"It is thus manifest on the face of all the cases that they in no way sustain the assumption that because a violation of the Constitution was not a large one it would be sanctioned. * * * ".

If quantity or amount of burden were controlling, then the attempted direct regulation of 17% of appellant's deliveries of gas would be enough; less than 3% was involved in *Public Utilities Comm. vs. Attleboro Co., 273 U. S. 83, 91.*

People Natural Gas Co. vs. Public Service Comm., 270 U. S. 550, is distinguishable because there the challenged order, as construed by the State court, applied only to the intrastate part of the commingled mixture, leaving the gas company free "to deal in usual course with so much of the mixture as represents the gas from West Virginia"—the interstate gas. The order applied only to the City of Johnstown, Pennsylvania. It ordered the company not to discontinue the furnishing of gas to Johnstown. The company had on hand, as found by the State court, a sufficient amount of intrastate gas to perform the order and also had on hand enough interstate gas to serve the other cities on its line. This

Court held that, in these circumstances, "the order does not interfere with or affect the interstate commerce in which the company is engaged." In *Peoples Natural Gas Company vs. Public Service Commission, supra,* the order was separable on its face and as construed and sought to be enforced by the State commission and State courts. Here the challenged order, as construed by the State commission and State court, applies to all of appellant's deliveries in Texas, including any deliveries constituting interstate commerce. It is an indivisible order. (*Infra,* pp. 97-104.) The order amounts to an indiscriminate regulation of interstate and intrastate commerce. This being its character, the entire order must fall. *Illinois Central Ry. vs. McKendree, 203 U. S. 514, 529; Cooney vs. Mountain States Tel. Co., 294 U. S. 384, 392, 393.*

It is further submitted that, even if the quantity of this Wheeler County gas were not known, still the attempted regulation could not stand. It would be sufficient, in the circumstances mentioned, that the regulation applies to the Wheeler County gas and, thus applied, amounts to a direct regulation of interstate commerce. That fact would establish that the commission had gone beyond the limits of its rightful authority, and, the regulation being indivisible, the entire regulation must fall. Under the decisions of this Court the State may not to any extent directly regulate the interstate deliveries. The amount of the burden imposed by the regulation is immaterial. It is sufficient that it is known that interstate deliveries are being made and they are subjected to the order, indiscriminately, along with the intrastate deliveries.

5. The holding of the State court to the effect that the State may prescribe reasonable rates applicable to the interstate deliveries of gas is plainly wrong.

After holding that the deliveries made on appellant's Line A of gas transported through the State of Oklahoma were not interstate deliveries, the State court further held that even if these deliveries constitute interstate commerce, the State commission might validly regulate them because, in the view of the court, the prescribed rates were reasonable. (V, R. 3347-3352.) Said the State court:

"Where the rates are reasonable and are fixed according to some uniform, fair and practical standard they constitute no burden on interstate commerce." (V, R. 3350.)

" * * *

"The rate order in this suit does not in any manner interfere, restrain or burden the free transportation of gas between Texas and Oklahoma. Oklahoma gas may be freely transported to Texas and sold in the open market at the same reasonable rate fixed for Texas gas." (V, R. 3351-2.)

" * * *

"The order only attempts to regulate and fix the price for which such gas may be sold in Texas by appellee to its various distributing companies." (V, R. 3347.)*

*The State court's discussion of this question refers not only to the Wheeler County gas transported *through* Oklahoma but also to the gas produced or purchased by appellant in the State of Oklahoma and transported to city gates in Texas. The questions arising in connection with the gas produced or purchased in Oklahoma are elsewhere discussed, *infra*, pp. 104-110.

The holding of the State court is clearly wrong. The rate order operates as a direct regulation of interstate commerce and, for that reason, must fall. The State is without power to prescribe the rates, reasonable or unreasonable, applying to the interstate deliveries of gas. The question discussed by the State court is settled against its view by the prior decisions of this Court.

Missouri vs. Kansas Natural Gas Co., 265 U. S. 298;
Public Utilities Comm. vs. Attleboro Co., 273 U. S. 83, 89, 90;
Peoples Gas Co. vs. Public Service Comm., 270 U. S. 550, 554;
State Corp. Comm. vs. Wichita Gas Co., 290 U. S. 561, 563, 564;
State Tax Comm. vs. Interstate Natural Gas Co., 284 U. S. 41.

The State court's affirmance of the State's power is based upon its finding that the prescribed rate is *reasonable*. This assumes the very question to be decided—the power of the State commission to determine the issue of reasonableness. That the rate may be reasonable is not material where the question is one of power and not reasonableness. There can be no valid or *reasonable* exertion of usurped power. *Minnesota Rate Cases, 230 U. S. 352, 396, 401; Smith vs. Illinois Tel. Co., 282 U. S. 133, 148; Missouri vs. Kansas Natural Gas Co., 265 U. S. 298; Peoples Natural Gas Co. vs. Public Service Comm., 270 U. S. 550, 554.* The power to regulate being exclusively vested in the Congress, only the Congress may determine whether a given regulation is reason-

able. A determination of the issue of reasonableness is merely incidental to the proper exercise of the power of rate regulation—a power not vested in the State commission.

The holding of the State court is in conflict with the decisions of this Court that we have cited and with its ruling in an earlier and leading case, *Wabash, etc. Ry. Co. vs. Illinois, 118 U. S. 557, 575.*

The original cost of the gas at the wells is trifling as compared to cost of constructing and operating this interstate line used in transporting the gas in interstate commerce. The result is that the fixing of the city gate rate as here attempted is, in practical and legal effect, the fixing of the compensation that the utility may exact for the use of its interstate facilities; it amounts to the fixing of the utility's compensation for the transporting of the commodity in interstate commerce; for the performance of a public service in interstate commerce. It amounts, therefore, to a regulation of a matter of national and not merely local concern. *East Ohio Gas Co. vs. Tax Comm., 283 U. S. 465, 470, 472; Missouri vs. Kansas Natural Gas Co., 265 U. S. 298, 309; Public Utilities Comm. vs. Attleboro Co., 273 U. S. 83, 88, 89, 90.*

That appellant's business, viewed as a whole, may be predominantly local, as is asserted by the State court, does not change the fact that a part of its business is interstate and therefore national in character. The fact that the greater part of the business may be local in nature is not effective to extend the power of the State so as to enable it to regulate, in the direct way here attempted, that part of appel-

lant's business that indisputably is interstate in character.

The State court erroneously assumed, as is apparent from its opinion, that this order fixing the city gate rate is merely a local police regulation and valid, unless it discriminates against interstate commerce. Discrimination against interstate commerce is not material except where, absent such discrimination, the attempted regulation would be valid as a regulation of intrastate commerce. The rate order here challenged is a direct regulation of interstate commerce and for that reason must fall, however non-discriminatory it may be.

6. The failure of Congress to regulate gas pipe lines.

The State court refers to the failure of Congress to act and to the Federal statute providing that the Interstate Commerce Act shall not apply to gas pipe lines. (V, R. 3347.) Inasmuch as the rate operates as a direct regulation of interstate commerce, the failure of Congress to legislate on the subject is not material. Precisely the same contention was made, considered and expressly overruled in *Missouri vs. Kansas Natural Gas Co., 265 U. S. 298.** See also *State Corporation Comm. vs. Wichita Gas Co., 290 U. S. 561; Peoples Natural Gas Co. vs. Public Service Comm., 270 U. S. 550, 553, 554; Public Utilities Comm. vs. Landon, 249 U. S. 236; Public Utilities Comm. vs. Attleboro, 273 U. S. 83, 90.*

*In that case the State court held, as did the State court here, that since Congress had not acted, the State had the power to regulate "the sale of natural gas in this State by

The failure of Congress to regulate interstate rates does not enlarge the power of the states; nor does such enlargement flow from a mere denial by Congress of the power of a given Federal agency—the Interstate Commerce Commission—to impose the regulation. The only implication arising from that fact is that the Congress believed that regulation is not necessary. *Missouri vs. Kansas Natural Gas Co., 265 U. S. 298, 301; Minnesota Rate Cases, 230 U. S. 352, 396, 401; Oregon-Washington Co. vs. State of Washington, 270 U. S. 87, 102; Welton vs. Missouri, 91 U. S. 275, 282.*

7. Corporate affiliation between appellant and the distributing companies is not material to a correct determination of the interstate commerce issue.

The Court of Civil Appeals discusses at length the corporate affiliation between the appellant and the distributing companies, constituted by the fact that

---

the Kansas Natural Gas Company." *State vs. Kansas Natural Gas Co., 111 Kan. 809.* The decision was reversed in this Court, *265 U. S. 298.* Appellants in support of their claim that the rates were subject to local regulation relied on the same authorities that are cited by the appellees in the Court of Civil Appeals here, including, principally, *State vs. Flannelly, 96 Kan. 372,* and *Manufacturers' Light & Heat Co. vs. Ott, 215 Fed. 940.*

The non-action of Congress and the provision of the Interstate Commerce Act exempting pipe lines from the jurisdiction of the Interstate Commerce Commission was also made the basis for the decision of the Pennsylvania court in *Peoples Gas Co. vs. Public Service Comm., 279 Pa. 252.* The holding of the Pennsylvania court on that question was expressly disapproved by this Court. *Peoples Natural Gas Co. vs. Public Service Comm., 270 U. S. 550, 553, 554.*

they are subsidiaries of the same parent corporation. (V, R. 3338-3344.)* The point attempted to be made by the court in this connection is not plain; the materiality of the discussion, even from the court's viewpoint, is not apparent. Its ultimate conclusion was that corporate affiliation was not material in determining the question of interstate commerce. Said the Court:

"The fact that appellee and affiliated distributing companies may be engaged in the integrated but single business enterprise of producing, purchasing, transporting, and selling natural gas to the ultimate consumer or burner tip user is not of controlling importance on the commerce issue; because the commission did not fix the burner tip rate, nor did it require the distributing companies to pay appellee not in excess of the 32-cent city gate rate, and to pass the 8-cent reduction on to the ultimate consumer or burner tip user." (V, R. 3343.)

The total import of the opinion of the State court on the point of corporate affiliation is that corporate entities should be ignored for the purpose of proving that appellant and the distributing companies are conducting a "single business"; and that appellant is conducting merely a "department" of that business. The State court does not hold that separate corporate entities will be ignored in the application and enforcement of the rate order.

The order of the commission respects separate corporate entities. The commission proceeded under Article 6053, R. S. 1925 (*infra*, p. 85), directly

*Two of the distributing companies are independent concerns.

against the appellant pipe line company as a separate and distinct corporation and fixed, by its order, the rate that the appellant might charge and collect from the *distributing* companies, treated by the order as separate corporations.*

The order has been copied, *supra*, pp. 6-7. It recites that the commission had instituted the proceeding on its own motion to inquire into the rates charged by appellant for gas sold to distributing companies, and it directs that the prescribed rate should apply to all gas sold at the city gates to all distributing companies. (*Supra*, pp. 6-7.)

The commission's findings of fact, constituting a part of the order, show that the commission was proceeding against the appellant as a pipe line company and as a separate corporate entity subject to regulation under Article 6053. These findings recite that the appellant is engaged in the "sale at *wholesale*" of natural gas; and that it operates "an integrated pipe line system" and engages in "both interstate and intrastate commerce." It is further stated by the commission that the only question to be determined was what rate should be charged by appellant at the city gates. (I, R. 14-16.)

It thus appears that nothing was involved except the rate applicable to the *wholesale* city gate deliv-

*This is illustrated by the commission's and State court's discussion of the advertising expense item. The commission "reluctantly" allowed this item, referring to the fact that in its view this expense was incurred for the benefit of the distributing companies. (I, R. 23-24.) The item was disallowed by the State court; the court stating that it was properly chargeable only against the distributing companies. (V, R. 3365-3366.)

eries of the pipe line company. Burner tip rates were not involved. No evidence was offered relating to the reasonableness of burner tip rates or as to the value of the properties of the distributing companies served by appellant or as to their revenues and expenses.

The holding of this Court in *Smith vs. Illinois Telephone Co., 282 U. S. 133, 143*, is directly applicable. There it was contended that corporate entity should be ignored and the American Telephone Company should be treated as the real party at interest. Discussing this contention this Court said:

"Upon these facts the City attacked the standing of the Illinois Company as the real plaintiff in the case. The court overruled this contention, holding that the ownership of stock by the American Company, and its power to control the Illinois Company, did not destroy the distinct corporate identity of the Illinois Company. The court pointed out that the order of the Commission was directed against the Illinois Company, and that it was treated as a corporation for the purpose of compelling it to establish the prescribed rates for service furnished by the operation of the property to which it had legal title. No ground appears for assailing this ruling. The fact that the relation of the Illinois Company to the American Company may demand close scrutiny, in dealing with certain questions which bear upon the validity of the rate order, cannot obscure the essential basis of that order, that is, that the Commission was imposing its requirement upon a corporate organization engaged in an intrastate public service and, as such, amenable to a valid exercise of the Commission's authority."

See also *Cannon Mfg. Co. vs. Cudahy Pkg. Co., 267 U. S. 333, 336, 337.*

Here the commission's order was directed against the pipe line company and it "was treated as a corporation for the purpose of compelling it to establish the prescribed rates for service furnished by the operation of the property to which it had legal title." (282 U. S. 144.) If appellant's corporate entity is to be recognized for the purpose of enforcing the rate order against it, then its corporate entity must be recognized in support of its attempt to prove that the order is void.

It is next submitted that the corporate affiliation between appellant and the distributing companies (excepting two of them, V, R. 3340) is wholly without effect in determining whether the deliveries in question constituted interstate commerce. The uninterrupted transportation of the Wheeler County gas from the Panhandle gas field and through the State of Oklahoma to city gates in Texas and Oklahoma constitute interstate commerce without regard to the ownership of the facilities transporting it. The city gate deliveries in Texas are as much interstate commerce as are the city gate deliveries in Oklahoma. On the other hand, the distribution and sale of gas through the local pipes to the burner tips is intrastate commerce without regard to the ownership of the facilities engaged in such local business. Regardless of the relationship between appellant and the distributing companies, the two activities are separated and are different in character. The reasoning of the State court on this question is point-

less. The relationship between the pipe line company and the distributing companies, however close, does not unify the two activities or avoid the fact that the State, not being content to regulate only the local activity, is here attempting to regulate the national activity. That is made plain by the decisions of this Court, beginning with the decision in *Public Utilities Comm. vs. Landon, 249 U. S. 236*, and including the following cases: *Pennsylvania Gas Co. vs. Public Service Comm., 252 U. S. 23; Missouri vs. Kansas Natural Gas Co., 265 U. S. 298; Public Utilities Comm. vs. Attleboro Co., 273 U. S. 83, 90; State Corporation Comm. vs. Wichita Gas Co., 290 U. S. 561, 563.*

The issue of interstate commerce is settled by the facts showing how the gas was transported and handled, that is, by the "course of business," and not by the relation between the various persons or corporations handling it. It may be transported by one company or by more than one, and the companies may be related or unrelated; the transaction is still one in interstate commerce. *East Ohio Gas Co. vs. Tax Comm., 283 U. S. 465; State Corporation Comm. vs. Wichita Gas Co., 290 U. S. 561, 563; Public Utilities Comm. vs. Attleboro Co., 273 U. S. 83, 90; Eureka Pipe Line Co. vs. Hallanan, 257 U. S. 265; Western Union Tel. Co. vs. Foster, 247 U. S. 105.*

This Court has held that where corporate affiliation is present, the fixing of the city gate rate operates as a direct regulation of interstate commerce. *State Corporation Comm. vs. Wichita Gas Co., 290 U. S. 561, 563.* See also *State ex rel Cities*

Service Gas Co. vs. Public Service Comm., 337 Mo. 809 (writ of cert. denied, *296 U. S. 657).*

In *State Commission vs. Wichita Gas Company, 290 U. S. 561,** there existed corporate affiliation as between the pipe line company and the various distributing companies. The Court in its opinion said:

"The Kansas statutes empower its public service commission to regulate the service and to fix rates to be charged by public utilities, including the distributing companies. They prescribe heavy penalties for failure to comply with commission-made orders. But the sale, transportation and delivery of natural gas by the pipe line company to the distributing companies constitutes interstate commerce and therefore the State is without power to prescribe rates or prices to be charged therefor. *Missouri vs. Kansas Gas Co.*, 265 U. S. 298, 305, *et seq. Peoples Gas Co. vs. Pub. Serv. Comm'n*, 270 U. S. 550, 554. *Pub. Util. Comm'n v. Attleboro Co.*, 273 U. S. 83, 90. *Smith v. Illinois Bell Tel. Co.*, 282 U. S. 133, 148." (290 U. S. pp. 563, 564.)

Here the Texas statutes authorize separate regulation, at least in part, of pipe line companies and distributing companies. As pointed out in the commission's findings, local distributing rates of all cities and towns having a population exceeding 500 inhabitants are fixed by the local governing authori-

**State Commission vs. Wichita Gas Co., supra,* involved only an inquiry as to the reasonableness of the city gate rate, considered as an expense item that might be set up by the distributing companies on their books. The order did not purport to fix any city gate rate binding either on the pipe line company or the distributing companies.

ties. *Article 1119.** There is a right of appeal to the commission. *Article 6058.* The commission has original and exclusive jurisdiction to fix the city gate rates of pipe line companies. *Article 6053.*†

Appellant and the distributing companies, excepting the two independent concerns heretofore mentioned, *supra*, p. 4, are subsidiaries of the same parent corporation. This does not mean that they are agents each of the other. But even if the distributing companies were appellant's agents, the rate order could not stand because it fixes, not the burner tip rate, but the rate that may be charged by appellant for transporting and delivering the gas in interstate commerce; it regulates the national activity carried on by the principal, as distinguished from the local activity carried on by the agent. The transportation of the gas through more than one State constitutes interstate commerce, and delivery at the end of the journey is an essential part of that commerce There can be no interstate commerce without delivery. This gas is interstate gas when it arrives at the city gates for delivery, and the contract between the parties defining the conditions upon which the gas will be delivered, including the price that must be paid by the agent to the principal, may not be regulated by the State.

---

*The Court of Civil Appeals in its opinion directs attention to the fact that this population limit is 2000 inhabitants, the amendment reducing the limit to 500 having been held unconstitutional in *Texas-Louisiana Power Co. vs. City of Farmersville (Tex. Comm. App.), 67 S. W. (2d) 235.*

†The case of *United Gas Public Service Co. vs. State of Texas, et al.*, (unreported), decided by this Court on February 14, 1938, came before the commission on appeal under Article 6058.

The city gate deliveries to the distributing companies were made under term contracts specifying the rate applicable to wholesale deliveries. By its order the commission attempts to fix the terms and conditions under which these interstate sales and deliveries of gas may be made. This, the commission is powerless to do. *Shafer vs. Farmers Grain Co., 268 U. S. 189, 198; Lemke vs. Farmers Grain Co., 258 U. S. 50; Dahnke-Walker Co. vs. Bondurant, 257 U. S. 282, 290.*

Corporate affiliation of the parties to the contracts is not material. What is material and controlling is the fact that the parties have made contracts defining the terms and conditions under which these interstate deliveries of gas will be made.

The rate order, if valid, is binding whether corporate affiliation be present or not. The pipe line company would violate the order if it sold gas at a higher rate to any independent distributing company —and the record shows that two of the distributing companies are independent concerns. Will it be contended that the rate order is void as applied to the deliveries made to the two independent companies and valid as applied to the deliveries made in the same way to the affiliated companies?

The opposing argument, in effect, admits that if the gas were delivered to independent companies, the State regulation could not stand; the rate could be regulated only by the Congress. The authoritative pronouncement in *Missouri vs. Kansas Natural Gas Co., 265 U. S. 298*, requires this admission. The recognition of such a distinction would lead to anomalous and indefensible results. These results may

be illustrated by reference to the facts of this case. It appears from the evidence that there are two distributing companies doing business in the City of Waxahachie, Texas. One is the Municipal Gas Company, a corporation affiliated with appellant; the other is an "independent" corporation, the Waxahachie Gas Company. The appellant has contracts with and makes city gate deliveries of gas to each of these two distributing companies. (IV, R. 2312, 2342.) The contracts are substantially identical and the deliveries are made in the same way. Following appellees' contention as to the effect of corporate affiliation, the deliveries to the Municapal Gas Company, the affiliated distributing company, constitutes intrastate commerce, subject to State regulation. On the other hand, the deliveries to the Waxahachie Gas Company, the independent company, although made in the same way, constitute interstate commerce, to the extent that these deliveries include interstate gas, and are subject only to regulation by Congress. This difference in the exertion of regulatory authority is based, not upon any difference in the manner in which the gas was transported, sold and delivered, but upon the affiliation of the transporting company with one of the distributing companies.

Western Distributing Company vs. Public Service Commission, 285 U. S. 119, 124, is distinguishable because it did not involve any effort to directly fix the city gate rate. There was involved only the burner tip rate. The rate order here challenged applies directly against the interstate pipe line and prohibits it from charging any other rate. The Court

of Civil Appeals has held that if the prescribed rate is upheld, the adjudication will finally and conclusively determine its validity as against appellant. (V, R. 3349-3350.) In the *Western Distributing Company* case the Kansas Commission conceded that the city gate rate of the pipe line company was "an interstate rate and not the subject of regulation by any State authority." The parties to the contract were left free to perform the contract. Here the contract rate is stricken down and the commission's rate substituted for it.

Western Distributing Company vs. Public Service Commission, supra, merely holds that where corporate affiliation of the seller and the buyer exist and the rates of the buyer, a local distributing company, are under consideration, the regulatory authority, having admitted power to fix the local distributing rates, may properly consider and determine whether the rate paid by the distributing company to the affiliated pipe line company is a fair and reasonable rate for the gas delivered under the contract. This is done, not by way of regulating the pipe line company's rate, but by way of regulating the distributing company's rate; not by way of fixing the compensation of the pipe line company for transporting the gas in interstate commerce, but by way of fixing the compensation of the local distributing company; that is, by directly regulating that part of the business that is local in character, as distinguished from that part that is national in character.

Western Distributing Company vs. Public Service Commission, supra, merely follows and applies rules recognized in the decision of this Court holding that,

where corporate affiliation is present, contracts made between the affiliated parties will be scrutinized and will be upheld only upon a finding that they are reasonable. *Smith vs. Illinois Tel. Co., 282 U. S. 133, Columbus Gas Company vs. Public Utilities Comm., 292 U. S. 398, 400; Dayton Power & Light Co. vs. Public Utilities Comm., 292 U. S. 290, 295; United Gas Company vs. Railroad Commission, 278 U. S. 300, 320.* No decision of this Court lends any support to the contention that corporate affiliation in a case like this will be effective to change a given "course of business" into intrastate commerce where, but for the corporate affiliation, it would be interstate commerce.

Appellees emphasize *Pennsylvania Gas Co. vs. Public Service Comm., 252 U. S. 23.* The case involved only the burner tip rate. The business regulated was local and not national in character, and the regulation imposed was purely local in character. That is the ground upon which the decision must be upheld, if upheld at all, as was explained in *Missouri vs. Kansas Natural Gas Co., 265 U. S. 298, 309.* The decision in *Pennsylvania Gas Co. vs. Public Service Commission* was not based upon pipe line company ownership of the distributing facilities; correctly viewed, the decision would have gone the same way even if the distributing facilities had been owned by an independent company or by an affiliated company. Unifying the ownership of the pipe line and the distributing facilities, either directly or indirectly, would not change the character of the two businesses, one national and the other local. The facts of that case were controlled by the prior de-

cision of the Court in *Public Utilities Comm. vs. Landon, 249 U. S. 236.*

In *East Ohio Gas Company vs. Tax Comm., 283 U. S. 465, 472,* this Court said:

"It does not appear that there were presented, in *Pennsylvania Gas Co. v. Public Service Comm.*, to the state court or here the considerations on which it is held that interstate commerce ends and intrastate business begins when gas flowing through pipe lines from outside the State passes into local distribution systems for delivery to consumers in the municipalities served. But, however that may be, the opinion in that case must be disapproved to the extent that it is in conflict with our decision here."

In the same case the Court held that the transportation of gas from wells outside of Ohio in high pressure transmission lines to their connection with local systems "is essentially national—not local—in character and is interstate commerce within as well as without that State"; and, further, that the furnishing of gas to domestic consumers by means of distribution plants suitable for purely local service "is not interstate commerce but a business of purely local concern exclusively within the jurisdiction of the State. This was said in a case where the transporting pipe line company also owned the local distributing facilities.

It has been argued by the appellees that the commission is merely proceeding to do directly what it might have done indirectly by proceedings brought against the distributing companies and directly involving their burner tip rates. That in such proceedings the commission would have had the power to do

what was done in *Western Distributing Company vs. Public Service Commission, supra.* It is claimed, in effect, that the commission has arrived at the same result by a "short cut." As to this we submit:

(a) The commission has no *general* authority to *directly* fix burner tip rates. It has no jurisdiction of burner tip rates except as to towns whose population falls under the limit named in *Article 1119, supra.* As to other towns, its jurisdiction is simply appellate.

(b) As is admitted by the State court, the commission has not attempted to fix the burner tip rate. It is proceeding directly against the pipe line company and is attempting to do nothing except to fix the city gate rate.

(c) The power to fix the burner tip rate in a case where the pipe line company, transporting the gas to the city in interstate commerce, is also operating the distributing system within the city has been explained and upheld under the "original package" doctrine. The power was so explained in *East Ohio Gas Company vs. Tax Commission, 283 U. S. 465, 471.* See also *Public Utilities Comm. vs. Landon, 249 U. S. 236, 245,* and *Missouri vs. Kansas Natural Gas Co., 265 U. S. 298, 305.* The segregation of the gas in the local service lines where it remains awaiting the local demands for service is treated as a breaking of the "original package." "The treatment and division of the large compressed volume of gas is like the breaking of an original package, after shipment in interstate commerce in

order that its contents may be treated, prepared for sale, and sold at retail." *East Ohio Gas Co. vs. Tax Comm., supra.* But the regulation here attempted falls on the package before it has been broken. It therefore cannot be sustained. It will not do to say that the commission is merely proceeding to do directly what it might have done indirectly in an attempt to regulate burner tip rates—in an attempt to impose the regulation after the breaking of the package. To thus sustain the regulation would destroy the original package doctrine—the doctrine that protects the original package from direct regulation by State authority.

The decisions applying the original package doctrine draw a definite line. The national power exists on one side of the line and the State power on the other. The unbroken package is beyond, and the broken package within, the scope of the State power of taxation or regulation. It is immaterial that the line may be a narrow one.. That is true of all "lines" in the law. "The very meaning of a line in the law is that right and wrong touch each other and that any one may get as close to the line as he can if he keeps on the right side." (Per Mr. Justice Holmes in *L. & N. R. R. Co. vs. United States, 242 U. S. 60, 74.)*

8. The challenged rate order is an indivisible act of a legislative nature; and, being void as to the interstate city gate deliveries, it is also void as to the intrastate city gate deliveries.

That this rate order amounts to a direct and unconstitutional regulation of interstate commerce as

applied to the deliveries of the Wheeler County gas is clear. The next question involved is this: Is the order wholly or only partially void? Is the order divisible or indivisible?

(a) The order as written and as interpreted and applied by the Railroad Commission, and as upheld and enforced by the Court of Civil Appeals, applies to all city gate sales in Texas whether made in interstate or intrastate commerce. There was no attempted designation of certain cities and towns to which the rate should be applied, and no attempted limitation of the application of the order to city gate sales that might constitute intrastate commerce. It is plain that the commission was not willing to discriminate in imposing the regulation and in regulating the rate; it was not willing to leave unregulated certain city gate deliveries and to regulate others. It imposed a *uniform* state-wide city gate rate of 32¢ per MCF and made the rate applicable to all deliveries. The language of the order is:

"IT IS ORDERED, ADJUDGED AND DECREED that effective as of the next billing date the Lone Star Gas Company shall charge, bill and receive for domestic gas at the city gate from *all* distributing companies served by it, a rate not to exceed $0.32 per thousand cubic feet." (I, R. 116; our italics.)

The Court of Civil Appeals interpreted the order as applicable to all city gate deliveries in Texas without regard to any distinction between interstate and intrastate commerce. It held that if any of the city

gate deliveries constituted interstate commerce, they were nevertheless subject to State regulation provided the prescribed rate was a reasonable one. The opinion of the State court concludes:

"Judgment of the trial court declaring the rate to be unjust and unreasonable is reversed. The injunction granted by the trial court is dissolved, and the city gate rate of 32 cents fixed by the commission is declared to be just, reasonable and valid *in every* particular." (V, R. 3370; our italics.)

The operation of this order is defined in a single sentence and in general words. It applies to all deliveries made by appellant to "all distributing companies served by it." (I, R. 116.) What the Court said in *United States vs. Ju Toy, 198 U. S. 253, 262,* is directly applicable:

"But the relevant portion being a single section, accomplishing all its results by the same general words, must be valid as to all that it embraces, or altogether void. An exception of a class constitutionally exempted cannot be read into those general words merely for the purpose of saving what remains. That has been decided over and over again. *United States v. Reese,* 92 U. S. 214, 221; *Trade-Mark Cases,* 100 U. S. 82, 98, 99; *Allen v. Louisiana,* 103 U. S. 80, 84; *United States v. Harris,* 106 U. S. 629, 641, 642; *Virginia Coupon Cases,* 114 U. S. 269, 305; *Baldwin v. Franks,* 120 U. S. 678, 685, 689; *Smiley v. Kansas,* 196 U. S. 447, 455. It necessarily follows that when such words are sustained they are sustained to their full extent."

The rate order is an indivisible legislative act. It "is in terms single and indivisible." *Illinois Central*

R. Co. vs. McKendree, 203 U. S. 514, 529. The result is that the order may not be limited in its application to intrastate transactions. To do this would remake it—a legislative function. *Butts vs. Merchants, etc. Transportation Co., 230 U. S. 126, 135; Employers' Liability Cases, 207 U. S. 463, 502; Baldwin vs. Franks, 120 U. S. 678, 686, 688; James vs. Bowman, 190 U. S. 127; Trade-Mark Cases, 100 U. S. 82.* The order attempts an indiscriminate regulation of both interstate and intrastate commerce. It is therefore wholly void. *Cooney vs. Mountain States Tel. Co., 294 U. S. 384, 393.**

The Supreme Court of Texas, in dealing with legislative acts imposing, indiscriminately, a tax on or a regulation on both interstate and intrastate commerce, has held the acts to be entirely void. *Western Union Tel. Co. vs. Texas, 62 Texas 630; State vs. Humble Pipe Line Co., 112 Texas 375, 385, 386.*

In *Reagan vs. Farmers' Loan & Trust Co., 154 U. S. 362, 400,* this Court, discussing a rate schedule promulgated by the Railroad Commission of Texas, said:

---

*It is pertinent, we think, to point out that in Texas the courts do not participate in the rate making process; they have no power to revise the rate of the Railroad Commission or the findings made in support of it. Their power is simply that of judicial review. *Railroad Commission vs. Weld & Neville, 96 Texas 394, 403; Railroad Commission vs. Uvalde Construction Co., (Tex. Civ. App.), 49 S. W. (2d) 1113, 1114.* See also the opinion of the State court in this case, V, R, 3356. Judicial participation in rate making is not permitted under the Texas Constitution. *Daniel vs. Tyrrell & Garth Investment Co., 127 Texas 213, 220.*

"As we have seen it, it is not the function of the courts to establish a schedule of rates. It is not, therefore, within our power to prepare a new schedule or rearrange this. Our inquiry is limited to the effect of the tariff as a whole, including therein the rates prescribed for all the several classes of goods, and the decree must either condemn or sustain this act of quasi legislation."

(b) Holding the order void as applied to interstate deliveries and valid as applied to intrastate deliveries would remake not only the order but the commission's basic findings made to support the order. The Court would be compelled to reconstruct the rate base and the operating account as found and considered by the commission. It would be compelled to consider, and make judicial findings relating to the value of properties, and as to operating revenues and operating expenses, wholly different from the properties and operating revenues and operating expenses considered by the commission as set forth in its findings.

The commission included in its rate base the value it assigned to appellant's Wheeler County gas producing properties and the value it assigned to appellant's Line A used in transporting the Wheeler County gas, including even that part of Line A which is located in the State of Oklahoma. The commission's findings as to appellant's operating revenues and operating expenses and as to what was required to cover a reasonable annual accrual to the depreciation and amortization reserve were based upon the inclusion and consideration of Line A, including even that part of Line A located in Oklahoma. All of appellant's properties and operations both in

Oklahoma and Texas were considered as "an integrated operating system." (I, R. 14-16.) It is impossible to revise the commission's findings so as to exclude Line A and the operations conducted thereon; and even if this could be done, there would remain no commission finding that the prescribed rate, considered and supported in such a way, was reasonable.

It further appears that the inclusion of Line A and the revenues accruing from that line greatly influenced the holding of the State court to the effect that the prescribed rate was not confiscatory. The court in its opinion refers to the fact that the operations on that line made a relatively small addition to appellant's operating expenses and a large addition to appellant's revenues. It clearly appears that the inclusion of the Line A properties and operations had an important bearing on the State court's conclusion that the prescribed rate was reasonable. We quote from the opinion of the State court as follows:

"Clearly the difference in theory as to whether the gas produced or purchased by appellee in the Texas Panhandle field and transported by its private pipe line across a corner of Oklahoma and back into Texas, where it was intended at all times to be sold and used, accounts for most of the important difference with respect to the fair value of the property used in Texas public service, the annual depreciation thereof, and particularly as to the operating expenses and revenues. For instance, the Texas Panhandle gas cost appellee 2 cents per thousand cubic feet at the well; whereas, the gas from all other sources or fields cost from 6 to 10 cents per thousand cubic feet. The advantage in favor of appellee in excluding this gas from intrastate commerce is apparent. The cost of

the 2-cent gas would add only about $125,000 annually to Texas operating expenses, according to Appellee's Exhibit No. 46; whereas, according to the same exhibit, which shows the percentage of the total cost of gas transported from the Panhandle field and sold in Texas, the Texas revenue would have been increased for the 1929-1933 period more than $1,500,000 annually; and calculations show that if other proper operating expenses were included and charged against the Panhandle gas, still the profit in such gas was more than in other gas handled by appellee either in Oklahoma or Texas. Thus the double advantage to appellee in freeing this gas from intrastate commerce and from state regulation is shown." (V, R. 3362.)

Considering these findings of the commission and the State court, it cannot be assumed that, with the Wheeler County gas and Line A operations excluded, the commission would have prescribed the same rate, or that a rate so prescribed would have been sustained by the State court. The contrary very clearly appears from the findings of the commission and the court.

(c) An order of a board or commission made in consequence of assumption of powers not possessed by it is void and its enforcement will be restrained. *Southern Pacific R. R. Co. vs. Interstate Commerce Commission, 219 U. S. 433, 451; Atchison, etc. R. Co. vs. Interstate Commerce Commission, 190 Fed. 591.*

It affirmatively appears from the commission's order that it proceeded upon the assumption, in promulgating the order, that it had authority to regulate interstate deliveries. In these circumstances,

and it appearing from the evidence in this case as well as from the commission's findings that appellant is engaged, in part, in interstate commerce, the order must fall.

Point Two.

The transportation, sale and delivery in Texas of the gas produced or purchased by appellant in Oklahoma constitutes interstate commerce. The rate order as applied to this gas is unconstitutional because amounting to a direct regulation of interstate commerce.

The facts relating to the transportation, sale and delivery at city gates in Texas of gas produced or purchased by appellant in Oklahoma have been stated, *supra*, pp. 30-34. Some of the legal questions here involved are identical with the questions arising in connection with the Wheeler County gas transported through Oklahoma. The discussion here will be confined to the points of difference.

That this Oklahoma gas arrives in Texas as an article of interstate commerce cannot be disputed. It is transported to Texas without interruption of movement, in high pressure lines, from the gas fields in Oklahoma.* The only question to be determined is whether the gas is so handled after it arrives in Texas that it becomes an article of intrastate commerce before it arrives at the city gates where the prescribed rate is applied.

---

*The actual movement from one State to another is interstate commerce, notwithstanding the fact that both the gas and the pipe line are owned by appellant. *Pipe Line Cases, 234 U. S. 548 560, 561; Kelley vs. Rhoads, 188 U. S. 1, 8-9.*

1. The various points made by the State court in respect to this gas are untenable.

The various points made by the State court are now briefly considered:

(1) The State court first refers to the fact that after this Oklahoma gas arrives in Texas it is run through extraction plants "where the heavier hydrocarbons and volatile gasoline are extracted." (V, R. 3348.) In passing, we again direct attention to the fact that this statement is applicable only to the gas produced or purchased in Oklahoma. The Wheeler County gas is not run through a gasoline plant in Texas; all of it goes through an extracting plant at Hollis, Oklahoma.

What is done to the gas at these extracting plants very clearly appears from the testimony of the witness Schmidt, heretofore quoted, *supra*, pp. 31-32. It appears that the primary purpose of the appellant in running the gas through these gasoline stations is to eliminate operating troubles due to the freezing of the heavy hydrocarbons in the lines, and to put the gas in a more suitable condition for domestic consumption.

The uncontradicted testimony of the witness was to the effect that the forward movement of the gas was not interrupted at all by the process of running it through the extraction plants. (*Supra*, pp. 31-32.) *

*The rulings of the State court as to the effect of running gas through a gasoline absorption plant are inconsistent: The Wheeler County gas is run through such a plant at Hollis, Oklahoma, and is thereafter transported from Oklahoma to Texas and sold and delivered at city gates. If the running of the Oklahoma gas through the plants at

Under the decisions of this Court this handling of the gas is without effect on its character as a commodity transported in interstate commerce. *Carson Petroleum Co. vs. Vial, 279 U. S. 95; Southern Pacific Co. vs. Interstate Commerce Comm., 219 U. S. 498, 526; Ohio Railroad Comm. vs. Worthington, 225 U. S. 101; Stafford vs. Wallace, 258 U. S. 495; Heyman vs. Hays, 236 U. S. 178, 187;* see also *East Ohio Gas Co. vs. Tax Comm., 283 U. S. 465, 468.*

(2) The State court in its opinion says:

"At various points before delivery its pressure is reduced and the gas allowed to expand." (V, R. 3348.)

The expression "various points," considering the undisputed evidence, can only mean the city gates where the gas is delivered to the distributing companies. There is no evidence of any reduction in pressure except that effected by the regulators of the distributing companies. This reduction is made for the purpose of effecting delivery. There is, of course, a gradual and inevitable loss of pressure as the gas moves forward and the distance from the source of pressure increases. This is offset by the maintenance of compressor stations.

This Court has held that such a reduction in pressure as that here involved is immaterial in deter-

---

Petrolia and Gainesville is effective to bring the gas to rest in Texas, making it an article of intrastate commerce, then it would seem that subjecting the Wheeler County gas to the same process at Hollis, Oklahoma, would have the same effect, with the result that when the gas is later transported to Texas it is transported in interstate commerce.

mining the interstate commerce issue. *State Tax Comm. vs. Interstate Gas Co., 284 U. S. 41, 43-44.* The reduction of pressure is merely incident to the delivery of the gas—a method of delivery. A "mere method of delivery is a negligible circumstance" in determining whether a given transaction or course of business constitutes interstate commerce. *Heyman vs. Hays, 236 U. S. 178, 187.*

Reference has been made to the fact that a part of this gas is run through compressor stations. The sole purpose of this is to facilitate the forward movement of the gas. (Schmidt's testimony, *supra*, p. 27.) It is therefore without effect on the issue of interstate commerce. *Ozark Pipe Line Co. vs. Monier, 266 U. S. 555, 560; Peoples Gas Co. vs. Public Service Comm., 270 U. S. 550, 552; East Ohio Gas Co. vs. Tax Commission, 283 U. S. 465, 468.*

(3) The State court in its opinion, discussing this gas produced or purchased in Oklahoma, says:

"Large amounts of it are run through and stored in wells on the Miller farm near the extraction plant in Texas, continuously, and for use later as needed." (V, R. 3348.)

Under the evidence this statement is correctly applicable only to a part of the Oklahoma gas. The undisputed evidence shows that only a part of it is stored in wells on the Miller lease. This rate order applies to all of the gas delivered at city gates in Texas, including the gas that is not stored, as well as the gas that is stored, on the Miller lease. If the storing of some of the gas on the Miller lease is effec-

tive to bring it to rest in Texas and to make it an article of intrastate commerce, that can have no effect on the part of the gas that is not so stored. It remains an article of interstate commerce and is so delivered at the city gates.

The rate order, as we have before pointed out, is an indivisible act of a legislative nature. It applies to all gas deliveries made by appellant at city gates in Texas, whether delivered in interstate commerce or intrastate commerce. The result is that the order is void as applied to the Oklahoma gas that is not stored on the Miller lease and, being void as to this part of the gas, it is wholly void. (*Supra*, pp. 97-104.)

(4) The State court states in its opinion that the Oklahoma gas has "no particular Texas city gate destination" and that after it is run through the extraction plants it passes into the pipe line system and is mixed and commingled with Texas gas until it is impossible "to trace or identify it by volume at any city gate of delivery." (V, R. 3348.) The order prescribes a uniform rate applicable to all deliveries at all city gates in Texas. It is therefore obviously immaterial whether a given quantity of gas may be delivered at one city gate or at another; the point of delivery is wholly without effect in applying the rate. If this interstate gas is delivered at any city gate—and manifestly it must be delivered at some city gate—it is subjected to this rate.

The commingling is immaterial because the quantities commingled are known. Furthermore, as we have previously pointed out, even if the quantities commingled were not known, the regulation could

not stand. It is sufficient that a quantity of Oklahoma gas, delivered in interstate commerce, is unlawfully subjected to this rate regulation. This being true, the order must fall, although the court may be unable to determine the amount of gas subjected to unlawful regulation. *Alpha Cement Co. vs. Massachusetts, 268 U. S. 203, 217; Heisler vs. Thomas Colliery Co., 260 U. S. 245, 259; Looney vs. Crane Co., 245 U. S. 178, 190.* We again direct attention to the fact that this discussion by the court of commingling is wholly inapplicable to the Wheeler County gas delivered at Wichita Falls, Texas, and at the city gates of the Texas cities and towns lying north and west of Wichita Falls. All of these deliveries are of Wheeler County gas uncommingled with any other gas.

(5) The State court compares appellant's deliveries of Texas gas with its deliveries of Oklahoma gas at city gates in Texas, and concludes that the amount delivered is relatively unimportant. The finding of the court as to the amount of Oklahoma gas is erroneous, as we have already pointed out, *supra*, p. 33. But, although the amount may be small, still, since it is transported and delivered in interstate commerce, it may not be subjected to this State regulation. Its immunity from State regulation does not depend upon its amount as compared with the amount of Texas gas.

The State court undertakes to compare the amount of the *Oklahoma* gas sold by appellant at city gates in Texas with the amount of *Texas* gas sold by appellant at city gates in Oklahoma, and undertakes

to use the Oklahoma city gate deliveries of Texas gas as an offset against the Texas deliveries of Oklahoma gas. The view of the court seems to have been that appellant was engaged in interstate commerce in delivering the Oklahoma gas at city gates in Texas only to the extent that such deliveries might exceed in amount its deliveries of Texas gas at city gates in Oklahoma. Both deliveries constitute interstate commerce. It is so clear as hardly to require statement that the character of appellant's interstate business of selling and delivering Oklahoma gas in Texas is in no way affected by its business of selling Texas gas in Oklahoma.

(6) The State court upholds the rate order on the ground that, even if the Oklahoma gas is interstate gas, the prescribed rate "in no manner interfered with, impeded, or burdened the flow of gas from Oklahoma, but such gas may be freely transported to Texas and sold in the open market at the same reasonable rate fixed for Texas gas." (V, R. 3352.) We have already discussed this plainly untenable holding, *supra*, pp. 79-82. The order is not challenged on the ground that it effects a discrimination against interstate commerce but on the ground that it directly regulates interstate commerce. Equality of treatment is not sufficient to sustain such a regulation.

Point Three.

The State court's holding that appellant's evidence, relating to the value of the entire "integrated operating system" and the revenues accruing there-

from and operating expenses incurred in connection therewith, was not material and should not be considered because of appellant's failure to make a proper segregation of its properties and operations, as between interstate and intrastate commerce or between Oklahoma and Texas, is plainly wrong.

This point is directed to the State court's holding that appellant's evidence showing the value of its properties, as well as its over-all revenues and expenses, was not material to any issue in the case and not entitled to be considered because it was not based on a proper segregation of appellant's properties as between interstate and intrastate commerce or as between Oklahoma business and Texas business. (V, R. 3361-2.)

The commission's order recites that it was based on the findings of fact stated in the order and on "such other findings and statements of fact, as are set out in the opinion next preceding this order." (I, R. 116.)

In the findings thus referred to, the commission found that appellant's Oklahoma and Texas properties constituted an "integrated operating system"; and that appellant's properties and operations had been thus considered. (*Supra*, p. 8.) The commission then proceeded to make detailed findings with reference to appellant's integrated properties and operations. These findings have been heretofore summarized, *supra*, pp. 9-10.

Appellees having offered the order to make out a *prima facie* case, and appellant's request for a directed verdict having been overruled, appellant then

offered the opinion and order and findings of the commission as the basis for its attack thereon (I, R. 312); and thereafter introduced evidence showing the book cost, reproduction cost new, fair value, gross revenues, expenses, allowance for depreciation, depletion and amortization reserve accrual, and income available for return. This evidence was offered on the theory and basis followed by the commission's findings. It dealt with appellant's properties and business operations in Texas and Oklahoma as an "integrated operating system," just as the same properties and operations had been considered by the commission in fixing the rate. This evidence has been heretofore summarized, *supra*, pp. 34-43. This evidence was in direct rebuttal of the commission's findings. It cannot be doubted that this evidence, if accepted by the triers of fact, was amply sufficient to demonstrate that the commission's findings were wrong.

This evidence was followed by additional evidence, introduced by appellant, showing, and being based upon, a segregation of appellant's properties and operations as between interstate and intrastate commerce. Appellees then offered evidence showing a segregation of appellant's properties attributable to its Texas operations from those attributable to its Oklahoma operations. (*Supra*, pp. 44-50.)

Appellees' evidence showed, and the Court of Civil Appeals found, that 85% of the appellant's properties were located in Texas. (V, R. 3337.) It further appeared that approximately 28% of its annual gas deliveries were transported from and, in Line A, through, Oklahoma. (*Supra*, p. 28.)

The trial court admitted all of appellant's evidence dealing with its integrated properties and operations. Repeated objections were made on the ground that the evidence was immaterial because no segregation as between Texas and Oklahoma operations, or interstate and intrastate commerce, had been made. (Illustrative, I, R. 325-6.) But all of these objections were overruled and the case submitted to the jury for a finding by it on the ultimate issue of confiscation.

We have heretofore summarized the court's charge to the jury, accompanying the special issue that was submitted. (*Supra*, pp. 15-17.) Considering the charge, the jury's answer to the single special issue submitted imported a finding that the rate was confiscatory. (*United Gas Public Service Co. vs. State of Texas*, unreported, decided February 14, 1938.) And, considering the charge as a whole, it is clear that the jury must have understood that, in answering the special issues submitted, they were to find whether the rate was so low that it would not provide "for a fair return upon the fair value of defendant's property used and useful in supplying the service furnished by said defendant"; that service being described as the deliveries "*to points in Texas.*" (I, R. 194.) The charge clearly required the jury to identify the property that was used and useful in rendering the service "to points in Texas," and then to find whether the prescribed rate as applied to the Texas deliveries would yield a fair return on the fair value of that property. Presumptively the jury followed the charge.

The trial court rendered judgment on the verdict

of the jury finding the rate to be confiscatory and enjoining its enforcement. (I, R. 197-199.) On appeal, the Court of Civil Appeals held:

(a) That appellant had failed to make a proper segregation of its properties and operations as between interstate and intrastate commerce; and

(b) That, because of such failure, the evidence it offered on the issue of confiscation was immaterial, wholly lacking in probative force, and not entitled to consideration, and that a verdict should have been directed against it.

This holding was applied to appellant's alleged failure to make a proper segregation of its properties. (V, R. 3361-3362.) The segregation appellant made was condemned and it was held that, since appellant had offered "no other proof on segregation or allocation of the property," the trial court erred in failing to direct a verdict against it. (V, R. 3361.) Upon the same ground the State court condemned as immaterial appellant's evidence relating to operating revenues and expenses. (V, R. 3364.)*

The court's holding is now discussed under separately stated points.

*The court here, and in other parts of its opinion, refers to appellant's failure to make a segregation as between interstate and intrastate commerce. This is inconsistent with the court's prior holding that appellant was not engaged to any extent in interstate commerce in Texas. Apparently the court used the term "interstate commerce" as referring to the Oklahoma operations and "intrastate commerce" as referring to the Texas operations. Otherwise, the court's holding is in plain conflict with its holding on the interstate commerce question.

1. The ruling of the State court in this connection denied appellant a fair opportunity to prove that the rate was confiscatory and amounted to a denial of due process.

The commission's order shows that it was based on the commission's findings made a part of it. The trial court instructed the jury that they were entitled to consider these findings in determining whether the rate was "unjust and unreasonable"—and therefore confiscatory, considering the definitions contained in the charge. The trial court permitted appellant to introduce evidence assailing these findings as they were made; that is, evidence showing the value of the entire integrated properties and the revenues and expenses connected with the operation of these properties. The Court of Civil Appeals held that this evidence was immaterial and should not have been considered at all, and that a verdict should have been directed against appellant because it failed to make a proper segregation of its properties and operations as between interstate and intrastate commerce or as between Oklahoma and Texas.

This action amounted to a denial to appellant of a "suitable opportunity" to challenge the validity of the order in a judicial proceeding. It was a denial of fair play and therefore a denial of due process, violating the Fourteenth Amendment. A fair hearing is essential to due process. "The right to such a hearing is one of the rudiments of fair play." *Ohio Bell Tel. Co. vs. Public Utilities Comm., 301 U. S. 292.* "The fundamentals of a fair hearing were not

conceded to the company." *West Ohio Gas Co. vs. Public Utilities Commission, (No. 1) 294 U. S. 63, 70.*

Any evidence tending to show that the commission's findings, upon which the order was based, were erroneous was admissible. By the court's charge, the jury was given the right to consider the findings in determining whether the rate was confiscatory. In these circumstances, appellant had the right to attempt to rebut the findings.

If the findings were discredited as to over-all value, they might also be discredited, from the standpoint of the jury, when limited to the value of the property rendering the service "to points in Texas." If the jury believed that the commission's over-all valuation was too low, it might well have concluded that its valuation of the Texas part of the over-all, 85%, was also too low.

Here, the appellant occupied a different position from that occupied by a plaintiff, and the vice of the opinion of the Court of Civil Appeals lies in its failure to recognize the distinctive nature of this proceeding. Here, the combined legislative-judicial process was initiated by the commission. When the proceeding had reached the stage of judicial review, the commission had defined the issues. It had promulgated, not merely a naked order without findings, but an order based upon, and, by reference incorporating as an integral part of it, definite findings. This the commission had done in order "that the courts might (will) understand why it had acted as it had," in contemplation of the court

action that normally would follow. *Norwegian Nitrogen Co. vs. United States, 288 U. S. 294, 319.**

At the commission hearing the commission selected the field of contest and issued its order after the conflict had been waged on the ground that it had chosen. By its findings it undertook to define the ground. When the commission fortified its order by findings, it invited a challenge of the findings, if the appellant would challenge the order. The Court of Civil Appeals has ruled that even though the findings were shown to be wrong, the order will prevail in deference to blind presumptions having no support in the findings.

The practical effect is to require the enforcement against appellant of a rate presumptively valid only because of findings that appellant is not permitted to assail. The effect is to give to the findings of the commission not merely presumptive correctness but irrebuttable finality.

A denial of the right to assail and discredit the findings, made a part of the order and furnishing the sole support for the order, was a denial of the right to assail the order itself.

When appellant carried its case to court for the purpose of challenging the order, of which the findings were made a part, it there assumed the heavy burden of establishing the invalidity of the order by "clear and satisfactory" evidence. The failure to attack the findings, supporting the order, by evidence

---

*There is no need to consider whether the findings were indispensable. The order, however, was not "general legislation" but was "in the nature of a judgment directed against the individual concern." *Pacific States Box & Basket Co. vs. White, 296 U. S. 176, 186.*

directed to the issues tendered by the findings would have left them fully sustained by recognized presumptions. *Thompson vs. Consolidated Gas Co., 300 U. S. 55, 69.* In that state of the record, the appellant was entitled to challenge the order in a trial *de novo* in the State District Court by opposing the order with evidence directed to the findings. This was the order on which the commission had chosen to stand—an order of which the findings were a part.

Presumptively, the range of inquiry conducted by the commission and the scope of its hearing are aptly defined by the findings. The Court of Civil Appeals was not at liberty, in view of the Fourteenth Amendment, to uphold the order upon a presumption of validity that went beyond the evidence heard by the commission and the commission's findings. The holding of the Court of Civil Appeals amounted to a denial of "suitable opportunity through evidence and argument to challenge the result" of the commission's action. *West Ohio Gas Co. vs. Public Utilities Comm. (No. 1), 294 U. S. 63, 70.* The result, here, was the order and the findings. Without fair warning, the findings were, in effect, repudiated, and defense for the order was grounded on the assumption that the findings were of no importance. If the findings were of no importance, appellant was nevertheless entitled to show that they were *wrong*, in order to destroy the presumption that the order, resting upon the findings, was right. This appellant did to the satisfaction of the jury, and the court having control of the shaping of the issues at the trial. When the case came before the appellate court,

after it was too late to reshape the issues and when the appellant no longer had an opportunity to offer evidence and argument thereon, the Court held that the rebuttal of the findings was of no consequence and that the order should have been subjected to another and wholly different kind of test having no relation to the findings—a test that involved the segregated properties and operations, as distinguished from the integrated properties and operations.

In a constitutional sense, the case is no different from what it would have been if the District Court, after first ruling that appellant's over-all evidence was material and relevant, had at the close of the trial announced the opposing view and had then denied to appellant the right to offer additional proof to meet the exigencies of the new ruling. Such action, obviously, would have offended the rules of fair play. But the judicial process afforded by the State is to be tested in its totality. What boots it if the trial court accorded the appellant a fair trial when all that was done by the trial court has been nullified by the Court of Civil Appeals, and no opportunity afforded to meet the new ruling?

2. If a segregation was necessary, then the basis for a proper segregation was laid in the evidence and, presumptively, the jury, following the charge, made the segregation.

Evidence as to the over-all value of the entire "integrated operating system" was the essential basis for any segregation of property values as between the two States or as between interstate and

intrastate commerce. At all events, the reasonable way to proceed was to establish the over-all value and then apply a proper segregation factor to that value in order to arrive at the value of the property used in rendering the Texas service.

The commission's findings (*supra*, p. 9) and the appellant's evidence (*supra*, pp. 34-39) showed the over-all value. Appellees' evidence (*supra*, pp. 45-46) disclosed a basis for the segregation of the over-all value as between the two States. In this situation it was open to the jury to accept appellant's evidence showing the over-all value, as against the commission's findings as to over-all value.

The State court, accepting appellees' evidence, found that 85% of appellant's properties were assignable to Texas. (V, R. 3337.)

In this situation it was open to the jury to accept appellant's evidence showing the over-all value as against the commission's finding of over-all value. It was also open to the jury to accept appellees' evidence showing a segregation of the properties as between the two States and developing a percentage factor to be applied in making the segregation, and then to apply that percentage factor—85%— to the over-all value arrived at by the jury. So proceeding, the jury could have arrived at a reasonable and supportable conclusion that the rate was confiscatory even when considered in the light of the commission's findings relating to operating revenues and expenses or in the light of appellees' set-up of operating revenues and expenses.

Eighty-five per cent of the rate base, as shown by

appellant's evidence, would equal approximately $60,000,000.00. On that basis, and accepting even the appellees' evidence as to the operating revenues, expenses, and depreciation allowance, the rate of return would have been confiscatory, being approximately 4½%. Or, the jury could have found that the rate was confiscatory by accepting the rate base shown by the testimony of appellees' witnesses, $40,256,862.39, (III, R. 1900, V, R. 3360) and by accepting appellant's evidence as to what would be a *fair rate of return.* Thus it could have settled the issue of confiscation in appellant's favor by resolving in its favor the conflict in the testimony of the "equally well qualified experts" on the issue of fair *rate of return.* (*Supra,* p. 42.) The jury could have settled the confiscation issue in appellant's favor by taking appellees' segregated rate base of $40,256,862.39 and by adding thereto the value of appellant's production system properties, eliminated by appellees' expert witnesses, this amounting to more than $5,000,000.00. (*Infra,* pp. 162-165.) It will be noted that the trial court instructed the jury that in determining the confiscation issue they should consider the value of all of appellant's property "used and useful" in rendering the service in question, including its properties used in the "production * * * of natural gas." (I, R. 193-195.) If the jury followed the charge, it rejected appellees' elimination of the production system properties and put these values back into the rate base.

In these and other ways, the jury could have settled the confiscation issue in appellant's favor merely by exercising its undoubted power to select the evi-

dence satisfactory to it, regardless of its source. (*Infra*, pp. 159-170.) The jury was not required to accept appellant's evidence in its entirety or to accept appellees' evidence in its entirety.

The trial court did not hold that a segregation was unnecessary. It merely held that the evidence relating to the value and net operating revenues of the integrated properties—the very properties that had been valued and considered by the commission, as shown by its findings,—was admissible to be considered by the jury along with the commission's findings and all the other evidence in determining whether the rate was confiscatory. The trial court instructed the jury that they could consider the findings of the Railroad Commission for the purpose of assisting them in determining whether the rate order was "unreasonable and unjust to the defendant." (V, R. 194.) Manifestly, appellant had the right, in view of this charge, to have its over-all evidence considered in the same way, not as proving that no segregation was necessary, but as proving the value of the whole property, including the value of the part attributable to the Texas service.

None of the decisions of this Court hold that this evidence, relating to the "integrated operating system," was legally immaterial and inadmissible. These decisions merely hold that the basis for the segregation must be laid in the evidence; not necessarily in the evidence offered by the utility, considered alone, but in the evidence considered as a whole. That basis was laid in the evidence here. The jury were required by the charge, correctly construed, to make a segregation and to limit their consideration to the

property rendering the Texas service. The jury could have made the segregation on the basis shown in appellees' evidence, and then could have applied that segregation to any over-all rate base that the jury believed was established by the evidence.

Appellant's evidence can not be properly condemned because it did not include a segregation of properties and operations. It is sufficient that the evidence, considered as a whole, furnished a basis for the segregation which the jury must have made if it followed the court's charge. It can make no difference, as far as appellant's legal rights are concerned, who made the segregation. The ultimate question is not who made it but whether, once the segregation has been properly made, the fact-finding body has determined that the rate as applied to the segregated property is confiscatory.

Here the Court of Civil Appeals reverses the judgment apparently, not because a proper segregation was not made as a predicate for testing the rate, but simply because appellant's evidence failed to make the required segregation.

Smith vs. Illinois Telephone Co., 282 U. S. 133, is distinguishable. In that case there were no findings segregating the interstate from the intrastate properties and operations; there were no findings segregating the properties that were used in rendering the service to which the rate applied. Here there is evidence showing a segregation and there is a finding by the jury that the rate was confiscatory when tested by its application to the property "used and useful" in rendering the service "to

points in Texas." That finding supplies what was lacking in the Smith case.

Point Four.

The holding of the State court that the triers of fact were without power to settle conflicts in the evidence denied appellant an adequate judicial review of the rate order on the tendered issue of confiscation. It denied appellant due process.

The Court of Civil Appeals did not stop with its holding that a verdict should have been directed and judgment rendered against appellant, declaring the rate order "valid in every particular," (V, R. 3370) because of appellant's alleged failure to make a proper segregation of its properties and operations. It further held, in effect, that, at most, the evidence on the issue of confiscation was merely conflicting and that, in these circumstances, the law raised a barrier against appellant's attack on the rate in advance of an actual test.

On the issue as to the *value* of appellant's property, the State court said:

"At most, the evidence merely presented the difference of opinions of equally well qualified experts." (V, R. 3363.)

And again:

"Valuation of such public service property is in the main a matter of estimate or opinion, and closely resembles discretion as regards the finding of value by an administrative commission. In any event, a

scientific or statutory standard of absolute value is unattainable; and because of this uncertainty of value, except where the evidence clearly shows gross over or under valuation, or mistake, inequality or fraud in the appraisal, the finding of value by an administrative commission is generally given finality. Especially is this the rule in absence of an actual test under the new rate." (V, R. 3405-6.)

The conflicting evidence on the issue of value, to which the court refers is hereafter summarized, *supra*, pp. 34-50.

There was a clear conflict in the evidence as to what would be a proper *rate of return*. Even the Court of Civil Appeals conceded this. Referring to the fact that the commission had found 6% was a proper rate of return and to the conflict in the evidence as to what would be a proper rate of return, the State Court said:

"The burden was heavily upon appellee to show by clear and satisfactory evidence that such rate of return was confiscatory or unreasonable and unjust. To meet this test appellee was required to 'establish by evidence which leaves no reasonable doubt in the judicial mind that the rate or rule is unjust and unreasonable.' R. R. Comm. v. Galveston, etc., supra. It offered the testimony of an interested witness and the testimony of experts employed by it, to the effect that in their opinion an 8% or 10% rate of return would be reasonable. A disinterested expert testified that under present business conditions a 6% rate of return was entirely fa and reasonable. This evidence merely presented the difference of opinion of experts, and manifestly their opinion or opinions cannot be substituted for the finding of the Commission that a 6% rate of return was fair and

reasonable, which finding was based upon substantial evidence." (V, R. 3368.)

Considering the state of the evidence hereafter summarized, pp. 147-149, the whole issue as to whether the rate was confiscatory might have been settled by resolving the conflict in the evidence as to what would be a proper rate of return. Appellant's evidence on that important issue was condemned because it was merely in conflict with the opposing evidence offered by the appellees. Thus, it was definitely held that the reviewing court had no power to settle the conflicts in the evidence relating to a proper rate of return. According to the Court of Civil Appeals, the reviewing court was merely empowered to discover the conflicts and then sustain the rate order, leaving the conflicts unsettled.

The point here made is not based upon the failure of the Court of Civil Appeals to exercise an independent judgment as to the facts or its failure to make findings settling the conflicts in the evidence referred to. That court has no power under the State law to "set aside the verdict of the jury and substitute its finding, instead of the finding of a jury, and render judgment accordingly. * * * It has no power to make an original final determination of a question of fact." *Choate vs. S. A. & P. Ry. Co., 91 Tex. 406, 410; United Gas Public Service Co. vs. State of Texas, supra.*

Nor do we challenge here the proceedings in the State trial court as amounting to a denial of due process. There, the jury, as an arm of the court, exercised an independent judgment on the facts under a charge making it the exclusive judges "of the facts

proved, of the credibility of the witnesses, and of the weight to be given to their testimony"; (I, R. 192) and found the rate unjust, unreasonable, and confiscatory. This finding was made under the court's direction that such findings should be made only if the evidence in support of it was "clear and satisfactory." (I, R. 194.)

What we do complain of is the judgment of the Court of Civil Appeals, which, in effect, deprived appellant of the judicial review accorded it in the trial court and placed it in the same position as if that review had been denied by the trial court. Appellant's complaint is not that the Court of Civil Appeals has erroneously declared the State law applicable to the judicial review of rate orders. Appellant's complaint is that the procedure, provided by the State, as expounded and applied against it in the instant case, denies it an adequate judicial review of the rate order. What the Court of Civil Appeals said on the subject of judicial review of rate orders is the law of the State, at least for the purposes of this case. And appellant's complaint is that the law of the State, as thus declared and enforced against it, amounts to a denial of due process. The appellant challenges the correctness of the ruling that adequate judicial review is afforded where the reviewing court, discovering a conflict in the evidence, upon a trial *de novo*, must leave the conflict unsettled and render a judgment sustaining the rate order. This, in effect, amounts to a holding that the Fourteenth Amendment applies only to cases where the evidence is not conflicting. The rule thus declared is in clear conflict with the decisions of this Court. *Ohio Water*

Co. vs. Ben Avon Borough, 253 U. S. 287; St. Joseph Stock Yards Co. vs. United States, 298 U. S. 38, 51; Baltimore & Ohio R. R. Co. vs. United States, 298 U. S. 349, 368.

In *United Gas Public Service Company vs. State of Texas*, decided on February 14, 1938, this Court held that the complaining public utility had not been denied adequate judicial review of the challenged rate order. In that case, the evidence on the issue of confiscation was conflicting, in the view of this Court, and the conflict had been settled against the utility by the jury in the trial court. The trial court rendered judgment on the verdict sustaining the rate order, and that judgment was affirmed by the Court of Civil Appeals. This Court held that the utility had been accorded an adequate judicial review but had failed to obtain a verdict settling the issues of fact in its favor. This case stands in a wholly different light. Here, the jury settled the conflicts in the evidence in favor of appellant and found that the rate order was confiscatory. The trial court approved the verdict and rendered judgment annulling the rate order. The appellate court reversed the judgment of the trial court and rendered judgment declaring the rate order to be valid and directing its enforcement, and based its judgment, at least in part, on the view that the evidence being merely conflicting on certain vital points, was legally insufficient to sustain the rate order. The court, in effect, denied the right of the jury, or the District Court sitting without a jury, to settle conflicts in the evidence. According to the appellate court, the sole right and duty of the Dis-

trict Court was to ascertain the presence of a conflict in the evidence, and after finding the conflict, to render judgment sustaining the rate order.

It is true that in certain portions of its opinion the Court of Civil Appeals acknowledged the existence of the rule requiring a wider scope of judicial review than that just mentioned. Said the court in the course of a general discussion of the subject:

"The commission contends that the rate must be sustained against the attack that it is confiscatory and unreasonable and unjust because it does not yield a reasonable return on the fair value of the property when it is shown to be based upon substantial evidence adduced before the commission, and that only the evidence adduced before the commission on the rate hearing may be considered on appeal to the court. On the other hand, appellee contends that the hearing on appeal to the court of such issues is de novo and that 'due process of law requires submission to a judicial tribunal for determination upon its own independent judgment as to both law and facts according to the settled rules governing judicial action and decision. * * *' As regards the rate making power of the commission, the Texas courts have adopted this wider scope of review." (V, R. 3354.)

And again:

"But the questions of whether a rate is confiscatory or unreasonable and unjust have been held to be legal or justiciable questions of fact and as to which the wider scope of judicial appellate review seems to have been adopted by the Legislature and courts of this State." (V, R. 3357.)

What the court said must be distinguished from what it did. The requirement of due process,

recognized in the language just quoted, is denied effective operation in the court's statement and application of the rules governing the judicial review of rate orders in the District Court. This is apparent from the language we have previously quoted, *supra*, pp. 124-126, and from the action of the court in reversing the judgment of the trial court and rendering judgment against the appellant.

What the same court said in *United Gas Public Service Company vs. State of Texas, 89 S. W. (2d) 1094, 1102*, decided after the present case, is enlightening:

"* * * in advance of any actual test of the practical result of the new rate the court on appeal will not disturb the rate where it is based upon conflicting evidence as to valuations of property or as to any other item used as a basis for the calculation of the rate because to do so would likely substitute the finding of the court or jury upon conflicting evidence for that of the commission, and would therefore permit the court to exercise the legislative function of rate making."

Under the rules laid down and applied against the appellant in this case by the Court of Civil Appeals, the issue in a case like this is not whether the rate is confiscatory, but whether there is substantial evidence supporting it. The inquiry, according to the court, is directed, not to the validity of the rate, but to the existence of a conflict in the evidence relating to its validity. The rate must be upheld, not because it is reasonable, but because those supporting the rate say that it is.

And it is important to bear in mind that the con-

flicts which the court refers to are not the conflicts between the findings of the commission—which were abandoned and in effect repudiated by the appellees at the trial—and the testimony of appellant's witnesses. The conflicts to which the court gave conclusive legal effect in deciding the case against appellant are those between the testimony of appellant's witnesses and the testimony of appellees' witnesses at the trial. The evidence heard by the commission was not admitted in evidence in the trial court. The trial was entirely *de novo*. When the State court refers to the evidence sustaining the commission's order and findings, it is referring to the testimony heard *de novo* at the trial.

In the view taken by the State court, the evidence on the issue of confiscation in a rate case can never present an issue of fact. The question to be determined in every such case becomes solely one of law, depending for its solution on the presence or absence of a conflict in the evidence. In either instance, a verdict must be directed; in the one instance in favor of those supporting the rate because of a conflict in the evidence, and in the other, in favor of those assailing the rate because the evidence showing that it is confiscatory is undisputed. The practical operation of such a rule would mean that a rate can never be successfully attacked for there is always evidence "easily produced" in support of the "findings of the implicated board." *Chicago, etc., Ry. Co. vs. Osborne, 265 U. S. 14, 16-17.*

It is one thing to say that the reviewing court in a case like this must accept testimony that simply conflicts with the findings underlying the rate order

or with other testimony sustaining the rate order. It is quite a different thing to say that the reviewing court is not entitled to credit such testimony. In the case of a conflict in the evidence adequate judicial review requires the right of selection and that is wanting here.

The presumption of validity surrounding a rate order, properly promulgated by a duly authorized body, may be enough to cause a reviewing court with power to weigh the evidence and exercise its independent judgment as to the facts affecting the issue of confiscation, to accept the findings underlying the order if they are supported by substantial evidence. The point here is that the jury in this case did not see fit to do so. It settled the conflicts in the evidence against the validity of the rate order. What it has done, and the power to do it again, must be upheld if the right to an adequate judicial review is to remain. How can there be any adequate judicial review when there is no power to settle conflicts in the testimony; no power to determine what testimony constitutes evidence?

The existence of "substantial evidence" sustaining a rate order does not negative the existence of clear, definite and satisfactory evidence against the validity of the order. And the reviewing court, though having the right to credit the substantial evidence in favor of the order and sustain it, must also have the right to credit the clear, definite and satisfactory evidence against the order and strike it down. To say that a rate order is properly sustained when it is supported by substantial evidence does not mean that the order must be sustained if it

is supported by substantial evidence, without regard to the amount of evidence on the other side.

Much that has been said on this subject has been said in cases where the reviewing court had before it only the evidence heard by the commission, promulgating the rate, and the commission's findings based on the evidence heard by it. In every such case the conflicts in the testimony have been settled by the commission before the case reached the reviewing court, and the court was called upon, viewing the same record, to upset the action of the commission in settling the conflicts in a particular way. In Texas, judicial review of a rate order is *de novo;* and this order was thus reviewed. None of the evidence heard by the commission was placed before the jury. The jury, under the supervision of the trial court, was called upon to consider originally the conflicts in the evidence. In this situation conflicts must be settled in the District Court, or they cannot be settled at all.

The distinction here pointed out seems to have been recognized by this Court in *St. Joseph Stock Yards Co. vs. United States, 298 U. S. 38, 54.*

The practical result of the holding of the Court of Civil Appeals is that the rate order, duly challenged by appellant as being confiscatory, has been sustained and enforced against appellant notwithstanding the fact that admitted conflicts in the evidence, relating to matters affecting the issue of confiscation, were not settled and must remain unsettled. In these circumstances, of what value to appellant was the so-called *de novo* trial—a trial before a tribunal, empowered to hear evidence *de novo*, as

distinguished from the commission record, and yet without power to settle the conflicts in the evidence heard. This holding means that the reviewing court had the power to hear but no power to decide.

The holding of the Court of Civil Appeals means that while Texas has provided a tribunal empowered to find a conflict in the evidence, it has provided no tribunal empowered "to weigh the evidence and pass upon the issues of fact." *St. Joseph Stock Yards Co. vs. United States, 298 U. S. 38, 50.*

This Court, in *B. & O. R. R. Co. vs. United States, 298 U. S. 349, 368,* said:

"The due process clause assures a full hearing before the court or other tribunal empowered to perform the judicial function involved. That includes the right to introduce evidence and have judicial findings based upon it."

A decision in favor of the commission upon the trial *de novo*, merely because the evidence is conflicting, is no decision of the *case* at all. It is simply an announcement of judicial impotence, imposed on the reviewing court by the rule denying it the right to weigh the facts and settle conflicts in the evidence.

Point Five.

The finding of the jury that the rate was confiscatory is sustained by clear and satisfactory evidence. Therefore the judgment of the Court of Civil Appeals should be reversed and that of the district court affirmed.

What quantum and character of evidence is required to sustain a judgment setting aside a rate order, challenged as being confiscatory, is a matter of law—of Federal constitutional law. It is clear that this question has been erroneously decided by the State court.

The opinion of the State court discloses a failure on its part to understand the decisions of this Court, defining the test to be applied in determining whether a rate order is confiscatory. The Court of Civil Appeals announces that, where the evidence is conflicting and the conflict has been settled by the triers of fact against the validity of the order, their finding must be set aside and the rate sustained merely because of the presence of the conflict and without settling the conflict. There is no decision of this Court sustaining the ruling of the State court. The cases cited by the court involve entirely different states of fact.

The question involved here is what amount of evidence is sufficient to sustain a judgment invalidating a rate order as confiscatory. It is a case where the conflict in the evidence on vital points has been resolved *against* the order by the triers of fact.

The State court cites cases where the same kind of conflicts in the evidence were resolved in favor of the order by the triers of fact and where the utility on appeal was attempting to reverse the judgment. These decisions, correctly understood, apply here in support of, rather than against, appellant's position. For example, the State court and counsel for appellees greatly emphasize *Dayton Power & Light Co. vs. Commission, 292 U. S. 290, 299, 301,*

302. There the Supreme Court of Ohio, having full authority "to revise the findings of the commission in respect to fact and law" (292 U. S. 302), had settled the conflicts in the evidence in favor of the rate order and the question was whether this Court should overrule the findings of the State court. This Court in its opinion said:

"But plainly opinions thus offered, even if entitled to some weight, have no such conclusive force that there is error of law in refusing to follow them." (292 U. S. 299.)

"* * *

"Granting even that the testimony had an evidential value, it had that and nothing more. It had no such commanding quality as to apply coercion to the judgment of the appointed triers of the facts, and exclude every choice but one." (292 U. S. 301.)

Discussing the findings of the State court relating to the fair value of the utility's properties this Court said:

"Plainly in all this there has been no infringement of constitutional immunities unless a higher value has been made out by evidence too strong to be rejected. But for reasons already stated, the evidence is lacking in that high coercive power. Court and commission were free in their discretion to reject as unsatisfactory the conflicting opinions of a group of friendly experts." (292 U. S. 302.)

Here the independent triers of fact have resolved the conflicts in the evidence against the validity of the rate order. The conflicts in the testimony of the "equally well qualified experts" were settled

in favor of the appellant; and the rules announced in cases like the Dayton Power & Light Company case apply to sustain these findings.

The State court erroneously assumed that the rules announced in cases like the Dayton case apply only where the conflict is resolved in a particular way—that is, in favor of the rate order. These rules apply to sustain the findings without regard to the way in which the conflict was settled by the findings.

Other cases, similarly misapplied by the State court, are those where this Court has reviewed, on appeal, Federal equity cases, and where it was invested with the power to consider questions of fact as well as of law. Such a case was *St. Joseph Stock Yards Co. vs. United States, 298 U. S. 38, 50, 54.* In that case it was claimed that the order had not been properly reviewed in the lower Federal court. The Government, responding to this contention, invited this Court, sitting as an appellate court in a Federal equity case, to review the evidence under any proper test of judicial review. (298 U. S. 50.) This the Court did. See also *Lindheimer vs. Illinois Tel. Co., 292 U. S. 151.*

In a case appealed from the highest court of a State, this Court stands in a different position, the rule being settled that the findings of fact in the State court will not be re-examined on their merits in this Court. This rule has added force where the Court is called upon to examine a finding of fact made by a jury, because then the Seventh Amendment is applicable. *Dower vs. Richards, 151 U. S.*

658, 667; Jones National Bank vs. Yates, 240 U. S. 541, 552, 553.

However the opinion of the Court of Civil Appeals may be interpreted, appellant's right to an adequate judicial review was in practical effect denied. If the District Court had the power to adequately review the order, then appellant was wrongfully deprived of the result of that review by the judgment of the Court of Civil Appeals. It is not material whether the limitation on judicial review was stated by the Court of Civil Appeals as a rule specially limiting the judicial process locally provided in Texas for the review of such orders, or as a general rule of administrative and constitutional law limiting all courts in reviewing such orders. The result is the same: The order is to be enforced against appellant under the judgment of the State court without any provision for an adequate judicial review.

In determining whether the rate order has been proven to be confiscatory by clear and satisfactory evidence, the evidence must be viewed as a whole and must be considered in the light in which the triers of fact had the right to consider and blend it. It must be given the weight that the triers of fact were entitled to give it. In the instant case, the triers of fact, acting under a charge that affirmed their right to consider the credibility of the witnesses and the weight to be given their testimony, and that instructed them that the attack on the rate order must be sustained by clear and satisfactory evidence, have found that the rate order is confiscatory. If there is evidence in the record that they had a right to

accept, sufficient to constitute clear and satisfactory evidence, then their finding must be sustained.

We shall now review the evidence and undertake to demonstrate that when it is blended and considered as a whole in the way, in which the triers of fact were entitled to consider it, it shows in a clear and satisfactory way that the rate order is confiscatory.

1. The application of the rate considered in the light of the evidence as to appellant's integrated properties and operations.

The commission's order was shown by clear and satisfactory evidence to be confiscatory on the basis of appellant's evidence relating to its "integrated operating system"—the property and operations covered by the commission's findings. We have heretofore summarized this evidence; clearly the triers of fact were entitled to accept it. (*Supra*, pp. 34-43.)

Certain features of this evidence were specifically criticised by the Court of Civil Appeals. They are now discussed.

Federal Income Taxes. The court states that appellant claims between $300,000.00 and $400,000.00 a year for this item; that appellant has never paid any income tax, and that the only amount justified by the record is around $50,000.00 per annum. (V, R. 3364.) This is erroneous. The commission found "Federal income tax computed on the basis of 1931 actual earnings amounted to $302,302.41," (I, R. 104), but made no allowance for Federal income taxes in computing the amount available for return. (I, R. 105.) True, appellant

had not, for several years, paid income taxes directly. The payments were made by the parent company through a consolidated return. Since 1934 appellant has been required, by law, to make its own return and pay its own tax. The rate applicable, beginning January 1, 1934, was 13¾% of taxable income.

Appellees' witness estimated Federal income taxes payable on earnings from the Texas properties alone at $97,534.45 for the twelve-months period ended March 31, 1934, and $96,073.64 for the year 1933. (III, R. 1900.) There is no evidence in the record to support the court's statement that $50,000.00 would be an adequate allowance for the payment of Federal income taxes. Federal income taxes are proper deductions from earnings in computing the amount available for return. *Galveston Electric Co. vs. Galveston, 258 U. S. 388; Georgia Ry. & Power Co. vs. Railroad Commission, 262 U. S. 625.*

New Business Expenses. The Court of Civil Appeals says that appellant "proved only a small amount for advertising, nothing in proportion to the charges made by their experts in their accounts," and that the expense was "not supported by the quantum and character of evidence required." (V, R. 3365-3366.) The court was confused.

The amount claimed did not represent an expert's opinion; it was not an estimate, but an out-of-pocket operating expense. Appellees', as well as appellants', evidence shows the following sums actually expended for the item in question: For the year 1931, $126,125.98; 1932, $87,528.94; 1933, $99,793.94; and twelve-months period ended March 31, 1934,

$101,308.68. (Appellees' Ex. 5, III, R. 2131.) These outlays covered new business advertising salaries, new business solicitors and commissions, advertising supplies and expenses. The evidence shows that the expenses were incurred in good faith in the regular course of business and in the exercise of the management's best judgment.

"In all the pages of this record there is neither a word nor a circumstance to charge the management with fault." *West Ohio Gas Co. vs. Public Utilities Commission, 294 U. S. 63.* Appellant is as interested in increasing gas sales as the distributing companies. Reasonable sums expended for this purpose in the way of new business activities and advertising are legitimate charges to operating expenses. *West Ohio Gas Company vs. Public Utilities Commission, supra; Wichita Gas Company vs. Public Service Commission, 2 Fed. Supp. 792.* The court's criticism of the new business and advertising expenses is not justified by any of the evidence in the record.

Canceled and Surrendered Leases. The court's discussion of this item of expenses shows that the court was confused. (V, R. 3366.) It states that the undisputed evidence is that appellant's gas reserves are adequate for forty years to come. This is error. The only testimony in the record on this point is that they would last approximately twenty years. (I, R. 531; II, R. 1336.) The court says that the commission allowed appellant for gas produced from its wells the full prevailing price, eliminating production expenses, drilling and tool expenses, dry holes, canceled and surrendered leases,

and other items. This is error. The court confuses the commission with the experts who testified for appellees upon the trial. The commission made no such allowance, nor did it make such eliminations. It made an allowance for canceled and surrendered leases in promulgating the order. It said: "Cancelled and surrendered lease expense amounted to $239,230.96 for the year 1931. * * * Cancelled and surrendered lease expense is incurred whenever the company drills a dry hole on an undeveloped lease and decides that the whole lease is dry; whenever an undeveloped lease is proven dry by any other operation; whenever the company deems the prospective gas not worth the delay rentals; or whenever for any reason the company decides that the lease is not of sufficient value to continue to pay delay rentals; when an undeveloped lease is cancelled and surrendered, it is charged off at its original cost plus all delay rentals and any acquisition costs that have been set up on the books of the company." (I, R. 28.) The commission found that the average expense for canceled and surrendered leases for the five-year period ended December 31, 1931, amounted to $99,140.73 per annum, and allowed this amount for the year 1931, the year upon which it based its findings in computing its order. (I, R. 30, 104.) Appellees' own testimony showed actual charges for this item as follows: 1931, $239,230.96; 1932, $255,829.03; 1933, $188,629.92; and twelve months ended March 31, 1934, $169,362.09. (Appellees' Ex. 5, III, R. 2126A.) For Texas properties only, appellees' Exhibit 4 showed: 1931, $232,271.16; 1932, $245,103.65; 1933, $176,139.67; and twelve-

months period ended March 31, 1934, $166,304.21. (III, R. 2116A.)

The court also confused canceled and surrendered leases with gas reserves and depletion. Depletion expense is intended to provide for amortizing the producing leaseholds. The nature of canceled and surrendered lease expense is explained in the excerpt from the commission's opinion quoted above. Such expense may be handled in either one of two ways. It may be charged either to current operating expense or it may be provided for by reserve accruals. Both methods are recognized by the United States Bureau of Internal Revenue. In the instant case neither appellant nor appellee set up a reserve accrual for this purpose. In view of this fact it was proper to charge it as an operating expense. This is what appellant did. The amounts charged were reasonable. In any event, the commission's average was not assailed by appellees. Appellees' witnesses at the trial purported to include this expense in allowing the well head price for gas. Some allowance must be made if confiscation is to be avoided. What was a reasonable charge was not a matter of law, but a matter of fact for the jury.

Regulatory Commission and General Expenses. Speaking of this item, the Court of Civil Appeals said: "The experts employed by appellee charged in excess of $400,000.00 per annum for regulatory commission and general expenses." We cannot identify this figure in the record. Regulatory commission expense, however, does definitely appear. It is an out-of-pocket expense—not a matter of opin-

ion as the court's statement seems to imply. The commission allowed $17,695.86, this being the sum expended in 1931, saying: "Expenditures necessary for the preparation of inventories, for a reasonable number of evaluations, and for a presentation of all relevant facts to this commission and to the courts are properly chargeable to this account. The 1931 regulatory expense was not relatively large. Whenever such expense is relatively large, it should be amortized over a reasonable length of time, say ten years." (I, R. 22.) Appellee's accounting exhibit showed that the regulatory expenses were: 1931, $17,695.86; 1932, $163,739.01; 1933, $66,792.39; and for the twelve months ended March 31, 1934, $56,204.18, or a total of $304,431.44 for the four accounting periods. (Appellees' Ex. 5, III, R. 2131.) If amortized over a five-year period, it would amount to approximately $61,000.00 per annum, and $30,500.00 per annum if amortized over a ten-year period. It is uniformly recognized that reasonable regulatory commission expenses are a proper charge against operations. *West Ohio Gas Co. vs. Public Utilities Commission, 294 U. S. 63.*

Going Value. The only specific criticism made by the Court of Civil Appeals of the amount claimed by appellant as the fair value of its property related to going concern value. (V, R. 3367.) It rejected appellant's claim for going concern value because it had "not experienced any loss on account of inception costs, which are usually included in going value," and because "the reproduction cost new value, as determined in the instant case, allows for

all overhead expenses, which, together with the reasonable operating expenses allowed, fully compensate appellee for all development costs which have been incurred, and are ample cover items entering into and forming a part of what is referred to as 'going concern value.'" (V, R. 3367.)

Appellees included nothing in their appraisal for going concern value. Their expert testified as follows:

"Q. Well, did you include anything in your exhibit 6 for what is commonly known as going value, going concern value, or cost of reproducing the business?

"A. No." (III, R. 1793-94, 2108.)

The commission made no specific allowance for going concern value, and in our view it made no allowance whatsoever therefor. The commission thought that because it had allowed for all collateral construction costs and had not valued the property as junk, it had sufficiently compensated for the going concern value. (I, R. 66.) All parties admit that a going concern value inheres in appellant's property and business.

The amount claimed by appellant for going concern value was estimated by the witness Connor. Connor prepared and sponsored in evidence an exhibit which covered the subject exhaustively. (Appellant's Ex. 28, IV, R. 2914—V, R. 3006.) Connor based his estimate on a thorough study of the history and circumstances of appellant's property and business. He took into consideration that appellant's property and business was well established; that it

had been operating for approximately 24 years and was serving approximately 230,000 domestic and 1400 industrial consumers at the date of inquiry; that appellant, after much difficulty over a period of years, had secured and consolidated a diversified supply of gas ample to meet the maximum requirements of its consumers; that its property was well constructed, well maintained and so located as to meet the future growth of the territory that it serves. That appellant had a trained, efficient, operating personnel; that its credit was good; that there was demand for its service and that under reasonable rates it could earn a fair return on the fair value of its property. (II, R. 989.)

Connor showed in exhibit form the historical rate of business attachment on four of appellant's major pipe line systems. (Appellant's Ex. 48, V, R. 3318-3321.) He studied the history of business attachment to these pipe lines beginning with the date they were put in service and extending to the date of inquiry. He made a careful study of the existing system and markets and an analysis of the historical rate of business attachment for the cities and towns served by appellant. The way and manner in which appellant's witness arrived at going concern value meets controlling tests laid down by this court. It is fully explained in the record and need not be further detailed here. (II, R. 988-1013.)

That there is an element of value in appellant's assembled and established system which is doing business and capable of earning a reasonable return with reasonable rates, and that such value is a property right which should be considered in determining

the value of the property upon which appellant has a right to make a fair return, can not be doubted. *Los Angeles Gas & Elec. Corp. vs. Railroad Commission, 289 U. S. 287, 313-315.* There was no margin in the commission's rate base or appellees' appraisal for this property right.

We submit that a reasonable allowance should have been made to cover this item. What was a reasonable allowance was a question of fact for the jury.

Rate of Return. In disposing of appellant's contention that the jury may have found that a 6% rate of return was confiscatory or unreasonable and unjust, the Court of Civil Appeals said:

"We are clear in the view that the evidence adduced by appellee (appellant here) did not raise a jury question as to whether a 6% rate of return was either confiscatory or unreasonable and unjust."

The court then referred to the conflicting evidence and concluded that "this evidence merely presented the difference of opinion of experts, and manifestly their opinion or opinions can not be substituted for the finding of the commission that a 6% rate of return was fair and reasonable, which finding was based upon substantial evidence." (V, R. 3368.)

What annual rate will constitute just compensation depends on many circumstances and must be determined by the exercise of a fair and enlightened judgment having regard to all relevant facts. It involves a determination of what rate of return will be reasonably sufficient to assure confidence in the financial soundness of the enterprise and be adequate under efficient and economical management to main-

tain and support appellant's credit and enable it to raise the money necessary for the proper discharge of its public duties. *Bluefield Waterworks & Improvement Co. vs. Public Service Commission, 262 U. S. 679, 692, 693; Los Angeles Gas & Elec. Corp. vs. Railroad Commission, 289 U. S. 287, 319, 320.* It is clear that the question presents a fact issue determinable by the jury in this case.

Appellant offered the testimony of two experienced bankers, Messrs. Thornton and Florence, who testified that a return of 8% would be reasonable. Other witnesses testified to the same effect. These witnesses gave the basis of their conclusions. (Page 42, *supra;* also, Thornton, III, R. 1960-1965; Florence, III, R. 1965-1977.)

Appellees' principal witness on rate of return, a University professor, testified that at the date of inquiry no return at all would be reasonable, but that over a period of ten years 5% would be exceedingly liberal. (III, R. 1815-1816.) This witness gave no satisfactory basis for his conclusion. There are other facts to support a finding that a 7% or 8% rate of return would be reasonable.

The jury were clearly entitled to accept the testimony of appellant's witnesses on the issue of *fair rate of return* as against the testimony offered by appellees' witnesses on the same issue. That this testimony when accepted by the jury would constitute clear, definite and satisfactory evidence of confiscation cannot be denied.

What we have said here is correct without regard to the decision that may be made concerning the alleged failure of appellant to properly segregate its

properties and business as between Oklahoma and Texas, or interstate and intrastate commerce. If the jury resolved the conflict in the testimony of these "equally well qualified experts" on the issue of fair return in favor of appellant, then the rate was shown by clear and satisfactory evidence to be confiscatory even on the basis of the commission's own findings as well as on the segregation of properties and operations sponsored by appellees' witnesses at the trial. A determination of the issue of fair rate of return in favor of the appellant would necessarily have determined in its favor the entire issue of confiscation under any possible view of the evidence.

Depreciation, Depletion and Amortization Reserve Accruals. The Court of Civil Appeals compares appellant's estimate of $3,465,123.36 with appellees' estimate of $831,946.08 for annual reserve accruals for depreciation, depletion and amortization. (V, R.. 3363.) It also compares appellant's estimate with the actual charges against the reserve for the years 1927 through 1933. Upon the basis of these comparisons it concludes that appellant's estimate is at war with experience and plainly excessive. It concludes that appellant's estimate was of no probative force. In making these comparisons, statements and conclusions, the court states that the commission made certain estimates. The court is here actually referring to appellees and not to the commission. The commission allowed $968,066.98 for annual reserve accruals, whereas appellees estimated only $831,946.08 for depreciation.

Appellant's estimate is based upon the straight line

method, the method employed by appellant over a period of approximately twenty-five (25) years in its reserve accrual accounting. (II, R. 1260.) The straight line method is quite generally used and preferred for properties with units of varying life such as those involved in this case. *Lindheimer vs. Illinois Bell Telephone Co., 292 U. S. 150; Clark's Ferry Bridge Company vs. Public Service Commission, 291 U. S. 227.*

The estimates of appellant and appellees are not comparable. The differences in methods employed call for different rates and different annual amounts. Appellees' witness testified that if he had employed the straight line method he would have used 4.205% of the reproduction cost new of the depreciable property and 3.09% of the total rate base (III, R. 1874) instead of 2.11% which he used under the sinking fund method. (III, R. 1843.)

The estimates are not comparable for other reasons. Appellees' estimate included nothing for depreciation and depletion on appellant's Texas production system properties. (III, R. 1795.) Appellees' estimate covers only the properties located in Texas, exclusive of the production properties, whereas appellant's estimate covers the integrated operating system. Appellant's estimate provides $146,000.00 per annum for depletion of gas reserves, (V, R. 3055, 3196), and $421,316.00 for depreciation of gas well construction and equipment. (V, R. 3141.) Appellees' estimate makes no provision for depletion and depreciation on this type of property, which is admittedly the most highly depreciable item of property in appellant's system. (III, R. 1874.) It

is clear, therefore, that without regard to the basic differences in the calculations between appellant and appellees, a comparison of their respective estimates for reserve accruals is unsound because appellees' estimate includes only a part of the integrated operating system, whereas appellant's estimate includes all of the property in the system.

The court's comparison of the actual charges against reserve with appellant's estimate and its conclusion that because the estimate exceeds the charges it is "speculative, at war with actual experience, and plainly excessive" is fallacious. It is an accepted fact that reserve accruals should consist of uniform charges against operating revenues to meet the impact of increasing and fluctuating costs of replacements, removals and abandonments of capital items used in the service. *Lindheimer vs. Illinois Bell Telephone Co., 292 U. S. 150.* In the case of natural gas reserves, wasting assets, the accruals must provide for final exhaustion thereof. *Columbus Gas & Fuel Company vs. Public Utilities Commission 292 U. S. 398.*

As respects appellant's property, it is important to bear in mind that it has had a rapid growth in recent years. At the date of inquiry it was not the same property that was in existence when charges against reserves were made in past years. It was a larger and newer property at the date of inquiry because of large extensions and additions in recent years. At the date of inquiry its weighted age was only twelve years. (Page 39, *supra.*) As the pipe lines and other depreciable property grow older, the mortalities occasioned by depreciation, depletion,

public requirements and changed operating conditions will increase. The Court of Civil Appeals failed to consider the special conditions of a growing plant; that there are plant groups in operation upon which depreciation is accruing, but which are not yet represented or are but slightly represented in the retirement losses. The court has failed to consider that "where, as in this instance, there has been a rapid growth, retirements at one point of time will relate for the most part to the smaller preceding plant, while the depreciation reserve account is currently building up to meet the 'increased eventual retirement liability' of the enlarged plant." *Lindheimer vs. Illinois Bell Telephone Co., 292 U. S. 150.*

If proper recognition be given to the fact that the rate of replacements, removals and abandonments in a property such as that under consideration increases with age and use, then it becomes apparent that an estimate of the average future rate of these occurrences can not properly be assumed to be "at war with realities" by reason of the fact that it exceeds the past rate of mortalities. It is axiomatic that the converse is true; that where a variable rate of occurrences which increase with age and use are involved an estimate of the future average rate that did not exceed the past rate would be contrary to the basic principle that the rate was an increasing variable.

Another reason why charges against the reserve are not comparable with appellant's accrual estimate is that the estimate provides for amortizing certain classes of property, whereas no charges have

been made against reserve for property which is still in service, but which is yearly approaching the end of its life and for which an amortization accrual must be currently made. Appellant's estimate includes $350,515.00 for amortization. (Exhibit 42, V, R. 3192.)

Appellant's estimate was predicated in every particular upon its actual experience from the beginning of operations, after giving effect to every factor which would tend to insure accuracy and after testing the accuracy of the conclusions reached by every available check. (Pages 37-39, *supra.*)

In the final analysis, the weight that should be given an estimate or determination of annual accruals for depreciation, depletion and amortization must largely depend upon the qualifications and experience of the individuals making the estimate, the extent and accuracy of the available historical data and the interpretation of the data and their application to the property. Appellant's witness Connor was well qualified and thoroughly experienced. He had access to and analyzed an impressive amount of historical data. (Pages 37-39, *supra.*) Appellees' estimate would have provided for only 61.8% of the removals and replacements actually made by appellant up to the date of trial. (III, R. 2000-2001.) If appellees' rate of accrual had been applied to the property in service each year prior to the date of inquiry, rather than the property in service at the date of inquiry, it would have been inadequate to meet actual requirements. (III, R. 2027-2033.) Appellees' estimate was admittedly inadequate to meet the calculated future mortalities

unless supplemented by the existence and use of a credit balance in reserve account at the date of inquiry of $5,000,000.00 for transmission lines alone. (III, R. 1861.)

It was for the jury to resolve the conflicting evidence on the subject and to weigh the opposing contentions and conflicts, and to pass upon the credibility of the witnesses. In doing so they had a right to reach a conclusion favorable to appellant. The evidence clearly supports such a conclusion. "The question of the amount which should be allowed annually for depreciation is a question of fact." *Clark's Ferry Bridge Company vs. Public Service Commission, 291 U. S. 227.* The jury had a right to say in the light of all the circumstances what amount should be allowed for annual reserve accruals. *Columbus Gas & Fuel Company vs. Public Utilities Commission of Ohio, 292 U. S. 398, 406.*

The amounts available for depreciation, depletion, Federal income tax and return under the 32 cent rate, after adjusting operating expenses in accordance with the findings of the commission, were: For the year 1931, $3,765,160.24; 1932, $3,908,663.51; 1933, $2,997,969.38; and the twelve-months period ended March 31, 1934, $3,191,162.50. (III, R. 2270-2271.) These figures eliminate controversial items of expenses. Management fees and other expenses eliminated by the commission have been eliminated in arriving at them. The jury may have accepted these figures. If they had agreed to the inclusion of expenses eliminated by the commission, the amounts available for depreciation, depletion, Federal income tax and return would have been less than is shown

by these figures. They are being used, however, for the purpose of demonstration.

The actual costs of the property are set out at pages 36-37, *supra*. These costs include nothing for cash working capital. The commission estimated cash working capital at $1,488,369.91. If this amount be added to the actual cost and the accrued depreciation be deducted therefrom as determined by appellant's experts, this determination as shown in appellant's Exhibit 34 (V, R. 3037) being undisputed and unchallenged, the following amounts would represent actual costs depreciated rate bases:

	Before Deducting Accrued Depreciation	Percent Condition of New	Actual Cost less Accrued Depreciation
12-31-31	$49,265,119.54	94.26	$46,437,301.67
12-31-32	51,522,801.61	94.26	48,565,392.79
12-31-33	51,325,395.97	94.26	48,379,318.23
3-31-34	51,361,131.00	94.26	48,413,002.08
Average	50,868,612.03	94.26	47,948,753.70

If the 5% annual rate for depreciation and depletion determined by appellant's expert be applied to the actual costs depreciated rate bases, it results in the following amounts for reserve accruals:

12-31-31	$2,321,865.08
12-31-32	2,428,269.64
12-31-33	2,418,965.91
3-31-34	2,420,650.10

If these amounts are deducted from the sums available for depreciation, depletion, Federal income tax and return shown above, there remains available

for Federal income tax and return on the depreciated actual costs rate bases the following percentages:

12-31-31	3.11%
12-31-32	3.05%
12-31-33	1.20%
3-31-34	1.59%

If the jury had accepted the testimony of appellees' expert that in estimating annual reserve accruals by the straight line method he would use 3.09% on the total property, both physical and non-physical, and this percentage had been applied to the actual costs depreciated rate bases, it would result in the following reserve accruals:

12-31-31	$1,434,912.62
12-31-32	1,500,670.64
12-31-33	1,494,920.93
3-31-34	1,495,961.76

After these amounts are deducted from the sums available for depreciation and return shown above, there remains available for return on the depreciated actual costs rate bases the following percentages:

12-31-31	5.02%
12-31-32	4.96%
12-31-33	3.11%
3-31-34	3.50%

If the jury had accepted appellant's reproduction cost new estimate for the physical properties in the amount of $60,054,589.57 and appellant's determination of their percent condition of new, which was the only evidence introduced on this point, they

would have found a present value of $55,809,205.16. (V, R. 3037.) This figure does not include preliminary and organization expense, working capital or going concern value. Adding to this figure, as the jury may well have done, the commission's allowance for preliminary and organization expense in the amount of $231,555,30, and cash working capital in the amount of $1,488,369.91 (I, R. 52), they would have arrived at a present value of $57,529,130.37, exclusive of going concern value.

Appellant's expert estimated this annual requirement at $3,465,123.36, or approximately 5% on the total value ascribed to the property by appellant. (Page 37, *supra.*) This estimate was based on the straight line method and requires a depreciated rate base. If the 5% be applied to $57,529,130.37 suggested above, which was determined after deducting accrued depreciation, $2,876,456.51 results. This amount should be deducted from the amounts shown above to be available for depreciation, depletion, Federal income tax and return. When this is done, the following amounts are available for Federal income tax and return on the rate base of $57,529,130.37:

12-31-31	1.54%
12-31-32	1.79%
12-31-33	.21%
3-31-34	.55%

On the other hand, the jury may have accepted the testimony of appellees' expert that in estimating annual reserve accruals by the straight line method 3.09% of the total property, both physical and non-physical, should be used. If this percentage be

applied to the rate base of $57,529,130.37, it results in an annual accrual of $1,777,650.12. The following amounts are available for return on the rate base of $57,529,130.37: 1931, 3.45%; 1932, 3.70%; 1933, 2.12%; and twelve-months period ended March 31, 1934, 2.46%.

Facts set out under statement of the evidence show that even if the jury had accepted the commission's findings as to the rate base, annual depreciation reserve accrual, and operating expenses, they would have found that the 32 cent rate yielded 5.56% for 1931, 5.76% for 1932, 3.97% for 1933, and 4.31% for the twelve months ended March 31, 1934, or an average of 4.89% for return. (Page 41, *supra.*) It is apparent from the foregoing illustrations that if the jury found that appellant was entitled to a higher annual reserve accrual than the commission allowed or a minimum rate of 6%, as the commission found, or a rate of 7% or 8% for return, they were bound to find, as they did find, that the order of the commission was confiscatory and unjust and unreasonable as to appellant.

2. The application of the rate to appellant's intrastate operations, as determined by its segregation.

The only objection which the Court of Civil Appeals leveled at appellant's segregation was directed to the asserted error in treating the transportation of gas through Line A as interstate commerce. We have shown that the court's view in this regard was erroneous. (Pages 65 *et seq, supra.*) Whatever appli-

cation the court's criticisms of appellant's evidence in relation to its integrated operating system may have to appellant's segregation has already been sufficiently answered in the foregoing discussion. It has been sufficiently demonstrated, we think, that, in the exercise of their power to blend and weigh the evidence, the jury had a right to conclude that the commission's order was unjust and unreasonable as to appellant and that the rate prescribed by the order was confiscatory if applied alone to appellant's intrastate property and business.

The return yielded under the 32 cent rate, when applied to appellant's intrastate property and business, was shown to be 4.65% on the actual cost and 3.78% on the fair value (exclusive of going concern value) of appellant's intrastate properties, for the year 1933, after allowing for reserve accruals at the commission's rate of 2% per annum. (Pages 43-44, *supra.)*

3. The application of the rate to appellant's Texas properties and operations as segregated by the appellees.

Appellees introduced no evidence in relation to appellant's integrated operating system. The evidence which they introduced at the trial was based upon a segregation of the property and business between Texas and Oklahoma. This segregation in the main was based upon the geographical location of the property. (For discussion of appellees' segregation, see pages 44-47, *supra.*)

Appellees' expert found a reproduction cost new of appellant's integrated operating system of

$53,005,251.39 at December 31, 1931. He allocated $47,355,114.77 of that amount to the Texas properties. (III, R. 1797.) This is approximately 89.34% of the total value. This appraisal was not introduced in evidence by appellees, but was used by appellant at the trial for impeachment purposes. The jury had a right to take this figure into consideration in determining the value of the Texas properties if they felt the segregation formula employed by appellees at the trial was reasonable and proper. At the trial of this case the same expert testified to an evaluation of $40,256,862.39, (Appellees' Ex. 6; III, R. 2143) for the Texas properties alone, as of June 15, 1934. There is a difference between the two evaluations made by the same alleged expert of over $7,000,000.00 for Texas properties. Appellees' Exhibit 4 shows that from January 1, 1932, to March 31, 1934, the net capital additions to public service property in Texas alone amounted to $1,500,843.28. (III, R. 2125.) Prices for material and labor were higher as of June 15, 1934, than at December 31, 1933, the date of appellees' appraisal in this case. Thus, it is patent that the value ascribed to the Texas property by appellees' expert at June 15, 1934, is inconsistent with his prior determination. The pertinent facts would indicate a higher value at the later date because of net capital additions and increases in material prices and labor rate. The jury may have taken into consideration the disparity between the two appraisals by the same alleged expert and they may have given more weight to his first than to his second appraisal.

In passing upon the weight to be given appellees' evaluation of the Texas property which they submitted in this case, the jury had a right to take into consideration the following additional facts in reaching their conclusion as to the value of the Texas properties. Appellees' alleged expert, who made the evaluation, used prices prevailing as of January 1, 1933. He admitted that the net increase in prices from January 1, 1933, to June 15, 1934, on transmission line equipment alone amounted to $1,269,688.28. His appraisal does not give effect to this increase. (III, R. 1745-1746.) The witness could not give a breakdown of his cost in respect of the pipe lines. (III, R. 1769-1770.) He relied on information furnished by contractors in respect of the cost of hand excavation. (III, R. 1771-1772.) He had never had any experience in welding pipe lines, (III, R. 1778) or laying threaded and coupled pipe. (III, R. 1776-1777.) His appraisal did not include appellant's gas wells, gas well equipment, gas leaseholds, gas reserve or other production system property. (III, R. 1795-1796.) His appraisal did not represent his independent judgment based upon experience. (III, R. 1760-1762.) He had had no actual experience in designing, constructing or operating properties such as were included in his appraisal. (III, R. 1735, 1775-1776.) He had had no experience in laying natural gas pipe lines. (III, R. 1762.) The excavation costs which he used in preparing the appraisal were based on $.375 per cubic yard for machine excavation, whereas appellant's actual costs for machine excavation amounted to $.4646 per cubic yard. (III, R. 1923; Appel-

lant's Ex. 47, V, R. 3317.) Appellant's excavation costs were based on a labor rate of 35 cents per hour, whereas the rate prevailing at the date of inquiry was 40 cents per hour. (III, R. 1923-28.) The overhead or collateral construction costs applied in appellees' appraisal amounted to approximately 11.8%, (III, R. 2023), whereas experience shows such costs to run approximately 18%. (III, R. 2010.) The excavation costs used by appellees were 36.4% under excavation costs experienced by appellant. (Appellant's Ex. 47, V, R. 3317; III, R. 1925, et seq.)

The production system properties in Texas and which appellees eliminated from their appraisal in this case had an actual cost of $5,191,539.42. Not only were these properties eliminated from the appraisal, but the expenses incurred in their operation were also eliminated; and no sum was provided for depreciation and depletion thereon in the exhibit upon which appellees attempted to support the commission's order. The effect of these eliminations is discussed under the statement of the evidence, pages 46-50, *supra*.

The undisputed evidence showed the Texas production system properties to be used and useful in the Texas public service. (III, R. 2060.) Under the court's charge the jury were required to consider these properties in determining the rate base. The court instructed them that by the term "used and useful" was meant property of appellant's actually being used in the *production*, transportation, delivery and sale of natural gas to its customers. (Page 121, *supra*.) If the production system prop-

erties in Texas be added to appellant's appraisal at actual cost, it will result in a total value of $45,448,401.81. The jury could have properly adopted this figure as the rate base for Texas properties.

Appellee's witness testified that the actual cost of the Texas properties, as reflected by appellant's books, was $44,053,612.30 (Page 46, *supra*), exclusive of cash working capital, material and supplies, or going concern value. Appellees' appraisal included $1,289,000.00 for working capital on the Texas properties. (III, R. 2143.) If this sum be added to the actual cost, it results in a total of $45,342,612.30, exclusive of going concern value. Appellees' expert testified that $831,946.08 was a proper amount for annual depreciation reserve accruals. After correcting an error in his calculations, this amount was increased $16,600.00 (III, R. 1843), making a total of $848,546.08.

Appellees' estimate did not include any allowance for depreciation or depletion on the production system property. Appellees' witness testified that approximately $94,000.00 per annum should be allowed for this purpose. (III, R. 1913.) This makes a total annual reserve accrual on the basis of appellees' testimony, including the production system properties, of $942,546.08, which is 2.07% on appellees' appraisal, plus production system properties at cost. The jury may have accepted this figure. However, the jury may have accepted any of the other higher figures that we have heretofore referred to in discussing this subject.

The results obtained by blending appellees' evidence, to which we have just referred, are thus shown: The only exhibit relied on by appellees to show that the commission's order was reasonable and the rate prescribed thereby compensatory, was their Exhibit 8. (III, R. 2163-2174.) This exhibit shows $3,420,665.19 for the year 1933, and $3,608,172.77 for the twelve months ended March 31, 1934, available for depreciation, Federal taxes and return on the Texas properties under the 32 cent rate. These amounts were obtained by taking the actual revenues derived from Texas operations under the 40 cent rate as shown in appellees' Exhibit 4, and deducting therefrom the reduction occasioned by application of the 32 cent rate. The operating expenses used in this exhibit cover Texas operations only. None of the production system expenses are included. (III, R. 1903-1904.) The production system expenses amounted to $232,758.70 for 1933, and $222,752.66 for the twelve months ended March 31, 1934. (III, R. 2116-A.) After accounting for the production system expenses, there remained $3,187,906.49 for the year 1933, and $3,385,420.11 for the twelve months ended March 31, 1934, to provide for depreciation, Federal taxes and return. If the amount estimated by appellees' experts for depreciation and depletion reserve accruals be deducted from these amounts, there remains available for Federal taxes and return $2,245,360.41 for the year 1933, and $2,442,874.03 for the twelve months ended March 31, 1934.

Appellees estimated Federal income tax requirements for Texas operations alone at $96,073.64 for

1933, and $97,534.45 for the twelve months ended March 31, 1934. (Appellees' Ex. 8, III, R. 2174.) After deducting these amounts for Federal income taxes, there remains available for return $2,149,286.77 for 1933, and $2,345,339.58 for the twelve-months period ended March 31, 1934. In determining the weight to be given appellees' estimate for annual reserve accruals, the jury may have taken into consideration that the estimate was based upon the sinking fund method and presupposed the existence and use of a credit balance in the reserve account of $5,000,000.00 at the date of inquiry for transmission lines alone. (III, R. 1860-1861.) (Page 48, *supra.*)

When expressed as a percentage of a rate base determined by (1) taking appellees' appraisal of the Texas properties and adding the production system properties, and (2) a rate base determined by using the actual cost of the Texas properties plus cash working capital, the following is shown: (1) On the appraisal: 4.73% for the year 1933, and 5.16% for the twelve months ended March 31, 1934, for return; and (2) On basis of actual cost 4.74% for the year 1933, and 5.17% for the twelve months ended March 31, 1934, for return.

4. The application of the rate to appellant's Texas properties and operations, these properties being identified by applying appellees' formula of segregation to the entire integrated operating system; and discussion of the application of the rate to various bases of fact supported by the record.

The following computations are based on the finding of the Court of Civil Appeals that 85% of appellant's property is located in Texas. (V, R. 3337.) This finding conforms to appellees' segregation of the property between Texas and Oklahoma public service, appellees having determined that approximately 85% of the physical property is located in Texas. (III, R. 1748-1749.) Operating revenues and expenses have been allocated to Texas public service on the basis set up and used by appellees in their Exhibit 4. (III, R. 2116-A.)

Gross revenues under the 32¢ rate for Texas operations only have been determined by applying the 32¢ rate to the gas sales at Texas city gates, shown in Appellees' Exhibit 4. Expenses for the Texas operation alone have been taken from Appellees' Exhibit 4. In this manner the net amounts available for Federal income tax, depreciation, depletion and return for Texas operations alone were determined to be as follows:

12-31-31	$3,451,191.26
12-31-32	3,604,611.08
12-31-33	3,114,869.32
3-31-34	3,310,034.06

The depreciated actual book cost for the integrated operating system have heretofore been shown. (Page 155, *supra.*) Application of the finding that 85% of the property is located in Texas, gives a depreciated actual book cost for Texas properties of:

12-31-31	$39,471,706.42
12-31-32	41,280,583.87
12-31-33	41,122,420.50
3-31-34	41,151,051.77

If the 5% rate estimated by appellant's witness Connor for annual reserve accruals be applied to these depreciated book costs and deducted from revenues, the following percentages remain available for Federal income tax and return on Texas operations:

12-31-31	3.74%
12-31-32	3.73%
12-31-33	2.57%
3-31-34	3.04%

If the 3.09% estimated by appellees' witness for reserve accruals on the straight line method be applied to the depreciated book costs for the Texas properties, the following percentages remain available for Federal income tax and return on Texas operations:

12-31-31	5.65%
12-31-32	5.64%
12-31-33	4.48%
3-31-34	4.95%

We have heretofore shown that by taking appellant's determination of the fair value of the physical properties only in the integrated operating system and accepting the commission's findings for preliminary and organization expense and cash working capital on these properties, it results in a fair

value of $57,529,130.37, exclusive of going concern value. (Pages 156-7, *supra.*)

If the 85% factor be applied to this figure, it results in $48,899,760.81 for the fair value of the Texas properties only.

After applying the 5% rate estimated by appellant's witness for depreciation, depletion and amortization to these amounts, there remains available for Federal income tax and return on Texas operations the following percentages:

12-31-31	2.06%
12-31-32	2.37%
12-31-33	1.37%
3-31-34	1.77%

If the estimate of appellees' expert of 3.09% for depreciation, depletion and amortization be applied, there remains available for Federal income tax and return on Texas operations, the following percentages:

12-31-31	3.97%
12-31-32	4.28%
12-31-33	3.28%
3-31-34	3.68%

If the 85% factor be applied to appellant's determination of fair value for the integrated operating system in the amount of $69,738,021.16, it results in $59,277,317.99 for the fair value of the Texas property.

After applying appellant's estimate of 5% for annual depreciation reserve accruals, the following

percentages remain available for return on Texas operations:

12-31-31	.82%
12-31-32	1.08%
12-31-33	.25%
3-31-34	.58%

If the estimate of appellees' expert of 3.09% for depreciation, depletion and amortization reserve accruals be applied, the following percentages remain available for Federal income tax and return on Texas operations:

12-31-31	2.73%
12-31-32	2.99%
12-31-33	2.16%
3-31-34	2.49%

The foregoing computations exhibit reasonable and supportable blendings of the evidence that the triers of fact in any court empowered to adequately review the rate order might have applied to the evidence after determining the credibility of the witnesses and the weight to be given to their testimony. Thus we think it is clearly demonstrated that there was evidence in the record that the triers of fact in the District Court were entitled to credit and accept as constituting clear and satisfactory proof that the rate was confiscatory. If we be correct as to this, then their finding should stand. If it is not permitted to stand, then the decision to that effect must be based upon the rule announced by the Court of Civil Appeals denying the right of any court re-

viewing a rate order to settle conflicts in the evidence relating to matters and issues vitally affecting any correct decision of the issue of confiscation.

VII.

The judgment of the Court of Civil Appeals sustaining the rate order, challenged by appellant as being repugnant to the Constitution of the United States, should be reversed and the rate order adjudged to be void.

Respectfully submitted,

ROY C. COFFEE,
MARSHALL NEWCOMB,
OGDEN K. SHANNON,
BEN H. POWELL,
CHARLES L. BLACK,
Counsel for Appellant.

APPENDIX A.

(These articles are extracted from Texas Revised Civil Statutes, 1925.)

Art. 6053. Regulation of utilities.—The Commission after due notice shall fix and establish and enforce the adequate and reasonable price of gas and fair and reasonable rates of charges and regulations for transporting, producing, distributing, buying, selling and delivering gas by such pipe lines in this State; and shall establish fair and equitable rules and regulations for the full control and supervision of said gas pipe lines and all their holdings pertaining to the gas business in all their relations to the public, as the Commission may from time to time deem proper; and establish a fair and equitable division of the proceeds of the sale of gas between the companies transporting or producing the gas and the companies distributing or selling it; and prescribe and enforce rules and regulations for the government and control of such pipe lines in respect to their gas pipe lines and producing, receiving, transporting and distributing facilities; and regulate and apportion the supply of gas between towns, cities, and corporations, and when the supply of gas controlled by any gas pipe line shall be inadequate, the Commission shall prescribe fair and reasonable rules and regulations requiring such gas pipe lines to augment their supply of gas, when in the judgment of the Commission it is practicable to do so; and it shall exercise its power, whether upon its own motion or upon petition by any person, corporation,

municipal corporation, county, or commissioner's precinct showing a substantial interest in the subject, or upon petition of the Attorney General, or of any county or district attorney in any county wherein such business or any part thereof may be carried on.

Art. 6054. Orders, etc., reviewed.—All orders and agreements of any company or corporation, or any person or persons controlling such pipe lines establishing and prescribing prices, rates, rules and regulations and conditions of service, shall be subject to review, revision and regulation by the Commission on hearing after notice as provided for herein to the person, firm, corporation, partnership or joint stock association owning or controlling or operating the gas pipe line affected.

Art. 6059. Appeal from orders.—If any gas utility or other party at interest be dissatisfied with the decision of any rate, classification, rule, charge order, act or regulation adopted by the Commission, such dissatisfied utility or party may file a petition setting forth the particular cause of objection thereto in a court of competent jurisdiction in Travis County against the Commission as defendant. Said action shall have precedence over all other causes on the docket of a different nature and shall be tried and determined as other civil causes in said court. Either party to said action may have the right of appeal; and said appeal shall be at once returnable to the appellate court, and said action so appealed shall have precedence in said appellate court of all causes of a different character therein pending. If the court

be in session at the time such right of action accrues, the suit may be filed during such term and stand ready for trial after ten days notice. In all trials under this article the burden of proof shall rest upon the plaintiff, who must show by clear and satisfactory evidence that the rates, regulations, orders, classifications, acts or charges complained of are unreasonable and unjust to it or them.

Art. 1119. Rates prescribed, etc.—The governing body of all cities and towns in this State of over two thousand population, incorporated under the general laws thereof, shall have the power to regulate, by ordinance, the rates and compensation to be charged by all water, gas, light and sewer companies, corporations or persons using the streets and public grounds of said city or town, and engaged in furnishing water, gas, light or sewerage service to the public, and also to prescribe rules and regulations under which such commodities shall be furnished, and service rendered, and to fix penalties to enforce such charges, rules and regulations. The governing body shall not prescribe any rate or compensation which will yield less than ten per cent per annum net on the actual costs of the physical properties, equipment and betterments.

SUPREME COURT OF THE UNITED STATES

October Term, 1937

No. 313

LONE STAR GAS COMPANY, *Appellant*,

v.

STATE OF TEXAS, ET AL., *Appellees*

Appeal from the Court of Civil Appeals, Third Supreme Judicial District of Texas

---

APPELLANT'S BRIEF OPPOSING APPELLEES' MOTION TO DISMISS

I.

The Question Raised by the Motion Has Been Settled By Prior Decisions of this Court.

The motion to dismiss is grounded, in main, upon the statement (p. 9) that "the rule observed by this Court in appeals from Texas is in direct conflict with its rule observed in appeals from the State of Ohio,

and perhaps other states." Appellees have accurately stated that the Court has observed a rule in cases brought up from Texas. They concede that the action of the Court in allowing the appeal in this case accords with that rule. That explains the absence of reference by them to any case decided by this Court originating in Texas. Indeed, they say (p. 9) "that the Court has, in several instances, retained jurisdiction of appeals prosecuted from our Courts of Civil Appeals in the circumstances here involved." The statement is a conservative one.

As showing that the rule applicable to cases coming from Texas is more firmly established than is indicated by the above statement, we give below a list of cases that have come to this Court directly from Courts of Civil Appeals of Texas after the Supreme Court of Texas had refused writ of error. We do not list the larger number of cases in which certiorari has been denied, not dismissed. The list does not include any case in which petition for writ of error has been dismissed by the Supreme Court of Texas, for want of jurisdiction, or otherwise.

We hardly see how uniformity may be achieved by dismissing an appeal that has been brought here from Texas in conformity with a test of jurisdiction that has been applied to Texas cases invariably since 1893, as witness the following cases:

Stanley v. Schwalby, 162 U. S. 255;*
Bacon v. Texas, 163 U. S. 207;

---

*This was the first case, thus originating, to be decided by this Court but it was in fact the second case brought to this Court directly from a Texas Court of Civil Appeals. The first case was *Bacon v. Texas, supra*, in which the Court

Roller v. Holly, 176 U. S. 398;
Waters-Pierce Oil Co. v. Texas, 177 U. S. 28;
M. K. & T. Ry. Co. v. Ferris, 179 U. S. 602;
Smith v. St. L. & S. W. Ry. Co., 181 U. S. 248;
Waggoner v. Flack, 188 U. S. 595;
Pardee v. Aldridge, 189 U. S. 429;
Greer County v. Texas, 197 U. S. 235;
H. & T. C. Ry. Co. v. Mayes, 201 U. S. 321;
Waters-Pierce Oil Co. v. Texas, 212 U. S. 86;
A. T. & S. F. Ry. Co. v. Sowers, 213 U. S. 55;
Morgan's La. & T. R. & S. S. Co. v. Street, 217 U. S. 599;

United Gas Public Service Co. v. Texas (the Laredo Gas case), 301 U. S. 667 (overruling motion to dismiss appeal).

At the last term of this Court two similar motions to dismiss cases, appealed directly to this Court from Courts of Civil Appeals after the Supreme Court of Texas had refused a writ of error, were filed and overruled. *United Gas Public Service Co. v. State of Texas* (the Laredo gas rate case), 301 U. S. 667, and *Texas & New Orleans R. R. Co. v. Neill*, 301 U. S. 674 (certiorari granted).* These

*Motion to dismiss this case was overruled by this Court on June 1, 1937. We are unable to find any report of the Court's order overruling the motion. After hearing argument the writ of certiorari was dismissed on October 25, 1937, because the only substantial question involved was one of local practice.

motions were based upon the grounds now presented by appellees and were supported by the same points of argument. The Texas statutes were elaborately reviewed. The statutory change affecting the Supreme Court of Texas, made in 1927, was greatly emphasized. In the Laredo case the Court was furnished a printed copy of the opinion of the Commission of Appeals of Texas in *Gammel-Statesman Publishing Co.* v. *Ben C. Jones & Company*—the same opinion that is attached to the present motion. The motion in the Laredo case was filed by the counsel presenting the present motion. And in the present motion (p. 9) it is admitted that the question raised was "briefed somewhat more in detail on both sides" in the Laredo case.

The Court's decision *per curiam* on the motion filed in the Laredo case is quoted:

"No. 807. UNITED GAS PUBLIC SERVICE CO. v. TEXAS ET AL. Appeal from the Court of Civil Appeals, Third Supreme Judicial District, of Texas. May 17, 1937. The motion of the appellee to dismiss the appeal is denied. *Norfolk Turnpike Co.* v. *Virginia*, 225 U. S. 264, 269; *Second National Bank* v. *First National Bank*, 242 U. S. 600, 602; *Western Union* v. *Priester*, 276 U. S. 252, 258." (301 U. S. 667, Preliminary Print).

A similar motion to dismiss was made and overruled in 1913 in *St. L. S. F. & T. R. Co. v. Seale*, 229 U. S. 156, 157, as being "plainly untenable."

It would seem that in discharging the responsibility that rested upon counsel for appellant, in attempting to determine from what court the appeal

should be taken, they would hardly have been warranted in disregarding the authoritative precedents, as found in the decisions of this Court in cases thus brought here from Texas. And, in view of the guide furnished by the decisions of this Court reviewing final judgments of the Courts of Civil Appeals, in which writs of error had been refused by the Supreme Court of Texas, we submit that it is beside the point to inquire whether the established practice in cases brought to this Court from "Ohio and perhaps other states" is consistent or inconsistent with that in respect of cases coming from Texas. This consideration derives added force from the circumstance, naturally deemed significant, that among the cases referred to by this Court in its Rules of Court is one that was brought here by writ of error directed to a Texas Court of Civil Appeals after the Supreme Court of Texas had refused writ of error. (Amended Rule 12, 297 U. S. 733, citing *Zucht v. King*, 260 U. S. 174.) That the writ of error in that case was ultimately dismissed by this Court for the want of a substantial Federal question does not detract from, but rather adds force to, the point now made. It indicates that the question of jurisdiction was carefully considered by the Court. It is hardly to be supposed that the Court would have been silent in respect of the point now advanced by the appellees if the Court had then been of the view that it made against jurisdiction. The question of jurisdiction was rendered even more conspicuous by the circumstance that a writ of certiorari had previously been dismissed in the case for failure to comply with the rules of court.

II.

The Order Refusing Application for Writ of Error Does Not Appear "on the Face of the Record" To Be a Judgment of the Supreme Court of Texas on the Merits.

The motion to dismiss invites this Court to go into the intricacies of the State law to determine the nature of the action taken by the Supreme Court in refusing the application for writ of error. The Court has many times held that it will not do this. The settled rule, from which there has been no departure, is that announced in *Norfolk & Suburban Turnpike Co. v. Virginia*, 225 U. S. 264, 269. It was there held that where the court of last resort of a State declines to allow a writ of error or an appeal from a lower State court, this Court will not treat such action as an affirmance on the merits of the judgment or decree of the court below except where this plainly appears "on the face of the record * * * * in express terms of the judgment or decree sought to be reviewed."

The rule there declared was announced as a rule "for the guidance of suitors in the future." (229 U. S. 269.) It has been consistently applied to cases coming to this Court from Texas. The Norfolk & Suburban Turnpike Company case was cited as applicable authority in overruling the motion to dismiss in *St. L. S. F. & T. Ry. Co. v. Seale*, 229 U. S. 156; and in overruling the motion to dismiss *United Gas Public Service Co. v. Texas*, 301 U. S. 667 (Preliminary Print).

The rule announced in the Norfolk & Suburban Turnpike Company case was reaffirmed and restated in *Louisiana Nav. Co. Oyster Comm.*, 226 U. S. 99, 101, decided at the next term of the Court. In that case it was declared that, "this court cannot for the purpose of determining whether its reviewing power exists be called upon to disregard the form of the judgment in order to ascertain whether a judgment which is in form not final might by applying the state law be treated as final in character." And it was further declared that "the confusion and contradiction which inevitably arose from resorting to the state law for the purpose of converting a judgment not on its face final into one final in character was the dominating reason leading to the establishment of the principle that the form of the judgment was controlling for the purpose of ascertaining its finality. *Norfolk Turnpike Co. v. Virginia*, 225 U. S. 264, 268."

In *Western Union Tel. Co. v. Priester*, 276 U. S. 252, the Court granted a writ of certiorari to an Alabama intermediate appellate court because "the Supreme Court of Alabama, by denying the petition for certiorari, on the face of the record did not pass on the merits."

The fact that a State Supreme Court may state, as a reason for its refusal to review the judgment or decree of a lower State court, that it believes that the decision of the lower court is correct does not "take from the refusal its ostensible character of declining jurisdiction." *American Railway Express Co. v. Levee*, 263 U. S. 19, 21; *Western Union Tel. Co. v. Crovo*, 220 U. S. 364, 366; *Virginia Railway Co. v. Mullins*, 271 U. S. 221, 222.

If this Court should now decide (*Louisiana Nav. Co. v. Oyster Comm.*, 226 U. S. 99, 101, and the other cases referred to, to the contrary) to test the question by importing into the face of the record the provisions of the Texas statute (Article 1728), the Court of Civil Appeals would nevertheless remain the highest court of the State that could decide this case. The play of the statute upon the order refusing the writ can hardly be regarded as a higher token of approval than would be an accompanying opinion of the Supreme Court in terms declaring that the application was refused because the court believed that the decision below was correct. This Court has repeatedly taken jurisdiction of cases coming directly from the Courts of Civil Appeals where the Texas Supreme Court has accompanied its order of refusal by an opinion stating its reasons for refusing to review the case and showing its concurrence with the views of the court below. The following cases are examples: *M. K. & T. R. Co. v. Texas*, 245 U. S. 484 (same case, 107 Texas 540); *G. C. & S. F. Ry. Co. v. Texas*, 246 U. S. 58 (same case, 107 Texas 544); *M. K. & T. R. Co. v. Cassady*, 242 U. S. 611 (same case, 108 Texas 461); *T. & N. O. R. Co. v. Neill*, 301 U. S. 674 (same case, 128 Texas 580, 100 S. W. (2d) 348). The motion to dismiss in *T. & N. O. R. Co. v. Neill* was grounded in part on the fact that the State Supreme Court had written an opinion assigning as the reason for its refusal of a writ the fact that it believed the decision below was correct.

If authority were needed to show that appellees are mistaken in ascribing to inadvertence (motion, p. 9) the repeated action of this Court, in cases com-

ing here from Texas, it would be sufficient to refer to the opinions by Mr. Justice Holmes in *M. K. & T. Ry. Co. v. Texas, supra,* and *G. C. & S. F. Ry. Co. v. Texas, supra,* and to his later opinion in *American Express Co. v. Levee,* 263 U. S. 19, where the point was specifically dealt with, at p. 21.

It expressly appears from the record that the order of the State Supreme Court refusing the application for writ of error was not a judgment on the merits. Appellant in its application requested the State Supreme Court "to issue its writ of error * * * directed to the Court of Civil Appeals * * * to the end that this case may be removed from said Court of Civil Appeals to this Court and the record and proceedings herein may be fully reviewed by this Court and the judgment of the said Court of Civil Appeals rendered herein may be reversed and that of the District Court affirmed." (V, R. 3407.)

The order of the Supreme Court of Texas refusing the application reads:

"This day came on to be heard the application of plaintiff in error for a writ of error to the Court of Civil Appeals for the Third District, and the same having been duly considered, it is ordered that the application be refused; that applicant, Lone Star Gas Company, pay all costs incurred on this application. (No opinion filed.)" (V, R. 3435.)

Appellant then, as permitted by the rules of the State Supreme Court, filed its motion for rehearing and therein prayed "that the order of the Court refusing said Application be set aside and that the Application be granted on rehearing * * *." (V, R. 3436.)

On December 30, 1936, the State Supreme Court entered its order that said motion for rehearing "be and it is hereby in all things overruled"; the order further reciting that this was done "after due consideration of same." (V, R. 3456.)

The clerk of the State Supreme Court has certified that on the date the motion was overruled, he returned to the clerk of the Court of Civil Appeals "the entire record in said cause," excepting only the papers constituting the record made on the application for the writ. (V, R. 3457.) And the clerk of the Court of Civil Appeals has certified that on the same date the clerk of the State Supreme Court returned to the Court of Civil Appeals "the entire record in said cause," excepting only the record made in the Supreme Court on the application for the writ; and further, that said record "now permanently remains" in the Court of Civil Appeals. (V, R. 3489.)

The original record forwarded to the Supreme Court of Texas in connection with the application for writ of error, and later returned to the Court of Civil Appeals, has been filed in this Court under a stipulation of the parties and an order of the Court of Civil Appeals. (V, R. 3485.) The order referred to was omitted in printing, but it appears in the original record, at p. 340.

There is nothing here plainly showing "on the face of the record, by an affirmance in express terms of the judgment or decree sought to be reviewed, that the refusal of the court to allow an appeal or writ of error was the exercise by it of jurisdiction to review the case upon the merits." *Norfolk & Suburban Turnpike Co. v. Virginia, supra.*

The order of the court did not dispose of the case but only of the application for the writ. No judgment was entered setting forth and establishing the rights of the parties. That such was the character of the State Supreme Court's action is further indicated by the fact that on the day that its action became final, (Dec. 30, 1936) it caused the entire original record, excepting only the record made on the application, to be returned to the court that rendered the judgment which it had declined to review. It hardly can be supposed that it would have permanently surrendered the record in a case decided on the merits. Under a standing rule of the court, enforced by it "without exceptions," no record in a case already decided on the merits may be taken from the office of its clerk. *Hart v. West*, 92 Texas 416. In contrast, Rule 4 of the court requires its clerk, after its action in refusing a writ of error has become final, to return to the Court of Civil Appeals "the papers which belong to that court," retaining the petition for writ of error. Supreme Court Rules, 121 Texas 748. These rules clearly recognize that the court's refusal of a writ of error is not a decision of the case on the merits. If it were, the record, under the court's rules, would remain in the office of its clerk.

III.

The Court of Civil Appeals Has the Record, and for That Reason the Appeal Was Properly Taken From That Court.

By the law of the State, the record in a case decided by the Court of Civil Appeals is returned to

the Court of Civil Appeals when the Supreme Court refuses an application for writ of error, and it permanently remains in that court. An applicant for the writ is required to deposit with the clerk of the Court of Civil Appeals, at the time the application is filed, a sufficient amount to cover the cost of transporting the record to and from the Supreme Court. Article 1743, R. S. 1925; Appendix, p. 25. Rule 4 of the Supreme Court above referred to provides that, after the court's refusal of a writ of error has become final, its clerk shall return to the Court of Civil Appeals "the papers which belong to that court," retaining the petition for writ of error. (121 Texas 748.)

The applicable statutes and rules were followed in this case. As expressly appears from the certificate of the clerk of the Supreme Court of Texas and of the clerk of the Court of Civil Appeals, (*supra*, p. 11), "the entire record," other than that made on the application for writ of error, was returned to the Court of Civil Appeals "where it now permanently remains." (V, R. 3489.)

Since, under the State law and in fact, the record permanently remains in the Court of Civil Appeals, the appeal was properly taken from that court. *Atherton v. Fowler*, 91 U. S. 143, 146; *Polleys v. Black River Imp. Co.*, 113 U. S. 81; *Hodges v. Snyder*, 261 U. S. 600; *McDonald v. Massachusetts*, 180 U. S. 311, 312; *Sioux Remedy Co. v. Cope*, 235 U. S. 197, 200; *Lee v. Johnson*, 116 U. S. 48, 49.

In *Stanley v. Schwalby*, 162 U. S. 255, 269, Mr. Justice Gray, writing the first opinion of this Court

in a case coming from a Texas Court of Civil Appeals, said:

> "A petition for writ of error to the Court of Civil Appeals having been presented to the Supreme Court of the State, and denied, the present writ of error from this Court was properly directed to the Court of Civil Appeals, in which the record remained."

The rule laid down in the earlier cases was approved in *Van Huffel v. Harkelrode*, 284 U. S. 225, 230.

IV.

Under the State Law an Order of the Supreme Court Refusing Writ of Error Is Not a Judgment Disposing of the Case on Its Merits.

If resort properly may be had to the State law to determine the nature of the action taken by the State Supreme Court in refusing a writ of error, then it is submitted that, under the State law, such an order is not a judgment of the State Supreme Court disposing of the case on the merits. It represents, not a review and decision of the case on the merits, but a refusal to thus review it. Such an order disposes, not of the case, but of the party's asserted right to further appeal the case. As declared by the State Supreme Court, it is a discretionary denial of "the right to entrance" to the Supreme Court of Texas. *S. A. & A. P. Ry. Co. v. Blair*, 108 Texas 434, 439.

The decision of the court in that case was later followed in the case of *Gatz v. City of Kerrville*, 121 Texas 92.

The Constitution of Texas provides:

"The Supreme Court shall consist of a chief justice and two associate justices, any two of whom shall constitute a quorum, and the concurrence of two judges shall be necessary to the decision of a case." *Article 1, Section 2.*

It is obvious that if the refusal of an application for writ of error constituted the "decision of a case," the power could be exercised only by the Supreme Court itself and with the concurrence of two of the judges. The Supreme Court of Texas has held that the refusing of an application for writ of error is not the "decision of a case" and that the power to act on such application may be devolved by the Legislature upon other and special agencies created by it.

In 1917 the Legislature authorized the Chief Justice of the Supreme Court of Texas, or the two associate justices, to appoint a committee of three justices selected from the Courts of Civil Appeals, and authorized this "committee of judges" to pass upon applications for writs of error filed in the Supreme Court of Texas. This statute as it appears in the Texas Revised Civil Statutes of 1925 is copied in the appendix, p. 26. The validity of the act was challenged upon the ground that the refusing of an application for writ of error constituted the "deci-

sion of a case" and that such power could be exercised only by the Supreme Court. The act was upheld by the Supreme Court upon the ground that it regulated merely "the right of appeal to the Supreme Court," that is, the "right to entrance" to the Supreme Court; and that the Legislature had the power to vest in the Supreme Court itself "or in some other authority the discretionary power of deciding whether the appeal shall lie." *S. A. & A. P. Ry Co. v. Blair*, 108 Texas 434, 439. The court compared the statute to the Federal statute "which empowers the chief justice of a State Supreme Court to grant a writ of error in a certain class of cases as a means for their review by the United States Supreme Court." *108 Texas 434, 438.*

In 1930 the Legislature enacted another statute authorizing the State Supreme Court to appoint a commission consisting of six commissioners to assist the court in disposing of its work. Pertinent parts of this statute are copied in the appendix, pp. 26-7. These commissioners are not members of the Supreme Court and have no vote on any "decision of a case" by the Supreme Court. But this Act provided that any two of the commissioners appointed, "acting with one member of the Supreme Court, shall be authorized to pass on all applications for writs of error presented from the Courts of Civil Appeals and that action of said two commissioners and one member of the Supreme Court in passing upon such applications shall be given the same force and effect as if the same were passed upon by the Supreme Court itself."

This statute was passed, as will be noted, three years after the Legislature, by the act of 1927, had

provided that the refusing of a writ of error by the Supreme Court should evidence its approval of the judgment and opinion of the Court of Civil Appeals. The act of 1927 is the statute upon which appellees ground their claim that the Supreme Court's refusal of a writ of error is a "decision of a case" on the merits. The act of 1930 was challenged on the ground that the refusal of a writ of error was a "decision of a case" on the merits and that, under the State Constitution, such decision could be made only by the Supreme Court itself; that the power to decide a case on the merits could not be given to one judge of the Supreme Court and two commissioners. The act was upheld by the Supreme Court in *Gatz v. City of Kerrville, 121 Texas 92*, upon the ground that it merely prescribed "the method of admitting cases to the Supreme Court." *S. A. & A. P. Ry. Co. v. Blair*, 108 Texas 434, was expressly approved and the court declared that that case "applies with equal force to the act now under review." (121 Texas 93.)

It thus appears that the Supreme Court of Texas has expressly held that the act of 1927, upon which the appellees here rely, was not effective to convert an order refusing a writ of error into a judgment of the Supreme Court disposing of a case on the merits.

The provision of the act last referred to, to the effect that the action of the special agency, composed of one Supreme Court judge and two commissioners, in passing upon such applications "shall be given the same force and effect as if the same were passed upon by the Supreme Court," clearly points to the nature of the action of the court itself in refusing

an application for writ of error. By force of the statute, the refusal of the writ by the court is of no higher dignity than is a refusal by a single judge of the court and two commissioners. They are reduced to a common level. That could not be true if the refusal of the writ amounted to a decision of the case on its merits, for under the Constitution only the Supreme Court itself may decide a case on the merits.

It thus appears that in the Texas judicial system there are five agencies empowered to pass upon applications for writs of error: (1) The Supreme Court itself; (2) a committee of judges from the Courts of Civil Appeals; and (3) Three committees or commissions, each composed of one Supreme Court judge and two of the six commissioners aiding the Supreme Court. The effect of the action is the same in each case. The action determines in a discretionary way the applicant's "right to entrance" to the Supreme Court. *Railway Company v. Blair*, 108 Texas 434, 439.

The effect of refusing an application for writ of error is described in Article 1750; "The refusal or dismissal of an application shall have the effect of denying the admission of the cause into the Supreme Court." (Appendix, p. 27.) The filing of the application stays the enforcement of the judgment of the Court of Civil Appeals only pending the Supreme Court's action on the application. Article 1864, R. C. S. 1925.

When the Supreme Court's action in refusing the writ becomes final, certified copies of the order of the court are forwarded to the Court of Civil Appeals and the record is returned; and then the clerk

of that court is empowered to issue the mandate of that court to enforce its judgment. (Article 1864; Rule 66, of the Courts of Civil Appeals, 102 Texas xxxvi.) The mandate of the Supreme Court will issue, not to enforce its orders refusing writs of error, but only its final judgments. (Article 1773, R. C. S. 1925.)

Article 1756 provides that trials in the Supreme Court "shall be only upon the questions of law upon which the writ of error was allowed"—this clearly showing that a trial on the merits takes place in that court only after action on the application and only if it is granted.*

No change in the established Texas practice has been worked by the amendment of the Texas statute (Article 1728, R. C. S. 1925) referred to in the motion to dismiss (pp. 5-6). The Supreme Court of Texas has so held. *Gatz v. City of Kerrville*, 121 Texas 92. In that case it declared that the rule laid down in *Railway Company v. Blair*, *supra*, was still applicable; that these statutes merely relate to the "method of admitting cases to the Supreme Court," and that the reasoning in the Blair case "applies with equal force to the act now under review."

The last three cases listed above (p. 4) were brought to this Court after the effective date (June 15, 1927) of the statute upon which appellees ground their motion. Certiorari has been denied, not dismissed, in a larger number of cases sought to be brought up during the same period.

---

*The court maintains two dockets; one, the application docket and the other, the cause docket. No case is docketed as a cause until the application is granted. Rules 2, 8, 121, Texas 747, 750.

The fact that under the act of 1927 the refusal of a writ imports an approval of the opinion of the Court of Civil Appeals as a precedent as well as an approval of its judgment is without effect. Since 1893 the refusal of an application has amounted to an approval of the judgment. *Brackenridge v. Cobb*, 85 Texas 448, 450. The approval of the opinion as a precedent, implied under the force of the present statute, is immaterial in determining the jurisdiction of this Court. That jurisdiction exists and is exercised to review the "final judgment" of the highest court of the State to which the case could be taken. This Court has no concern with the opinions of the State court except as they may explain the reasons underlying its judgments. Furthermore, as we have pointed out, many cases have been brought here where the State Supreme Court had written opinions approving the decisions of the court below. Appellees would ascribe greater effect to the approval of the opinion of the court below, implied by force of the statute, than to an express approval evidenced by an opinion of the State Supreme Court.

Counsel have conceded that in the case of *Adams v. Saenger* (No. 197, October Term, 1937) the appeal was correctly taken from the Court of Civil Appeals because the Supreme Court of Texas in that case dismissed the application for want of jurisdiction, as authorized by Article 1728 (Appendix, p. 27.) Under that statute such dismissal imports an approval of the judgment of the Court of Civil Appeals but not an approval of its opinion. Such an order is indistinguishable from an order refusing writ of error in so far as either of them express an

approval of the judgment below. In either event this Court reviews the judgment of the Court of Civil Appeals and not its opinion. In neither instance does it plainly appear on the face of the record "by an affirmance in express terms of the judgment" that the refusal or dismissal amounted to an exercise by the State Supreme Court "of its jurisdiction to review the case on the merits," under the rule laid down in the Norfolk Turnpike Company case; and in neither case does the record remain in the possession of the Supreme Court.

Cases coming up from Ohio are cited in the motion, p. 5. As to these, it should be sufficient to say that the rule applicable to Texas cases is settled, and whether it is consistent or inconsistent with the rule applicable to Ohio cases is not material. But we think the Ohio cases are distinguishable. In Ohio, review of cases by the Supreme Court is a matter of right—right of the litigant and not discretion of the court. The action of the Supreme Court here is discretionary; the applicant is not entitled to have his case reviewed on the merits as a matter of right. Furthermore, in the Ohio cases, the statements, importing the consideration and decision of the case on the merits, were found in the judgment of the court. In each instance the proceedings had the form of a final judgment rendered by the Supreme Court of Ohio. Here, we have merely orders denying the party's right "to entrance" to the Supreme Court of Texas.

Appellees strongly rely on the opinion of the Commission of Appeals in *Gammel-Statesman Publishing Co. v. Ben C. Jones & Company*, 206 S. W. 931,

copy of which was attached to the motion to dismiss in the Laredo Gas Rate case. The case is clearly distinguishable. The facts were that the Court of Civil Appeals, after the expiration of the term at which it had rendered judgment and after the Supreme Court had refused a writ of error, attempted to set aside its judgment, already final, and to substitute another and different judgment for it. The aggrieved party then applied for a writ of error, contending that the second judgment of the Court of Civil Appeals was void because entered after the first judgment had already become final and beyond its control. That, as stated by the court, was "the only question presented for review." (206 S. W. 932.)

The case is authority for the proposition that the second judgment, rendered after the first judgment had become final and when the court no longer had authority to change it, was void, and that the Supreme Court had jurisdiction on writ of error to adjudge that it was void.

Nothing else was decided in the Gammel-Statesman Publishing Company case. We respectfully submit that the opinion does not hold what it is construed as holding on pages 6 and 7 of the motion. It does not hold that an order refusing writ of error is a judgment of the Supreme Court disposing of the case on the merits.

Furthermore, it will be noted that while the Supreme Court approved the "holding" of the Court of Civil Appeals on the single question presented for review, it did not approve everything said in the opinion. That explains the fact that the opinion was not reported in the official reports of the Supreme Court of Texas.

Adopted opinions are officially reported. Examples are *Weatherly v. Jackson*, 123 Texas 213, *Carey v. Looney*, 113 Texas 93. The limited effect, as authoritative precedents, of opinions not adopted by the Supreme Court and, in consequence, not officially reported, was explained in *Stephens County v. Mid-Kansas Oil & Gas Co.*, 113 Texas 160, 167.

The Court has adopted in respect of cases from Texas the only practicable rule. If this Court should attempt to review the judgment of the Supreme Court of Texas in the instant case (assuming the existence of such a judgment) and should conclude that the reversal of the trial court judgment was wrong, how would this Court proceed to correct it? Presumably, by reversing the action of the Texas Supreme Court in refusing writ of error and by sending the case back to that court for further proceedings not inconsistent with the opinion of this Court. What, then, could the Texas court do? Only set aside its order refusing writ of error and substitute one granting writ of error, and requiring the Court of Civil Appeals to send up the record to the State Supreme Court, to the end that the latter court might proceed to reverse the judgment of the Court of Civil Appeals. This would be to invoke needlessly the offices of the State Supreme Court in reaching the result desired, namely, the reversal of the judgment of the Court of Civil Appeals. Why should this Court adopt such cumbersome, indirect methods to accomplish the reversal of the judgment of the Court of Civil Appeals?

As we have before pointed out, the Supreme Court of Texas has held that the refusing of a writ of error

does not constitute a judgment of the Supreme Court. It constitutes merely the action of the judges who sit in passing on the application, and determines only the right of the party to have his case reviewed in the Supreme Court of Texas. This being true, the effect of this Court's judgment of reversal, if the case had been taken from the Supreme Court of Texas, would be to compel the Supreme Court to render a judgment in a case in which theretofore none had been rendered by it. This would not be to *review* a judgment of the highest court of the state under Section 237 of the Judicial Code, but would be to reverse the *action* of the *judges* who refused the writ in not functioning in such a way as to bring into play the Supreme Court's jurisdiction over the case.

The motion to dismiss is without merit. Appellant prays that it be denied.

ROY C. COFFEE,
MARSHALL NEWCOMB,
OGDEN K. SHANNON,
BEN H. POWELL,
CHARLES L. BLACK,
Counsel for Appellant.

APPENDIX.

Applicable Texas Statutes.

(These statutory provisions, unless otherwise indicated, are copied from Texas Revised Civil Statutes of 1925, with the latest amendments. Only relevant portions of each article or section are included.)

"Art. 1739. **Good cause to be shown.**—The Supreme Court may review final judgments of Courts of Civil Appeals upon writ of error, when good cause therefor be shown by application for such writ, as hereinafter required, the sufficiency of such cause to be determined as herein provided."

"Art. 1740. **Petition for writ of error.**—A writ of error before the Supreme Court may be applied for by petition addressed to said Court, stating the nature of the case and the grounds upon which the writ of error is prayed for, and showing that the Supreme Court has jurisdiction thereof; and the petition shall contain such other requisites as may be prescribed by the Supreme Court."

"Art. 1743. **Petition with record.**—The petition with the original record in the case, and the opinions of the Court of Civil Appeals, and the motion filed therein, and certified copies of the judgments and orders of the Court of Civil Appeals and copy of the appeal or supersedeas bond shall be filed with the Supreme Court. The party applying for the writ of

error shall deposit with the clerk of the Court of Civil Appeals a sum sufficient to pay the expressage or carriage of the record to and from the clerk of the Supreme Court, which sum shall be charged as costs in the suit."

"Art. 1748. **Designation of Civil Appeals Justices.**—The Chief Justice of the Supreme Court or any two Justices thereof may, by a writing recorded in the minutes of the Supreme Court, designate three of the Justices of the Courts of Civil Appeals to act as hereinafter provided. Such powers may be exercised from time to time in the same manner as long as reason therefor may exist, and the personnel of the designated Justices of the Courts of Civil Appeals may be changed as often as may be advisable, by relieving one, or more, and designating another, * * * * *."

Act of 1930—* * * "The Supreme Court of this State is hereby authorized to appoint a Commission, to be composed of six attorneys at law, having those qualifications fixed by the laws and Constitution of this State for the judges of the Supreme Court of Texas, which Commission shall be for the aid and assistance of said court in disposing of the business before it; and such Commission shall discharge such duties as may be assigned it by said Court. * * * *" (Sec. 1, Ch. 2, Acts 5th Called Session, 41st Leg., p. 112.)

"Two of said Commissioners designated by the Supreme Court acting with one member of the Supreme Court shall be authorized to pass upon all

applications for writs of error presented from the courts of civil appeals, and the action of said two Commissioners and one member of the Supreme Court in passing upon such applications shall be given the same force and effect as if the same were passed upon by the Supreme Court; provided, upon any application in which the three judges are not unanimous, the same shall be determined by the Supreme Court." (Ibid, Sec. 5, p. 113.)

"Art. 1750. **Effect of granting or denying writ.**—The granting of an application shall admit the cause into the Supreme Court to be proceeded with by the Court as provided by law. The refusal or dismissal of an application shall have the effect of denying the admission of the cause into the Supreme Court, except that motions for rehearing may be made to such designated justices in the same way as such motions to the Supreme Court have been heretofore allowed. The refusal or dismissal of any application shall not be regarded as a precedent or authority."

"Art. 1728. * * * *

"In all cases where the judgment of the Court of Civil Appeals is a correct one and where the principles of law declared in the opinion of the court are correctly determined, the Supreme Court shall refuse the application; in all cases where the judgment of the Court of Civil Appeals is a correct one but the Supreme Court is not satisfied that the opinion of the Court of Civil Appeals in all respects has correctly declared the law, it shall dismiss the case for want of jurisdiction. * * * *"

"Art. 1756. **Trial on questions of law.**—Trials in the Supreme Court shall be only upon the questions of law upon which the writ of error was allowed, or which were certified to the Supreme Court from a Court of Civil Appeals. * * * *"

"Art. 1864. **Mandate issued when.**—If no writ of error be sued out, or motion for rehearing be filed, within thirty days after the decision of the court has been entered in a Court of Civil Appeals, the clerk of the court shall, upon application of either party and the payment of all costs, issue a mandate upon said judgment."

SUPREME COURT OF THE UNITED STATES

October Term, 1937

No. 313

LONE STAR GAS COMPANY, *Appellant*,

v.

STATE OF TEXAS, ET AL., *Appellees*

Appeal from the Court of Civil Appeals, Third Supreme Judicial District of Texas

---

REPLY BRIEF FOR APPELLANT

Not perceiving how the Court will be aided by appellees' Introductory Statement (1-4) especially their general characterizations of our brief, we attempt no reply in kind, and immediately take up specific points.

DIVISION ONE.

The Interstate Commerce Questions.

With a few unimportant exceptions, every point of argument presented by the appellees in their dis-

cussion of the interstate commerce defense was presented to this Court in *Missouri v. Kansas Natural Gas Co.*, 265 U. S. 298, as the Court will see from an examination of the reported brief for the appellant in that case (265 U. S. 299, 304). This applies to the point that appellant's business is essentially a local business, properly subject to local regulation (265 U. S. 299, 302); and to the points of argument based upon the maintenance of delivery facilities, including regulators and meters at the city gates (265 U. S. 300, 302); and to the points of argument based upon the fact that the destination of any particular part of the gas is not known by the pipe line company in advance and deliveries are made *instanter* in response to the demands created by local consumption (265 U. S. 300-301); and to the point based upon the non-action of Congress (265 U. S. 302-303).

These points of argument were sustained by the decision of the State court in that case *(State v. Kansas Natural Gas Co.*, 111 Kan. 809). That decision was unanimously reversed in this Court.

And most of the points of argument presented by the appellees here were also presented to this Court in *State Commission of Mississippi v. Interstate Natural Gas Co.*, 284 U. S. 41, as appears from the report of appellant's brief in that case. This applies to the nature of the contracts, reliance on deliveries as "breaking the original package" and the local maintenance and use of "taps, regulators, thermometers, and meters" (284 U. S. 41-42).

We refer also to *East Ohio Gas Co. v. Tax Commission*, 283 U. S. 465, 468, 470; *Public Utilities*

omm. v. Attleboro, 273 U. S. 83, 90; *Peoples Natural Gas Co. v. Public Service Comm.*, 270 U. S. 550, 53; and *State Corporation Comm. v. Wichita Gas o.*, 290 U. S. 561, 563. The recent decision of this ourt in *Southern Natural Gas Corporation v. Alaama*, 301 U. S. 148, 155, is not in conflict with the ecisions referred to. In that case the company as maintaining not only local delivery facilities but ocal supply lines designed and installed to meet ocal consumer demands. The decision merely fols the rule announced in *East Ohio Gas Co. v. ax Commission* and earlier cases, and holds that the upplying of the demand of local consumers, howver conducted, is essentially a local business. Here, contrast, appellant, in making city gate delivries, is selling gas, not to ultimate consumers, but o retailers who, in turn, sell to ultimate consumers. ts delivery facilities and other activities are only uch as are appropriate to the conduct of its wholeale business. And the burner tip rates of the local etailing companies are not involved.

Appellees are, in effect, inviting the Court to reiew anew and reverse *Missouri v. Kansas Natural Gas Co., supra,* and the other cases referred to that ollow that decision.

I.

Reliance by Appellees on Matters Outside the Record.

(1) *The Railroad Commission Record.*

On page 3 of their brief appellees refer to the Railroad Commission record that was excluded from

evidence in the State District Court, and also to the fact that appellant has not designated any part of this excluded record for printing. This excluded record could not be considered by the Court of Civil Appeals or the Supreme Court of Texas except for the purpose of reviewing the alleged error of the District Court in excluding it from evidence—and it was not held that the District Court had committed any such error. It was before the State appellate courts only as a part of a bill of exceptions complaining of its exclusion from evidence. It is here in the same way, but it cannot be considered here for any purpose because no one is now complaining of the action of the District Court in excluding it from evidence.

Since this excluded Railroad Commission record was not considered by the State courts in testing the validity of the rate order, appellant did not designate any part of it for printing. Under the Texas review procedure a trial like this is *de novo* with all that that term imports. But this does not mean that the same evidence heard by the Railroad Commission may not be heard by the reviewing court. It means only that the evidence must be heard *de novo*. Either party is free to produce the same witnesses and offer the same evidence in open court instead of a transcript of their testimony given before the Commission. There is no evidence, or even contention, that the appellees were denied in the District Court the right to place the same witnesses on the stand and offer *de novo* their testimony and other evidence previously offered before the Commission.

On pages 32 and 33 of their brief appellees refer to this Commission record and invite the Court to consider it in support of their Point I. It is obvious that this excluded Commission record cannot be considered for any purpose. It is true that appellant stipulated with appellees that the original excluded record might be brought up to this Court, but this was done only after appellees in their State court praecipe had called for the inclusion of this Railroad Commission record as a part of the record to be forwarded to this Court. (V, R. 3485-3487.) By thus bringing here something that was by the State court excluded, and no part of the Statement of Facts on which the rate order was reviewed, appellees are unable to convert it into something else. Authentication denied in the State courts can not be supplied here.

(2) *"Statement of Facts of Hearing on Plea in Abatement and Pleas to Jurisdiction."*

The record shows that appellant filed in the State District Court certain pleas to the jurisdiction and plea in abatement and that a hearing was had before the court on these pleas before the beginning of the trial on the merits. (I, R. 123-133; 171; 301.) Evidence was heard on these pleas, and it appears in the printed record, having been designated for printing by the appellees (I, R. 215-300); it appears under the heading "Statement of Facts of Hearing on Plea in Abatement and Pleas to Jurisdiction" (I, R. 215). These pleas were addressed to the court and there was of course no jury trial. The pleas

were overruled on May 30, 1934 (I, R. 171). The trial on the merits was begun before a different judge and a jury on June 11, 1934—after the plea in abatement had been overruled (I, R. 197, 301). The evidence heard by the court and jury on the merits begins in the printed record in Volume I, page 301, under the heading "Statement of Facts of Trial on the Merits." The evidence heard on the pleas to the jurisdiction and in abatement was not offered in evidence on the trial on the merits. It was never placed before the court and jury that settled the issues of fact relating to the validity of the challenged order. In these circumstances, the Statement of Facts introduced before the judge who heard these pleas constitutes no part of the evidence heard by the court and jury on the merits.

An examination of appellees' brief will show that a large number of the references made to the record, especially in the discussion of the interstate commerce questions, are to this plea in abatement record. Illustrating, we refer to pages 34, 35, 36, 54, 55 and 56 of appellees' brief.

It is true that appellant joined appellees in stipulating that the "entire State court record" might be certified by the clerk of the State court to this Court, but this was done only after appellees had filed a counter praecipe in the State court that designated the "entire State court record" (V, R. 3485-3487). This stipulation did not and could not make the record of the evidence heard on the pleas to the jurisdiction and in abatement a part of the evidence heard in testing the validity of the rate order. The evidence heard on the pleas referred to is a part of

the "entire State court record," but it is not a part of the evidence heard in the State court on the trial on the merits. So to consider it would be to change the "State court record."

It thus appears that appellees have designated for printing and are relying upon the evidence heard on these pleas to the jurisdiction and in abatement—evidence that relates only to the legal issues tendered by the pleas referred to and that was heard by a different judge, and without a jury, more than a week before the trial on the merits was begun (V, R. 171, 301).

II.

Discussion of Contention That Appellant Is Estopped to Assert Its Interstate Commerce Defense.

Appellees assert that in the proceedings before the Railroad Commission appellant made no objection to the proposed rate grounded on the Commerce Clause of the Federal Constitution and that appellant "is now thereby estopped to assert such attack or defense in any form for the first time in a judicial review of the Commission's order." (Brief, 4, 5; also 32, 33.) As to this Appellant submits:

(1) The Commission record was excluded from evidence, as appellees admit. (Brief, 3.) Counsel for appellees go outside the record on the merits when they invoke it as they do. They invite this Court to decide the merits of the interstate commerce

issue by considering an alleged fact not in evidence before any one of the State courts.

(2) The theory of estoppel here set forth is asserted originally in this Court. In the State District Court appellant pleaded its interstate commerce defense against the rate order. (I, R. 136-138, 147, 148, 150.) Appellees filed their supplemental petition by way of reply to this defense but wholly failed to plead the estoppel or waiver that is now asserted by them in this Court (I, R. 153, 161). There is no reference to any failure on the part of appellant to assert the interstate commerce defense before the Commission.

If appellees had believed that appellant was estopped to assert the interstate commerce defense, the estoppel should have been pleaded in the court in which the defense was first asserted—the State District Court. Appellees were in no way prevented from pleading this estoppel and offering evidence *de novo* in support of it. This right was not denied by the District Court's exclusion of the Commission record. Notwithstanding the exclusion of that record, either party was given the right to offer any and all material evidence *de novo* and if this estoppel theory had any material bearing on the interstate commerce issue it was open to the appellees to plead it in their reply pleading, as the state practice requires, and offer evidence *de novo* in support of it.

(3) The estoppel here asserted is grounded upon the assumption that appellant knew at the beginning and during the progress of the Commission hearing

what kind of findings and order would be made and promulgated at the end of the hearing. There is of course no basis for this assumption. Appellant did not know that the Commission would attempt to exercise a power it did not possess until the findings were filed and the order promulgated. It appears from the record that the Commission hearing was concluded on the 29th day of June, 1933, and the order was not promulgated and the findings filed until the 13th day of September, 1933 (III, R. 1608.) Immediately thereafter appellant filed its suit assailing the Commission's order and invoking the protection of the Commerce Clause. Appellant acted as soon as the nature of the order was known.

Furthermore, the trial in the District Court was *de novo* and the failure of a party to assert a given defense before the Commission has no effect on his right to assert that defense in the reviewing court.

(4) It is asserted by appellees that appellant "lay in ambush for the Commission" and permitted the Commission to promulgate the order without "the slightest hint of the claimed defense of interstate commerce." (Brief, p. 5.) The record shows that the Commission knew that appellant was engaged in interstate commerce. The Commission at the conclusion of the hearing and in its findings made a part of the order found as a fact that appellant was engaged in interstate and intrastate commerce "in the selling of gas to some 300 cities and towns in the States of Oklahoma and Texas."

III.

The Wheeler County Gas Is Interstate Gas and the Rate Order Is Void as Applied to It.

(1) *The Handling of this Gas constitutes Interstate Commerce.*

Appellees declare that the gas transported through Line A is not "inherently interstate gas but is in fact and in law intrastate commerce since both termini are in Texas" (Brief, p. 13). They cite *Lehigh Valley R. Co. v. Pennsylvania*, 145 U. S. 192, and later cases following that decision. (Explained, appellant's brief, 69-70.)

United States Express Co. v. Minnesota, 223 U. S. 335 is cited. That case involved a gross receipts tax apportioned in accordance with line mileage located within and without the State, and no attack was made on the method of apportionment. The case therefore is distinguishable upon the grounds pointed out by Mr. Justice Holmes in the *Hanley* case.

Ewing v. City of Leavenworth, 226 U. S. 464, involved a tax levied solely upon business done in the City of Leavenworth "in receiving packages from points within the State and in transporting packages to like points." The tax levied was a flat license tax of $50.00, and the ordinance levying it excluded interstate and Government business. The Court in its opinion distinguished the *Hanley* case because it involved the fixing of a rate, and not the levying of a tax (226 U. S. 468, 469).

Wilmington Transportation Co. v. California Railroad Commission, 236 U. S. 151, is not in point. In

that case, the Transportation Company was engaged as a common carrier of passengers and goods by sea between San Pedro, on the mainland, and Avalon, on Santa Catalina Island, both places being within Los Angeles County, California. The California Commission undertook to prescribe its rates. The vessels used by the company in direct passage between the two ports traversed the high seas for a distance of 20 miles. They did not touch at any other port of either the United States or any foreign country. They did not on the voyage take on or put off any article of commerce. The rate making authority of the Commission was sustained upon the ground that jurisdiction to fix the rates was vested either in Congress or in the State of California, and Congress had not acted. The *Hanley* case was distinguished on the ground that the line of railway passed through the territory of another State. As to the *Hanley* case the Court said:

"The regulation of such rates cannot be 'split up' according to the jurisdiction of the respective States over the track; there must be one rate fixed by one authority. *Hanley v. Kansas City Southern Ry.*, 187 U. S. 617, 620."

The Court further said:

"We are not here dealing with the case of property which is in course of continuous transportation to another State or to a foreign country. (Citing cases.) It must be assumed upon this record that the State claims the right to exercise its authority only as to transportation between the mainland and the island, and solely with respect to such shipments over this route as are local to the State, both as to

the beginning and the end of the transportation. There is no passage through the territory of another State; the transportation, in its entire course, is subject to a single authority—either that of Congress or that of the State—and the latter would yield to the exercise of the former. The sovereignty of no other jurisdiction is encountered." (236 U. S. 156.)

Here the facts are entirely different. The pipe line is located in both States. Deliveries of gas are made in both States on the main line as well as on the branch line running north of Oklaunion, Texas. The right of Oklahoma to fix rates applicable to the Oklahoma deliveries stands on as strong a footing as does the right of Texas to fix the rates applicable to the Texas deliveries. Both States have statutes authorizing their regulatory commissions to fix rates and to regulate conditions of service, including the apportioning of an inadequate supply. The probability of a conflict in the exercise of regulatory power is obvious. *Buck v. Kuykendall*, 267 U. S. 307, 315, 316.

(2) *Inasmuch as the order amounts to a direct regulation of interstate commerce, the non-action of Congress is not material.*

This Court in some of its later decisions has declined to give controlling effect to descriptive words such as "direct" and "indirect" in determining whether a given State regulation operates as a "regulation" of interstate commerce "in a constitutional sense." But however the burden or restraint here imposed may be described, it is clear that no burden

or restraint could be more immediate or direct in its effect.

If the challenged regulation levied a gross receipts tax indiscriminately on appellant's interstate and intrastate business, it would not stand; under the decisions of this Court, it would be regarded as imposing a "direct" and prohibited burden on interstate commerce. *Cooney v. Mountain States Tel. Co.*, 294 U. S. 384, 392. Compare *Pacific Telephone & Telegraph Co. v. Washington*, 297 U. S. 403, 416. Is there any factual difference, favoring the validity of the exercise of State authority, between a regulation that would exact 20 per cent of appellant's gross receipts from sales of gas in the form of a tax, to be paid into the state treasury, and another regulation that would prevent appellant from collecting the 20 per cent at all? It is plain, whether viewed from a practical or legal standpoint, that the second regulation is not less "direct" in its restraint than is the first. Both subtract 20 per cent from appellant's receipts—the first by taking the 20 per cent after it has been collected and the second by denying the right to collect it at all.

The order indiscriminately limits the amount of the gross receipts of appellant's business, the interstate part as well as the intrastate part. The restraint is more direct than would be the case if a gross receipts tax had been levied on appellant's interstate business. Such a tax would leave it still free to control its business and to make its own contracts in an attempt to make the business yield a profit notwithstanding the tax. Here appellant's contracts are stricken down by the challenged regulation and

it is told that it will not be permitted to earn more than a given amount from its interstate business. Its interstate business is placed in a legislative strait-jacket along with its intrastate business.

The 32¢ per MCF rate is not merely the price of the gas owned and sold by appellant. This rate also represents the value, fixed by the State Commission, of the use of appellant's properties, including its interstate transportation system, in the rendering of a service to the public. The record shows that appellant's transportation lines and facilities constitute 90 per cent in value of its total properties. This rate, as fixed by the State Commission, affords the only source from which appellant may obtain compensation for the use of its transportation system in making the city gate deliveries involved. The rate in large part is a transportation rate. The statute under which the Commission is acting authorizes the Commission to fix "transporting" rates, and that is what the Commission has done by the challenged order. (Appellant's main brief, p. 171.)

The applicable Texas statutes authorize the Commission to directly and separately fix city gate rates of transporting trunk pipe line companies. (Main Brief, pp. 171-173.) The Commission is not limited to the indirect consideration of pipe line charges as reasonable expense items. Compare *Western Distributing Co. v. Public Service Commission*, 285 U. S. 119, 124-125. It has the power to proceed independently and fix a pipe line rate wholly apart from the fixing of any burner tip rate, and that is the way that it has here proceeded. It has proceeded against appellant as a trunk pipe line transporter of gas for

the purpose of fixing the amount of compensation to which appellant is entitled for producing or purchasing, and transporting and delivering the gas to the city gates.

Viewing the prescribed rate as simply the price of the gas fixed by State authority, the regulation nevertheless imposes a direct burden on interstate commerce. If interstate prices are to be regulated, the regulation must come from Congress. The power to regulate the prices that may be charged upon original sale and delivery of commodities in a State, in interstate commerce, is the power to dictate the terms upon which interstate commerce may be conducted. It is plainly the power to "regulate" interstate commerce "in a constitutional sense."

We do not think it necessary to review at length the many cases cited by appellees upholding "indirect" or "incidental" regulations of interstate commerce. They may be distinguished by referring to typical cases. This is not a case like *Savage v. Jones*, 225 U. S. 501, where a State regulation was upheld which was broad enough to apply to interstate sales as well as to local sales, and was designed directly to prevent fraud in the making of sales of merchandise. It is not a case like *Bradley v. Public Utilities Commission*, 289 U. S. 92, or *South Carolina State Highway Department v. Barnwell Bros.*, decided Feb. 14, 1938, where State regulations designed to promote safety in the use of the public highways were upheld. In all of these cases and in many similar cases, the burden validly imposed caused a loss consequential in nature. There was no direct purpose or effort to regulate interstate commerce as such.

This case clearly falls within the rule laid down in *Buck v. Kuykendall*, 267 U. S. 307; *Baldwin v. Seelig, Inc.*, 294 U. S. 511; *Wabash, etc. Ry. Co. v. Illinois*, 118 U. S. 557; *Missouri v. Kansas Natural Gas Co.*, 265 U. S. 298.

In the case last cited an attempt was made to distinguish a case like this from cases involving transportation rates of railroad companies. See the appellant's brief in that case, 265 U. S. 300, 303. The attempt failed there, and for like reason it should fail here.

The case is not like *Pacific Telephone & Telegraph Co. v. Washington, supra*, where a State statute imposed an occupation tax on the intrastate part of the business; where the only direct burden imposed was on intrastate commerce; the burden of the interstate end of the business being an indirect one. In that case it was open to the complaining taxpayer to discontinue its intrastate business and thus be relieved of the indirect burden imposed on the interstate end of its business. Compare *Interstate Busses Corporation v. Holyoke Street Railway Company*, 273 U. S. 45; 51. Here it is not open to appellant to discontinue the intrastate end of its business; it owes a duty in law to continue that business. *Pullman Co. v. Adams*, 189 U. S. 420; *Pacific Telephone & Telegraph Co. v. Washington, supra*, p. 414. And if it did, that would not relieve it of the burden imposed by the State regulation on its interstate business because the rate order is inseparable and the prescribed rate falls indiscriminately on the entire business. *Sprout v. South Bend*, 277 U. S. 163. However inseparable may be the two parts of appellant's busi-

ness, the prescribed rate falls on both—on the entire business as a unit. *Cooney v. Mountain States Telephone Co., supra.*

If the suggestion should be made that it is appellant's duty to discontinue its operations on Line A entirely and attempt to supply the demand in Texas by resort to its intrastate gas, the answer is twofold:

(a) The evidence shows that appellant's intrastate gas is inadequate to supply the demand. In the gas business the demand that must be supplied is the *peak demand;* and the undisputed evidence shows that all of appellant's lines must be operated at capacity in order to supply the peak demand. (Schmidt testimony, II, R. 1490-1492.) The evidence further shows that the demands on the supply available from Line A are growing. That line is connected with the "largest natural gas field in the United States, an enormous reservoir * * * * with a width of from ten to twelve miles." *Thompson v. Consolidated Gas Co.*, 300 U. S. 55, 59.

(b) To require appellant to discontinue its interstate business in order to escape State regulation would impose a direct burden on interstate commerce. That expedient is always available where a tax burden or other regulation is imposed on interstate commerce.

(3) *The alleged fraud in constructing Line A.*

Appellees assert that a glance at the map showing Line A will disclose that the appellant had no pur-

pose in locating that line as it was located "except to attempt evasion of State regulation." (Brief, 46.) The reasons moving appellant in locating this line as it was located are detailed by the witness Schmidt (II, R. 1472-1474; 1487-1490). The witness' testimony may be summarized in his own statement: "That line was constructed entirely on engineering principles and nothing else" (II, R. 1475).

Appellees criticise the opinion of Mr. Justice Holmes in *Western Union Telegraph Co. v. Speight*, 254 U. S. 17, claiming that only two cases are cited in the opinion and "neither case is in point." Two questions were involved in the Speight case: The first question was whether the movement through more than one State is interstate commerce. That question was decided in the Hanley case, cited by Mr. Justice Holmes. The second question was whether fraud in conducting the business in a particular way was material. That question was decided in *Kirmeyer v. Kansas*, cited by Mr. Justice Holmes. The two cases are precisely in point in support of the decision announced in the Speight case.

IV.

Gas Produced or Purchased in Oklahoma—Discussion of Appellees' Points X to XIV, Inclusive.

Appellees in their Point X assert that the Oklahoma produced gas "is unnecessarily imported" into Texas; that there is "ample Texas gas available to appellant from its own reserves and from its existing and potential purchase connections in Texas to meet all of its Texas demands." In the same con-

nection it is asserted that "the continued importation" of Oklahoma gas is only an "obviously fraudulent subterfuge to avoid state regulation in Texas." (Brief, 15.)

Point XI is to the effect that "the relatively small and rapidly diminishing volume of Oklahoma-produced gas" transported into Texas is practically offset by the Texas gas transported to Oklahoma, with the result that "the interstate commerce" question is thereby eliminated. (Brief, 16.)

Point XII is to the effect that the Oklahoma importations are too small to be noticed. (Brief, 16.)

Point XIII is to the effect that the order does not require appellant to transport Oklahoma gas to Texas and that it can just as easily and as cheaply obtain Texas gas; hence, that the Oklahoma gas is subject to Texas control. (Brief, 17.)

Point XIV is to the effect that the rate order, although applying to the Oklahoma gas, does not restrict, impede or directly burden the free importation of such gas into the State of Texas.

These points follow the reasoning of the State court, which was to the effect that appellant's gas reserves in Texas "are more than sufficient to supply all Texas needs, and the gas supply of Oklahoma will likewise supply all of its needs," with the result that appellant's interstate transportation of gas between Texas and Oklahoma should be ignored (V, R. 3337, 3347).

With respect to these Points it is submitted:

(a) These Points and the rulings of the State court, substantially to the same effect, are sufficient to suggest the necessity for congressional regulation

as against State regulation of interstate commerce in natural gas. The contentions here presented show the probability of conflicting State regulations. Appellees assert that the Oklahoma consumers are not entitled "as a legal or moral right to the same rates for natural gas as are the consumers in Texas." (Brief, 63.) They assert, in effect, that appellant is discriminating in favor of Oklahoma consumers and its Oklahoma properties and operations. They would deny to appellant the right to engage in interstate commerce upon the ground that it would be just as easy for appellant to conduct its business wholly in intrastate commerce. In other words, appellant's interstate business is to be eliminated because of an alleged lack of necessity to engage in that business. Appellant is even charged with being guilty of fraud because of its transportation of gas from Oklahoma (Brief, 15).

These various contentions in this connection are answered by the decisions of this Court in *Kirmeyer v. Kansas*, 236 U. S. 568 and *Western Union Tel. Co. v. Speight*, 254 U. S. 17.

(b) None of the contentions here advanced have any application to the Line A gas. Appellees apparently admit the necessity for the transportation and use of that gas (Brief, 51).

(c) The figures submitted by appellees deal with annual averages in the transportation and use of Oklahoma gas. This is not the proper way to determine whether it is necessary for appellant to transport Oklahoma gas to Texas. *The proper test is peak demand.* The uncontradicted evidence shows that in

times of peak demand these Oklahoma lines are operated to capacity. The capacity of Line H is 50,000,000 cubic feet per day. Line 2nd H has the same capacity. Line G has a capacity of 55,000,000, making a total daily capacity of 155,000,000 (II, R. 1490). The witness Schmidt testified as to the peak demand use of these lines:

"Q. Has the Company actually transported that amount of gas through those lines in recent years?
"A. They have.
"Q. On a daily basis?
"A. Yes, sir.
"Q. Has the utilization of Line A, Line H, Line 2nd H, and Line G been necessary to enable the Lone Star Gas Company to supply the gas required for industrial and domestic consumption by consumers in the numerous towns and cities supplied at wholesale by it in the State of Texas?
"A. They certainly are.
"Q. In times of extreme cold weather are all of those facilities needed to supply the demands put upon the public service facilities of the Company?
"A. In times of severe cold weather those lines are carried to capacity." (II, R. 1490-1491.)

In view of this undisputed testimony it is clear that appellees have wholly failed to convict appellant of being engaged unnecessarily and even fraudulently in interstate commerce in connection with its transportation from Oklahoma to Texas.

Appellees in their discussion of this subject travel outside the record and state that one of the Oklahoma lines has been taken up since the trial in the State court (Brief, 49-50); and also that appellant has constructed certain new lines (Brief, 52). We

will not reply to these obviously improper statements.

The Court will further note that in their discussion of this subject appellees repeatedly refer to the Plea in Abatement Record—a record that constitutes no part of the statement of facts heard at the trial on the merits. All references to pages 215 to 230 are to that record.

V.

Discussion of Various Matters Relied Upon by Appellees as Being Sufficient to Deprive the Oklahoma and Panhandle Gas of Its Interstate Character.

Appellees in their Points XVI and XVII assert that, even if the Oklahoma and Wheeler County gas is transported to Texas in interstate commerce, "yet the treatment of such gas by appellant" in certain particulars, after it arrives in Texas "constitutes a breaking of the original package" and "the bringing of the interstate movement to a rest" (Brief, 21; also 55, 61). The various points here made will be briefly discussed.

(1) *Withdrawals from line.*

Appellees refer to the withdrawals from the main trunk line as constituting what they call a "breaking of the original package" with the result that when the first withdrawal takes place the remaining mass constitutes a "broken package" brought to rest within the State of Texas. (Brief, 59-60.) Referring to

Line A, appellees point out that the first Texas delivery made out of Line A after it reenters Texas is the delivery made to the West Texas Utilities Company (III, R. 1693, 1695). They assert that the delivery "breaks the original package" and brings to rest in Texas not only the gas thus delivered but all of the other gas remaining in the trunk pipe line and moving forward under high pressures to Texas city gates for delivery. (Brief, 60.)

If appellees are right in their contention that the making of a single city gate or other wholesale delivery brings to rest, not only the gas delivered to the distributing company or other wholesale buyer, but also the gas remaining in the trunk pipe line, then *Missouri v. Kansas Natural Gas Co.*, 265 U. S. 298, was wrongly decided. And the same is true of *State Tax Commission v. Interstate Natural Gas Co.*, 284 U. S. 41, and the other cases that have followed *Missouri v. Kansas Natural Gas Company;* supra, p. 2. This is in effect what the appellees contend. Under this line of argument the first city gate delivery would be an interstate delivery, while all the subsequent city gate deliveries, although made in the same way, would constitute intrastate deliveries.

(2) *Fort Worth Distributing System.*

Appellees also refer to the reduction of pressure that takes place in the local distributing system at Fort Worth—the only distributing system operated by appellant (Brief, 59). It is asserted that the local service at Fort Worth necessitates pressures as low as 4 to 6 ounces per square inch (Brief, 59), and this is referred to as a fact showing that all of ap-

pellant's pipe line gas is brought to rest in Texas. As to this it is submitted:

(a) Appellant's local distributing operations at Fort Worth are not involved in this proceeding; only its pipe line operations are involved. Its local distributing system and operations at Fort Worth were expressly excluded from consideration by the Commission. (I, R. 15.)

(b) The reduction in pressures here referred to takes place in the local distribution system and not in the trunk pipe line. The gas that remains in the trunk pipe line is not reduced in pressure.

(3) *Other Deliveries from Trunk Pipe Line.*

In the same connection appellees refer to the commercial and industrial sales made by appellant from its trunk pipe line and to the sales at farm taps (Brief, 59). The prescribed rate does not apply to these sales; it applies only to the city gate deliveries intended for domestic consumption. Even if it be assumed that appellant is engaged in intrastate commerce in making any or all of the sales mentioned that does not mean that appellant is also engaged in intrastate commerce in making the city gate wholesale deliveries to the distributing companies in the manner shown by the evidence.

It appears to be appellees' position that appellant has assumed the burden of showing that it is not conducting any intrastate activities in Texas. Appellees assert that appellant is conducting numerous intrastate activities and refer to the maintaining of a general office at Dallas, Texas. Appellees' position is plainly shown by its repeated citation of and reli-

ance on the opinion of this Court in *Southern Natural Gas Corporation v. Alabama*, 301 U. S. 148, Preliminary Print. That case is not applicable here because there the Gas Company was assailing a tax levied against it for the privilege of doing a local business in Alabama measured by the property it owned in that State, and the question was whether the business thus conducted in Alabama was "entirely an interstate business." (301 U. S. 154, Preliminary Print.) Here the question is whether a part of appellant's business done in Texas constitutes interstate commerce. If so, the order is void because it is inseparable and indivisible in form and in substance, and in virtue of the findings purportedly sustaining it. (Appellant's main brief, 97-104.) It may be assumed that appellant is engaged in intrastate commerce in carrying on the local business of selling and distributing gas to consumers in Fort Worth; and even that it is engaged in intrastate commerce in making the industrial and other sales along its line referred to by the appellees. This does not change the fact that appellant is also engaged in interstate commerce in transporting gas in high pressure trunk pipe lines through and from the State of Oklahoma for sale and delivery in wholesale quantities at city gates in Texas and Oklahoma.

These various withdrawals from the line are effective to bring to "rest" the gas withdrawn from the trunk line, but they are without effect on the gas remaining in the trunk line. These withdrawals do not even stop the movement of that gas. If appellees are right, then if an interstate car of wheat were shipped to Texas, parts of it being consigned to pur-

chasers at different cities, the entire mass of wheat would be brought to "rest" upon making the first delivery from the car within the State.

Missouri v. Kansas Natural Gas Co., supra, and *State Tax Commission v. Interstate Natural Gas Co., supra,* are both distinguished by appellees upon the untenable ground that in both cases "the whole volume of gas was transported from another State" (Brief, 41). Here it is sufficient that a part of the gas sold and delivered at city gates in Texas, and affected by the challenged order, is transported through or from another State. That appellant may be making other sales in a different way and, in virtue of such sales and other activities, may be engaged in part in intrastate commerce is beside the issue.

(4) *Storage of Gas.*

Appellees refer to the storage of gas by appellant on the Miller Farm lease near Petrolia (Brief, 60-61). This is discussed in appellant's main brief, 107-108. It may be assumed that this stored gas is brought to "rest" in Texas, but that is not the question involved here. The question is whether the gas that is not stored is also brought to rest so as to become intrastate gas. In discussing this stored gas, appellees ignore the fact that none of the gas from Line G is stored; as well as the fact that only a small part, if any, of the Line A gas is stored (II, R. 1478); and the fact that approximately one-half of the Line A gas is consumed by deliveries made by appellant at city gates in Texas north and west of the Miller Farm Lease—that lease being located near Petrolia.

The rate order applies to all of the gas delivered at city gates in Texas, including the gas that is not stored as well as the gas that is stored and including even the gas that is consumed before arriving at Petrolia.

The rate order, as we have pointed out in the main brief (93-104), is an indivisible legislative act. It is clearly void as to gas that is not stored, and, being indivisible, it is entirely void.

(5) *Use of regulators and meters.*

Appellees refer to the use of regulators by the appellant in making deliveries to the distributing companies, whereby the pressures are reduced from the high trunk line pressures of 150 to 350 pounds to low pressures of 20 to 30 pounds per square inch (Brief, 21).

The manner in which the pressures are reduced, as well as the purpose of the reduction made in delivering the gas at the city gates, is correctly detailed in the undisputed testimony of the witness Schmidt, quoted in appellant's main brief, 24-26. The reduction is made for the purpose of effecting delivery; for the purpose of reducing the pressures to a point where a delivery into the smaller distributing lines will be safe. The reduction is merely an incident to the delivery of the gas. Such a reduction in pressure was held to be without effect in *State Tax Commission v. Interstate Natural Gas Co.*, 284 U. S. 41, 43, and also in *East Ohio Gas Co. v. Tax Commission*, 283 U. S. 465, 468, 470. The purpose of the reduction is explained in the East Ohio Gas Company opinion, 283 U. S. 468. In *State Tax Commission v. Interstate Natural Gas Company, supra*, the reg-

ulators and meters were owned and operated by the pipe line company. An argument like the one here presented was grounded on that fact. (284 U. S. 41, 42.)

There can be no interstate transportation without delivery at the end of the journey, and a reduction in pressures does not change the interstate character of the gas.

Appellees refer to contractual provisions which they interpret as requiring a reduction in pressures before the gas is delivered (Brief, 58). These provisions, thus interpreted, merely emphasize the purpose of the reduction—to effect a safe and suitable delivery.

Appellees refer to an inaccurate statement made on page 106 of appellant's brief in respect to the ownership of the regulators used in reducing pressures. This statement gives undue effect to the language of the contracts between appellant and the distributing companies requiring the distributing companies to install and maintain regulators and authorizing appellant to make deliveries at operating pressures. (These provisions are quoted in appellant's brief, 24.) Appellees now point out that there is a prior reduction made by the appellant immediately before the gas is metered. See the testimony of the witness Schmidt (appellant's main brief, 24-26). We accept Mr. Schmidt's testimony as correct, as apparently do the appellees. In making the criticised statement we did not intend that it should be construed as being in conflict with his testimony. At all events, the error in the statement criticised is an immaterial one. The record shows without

conflict that any reduction in pressures made by the appellant is made in connection with the act of delivering the gas and only for the purpose of effecting the delivery.

(6) *Gasoline Extracting Plants.*

As to the effect of the running of the Oklahoma gas through gasoline plants at Gainesville and Petrolia, we refer to our main brief, 105-106. The uncontradicted evidence shows that this process does not interrupt the movement of the gas (Schmidt's testimony, quoted in appellant's main brief, 32).

Appellees state that the witness Schmidt admitted that "the extraction process changes the B. T. U. content of the gas." (Brief, 57.) This is a partial interpretation of the testimony of the witness on the point. He testified:

"The heating value is lowered by possibly three per cent, but that is not the entire facts of the matter, because most of these hydro-carbons would condense in the lines anyhow, and you would have the same condition, besides giving us considerable operating troubles; these gases freeze up and cause stoppages in the line." (II, R. 1479.)

On the same point see his testimony, II, R. 1591-2.

Appellees state that the gas "coming through Line A is run through a gasoline extraction plant at Hollis, Oklahoma." (Brief, 57.) If running a gas through such plant brings it to rest, as appellees now contend, then all of this Line A gas is brought to rest and becomes intrastate gas at Hollis, in the State of Oklahoma, and then moves forward to Texas city gates as interstate gas.

(7) *Shifting of Flow of Gas by Appellant.*

In Proposition XVI appellees contend that when the gas leaves the Wheeler County field and the various fields in Oklahoma its destination is not known or determined in advance, and that it may be "shifted at the will of appellant to whatever destination may suit its own whim and fancy," and that appellant is in a position to thus defeat all regulatory authority (Brief, 20).

It is true that appellant does not know what destination in Texas or Oklahoma will be reached by any particular identified unit in quantity of the gas. But it does know that all of the gas not consumed in Oklahoma will be transported through and from Oklahoma into Texas, and that the city gate deliveries will be made in wholesale quantities with no reduction in pressure except that needed to effect the delivery.* Taking the Line A gas: Appellant knows the quantity going into the line and the quantity arriving in Texas, as well as the quantity delivered at every city gate in uncommingled state from the time it reaches Texas until it arrives at Petrolia, where it is there commingled with Oklahoma gas. This commingling is immaterial to a correct determination of the commerce issue (appellant's main brief, 74-76).

Of what effect is the fact that the exact quantity

*The argument here made by appellees, as well as that grounded on the fact that the title does not pass until the gas arrives at the city gates, was made in *Missouri v. Kansas Natural Gas Co.*, 265 U. S. 300, 301, 306, and in *State Tax Comm. v. Interstate Natural Gas Co.*, 284 U. S. 41, 42.

delivered at any particular city gate is not known? The prescribed rate is uniform and it is known that all of the gas will be delivered at some city gate and will be subjected to the prescribed rate.

There is no "shifting back and forth" of gas in appellant's lines, except in rare cases of line breakage or other emergency.* In the general course of business, gas in a gas pipe line moves forward in a single direction. The witness Schmidt was interrogated by the District Court on this point. We quote as follows from his testimony:

"The Court: Now, so everybody will understand me, I understand you to say now, as far as you know, there is no line in which and through which gas some days moves south into Texas and on other days in the same line is moved north into Oklahoma?

"A. That is correct.

"Q. Of course, in the case of a line break or an emergency gas can be transported north through the pipe line?

"A. Yes; it can move in any direction in the case of an emergency." (II, R. 1471.)

Schmidt also testified:

"Q. Now, then, Mr. Schmidt, is it your testimony that no gas ever travels north from Texas into Oklahoma in either Line H or Line Second H?

"A. That is correct.

"Q. Never does?

"A. Except under extreme conditions or emergencies; such as a break in the line some place north of the river; and we have to take gas up there to

*It will be noted that some of the record references made by appellees are to the "Plea in Abatement Record," Brief, pp. 55-56, supra, pp. 5-7.

supply perhaps Temple, or some town in the south of the state of Oklahoma.

"Q. There have been times, have there not, when gas has moved North into Oklahoma from Texas thru those lines?

"A. To my knowledge, that has never happened.

"Q. Do you know about it?

"A. Yes, I know.

"Q. Are you positive what you are talking about?

"A. Yes.

"Q. And you are willing to say that at no time has there ever been a movement in either Line H or Line Second H, north from Texas into Oklahoma?

"A. That's right.

"Q. Now, on Line G, which is the next line east of H and Second H, I believe you say that gas has passed from Texas into Oklahoma through that line?

"A. Well, the same thing is true there as of Line H. It would only be in the case of an emergency.

"Q. Well, has there ever been any movement of gas from Texas into Oklahoma?

"A. Well, I believe on that line there has been at times, when gas moved into Oklahoma.

"Q. There has been on Line G?

"A. Yes, but it was only in case of a break, and lasted for a very short time." (II, R. 1475-1476.)

Appellees state that the witness Dunn testified "that he is the sole person who determines where the supply of gas shall be withdrawn or purchased, and where it shall be directed to in the 4,000 mile system of the company," and they assert that this gives the company, acting through him, the power "to shift its withdrawals and transportation from day to day, and from hour to hour" (Brief, 56). The testimony of the witness does not support this statement. We quote:

"Q. Mr. Dunn, as Production Engineer, are you primarily responsible for the proration of production in the field and proration of purchases in the field, and, in the last analysis, for the amount of gas taken from the several fields which supply the Lone Star Gas Company's pipe line system?

"A. Yes, sir, that is part of my duties. I am responsible for the amount of gas which is produced, when applied to the requirements. In other words, I have no control over the demand, but I am responsible for the production of the gas to meet that demand, as obtained from the separate fields and the separate wells, and so forth, which includes the proration of that gas in the individual fields and from the separate sources of supply." (I, R. 531.)

The entire import of this is that Mr. Dunn is charged with the responsibility of producing or purchasing enough gas to meet the demand. There is no support here for the statement that he or any other officer of the company may shift its withdrawals and transportation back and forth (Brief, 56). It is a matter of common knowledge that it is impossible from a practicable standpoint to transport and handle gas in the manner described by appellees.

VI.

Corporate Affiliation—Reply to Appellees' Points IV to VI, Inclusive.

Appellees contend that appellant pipe line is not engaged in interstate commerce in transporting gas through and from Oklahoma for sale and delivery in wholesale quantities at city gates in Texas because it is affiliated with all of the distributing companies

excepting two (Brief, pp. 7-12). The State court held that corporate affiliation was of no controlling importance in determining the commerce issue (V, R. 3343).

This contention is discussed in appellant's main brief, 83-97. We briefly supplement what is there presented.

Appellees admit that the Commission, for obvious reasons of convenience, elected to proceed separately and independently against appellant pipe line company in order that it "could in one hearing, fix a final uniform gate rate for the entire system in Texas, and later build the burner tip rates upon same after hearings as to the distribution operations only" (Brief, 38), instead of proceeding separately against the distributing companies to fix burner tip rates, in which proceedings the pipe line rate would have been only indirectly involved as an expense item. They admit that the order in question "is a final, binding and conclusive legislative act fixing the rate to be charged by the pipe line company and paid by the distributors of gas delivered at the city gates" (Brief, 38).

The State court found that the rate order in question was "a final appealable order" (V, R. 3345) and that if the prescribed rate "is declared valid herein" appellant can have no further interest in any order the Commission may make "in requiring the distributing companies to pass the reduction to the consumers" (V, R. 3349-3350). The Commission asserts that in fixing burner tip rates it will insist "that the applicable gate rate has been finally and conclusively fixed by the present order" (Brief, 39).

An applicable statute subjects appellant pipe line company to heavy penalties for failing to obey the order, the penalties amounting to not less than $100.00 nor more than $1,000.00, each violation being regarded as a separate offense and each day calling for a separate penalty. *Article 6062, Texas Revised Statutes of 1925.*

It thus appears that the Commission has made and proposes to enforce the order against appellant as a separate corporate entity engaged in the gas pipe line business and subject to the statutes that apply to gas pipe line companies, including the statute that authorizes the Commission to fix their transportation rates. *Article 6053, Texas Revised Statutes of 1925.* The Commission has elected to proceed separately against the distributing companies in fixing burner tip rates.

It is true that the State court held that appellant and its affiliated distributing companies were engaged in an "integrated but single business enterprise of producing, purchasing, transporting, delivering and selling natural gas for domestic or other use to the ultimate consumer" (V, R. 3342). But the State court further held that this single business enterprise was divided into "departments" and that appellant, separately organized as a pipe line corporation, was operating one of the departments and the affiliated distributing companies another and different department. It held that appellant in its department was "engaged in producing and purchasing natural gas and in transporting same by its 4,000 mile pipe line system from the point of production to the city gates of some 270 cities and

towns in Texas, where the gas is delivered to one and the other affiliated distributing companies." (V, R. 3340.) It held that the distributing companies in their "department" were "engaged in selling and delivering the gas to the burner tips of the consumers" (V, R. 3340).

Accordingly, the Commission proceeded against the appellant as a separate "department"—that is as a pipe line company. It asserts that it proposes to proceed against the distributing companies operating their separate department—and as distributing companies.

In these circumstances, it is manifest, as was declared by the State court in its opinion, that corporate affiliation "is not of controlling importance on the commerce issue" (Appellant's brief, 84). See *Smith v. Illinois Tel. Co.*, 282 U. S. 133, 143-144. For further discussion see appellant's brief, pp. 83-97, inclusive.

Appellees, on page 39 of their brief, refer to certain contentions which it is claimed appellant has made in other suits and hearings after this suit was tried. These statements are outside the record and for that reason are not discussed.

DIVISION TWO.

The Segregation Issue—Discussion of Appellees' Points XX to XXIV, Inclusive.

Appellees in their discussion of the segregation question wholly fail to meet the issues tendered by the appellant—issues that clearly arise because of the rulings made by the State court (Appellant's

main brief, 110-124). Instead, appellees discuss issues that are clearly immaterial in view of the rulings made by the State court. Appellant is content to stand on the discussion presented in its main brief supplemented by the following:

(1) At the outset it may be pointed out that the entire argument here, as elsewhere, is grounded upon the assumption that appellant is not entitled to the benefit of any evidence in the record except that sponsored and offered by the appellant. It assumes that the rate order must stand if appellant failed to offer evidence sufficient to show that the rate was confiscatory, even though evidence showing that it was confiscatory, and coming from some other source, is in the record. As to this, see, for example, appellees' "General Thesis" on page 85 of their brief.

Appellees cite no authorities in support of their contention that the evidence supporting a judgment annulling a rate must come from the party who assailed the rate. It is clearly sufficient, we submit, that the invalidating evidence is in the record. In this case evidence and computations based thereon, covering various phases of the confiscation issue, came from three sources: First, the Commission's detailed findings were put in evidence for the consideration of the jury; next, there was evidence offered by the appellant; and, finally, evidence offered by the appellees. It was clearly open to the jury, in dealing with any particular phase of the confiscation issue—for example, with the fair value of appellant's public service properties—to accept all or any part of the evidence coming from any one

of these sources and to blend that evidence with other evidence coming from a different source.

(2) Appellees criticise at length appellant's segregation of its properties and business as between interstate and intrastate commerce (Appellees' brief, 65-76). The criticism is pointless because appellees claim that their segregation, in effect approved by the Court of Civil Appeals, was a proper one (Appellees' brief, 75); and appellant has demonstrated that when the validity of the rate order is tested on the basis of that segregation and in the light of other evidence that the jury was entitled to accept, and presumptively did accept, the rate order is clearly confiscatory (Appellant's main brief, 119-124).

It will be noted that appellees make no effort to answer that argument.

(3) In this case the State court ruled that appellant was not engaged in interstate business at all in making the city gate deliveries in Texas. It further ruled that appellant's confiscation evidence was legally worthless because of its alleged failure, by its evidence, to make a proper segregation as between its interstate and intrastate operations. These two rulings are obviously inconsistent; both cannot stand. If the Court of Civil Appeals meant that appellant was engaged in intrastate business in Texas and in intrastate business in Oklahoma and that it was necessary to make a segregation as between the Texas properties and operations and the Oklahoma properties and operations, then it is sufficient to point out that that segregation was made by the

appellees and was accepted by the State court and that the prescribed rate, when considered in the light of that segregation and other evidence that the jury was entitled to accept, is clearly confiscatory. (Main Brief, 121-124.)

(4) Here the prescribed rate applies to all of the Texas business. The order as drawn is indivisible and inseparable (Appellant's main brief, 97-104). Appellees assume that it was appellant's duty to segregate its city gate deliveries in Texas so as to separate and identify the interstate deliveries and the intrastate deliveries at all the city gates in Texas (Appellees' brief, 27, 30-31). No such burden devolved upon appellant. It was not the duty or even the right of appellant to rewrite the rate order. The order applied to all of the deliveries in Texas and the appellant is entitled to have the validity of the order tested in the light of that fact. If appellant had made the segregation, the order would have stood unmodified.

This is not a case like *Smith v. Illinois Telephone Co.*, 282 U. S. 133, 148. There, the order as drawn was divisible and separable in its operation. It expressly applied only to the intrastate part of appellant's business. The question, therefore, was simply one of segregating, not the order, but the properties and operations, in order to test the reasonableness of the rate that was properly limited in its application to the local business. That was also true in the other cases cited by the appellees: The rate as prescribed was a local rate, and the segregation required was of the properties and op-

erations. None of these cases hold that the party assailing a rate must assume the burden of offering evidence that would enable the reviewing court to rewrite the order.

The necessity for a segregation of properties and operations in any case is to identify the property used and useful in rendering the service to which the rate applies, to the end that it may be determined whether the revenues accruing under the prescribed rate will afford a fair return on the properties used in rendering the service. The rate order here applies to all of the city gate deliveries made in Texas. There was therefore no necessity that appellant, disregarding the terms of the order, should separate the property used in making these deliveries into two parts on the theory that part of the deliveries were interstate deliveries.

(5) Appellees refer to the map appended to appellant's brief and make the charge that this is the same map that was appended to appellant's brief in the Court of Civil Appeals and to its application for writ of error in the Supreme Court of Texas, but with certain colored zoned areas and delineations thereon obliterated; and the Court is invited by appellees to examine the map to determine if this is not true (Appellees' brief, 73-74). The map appended to appellant's brief is the same map that was appended to the briefs referred to by appellees and the colored zoned areas and other delineations have been removed. This was done because the present map is presented for a wholly different purpose. It is presented and is referred to in the brief

solely for the purpose of showing "the location of appellant's lines in Oklahoma and Texas" (Appellant's brief, 5). On the other hand, the map appended to the State court briefs was presented to show by colored zones and delineations a segregation of appellant's properties and operations as between interstate and intrastate commerce. These colored zones and delineations were eliminated because they had no relation to the purpose for which the present map is tendered; it is tendered merely to show the geographical location of appellant's lines. This map is also based on two other maps introduced in evidence and appearing in the record (V, R. 3206A and 3208A). Many maps are in the record, including one designed to show a segregation of appellant's properties and operations. The record affords ample basis for the preparation of a map designed to serve the limited purpose of the map attached to appellant's brief. We were there discussing simply the question of whether appellant was engaged in interstate commerce and endeavoring to show nothing except the location of its lines with reference to the State line between Oklahoma and Texas.

DIVISION THREE.

Denial of Adequate Judicial Review.

(1) Appellees assert that appellant, on page 126 of its brief, has admitted that it was not denied an " 'independent judgment as to the facts' by the District Court, or by the Court of Civil Appeals." (Appellees' brief, p. 76.) Appellant submits that nothing contained in its brief warrants this statement.

(Appellant's main brief, 126-127.) Appellant's complaint, as stated in its brief, is that the procedure provided by the State, as expounded and applied against it in the instant case, denied it a judicial review of the rate order. It specifically complains of "the judgment of the Court of Civil Appeals, which, in effect, deprived appellant of the judicial review accorded to it in the trial court and placed it in the same position as if that review had been denied by the trial court." (Appellant's brief, 127.)

(2) Appellees undertake to interpret the opinion of the Court of Civil Appeals and to restate its rulings on the question of judicial review. (Appellees' brief, 77-81.) The opinion speaks for itself. The court clearly held that the conflicting testimony of "equally well qualifitd experts" was insufficient as a matter of law to sustain a judgment setting aside a rate order as confiscatory, and that this is true even where the conflicts have been settled by the verdict of a jury or other fact finding agency. In this case the State court expressly found that the evidence on vital phases of the confiscation issue was conflicting. (Appellant's main brief, 124-125.) Because of the existence of these conflicts, it held that the verdict and judgment of the district court, settling the conflicts against the validity of the order, should be reversed and judgment should be rendered sustaining the rate order, this being upon the theory that conflicting evidence is insufficient as a matter of law to sustain an attack on a rate order. The court cited in support of its ruling cases decided by this Court, holding that a judgment *sustaining* a

rate order will not be set aside where the evidence for and against the order is conflicting and the conflicts have been settled in favor of the order. It is manifest that the decisions cited by the court, instead of supporting its conclusion, are in conflict with its conclusion. (Appellant's main brief, 131-132; also 135-136.)

(3) It is asserted by the appellees that this case differs from *United Gas Public Service Co. v. State* (the Laredo case), decided February 14, 1938, because there the jury finding imported that the rate was not confiscatory; whereas, here, the verdict does not import that the rate is confiscatory. (Appellees' brief, 84.) It is pointed out in this connection that there is a difference between an unreasonable rate an a confiscatory rate. (Brief, 84.) That such a difference exists is true, but that fact is immaterial here. The State District Court required the jury to find whether the prescribed rate as applied against appellant was "*unreasonable and unjust*" to the appellant. The jury was charged in this connection that an unreasonable and unjust rate was one "so low as to have not provided for a fair return upon the fair value of defendant's property used and useful in supplying the service furnished by said defendant." (Appellant's main brief, 16.) The jury's answer in the affirmative, interpreted in the light of the charge, means that the prescribed rate was so low that it would not yield a fair return on the fair value of appellant's property, and was therefore confiscatory. *Board of Public Utility Commissioners v. New York Tel. Co.*, 271 U. S. 23, 31; *Wilcox v. Consolidated Gas Co.*, 212 U. S. 19, 41.

DIVISION FOUR.

I.

The Confiscation Issue—Discussion in Reply to Division C of Appellees' Brief, pp. 85 to 206.

Appellant in Point V, submitted in its brief and the discussion thereunder, attempted to demonstrate that the finding of the jury that the rate was confiscatory is sustained by clear and satisfactory evidence—evidence that the jury was entitled to accept, and presumptively did accept, as true. Further, that the Court of Civil Appeals, without making any contrary finding of fact on the issue of confiscation, set aside the verdict of the jury and the judgment of the District Court approving the verdict and rendered judgment sustaining the rate order; and that this ruling of the Court of Civil Appeals was based simply on an erroneous conclusion upon a question of Federal constitutional law. The question of law erroneously decided by the court related to the quantum and character of evidence that is required to sustain a judgment setting aside a rate order challenged as being confiscatory (Appellant's main brief, pp. 134, 135-170).

In discussing this point appellant referred to many bases of fact, supported by evidence in the record, that the jury was entitled to accept, and presumptively did accept, and showing that the rate was confiscatory (Appellant's main brief, pp. 147-170; also 34-50).

Appellees make no attempt to meet the issue thus tendered. Instead, they have gone over the record

and selected other and different items of evidence and have presented these in their discussion and in the attached tables for the purpose of showing that the rate was not confiscatory. They ignore the fact that the work of selecting and blending different parts of the evidence had already been done by the jury. They have hand picked the evidence, ignoring the fact that it has already been hand picked by the jury. They have selected parts of the evidence unfavorable to the verdict and presumptively rejected by the jury, and blended these rejected parts in an effort to show that the rate was not confiscatory. The proper approach to this problem, as we believe, is to determine whether there is substantial evidence in the record that the jury was entitled to credit and then to select and blend in such a way as to support its finding that the rate was confiscatory. We approached the problem in that way in our main brief and we think our approach was correct.

The only findings of fact made on the confiscation issue in this case were made by the jury, with the approval of the District Court. The Court of Civil Appeals made none. Where the Court of Civil Appeals reverses the judgment of the District Court based on a finding of fact and renders judgment, it determines, not a question of fact, but a question of law. "Its ruling is therefore one purely upon a question of law—whether there be any evidence under the quantum of proof required which will support the jury's finding. *Tweed v. Telegraph Co.*, 107 Tex. 255, 166 S. W. 696, 177 S. W. 957." *Briscoe v. Bright's Adm'r.*, 231 S. W. 1084, 1085 (Tex. Com. App.). This was said in a case where an applicable

rule of law required that the evidence should be "clear and satisfactory." The court held that the conclusion of the Court of Civil Appeals that the evidence was not "clear and satisfactory," followed by the rendering of final judgment, amounted to no more than an erroneous conclusion on a question of law.

This results from the fact that the Court of Civil Appeals has no power "to make an original final determination of a question of fact." *Choate v. San Antonio & A. P. Ry. Co.*, 91 Texas 406, 410. It is because "it is not the province of the Court of Civil Appeals to determine a question of fact in the first instance." *Patrick v. Smith*, 90 Texas 267, 274. The Supreme Court of Texas has defined the fact finding power of the Court of Civil Appeals in *Post v. State of Texas*, 106 Texas 500, followed by this Court in *United Gas Public Service Co. v. Texas*, decided February 14, 1938. We quote as follows:

"The province of determining questions of fact is in the trial court. The Court of Civil Appeals has the power to set aside its finding and remand the cause for a new trial. Where the evidence is without conflict, it may render judgment. But where there is any conflict in the evidence upon a material issue, it has no authority to substitute its findings of fact for those of the trial court. Choate v. San Antonio & A. P. Ry. Co., 91 Texas, 406, 44 S. W. 69."

This is in line with the generally accepted rule that a holding that there is "no evidence" or no legally sufficient evidence is a holding on a question of law; it is not a finding of fact. *Creswill v. Grand Lodge K. of P.*, 225 U. S. 246; *Northern P. R. Co. v.*

North Dakota, 236 U. S. 585; *Union Pacific R. Co. v. Huxoll*, 245 U. S. 535; *Jones National Bank v. Yates*, 240 U. S. 541; *United Gas Public Service Co. v. State*, decided February 14, 1938.

All that the Court of Civil Appeals did here was to determine what "quantum and character" of evidence is legally sufficient to support a judgment setting aside a rate order as being confiscatory. Its holding on that question of law was to the effect that conflicting evidence is not enough. It was to the effect that where the evidence sustaining a judgment, annulling a rate order, consists merely, as the court described it, of the "conflicting testimony of equally well qualified experts" on the issue of fair value of the utility's property and other vital issues, it is insufficient as a matter of law to sustain the judgment, even though such evidence may have been accepted as true by the triers of fact. The Court, without denying the right of the jury, well established under the Texas rule, to resolve the conflicts in the evidence in the ordinary case, held that, under a general rule of law, claimed by the court to be supported by the decisions of this Court, this function cannot be exercised by any court in a rate case; and that its exercise by the jury in this case should be ignored. The Court held that the presence of conflict required that the issue of confiscation be decided against the complaining party without settling the conflict.

The Court does not find that the verdict of the jury was wrong on the facts. The Court had no power to make a finding of fact contrary to that made by the jury and then render final judgment, and did not

claim or attempt to exercise such power. All the Court did was to apply a wrong legal test in determining the legal sufficiency of the evidence on which the jury verdict was based.

The question of law thus determined is one arising under the Fourteenth Amendment. It is plain, we submit, that the question was erroneously decided. The decisions of this Court were erroneously interpreted and applied (Appellant's main brief, 135-139). The State court erroneously assumed that because conflicting evidence is not enough to require the reviewing court to set aside a rate order that conflicting evidence is also not enough, even when the conflicts have been settled by the triers of fact, to support a judgment annulling the order. No applicable decision of this Court supports this ruling.

The State court cites decisions of this Court holding that it will not reverse a judgment sustaining a rate order where the evidence as to the validity of the order is conflicting. These decisions fall short of holding that where the conflicts in the evidence have been resolved by the triers of fact against the validity of the order, their action will be reversed and the order sustained, notwithstanding their findings, merely because the evidence is conflicting.

We submit that the findings of fact made by the jury in this case, with the approval of the trial court, should be accepted in this Court if they are sustained by clear and satisfactory evidence that the jury was entitled to accept. The record should be reviewed solely for the purpose of determining whether it contains such evidence; and if such evidence is found, then it should be conclusively presumed that it was

accepted by the jury. The action of the Court of Civil Appeals in reversing the judgment of the District Court should be ignored because it is based, not on a contrary finding of fact, but only on an erroneous ruling on a question of constitutional law.

The ruling of this Court in *Jones National Bank v. Yates*, 240 U. S. 541, is applicable. In that case, as in this one, the findings and judgment of the trial court were overturned and reversed by the appellate court of the State. In that case it was "apparent that there were no findings of fact by the Supreme Court of the State," (p. 551). The court said that "the questions of fact, so far as they arose upon a substantial conflict in the evidence, were for the trial court." That it was not necessary for the court to review the evidence in detail, it being "sufficient to say that our examination of it has convinced us that the findings of the trial court at least with respect to the last mentioned reports had substantial support; and, in this view, we must conclude that the reversal of the judgments, as entered in the trial court, upon the ground of the legal insufficiency of the plaintiffs' case when tested by the Federal statute, was error." (P. 563.)

Here the Court of Civil Appeals has expressly held that the evidence was conflicting on vital issues relating to the ultimate issue of confiscation (Appellant's main brief, 124-125.) These conflicts have been settled by the jury. The Court of Civil Appeals has not denied the right of the jury to settle the conflicts, but has announced and applied as a general rule of constitutional law, that conflicting evidence

is insufficient as a matter of law to support a judgment annulling a rate order.

A jury verdict entered in a State court falls under the Seventh Amendment when a Federal court is invited to re-examine the findings of fact evidenced by the verdict. *Chicago, etc., Ry. Co. v. Chicago*, 166 U. S. 226, 246. The case of *Minnesota & S. L. R. Co. v. Bombolis*, 241 U. S. 211, cited by the appellees is not in point because the re-examination of the verdict in that case was in a State court, and the Seventh Amendment does not apply to a re-examination by a State court.

In *United Gas Public Service Co. v. State*, decided February 14, 1938, this Court, in defining the scope of its review of the evidence, said:

"This court will review the findings of fact by a State court (1) where a federal right has been denied as the result of a finding shown by the record to be without evidence to support it, and (2) where a conclusion of law as to a federal right and findings of fact are so intermingled as to make it necessary, in order to pass upon the federal question, to analyze the facts."

The court further said:

"We make that anlaysis, not to determine issues of fact arising on conflicting testimony or inferences, and thus to usurp the function of the State court as a trier of the facts, but to perform our own proper function in deciding the question of law arising upon the findings which the evidence permits. Kansas City Southern Ry. Co. v. Albers Commission Co., supra.

"Here, the issues of fact were determined in the

trial court. Counsel agree that under the state practice the Court of Civil Appeals had no authority to make findings of fact. 'Where the evidence is without conflict, it may render judgment. But where there is any conflict in the evidence on a material issue, it has no authority to substitute its findings of fact for those of the trial court.' "

Applying the rule thus announced, we understand that this Court will, in passing upon the ruling of the Court of Civil Appeals, review the findings of fact made by the State trial court. It will do this because the legal conclusion of the Court of Civil Appeals as to appellant's Federal right and the findings of fact of the District Court are so intermingled at to make it necessary to a proper determination of the Federal question to consider the facts. But in analyzing the facts, the Court will not determine the issues of fact that arise on conflicting testimony. It will not usurp the function of the jury and trial court as the triers of fact.

In discussing the confiscation issue in our main brief, we proceeded in the light of these rules that we believed to be correct. We have not supposed that this Court would review the evidence *de novo* for the purpose of determining whether the conflicts in the evidence may be settled in some way different from the way in which they were resolved by the jury. We have attempted in the main brief to show that there was substantial evidence in the record sustaining the jury's finding—evidence that, if accepted by the jury as true, would satisfy the test of being "clear and satisfactory" (Appellant's main brief, 154-170).

Appellees have proceeded in an entirely different way. They present points of argument that properly could have been addressed to the jury. They discuss alleged fallacies in "appellant's evidence" and emphasize the merits of "appellees' evidence." They proceed upon the theory that the evidence as a whole was divided into two separate and independent parts; and that the jury had no right to take evidence offered by appellant and blend it with evidence offered by the appellees.

Presumptively, the jury heard and considered the criticisms of appellant's evidence now offered by appellees. It determined that these criticisms were without merit or that, if any particular part of the evidence was not entitled to be accepted there was other evidence coming from other sources that properly could have been accepted.

Appellees assail appellant's reproduction cost new estimate and its evidence on reserve accruals for depreciation, depletion and amortization, and other items. It is sufficient to point out that the jury was not bound by any of this evidence. The jury was entitled to consider appellant's evidence, appellees' evidence, the findings of the Commission, and other relevant facts in arriving at its ultimate conclusion on the issue of confiscation. What parts of the evidence, whether sponsored by appellants or by appellees, were accepted by the jury and what weight the jury gave to any particular evidence is unknown. The nature of the charge submitted to the jury makes it impossible to determine now what particular phase or phases of the evidence influenced the jury in arriving at its verdict. But this fact is im-

material. What is material is that the jury's conclusion is supported by a reasonable interpretation and possible blending of all of the evidence introduced before it.

The five tables attached to appellees' brief illustrate very clearly the erroneous way in which they have considered the evidence in connection with the jury's verdict. These tables are plainly based upon a selection of items of evidence that the jury was entitled to reject, and presumptively did reject, to the extent that any particular item may be in conflict with the verdict.

What appellees have done is to demonstrate quite clearly that there were conflicts in the evidence to be resolved by the jury, and therefore that there was sufficient evidence of probative force and effect to justify submitting the case to the jury and to support the verdict of the jury finding that the rate was confiscatory.

We submit therefore that appellees' computations prove nothing material here (1) because of the fact that there is other evidence in the record which sustains the verdict of the jury rejecting the theories outlined in these computations; and (2) because of errors inherent in the computations.

We now briefly consider appellees' tables:

(1) *Appellees' Table I (Brief, 196).*

Under column 1 of this table appellees attempt to show that appellant from 1927 through 1933 would have received an average rate of return of 8% on the rate base adopted by the Commission, as shown by its findings. It is obvious that these figures are

based upon a hand picked selection of certain parts of the evidence that the jury possibly had the right to accept but presumptively did not accept. In preparing this and the other tables appellees blend the different parts of the evidence in a way not favoring the verdict, ignoring the right of the jury to blend the evidence in a way favoring the verdict.

In respect to each of the items shown on this table there was evidence of different items more favorable to the verdict. For example, the rate base is taken from the Commission's findings. There was evidence upon which the jury could have based a finding of a much higher rate base (Appellant's brief, 166-170).

The computations presented in Table I are based upon an allowance of reserve accruals approximating 2% a year, ignoring the fact that there was evidence favoring a larger allowance.

The rate base which the Commission found for the year 1927 through 1930 ranged from $29,517,879.08 to $46,745,646.84. This accords with the book costs for those years as appears under item 5, appellees' Table II (Appellees' brief, 197). The evidence shows that the book costs do not include cash working capital and going concern value. It also shows that all overhead construction costs were not capitalized. The record shows that the books understated the actual costs of the property (Appellant's brief, 37). The book costs ranged from $48,409,002.24 in 1931 to $50,399,110.82 for the twelve months ended March 31, 1934 (Appellees Table II, brief, 197), whereas the rate base figures used in Table I, $46,246,617.53 for 1931 and

$46,520,137.06 for 1932, represent the Commission's determination (I, R. 110-111). If the book costs be used as the rate base for the years 1931 and 1932 and the Commission's allowance for annual reserve accruals in the amount of 2.09% be used, the amounts available for Federal taxes and return would be 5.66% for 1931 and 5.84% for 1932, instead of the figures shown in Tables I for those years (I, R. 110-111).

For the year 1933, Table I shows 5.20% available for Federal income taxes and return. This figure was arrived at by adding to the actual revenues received during that year the sum of $441,240.12, which admittedly appellant did not receive but which appellees claim would have been received if weather conditions had been normal and more gas had been sold. It is obviously improper to test the effect of the 32 cent rate when applied to the year 1933 by anything other than the actual experience—actual revenues and expenses. *West Ohio Gas Co. v. State Tax Commission*, 294 U. S. 79. If the $441,240.12 thus added to actual revenues be eliminated and only the actual revenues used, the amount available for Federal taxes and return will be 4.29% on the rate base used in Table I instead of 5.20%. When applied to the actual cost of the property for the year 1933, the amount available for Federal taxes and return would be 4.11%.

Column 2 of Table I purports to include earnings from Government and Northern Natural Gas Company. None of the accountants who testified in this connection included such alleged revenues in their accounting exhibits.

(2) *Appellees' Table II (Brief, 197).*

It is at once apparent that the amounts shown to be available for return on this table were arrived at after allowing only *$344,871.84* for annual reserve accruals to provide for depreciation, depletion and amortization. This amounts to .71% for 1931, .70% for 1932, and .68% for 1933, on the book costs. This figure is 65% below the amount allowed by the Railroad Commission. The Commission allowed $983,698.43 for depreciation and depletion on the sinking fund basis, which requires an undepreciated rate base (I, R. 97, 98, 99). Appellees' alleged expert estimated $848,546.48 for depreciation and admitted that at least $94,000.00 for depletion of the production system properties would be required on the Texas properties alone, making a total of $942,546.48 (Appellant's brief, 47-48). This estimate was made on the sinking fund basis and he testified that with the application of this rate an undepreciated rate base should be used (III, R. 1829). This is the lowest figue suggested by any witness or shown by any evidence in this case for reserve accruals. The amount used in Table II for depreciation, depletion and amortization is 63% of the above figure. It is apparent that appellees themselves in the District Court trial did not rely on the figure $344,871.84 for depreciation reserve accruals. They should not now ask this Court to accept a figure which they themselves did not rely upon.

By the use of this figure of $344,871.84, appellees show 6.77% for the year 1931, 6.90% for the year 1932, and 5.46% for the year 1933, available for return on the book costs. If the Commission's allow-

ance for depreciation, depletion and amortization be used for the years 1931, 1932 and 1933, the following percentages are available for return on the book costs shown in Table II, to-wit; 1931, 5.45%, 1932, 5.61%; 1933, 4.19%.

Appellees have deducted the figure $344,871.84 for reserve accruals in computing the amount available for return for each year from 1927 through 1933, inclusive, although their own table shows that the book costs of the property increased from $29,517,879.08 for the year 1927 to $50,399,110.82 for the year 1933, an increase of $20,881,231.74. This increase represents additions to property over a seven-year period. It is obvious that depreciation, depletion and amortization requirements will increase as the property account increases. Appellees give no consideration to this elementary fact. Appellees also ignore the important fact that mortalities on the new property afford no measure of the requirements for reserve accruals to meet the increasing mortalities as the property grows older. They entirely disregard the newness of the property and the fact that reserve charges in past years are no measure of future requirements for which a reserve must be currently built up. (See facts mentioned in Appellant's main brief, 149-154.)

In the above computation Federal income taxes have been calculated on the basis used by appellees in their Table II. This basis is in fact erroneous. In computing Federal income taxes appellees have used a rate of 5% per annum for depreciation (see Note 4, Table II, Appellees' brief, 197). But in computing amounts available for return they used

.71% for 1931, .70% for 1932, and .68% for 1933, for depreciation reserve accruals. The inconsistency in using one rate for depreciation in computing return and another rate in computing Federal income taxes is obvious.

The result shown by application of the 32¢ rate for prior years is immaterial. The rate was promulgated September 13, 1933, and was based upon appellant's operating experience for the year 1931. Its effect, when applied to actual operating experience, is fairly and adequately demonstrated when applied to the years 1931 through March 31, 1934. Appellant claims that the 32¢ rate would not have afforded it a reasonable return at the date of its promulgation and for a reasonable period of time in the future. Earnings of the past cannot be used to support the rate. If it be confiscatory at the date of promulgation and when applied to the future, it is unconstitutional. *Los Angeles Gas & Electric Co. v. Railroad Commission*, 289 U. S. 287, 313; *Board of Com. of New York v. New York Telephone Co.*, 271 U. S. 23, 31, 32; *Bluefield Water Co. v. Public Service Commission*, 262 U. S. 679.

(3) *Appellees' Table III (Brief, 198).*

What has been said above with respect to appellees' Table II is applicable, in principle, to Table III. In Table III appellees allow $296,589.78 as a deduction from operating revenues for annual accrual to reserves for depreciation, depletion and amortization. Appellees' expert at the trial in the District Court admitted that $942,546.48 would be required for the Texas properties alone.

If depreciation reserve accruals be computed at the $942,546.48 figure, the amounts available for return on the basis shown in Table III would be 5.97% for 1931, 6.10% for 1932, and 5.10% for 1933.

(4) *Appellees' Table IV (Brief, 199).*

Appellees' Table IV is a reproduction of their Exhibit 8 (III, R. 2164). This is the exhibit and showing upon which appellees ultimately relied in the District Court trial in an effort to support the Commission's order.

The fallacies of this exhibit have been alluded to in appellant's main brief, pp. 47-50, 159-165.

This table represents, as do the others, a selection by the appellees of certain phases of the evidence and is based upon the assumption that the jury was compelled to make this particular selection as against some other selection in harmony with and supporting the verdict.

If Table IV, being appellees' Exhibit 8, is corrected so as to provide for actual expenses of operation on the Texas properties, exclusive of management fees, and if appellant's appraisal is corrected to include the production system properties in Texas at actual cost, and increases in prices for material on the transmission line equipment alone, as admitted by appellees' expert, be allowed for in the rate base, and if an allowance is made for depletion in the amount admitted by appellees' expert, the amounts available for return for 1933 would be 4.60% and for the twelve months ended March 31, 1934, 5.02%. The following tabulation demonstrates these results:

	3-31-34	12-31-33	
Net Revenues	$ 3,608,172.77	$3,420,665.19	(1)
Exp. (Prod. Sys.) III, 2116A	222,752.66	232,758.70	(2)
Available for Depr. Fed. Tax and Return	3,385,420.11	3,187,906.49	
Depr. & Depl. ($48,-546.08, incl. correction & $94,000 depletion, B.163)	942,546.08	942,546.08	(3)
Avail. for Fed. Tax and Return	2,442,874.03	2,245,360.41	
Fed. Income Tax	97,534.45	96,073.64	(4)
Available for Return	2,345,339.58	2,149,286.77	
Rate Base	$40,256,862.39		(5)
Increase in prices 1-1-33 to 6-15-34	1,269,688.28		(6)
Prod. System prop. in Texas	5,191,539.42		(7)
TOTAL rate base	46,718,090.09		
Percentage	5.02%	4.60%	

(1) Appellees' Ex. 8, Table IV, Brief 199.
(2) Expenses, production system, Appellees' Ex. 4, III, R. 2116A.
(3) Depreciation and depletion. (See Appellant's main brief, 163.)
(4) Federal income tax, Appellees' Brief, 199.
(5) Rate base, Appellees' Ex. 8, Table IV, Brief, 199.
(6) Increase in prices, Appellant's main brief, 161.
(7) Production system properties at cost, Appellees' Ex. 4, III, R. 2125.

(5) *Appellees' Table V (Brief, 200).*

The computations in this table, like those in the other tables, are not reliable. It is apparent therefrom that appellees have added to actual revenues

for the entire system $441,240.12 as "temperature correction." This temperature correction means that appellees have added to actual revenues the sum stated on the theory that the weather in the year 1933 was warmer than usual, and that if it had been normal appellant would have earned that much more money. There is deducted from the amount shown in the table to be available for depreciation and return, the sum of $848,466.08 for annual reserve accruals. This is appellees' estimate for depreciation reserve accruals on the Texas properties alone, and includes nothing for depletion of and depreciation on the production system properties in Texas. Appellees allow for reserve accruals on the entire integrated operating system estimated for the Texas properties alone. (Appellant's main brief, 163.) The actual cost rate base used in the table includes production system properties but the amount allowed for annual reserve accruals provides nothing for depreciation and depletion on these properties. On this basis appellees show a return of 5.55% on the integrated operating system. If they had used the actual revenues, eliminating the $441,240.12 added as temperature correction, and had used the Commission's allowance for annual depreciation reserve accruals for the entire system, the amount available would have been 4.35% instead of 5.55%.

The allocation to "D" operations of 6.63% for return shown in the table, was arrived at by the application of some sort of percentage formula. Appellant did not make its segregation between interstate and intrastate commerce on the basis of an arbitrary formula, or by the application of ratios or percent-

ages. Its segregation was based upon the way and manner in which the property was used and operated. (Appellant's main brief, 43.) Appellant's Exhibit 46 shows 3.78% available for return on the fair value of the property allocated to intrastate operations, exclusive of going value, after allowing for reserve accruals at the rate of 2% per annum, being the approximate rate allowed by the commission. (Appellant's main brief, 43-44.) Management fees were included in the calculation of expenses by which this percentage was determined. If the management fees be eliminated, the amount available for return is 3.99% instead of 3.78%.

All of the tables presented in appellees' brief (196 to 200, incl.) represent appellees' blending of various and sundry phases of the evidence in an effort to show that the 32¢ rate is compensatory. Appellees nowhere attempt to demonstrate in connection with any of these tables that the jury was compelled to select and blend the evidence in the way represented by these tables, or any one of them. The very fact that appellees have presented five blendings of the evidence is enough to suggest that probably other blendings were available, and this is affirmatively shown in appellant's main brief, pp. 164-170. At most, appellees have done no more than to show that probably a verdict and judgment in their favor might have been sustained. They have wholly failed to show that there is no "clear and satisfactory" evidence showing that the rate order was confiscatory. They have wholly failed to show that the state of the evidence was such that the jury was compelled to accept one of the blendings of the evi-

dence now brought forward by the appellees. We think it should now be assumed, in deference to the jury's verdict, that these same blendings of the evidence were put before the jury and the trial court by the appellees. The verdict should be interpreted as the definite rejection of these blendings of the evidence in favor of other blendings of it that will support the verdict.

When appellees' criticisms are considered in the totality of their consequences, the evidence still clearly supports the conclusion that the 32¢ rate is confiscatory. Granting these criticisms, for the sake of argument only, we shall now demonstrate by the following table of figures that, upon the basis of the evidence in the record, other than that assailed by appellees', the rate is shown to be confiscatory.

REVENUES, EXPENSES AND AMOUNTS AVAILABLE FOR RETURN

Based on 32¢ Domestic Gate Rate and Operating Expenses as Set Out by Commission

Depreciation and Depletion as Testified to by Appellees' Witness

	Dec. 31, 1931	Dec. 31, 1932	Dec. 31, 1933	Mar. 31, 193
Amount Available for Depreciation, Depletion, Federal Income Tax and Return (Note 1)	3,765,160.24	3,978,890.81	3,093,567.60	3,293,167.05
Depreciation and Depletion (Note 2)	942,546.08	942,546.08	942,546.08	942,546.08
Amount Available for Federal Income Tax and Return (Note 3)	2,822,614.16	3,036,344.73	2,151,021.52	2,350,620.97
Federal Income Tax (Note 4)	216,627.86	256,841.59	145,744.27	175,769.90
Amount Available for Return (Note 5)	2,605,986.30	2,779,503.14	2,005,277.25	2,174,851.07
Rate Base No. a (Note 6)	48,506,490.31	50,764,182.38	50,566,776.74	50,602,511.77
Rate Base No. b (Note 7)	50,252,481.96	50,252,481.96	50,252,481.96	50,252,481.96
Amount Available for Return (Note 8)				
Base a	5.37	5.48	3.97	4.30
Base b	5.19	5.53	3.99	4.33

Note 1. Appellant's Ex. 13 (III, R. 2283-2285; also 2297-2303). The revenues are based on the 32¢ rate and the operating expenses have been adjusted to conform to the Commission's eliminations, averages and adjustments. Management fees have been excluded. Donations allowed by the Commission have been included. Regulatory expenses have been amortized over a ten-year period. Dry hole and canceled and surrendered lease expenses have been amortized as the Commission amortized them.

Note 2. Appellees' estimate for annual reserve accruals. See appellant's main brief, 163. This figure covers the amount appellees' witness admitted would be required for depreciation and depreciation reserve accruals on the Texas properties only. It is applied here to the integrated operating system because it is the estimate made by appellees at the trial in the District Court. It is less than the Commissions' allowance for the whole property. The Commission allowed $968,066.98 for depreciation and $15,631.45 for depletion. (I, R. 97-99.)

Note 3. Calculation.

Note 4. Federal income taxes calculated at prevailing rates, after deduction of interest payments. Depreciation and depletion have been taken at the rate estimated by appellees' witness. See Note (2).

Note 5. Calculation.

Note 6. Actual book cost as shown at pp. 36-37 of appellant's main brief, less actual cost of the Petrolia field property, in the amount of $758,619.23 (Appellees' Ex. 4, III, R. 2125). This book cost includes general construction costs in the amount of $739,958.75 as of 12/31/33. All of such costs were not capitalized on the books (I, R. 348-351). The Commission allowed $4,528,968.30 for construction overheads, being administration and legal expense, engineering and supervision during construction, taxes during construction, interest during construction, and preliminary and organization expense (I, R. 47-52). Cash working capital has been added to

the actual book cost in the amount allowed by the Commission, $1,488,369.91 (I, R. 52.)

Note 7. This represents appellants' appraisal of the physical properties, less accrued depreciation, in the amount of $55,809,205.16 (Ex. 37, V, R. 3037); from which undistributed general costs and general supervision in the total amount of $8,932,012.77 have been eliminated (Ex. 37, V, R. 3038-3039). There is also excluded appellant's appraisal of the Petrolia field in the amount of $687,781.13. Collateral construction costs and working capital have been included in the amount allowed by the Commission, being $6,017,337.16 (I, R., 47-52). Developed leaseholds have been included at actual cost less depletion, as allowed by the Commission, in the amount of $727,442.54 (I, R. 71-72). Undeveloped leases have been included at actual cost, as included in appellant's appraisal, in the amount of $893,291.28 (V, R. 3038).

Note 8. Calculation.

The above is not presented on the theory that the jury and trial court were compelled to accept these figures. In every instance there was evidence in the record, more favorable to the verdict, that the jury might have accepted.

II.

Reply to Various Contentions and Statements of Appellees.

To specifically answer all the various points of argument presented by appellees would unduly extend

the length of this brief. We shall attempt to discuss only a few of the points made by appellees. Notwithstanding our inability to cover all of the points, we do not wish to be understood as assenting to appellees' interpretations of the evidence or the conclusions they draw therefrom.

Appellees assail principally "the item of depreciation reserve; next, the questioned items of operating expense; then the elements in the rate base; the rate of return; and, last, the operating computations submitted by the company and compared with those in * * * * our tables I to V, inclusive." (Appellees' brief, 100.)

We now discuss some of the points made by the appellees.

(1) *Depreciation Reserve Accruals.*

Appellees enter upon a lengthy discussion of the annual accruals to depreciation, depletion and amortization reserves in an effort to show that the allowances claimed by appellant's witnesses were unreasonable and their testimony incredible (Appellees' brief, 103-116). We might dismiss this subject by simply pointing out that the computations submitted by appellant's witnesses on this phase of the confiscation issue might be rejected and the computations submitted by appellees' witnesses accepted and still there would be ample evidence in the record clear and satisfactory in nature and showing that the prescribed rate is confiscatory. This has been fully demonstrated in our main brief, as hereinbefore pointed out.

This argument rests upon the unsupported assumption that if the jury was not entitled to accept the evidence offered by appellant on this issue, it was not entitled to accept evidence on any other issue. Appellees' points made here are more or less abstract. Everything they say could be admitted and still the verdict would find ample support in the evidence.

In the interest of an accurate presentation of the facts we will briefly reply to appellees' discussion of this question. We have set out in our main brief (149-158) facts and reasons which refute the argument now presented by appellees. We now supplement that discussion.

Appellees compare appellants' determination of per cent condition of new of the property with the balance in the reserve account at December 31, 1933 (appellees' brief, 104-105). They refer to the fact that appellant determined the over-all per cent condition to the 94.26%. They overlook the important fact that the per cent condition of the physical properties was 92.93%. This was equivalent to approximately 7% at the date of inquiry, or $4,245,384.00, being the difference between the reproduction cost new of the physical properties and the present value at January 1, 1933 (appellants' Exhibit 37, V, R. 3037). The balance in the reserve account must provide for this loss in value and represent free capital available to appellant. *Board of Public Utility Commissioners v. New York Bell Telephone Co.*, 271 U. S. 23, 70 L. Ed. 808.

Appellees' argument ignores the important fact that reserve accruals must provide for mortalities

brought about by causes other than decline of per cent condition. The reserve accruals must provide for removals, replacements, abandonments and amortization of property. In a natural gas producing and pipe line property, removals are occasioned by changes in sources of supply, changes in operating conditions and other factors which cannot be definitely anticipated. The Commission, with respect to the appellant's depreciation reserve, said that: "Inasmuch as the depreciation reserves actually set up by the company are substantially in the correct amount and are substantially the same as the sinking fund method of handling depreciation requires, the ratio of the book value to the book cost may serve as a fairly accurate basis of correcting the return above 6% to a depreciated rate base." (I, R. 114-115.)

Although the first property was installed in 1909, at the date of inquiry it had a weighted age, owing to the installation of a large percentage of new property in recent years, of only twelve years (III, R. 1860, 2041-2042). Other facts pointed out in appellants' original brief show the newness of the property at the date of inquiry. (Appellant's brief, 38-39.) Appellees argue that at the date of inquiry and notwithstanding the newness of the property, it had reached a static age (appellees' brief, 106). The record which is cited in support of this statement does not, in our opinion, support it (appellees' brief, 106, II, R. 1142-1143, 1171, 1183, V, R. 3037).

Appellees' own evidence disputes this contention. Appellees Exhibit No. 7 (III, R. 2160) shows a rate for replacements of 1.01% at the twelfth year.

The replacement rate is shown to increase from 1.01% in the 12th year to 3.43% in the 42d year. If the property was in the 12th year at the date of inquiry, it is obvious that the replacement rates or mortality rates had not become static. This is evident from appellees' own evidence. The 33 1/3 year average life curve shown in appellees' Exhibit No. 7 (III, R. 2162 C) and upon which appellees base their estimate for reserve accruals, shows that the peak in replacements is scarcely approached at the twelfth year. Hence, it cannot be plausibly argued that mortalities of the past and charges against reserve occasioned thereby are a fair measure of the mortalities which will be experienced as the property grows older.

Appellees say that appellant's witness in making his estimates for annual reserve accruals gave no consideration to credit balances currently building up during the earlier life of the property (appellees' brief, 106-108). This is an inaccurate and erroneous statement. In appellant's Exhibit No. 42 Connor states that "as in the case of the calculations from main lines and tap lines, a uniform annual accrual designed to provide the necessary annual funds indicated by the application of the adjusted total annual rates to the reproduction cost of field lines and well lines will create a credit balance during the earlier years of the accrual. The use of this credit balance, and the interest earned upon it, will tend to reduce the indicated amount of the uniform annual accrual." (V, R. 3123.)

The method employed by appellant's witness in estimating depreciation and depletion reserve ac-

cruals for gas reserves and gas well equipment is not open to the criticisms leveled thereat by appellees (Appellees' Brief, 110-112). The explanation made by the witness Connor in appellant's Exhibit 42 is sufficient to refute appellees' claims. (V, R. 3131, 3153.) Appellees vigorously assail the estimate of 20,000,000 M. cubic feet as the average annual rate of future deliveries from appellant's gas reserves. This estimate has a factual basis (V, R. 3136-3140).

Total gas deliveries by years were as follows, to-wit:

Year	M. cu. ft.
1927	38,469,319
1928	36,692,761
1929	42,777,847
1930	40,916,774
1931	34,628,020
1932	33,191,917
1933	30,838,394
1934	31,874,619

(Appellees' Ex. 5, III, R. 2126B.)

In view of appellant's total annual deliveries since 1927, we do not agree with appellees that it is unreasonable to suppose that in the future appellant will use 20,000,000 M. cubic feet per annum from its own reservoir.

Although appellant has not in the past obtained that high a percentage of its total gas deliveries from its own reserves, the facts set out in appellant's Exhibit No. 42 show why it will be necessary for appellant to draw more heavily upon its own reserves in the future. As illustrative, in 1927 appellant

obtained 17,641,453 M. cubic feet of gas from casinghead gasoline plants. Gas available from this source has declined from 100% maximum delivery in 1925 to 30.9% in 1932. In 1932 the deliveries of gas obtained from these casinghead gasoline plants were only 10,324,783 M. cubic feet. Other factors making for a decline in the amount of gas obtained from sources other than appellant's own reserves are shown in the record (V, R. 3135-3143).

(2) *Questioned Operating Expenses:* Appellees eliminate from the operating expenses or criticize various items which were included by the Railroad Commission and which were not assailed at the trial in the District Court (Appellees' brief, 116-130). They eliminate from their various computations management fees and charitable donations, and criticise the inclusion in the expense account of uncollectible bills, regulatory commission expense, dry hole expense, canceled and surrendered leases, new business expenses and Federal income taxes. These expenses are proper and were incurred in good faith by the management. (Appellant's main brief, 40.) The only item of expense excluded by any witness produced by appellees at the trial were the management fees. The reasonableness of none of the other items of expense now challenged by appellees was assailed in the District Court. "In all the pages of this record, there is neither a word nor a circumstance to charge the management with fault." There is no basis in the record for the elimination of the small expenses for donations, uncollectible bills and the reasonable sums expended for dry hole expense, cancelled and surrendered leases and new business ex-

pense. "Good faith is to be presumed on the part of the managers of a business * * *. In the absence of a showing of inefficiency or improvidence, a court will not substitute its judgment for theirs as the measure of a prudent outlay * * *." *West Ohio Gas Co. v. Public Utilities Commission (No. 1)*, 294 U. S. 63, 79 L. Ed. 761; *Southwestern Bell Telephone Co. v. Public Service Commission of Missouri*, 262 U. S. 276, 67 L. Ed. 981; *Lehigh Valley Ry. Co. v. Board of Public Utility Commissioners*, 278 U. S. 24, 73 L. Ed. 161.

(3) *Rate Base:* Appellant disagrees with appellees' statement that it did not use quoted prices for pipe and material and deduct all available discounts in the preparation of its appraisal (I, R. 640-641; II, R. 842-843). Appellees state that immediately after the date of appellant's appraisal, appellant purchased eleven carloads of pipe at prices very substantially lower than were used in the appraisal (appellees' brief, 132-133). Appellees make no reference to the record in support of this statement. The record does show that in 1933, appellants purchased 6,300 feet of 24-inch pipe at $2.0328 per foot (II, R. 902). The pipe thus purchased was not included in appellants' inventory and appraisal. It was purchased at a distress sale (II, R. 905-906). This pipe was not in standard condition when it was purchased and appellant was required to recondition it (III, R. 2045-2046). Appellees point to none of these important facts. They say that a striking example of the inflation injected into the prices used by appellant in its appraisal was the purchase of the aforesaid pipe "of the highest quality" at prices very

substantially lower than those used in the appraisal (Appellees' Brief, 132).

Appellees say "that the company and the commission included in the rate base all production system properties, when plainly a very large part thereof was not actually used and useful in the present public service, and would not become useful at any reasonable or near period in the future * *" (appellees' brief, 145).

We think it obvious that the producing leaseholds, that is, leases which are actually producing gas, are used and useful in the public service. Appellant included undeveloped leaseholds in its appraisal at $893,291.28 (Appellant's Exhibit 38, V, R. 3038). This sum is reasonable on its face when the magnitude of appellant's system is considered. The evidence on this point is that in proportion to the investment and the volume of business done by appellant, the amount of its undeveloped leaseholds was relatively very small and barely sufficient to insure adequacy of supply. This evidence showed that the undeveloped leaseholds could be utilized in the future by appellant and that they may be regarded in the nature of working capital. They were included in the appraisal at actual cost (I, R. 654-655). The undisputed evidence shows that appellant's production system properties were used and useful in the public service (III, R. 2044, 2060).

Appellees state that appellant's developed reserves are sufficient at past rates of withdrawal to last from forty to sixty years. The evidence shows that appellant's gas reserves would last approximately twenty years (I, R. 531, 564).

Developed leaseholds were included in the Commission's rate base at actual cost less depletion (I, R. 69-72) and not at actual cost, as stated by appellees. (Appellees' Brief, 150.)

At page 153 of their brief, appellees invite us to include undeveloped and developed leaseholds in capital account at actual cost and include the cancelled and surrendered leases and dry hole expenses in operating expenses. Under appellant's method of handling dry hole and cancelled and surrendered lease expense they are charged to operating expenses, as suggested by appellees, and no reserve is created therefor. Developed and undeveloped leaseholds are capitalized on appellant's books at actual cost. This method of handling leaseholds, cancelled and surrendered leases and dry hole expense seems to conform to appellees' suggestion, although this method is criticized in other places of appellees' brief. This method received the approval of the Commission (I, R. 28-29; Leaseholds, Method 2, I, R. 69-72.) It is true that in its appraisal appellant included the developed leases at their appraised value in the amount of $2,681,689.00. (V, R. 3038, Appellant's Ex. 37.) Undeveloped leaseholds were included at actual cost in the amount of $893,291.28 (V, R, 3038; 3034-3034A). This makes a total value ascribed to leaseholds in appellant's appraisal of $3,574,980.28. If they be included in the appraisal on the basis used by the Commission in the amount of $1,991,613.92 (I, R. 69-72), being actual cost with the developed leaseholds depleted, it will occasion a reduction in appellant's appraisal of $1,583,366.36.

Appellees state that the Meridian Gas Company

properties, which were purchased by appellant January 1, 1932, at a cost of $1,338,406.21 (I, R. 460) were appraised by appellant in the present case at $173,079.00, which included gas reserves, gas well equipment, production property of every kind, and including all recovery operating costs. After this statement, appellees then conclude that it "clearly shows that the Lone Star Gas Corporation sold the properties to its subsidiary, the Lone Star Gas Company, for $1,300,000.00 plus, for the simple purpose of putting these properties in appellant's rate base * * *." (Appellees' brief, 155-156.) The statement is misleading. The evidence shows that the properties were purchased from Meridian Gas Company at the actual cash cost paid therefor by the Meridian Gas Company. (I, R. 460-461.) That these properties were purchased in good faith at a fair and reasonable price is not disputed by any evidence in the record. Appellant did not appraise the property at $173,079.00 as stated by appellees. This figure represents the appraised value of the reserves alone. The various items making up the properties so purchased are scattered throughout the appraisal and we have been unable, within the time available, to identify all of them. It seems sufficient to point out that of the properties purchased from Meridian Gas Company, gas reserves were appraised in the present case at $173,079.00 (V, R. 3032); gas well equipment at $578,148.78 (IV, R. 2369); gathering system rights-of-way at $702.00 (IV, R. 2378); Field measuring station structures at $3,473.48 (IV, R. 2371); measuring station equipment at $12,905.92 (IV, R. 2374); and field line equipment at $63,691.04

(IV, R. 2377), making a total of $832,000.22 for these items alone.

Appellees charge us with "affirmatively and deliberately misrepresenting to the court what the testimony was with respect to appellees' allowance for going concern value." (Appellees' Brief, 174.) It seems to us that the testimony quoted at pages 174 to 177 of their brief shows the correctness of the statement at page 145 of our brief. At page 176 appellees quote the testimony of their expert as follows:

"Q. If the property of the Company were to be reproduced as of June 15, 1934, and there was no business attached whatsoever, wouldn't your reproduction cost be the same as set forth in plaintiff's Exhibit No. 6?

"A. Yes, and that would be true whether it was 100 per cent saturation or whether there was no saturation at all, in view of the history of the Company, the way it was actually produced and the way it could be produced from the beginning again. There was no loss of return on idle plant during the history of the Lone Star Gas Company."

We think it apparent from this testimony, as well as other testimony referred to by us and set out in appellees' brief that no allowance for going concern value was included in appellees' appraisal. We therefore adhere to our original statement (Appellees' brief, 185).

(4) *Temperature Adjustments.* Appellees attribute to appellant, as regards the matter of temperature adjustments, a position inconsistent with the

decision of this Court in *Los Angeles G. & E. Corp. v. R. R. Comm. of California*, 289 U. S. 287. (Appellees' Brief, 185.) Such is not the case. Appellant does not challenge the right of the Commission to take into consideration abnormal weather conditions, as well as abnormal conditions of any kind as a basis for making its prophecy as to what a particular rate will yield in the future. It does object to what was done by appellees' witness in this case. Appellees' witness added to revenues actually received by appellant during periods when experience had spoken, $268,829.64 for the year ended March 31, 1934, and $441,240.12 for the year ended December 31, 1933, on the theory that if the temperature had been normal appellant would have received these additional estimated amounts which actually it did not receive. (III, R. 2165.) We do not understand that the Los Angeles case sanctions any such adjustment or is authority for the proposition that a rate shown to be confiscatory upon the basis of actual experience during the particular accounting period as to which the rate is sought to be enforced may be made compensatory by adding hypothetical revenues to revenues actually received. This Court has held that to shut one's eyes to actual revenues and to build a schedule upon guesswork with evidence available is an arbitrary action. It has said that: "A forecast gives one rate. A survey gives another. To prefer the forecast to the survey is an arbitrary judgment," and that, "present confiscation is not atoned for by merely holding out the hope of a better life to come." *West Ohio Gas Company v. Public Utilities Comm. of Ohio, (No. 2)*, 294 U. S. 79, 81-83.

(5) *Fair Rate of Return.*

Appellees' discussion of the evidence relating to a fair rate of return discloses the weakness of their position in respect to the verdict of the jury. (See appellees' brief, 180-183.) Appellees discuss the credibility of the witnesses who testified on this issue. They point out that two of the witnesses were agents of the company and that two were Dallas bankers, who, at different times, had made loans to the appellant. It is plain that all of these matters, affecting only the credibility of the witnesses, were to be determined by the jury.

As pointed out in the main brief, the entire issue of confiscation can be settled in favor of the verdict, by considering the conflict in the evidence on this issue and by recognizing the power of the jury to settle that conflict. (Appellant's main brief, 121.)

(6) *Criticism of Computations in Appellant's Main Brief:*

Appellees criticise the computations in appellant's brief, pp. 186-187, on the general grounds that they fail to take into consideration temperature corrections for alleged abnormal temperature periods, and fail to take into account increased consumption which would result from putting the reduced rate into effect. We have already pointed out the impropriety of considering other than actual revenues in testing the effect of the rate during the years to which it is applied and sought to be enforced.

It would be impossible on this record to take into

account any alleged increased consumption under the reduced rate. There is no evidence in the record upon which such an assumption could be based. Appellees themselves refer to no such evidence in the record. Such evidence as the record affords on this subject consists of an unsupported conclusion of appellees' witness. It affords no basis for an estimate or prophesy (III, R. 1813-1815). Upon the record as it comes to this Court, this would be guess work, and no more. "There has been no attempt to measure the possible enhancement by appeal to the experience of other companies similarly situated or by any other line of proof. Present confiscation is not atoned for by merely holding out the hope of a better life to come." *West Ohio Gas Co. v. Commission (No. 2)*, 294 U. S. 79, 82-83.

(7) *Appellees' Statement as to the Holding Company's Books.*

Appellees state that access to the holding company's books has always been denied the regulatory authorities of Texas. (Appellees' brief, 34.) Appellees' accounting witness testified that he was "afforded access to every book, record and account" of appellant; that he had never made any requests of the personnel of appellant in respect to the examination of its books which had been refused. (III, R. 1661.) This same witness testified under examination by his own counsel that he was refused access to the books of the holding company (III, R. 1880). He did not state what requests were made, nor to whom they were made. Appellees made no demands

upon appellant during the trial for the holding company's books and they issued no subpoenas or process therefor. He did not testify that his ability to ascertain all relevant facts concerning appellant's business and operations was prejudiced by his inability to examine the books of the holding company. We think it manifest from the record that no such prejudice resulted. Appellees' witness stated that he wanted to look at the books of the holding company in connection with the management fee charge (III, R. 1880). The only possible relevancy that an examination of the holding company's books could have to the issues in this case would be with respect to the item of management fees. These management fees were eliminated by the Commission (I, R. 25-28) and they may be eliminated from appellant's expenses of operation without altering the results.

(8) *Claim of Appellant's Non-Cooperation.*

Appellees claim that appellant's attitude "has been one of studied concealment and distortion of the facts, and non-cooperation, rather than one of candid revelation." (Appellees' brief, 96.) They say that an examination of the entire record will show this to be true. Our examination of the entire record fails to show any support for the claim. The testimony of appellees' witness above referred to, to the effect that he was afforded access to every book, record and account of appellant, refutes the claim. (III, R. 1661.) The Commission's findings negative the claim (I, R. 14-18).

(9) *Appelless' Claim of Misrepresentation as to the Inclusion of Gas Reserves in the Appraisal.*

Appellees state that appellant included in its appraisal all developed and undeveloped gas reserves and leasehold and that appellant's statement to the contrary on page 36 of its brief is "absolutely unfounded." (Appellees' brief, p. 144). Appellant's statement on page 36 of its brief was directed solely to appellant's Exhibit 30. In this exhibit appellant estimated gas reserves underlying "only proven and developed reserves." The statement is correct and has manifestly been misinterpreted by the appellees.

Respectfully submitted,

No. 313

LONE STAR GAS COMPANY, *Appellant*,

v.

STATE OF TEXAS, ET AL., *Appellees*

Appeal from the Court of Civil Appeals, Third Supreme Judicial District of Texas

---

APPELLANT'S REPLY TO APPELLEES' SUPPLEMENTAL BRIEF

I.

Asserted Estoppel to Urge Interstate Commerce Defense.

In their Supplemental Brief appellees renew their claim that appellant is estopped to urge its interstate commerce defense (pp. 2-5). This contention is fully discussed in appellant's Reply Brief, pp. 7-9. Supplementing what is there presented we submit:

(1) The contention that appellant is not entitled to now rely upon its interstate commerce defense, because that defense was not pleaded before the Railroad Commission, is but another way of saying that this Federal defense was not seasonably raised by the appellant. The Court of Civil Appeals held that this defense was seasonably raised (V, R. 3334-3336). It considered and decided this defense on the merits (V, R. 3336-3352).

It must be said here as it was in *Missouri v. Gehner*, 281 U. S. 313, 320, that "upon the facts disclosed by this record, it is clear that appellant sufficiently raised in the highest court of the State the Federal questions here presented and is entitled to have them considered." Estoppel will not lie in this Court to prevent consideration here of a constitutional defense that is held by the State court to have been seasonably raised in the highest court of the State.

Appellees claim that the present record shows that this defense was not raised before the Commission. The record references made on page 2 of the Supplemental Brief are to statements in the pleadings and statements made by appellant's counsel during the trial of the case in substance making the point that the Commission's opinion and order did not show that the Commission would have promulgated the 32¢ rate and made it applicable to only the intrastate deliveries.

(2) As held by this Court in the Laredo gas case (*United Gas Public Service Co. v. State of Texas*, decided Feb. 14, 1938), and as, in effect, held by the Court of Civil Appeals in the present case (V, R.

3354), the scope of the District Court trial is not limited either by the pleadings or the evidence adduced at the hearing before the Railroad Commission. The order and findings of the Commission are subjected to a review under a trial *de novo*.

The judicial review proceeding is more like that which was provided for in the original Interstate Commerce Act than it is like the judicial review provided for by the Interstate Commerce Act now in effect. As illustrated in *Cincinnati, N. O. & Tex. Pac. R. Co. v. Interstate Comm.*, 162 U. S. 184, and in *Texas & Pacific Ry. Co. v. Interstate Commerce Comm.*, 162 U. S. 197, and as held in *Interstate Commerce Comm. v. Alabama M. R. Co.*, 168 U. S. 144, the trial court, in reviewing an order of the Commission under the original Interstate Commerce Act, was required "to proceed, as a court of equity, to hear and determine the matter and in such manner as to do justice in the premises" (p. 174). There it was held that the parties were free to formulate pleadings in the Circuit Court and to adduce evidence in that court not limited to the evidence previously heard by the Commission. (168 U. S. 175.) That is the Texas rule, as was declared by the Court of Civil Appeals from which the present appeal was taken in *Railroad Commission v. Rau*, 45 S. W. (2d) 413, 415:

"Each party is permitted to introduce such evidence as is pertinent to the controversy, regardless of whether it had been introduced before the Commission, as in all other de novo trials."

II.

Appellant's Line A Business Constitutes Interstate Commerce.

(1) Appellees again contend that the wholesale deliveries made on Line A do not constitute interstate commerce "as a matter of fact." The contention is clearly without merit. Appellant's Line A business constitutes commerce "which concerns more States than one"; it constitutes commerce "among the several States" in a constitutional sense. The express holding of this Court to that effect in *Hanley v. Kansas City Southern Railway Co.*, 187 U. S. 617, has not been departed from in any later case. In that case the Court said:

"The transportation of these goods certainly went outside of Arkansas, and we are of opinion that in its aspect of commerce it was not confined within the State. Suppose that the Indian Territory were a State and should try to regulate such traffic, what would stop it? Certainly not the fiction that the commerce was confined to Arkansas. If it could not interfere the only reason would be that this was commerce among the States. But if this commerce would have that character as against the State supposed to have been formed out of the Indian Territory, it would have it equally as against the State of Arkansas. If one could not regulate it the other could not.

"No one contends that the regulation could be split up according to the jurisdiction of State or Territory over the track, or that both State and Territory may regulate the whole rate. There can be but one rate, fixed by one authority, whether that authority

be Arkansas or Congress. *Wabash, St. Louis & Pacific Railway Co. v. Illinois*, 118 U. S. 557; *Covington & Cincinnati Bridge Co. v. Kentucky*, 154 U. S. 204; *Hall v. De Cuir*, 95 U. S. 485. But it would be more logical to allow a division according to the jurisdiction over the track than to declare that the subject for regulation is indivisible, yet that the indivisibility does not depend upon the commerce being under the authority of Congress, but upon a fiction which attributes it wholly to Arkansas, although that fiction is quite beyond the power of Arkansas to enforce." (187 U. S. 620.)

If Oklahoma could not regulate the movement and delivery of gas over Line A "the only reason would be that this was commerce among the States." And if this commerce had that character as against Oklahoma, then it would likewise have that character as against Texas. "If one could not regulate it," because of the interstate character of the movement, then "the other could not."

It cannot be doubted that the city gate deliveries at Hollis, Oklahoma, constitute interstate commerce. *Missouri v. Kansas Natural Gas Co.*, 265 U. S. 298. Why is it that the Texas deliveries have a different character? No reason can be assigned except the fact that the gas is produced in Texas. That fact is important in considering the power of the State of Texas to regulate the production of the gas to promote conservation of natural resources; but it is wholly without effect on the interstate commerce question. *Oklahoma v. Kansas Natural Gas Co.*, 221 U. S. 229.

Appellant, in affirming that its Line A business constitutes interstate commerce, is not relying upon

"a technical legal conception, but a practical one, drawn from the course of business." *Swift v. United States*, 196 U. S. 375, 398. Its Line A business, as actually conducted, is conducted in two States, and, apart from the Commerce Clause, is subject to the regulatory jurisdiction of two States, in the same way and with the same effect as if the line originated in one of the States and simply extended into the other without passing through it. If Line A originated in Oklahoma at the point, say, where it enters the State and otherwise continued, as it does, through Hollis, thence into Texas along its present route, there would hardly be a doubt that the business carried on through that line would be interstate commeree. *Missouri v. Kansas Natural Gas Company, supra.* It does not become internal commerce by adding the segment from Wheeler County, Texas, to the Oklahoma line at its north entrance. If the one is commerce that concerns two States so is the other.

The source of the gas supply is not the distinguishing feature. If it were, then the delivery at Hollis would be interstate and the other deliveries on Line A would be local. The business transacted is not that of selling gas at the well; it is that of transporting to and selling gas at city gates. The service appellant performs is a process that extends into and through two States.

In delivering its judgment in the *Minnesota Rate Cases*, 230 U. S., at page 398, the Court said:

"The words 'among the several States' distinguish between the commeree which concerns more states

than one and that commerce which is confined within one state and does not affect other states."

In *Gibbons v. Ogden*, 9 Wheaton 1, 194, Chief Justice Marshall said:

"The word 'among' means intermingled with. A thing which is among others, is intermingled with them. Commerce among the States, cannot stop at the external boundary line of each State, but may be introduced into the interior.

"It is not intended to say that these words comprehend that commerce, which is completely internal, which is carried on between man and man in a State, or between different parts of the same State, and which does not extend to or affect other States. Such a power would be inconvenient, and is certainly unnecessary.

"Comprehensive as the word 'among' is, it may very properly be restricted to that commerce which concerns more States than one."

The commerce here in question "concerns more States than one." Oklahoma is concerned in the same way and to the same extent that she would be concerned if Line A had its origin in Oklahoma and appellant were transporting gas from an Oklahoma gas field to city gates in Texas, serving Hollis, Oklahoma, in passing.

Here, if we put the Commerce Clause out of view, Line A is subject to the separate, equal and independent control of the two States. This applies not only to the rates that may be charged but also to the conditions of service. The Commerce Clause aside, Oklahoma and Texas have equal and independent power to regulate the kind and extent of

service rendered on Line A and the charges that may be exacted therefor. Every fact that supports the regulatory power of Texas exists as well to support the regulatory power of Oklahoma.

There is now only one Oklahoma delivery point on the main line, that at Hollis. But the Commerce Clause aside, Oklahoma may compel the establishing of other delivery points on the main line as well as on the branch line extending north from Oklaunion, Texas. The Oklahoma authorities may compel appellant to extend its lines and increase the service rendered in Oklahoma even to such an extent as will discriminate against the needs and demands of Texas consumers; and they may compel the rendering of this service at rates discriminating against Texas consumers. With the Commerce Clause put out of view, Texas may exercise like and equal authority.

Every probability of conflict in the exercise of authority, due to separate and independent regulation on the part of each of the two States, exists in this case to the same extent and in the same way as in the leading case *Missouri v. Kansas Natural Gas Co.*, 265 U. S. 298. Duality of control exists in the same way and to the same extent that it would exist if the movement of gas on Line A took the simplest form of interstate commerce, that is, a movement from one State to another. This duality of control and the resulting probability of conflict in the instant case, as in *Missouri v. Kansas Natural Gas Company*, are due to the fact that the appellant's properties are located in two States and its "integrated" business is being conducted in two States,

subject to the regulatory authority of both States; each being invested with power to regulate appellant's property and business for the purpose of protecting its local interests.

Appellees emphasize the difference between the pipe line transportation of natural gas and railroad transportation of other commodities. That difference is not related in any way to, nor does it grow out of, this "corner of a State" movement. The difference between the pipe line transportation of gas and the railroad transportation existed in *Missouri v. Kansas Natural Gas Company*, 265 U. S. 298, a case involving an ordinary interstate movement, in the same way and to the same extent as in the instant case. This difference was forcibly pointed out in the appellant's brief in that case (265 U. S. 299-301). Presumptively, this difference was carefully considered by this Court and held to be without effect in arriving at a proper determination of the interstate commerce question.

In *Western Union v. Speight*, 254 U. S. 17, the doctrine of the Hanley case was extended and applied to the transmission of intelligence (Main Brief, p. 66). If there be any difference between transportation of gas in a pipe line and transportation of commodities on a railroad, that difference is not so great as is the difference between the transportation of commodities on a railroad and the transportation of intelligence by a telegraph company.

(3) Appellees contend that the prescribed rate operates merely as an "indirect" burden on inter-

state commerce. As to this, we refer to appellant's main brief, p. 79, and its Reply Brief, pp. 12-18.

Nothing that this Court has since said or decided has modified the statement made in the *Minnesota Rate Cases* (p. 401), that "they (the States) have no power * * * * to prescribe the rates to be charged for transportation from one State to another, * * * * *." That has been settled law at least since *Wabash, etc., Ry. Co. v. Illinois*, 118 U. S. 557, was decided, if, indeed, the contrary view had ever theretofore been "the deliberate opinion of a majority of this court." (118 U. S. 575.) Decisions like *South Carolina State Highway Department v. Barnwell Brothers*, (No. 161, October Term, 1937, decided February 14, 1938,) upholding local highway regulation in the interest of public safety and preservation of highways, and *Western Livestock, etc., Co. v. Bureau of Revenue*, (No. 322, October Term, 1937, decided February 28, 1938), upholding a local privilege tax measured by gross receipts, apply other and distinct rules, else the expositions in such opinions were to no purpose. The application appellees attempt to make of the case last cited is wrong. It is obvious that, but for the protection of the Commerce Clause, the cumulative levies of gross receipts taxes mentioned in that case could be here made by the two States.

III.

The Confiscation Issue.

In their latest argument appellees wholly failed to meet the confiscation issue as it is presented in the record.

In appellant's main brief we have summarized the evidence offered by the parties, respectively, on the issue of confiscation (pp. 34-50). At the trial appellant first offered evidence relating to its over-all "integrated" properties and operations; this evidence being in direct rebuttal of the Commission's findings (Appellant's main brief, pp. 34-42). It then attempted to make a segregation of its Texas properties and operations as between interstate and intrastate business (pp. 42-44). The appellees contended that appellant was not engaged at all in interstate commerce in Texas. If appellees were right, then no segregation as between interstate and intrastate commerce was necessary, and the appellees made none. Instead, they offered evidence showing a segregation of appellant's properties and operations as between its business done in Oklahoma and its business done in Texas (Appellant's main brief, pp. 44-50). Under this segregation they assigned 85% plus of appellant's properties to its Texas business.

The Court of Civil Appeals held that appellant was not engaged in interstate commerce in Texas; that all of its Texas deliveries, subjected to the rate order, constituted intrastate commerce. Accordingly, it disapproved appellant's segregation, which was based upon the theory that some of the Texas deliveries were made in interstate commerce (V, R. 3361-2); and further held that, since appellant had failed to make a proper segregation, its evidence "proved nothing material to this case" and was insufficient as a matter of law to show that the rate was confiscatory (V, R. 3361-2). The Court of Civil Appeals fur-

ther held that 85% of appellant's properties were assignable to its Texas business; thus, in effect, approving the segregation made by appellees as between appellant's Oklahoma and Texas properties and operations.

In this state of the record it is manifest that the Court of Civil Appeals erred in holding that because appellant had failed to make a proper segregation as between interstate and intrastate commerce it had wholly failed to "adduce the quantum and character of proof necessary to establish the invalidity of the rate as being confiscatory." (V, R. 3362). This ruling was erroneous for the two reasons pointed out in appellant's main brief, pp. 110-124:

(a) Appellant's evidence relating to its over-all "integrated" properties and operations was in direct rebuttal of the Commission's findings, and appellant was entitled to have its evidence considered as against the findings. If the findings were material, then appellant's evidence in rebuttal of the findings was also material. If appellant's evidence was insufficient as a matter of law, then the findings, following the same theory as did appellant's evidence, were also insufficient as a matter of law to sustain the order.

(b) Furthermore, as is pointed out in appellant's main brief, the evidence taken as a whole laid the basis for a segregation, and presumptively a segregation was made by the jury (Appellant's main brief, 119-124). The Court of Civil Appeals held that none of appellant's business done in Texas con-

stituted interstate commerce. In view of this ruling and the fact that the order applied to all of appellant's Texas deliveries, it was not necessary for appellant to divide its Texas business into two parts, interstate and intrastate. If any segregation at all was needed, it was a segregation between the Texas properties and operations on the one hand, and the Oklahoma properties and operations on the other. That segregation was made by the appellees' evidence. And the Court of Civil Appeals has approved that segregation, including the segregation factor of 85% shown by appellees' evidence. When this segregation factor is applied to the value of appellant's over-all "integrated" properties, as shown by appellant's evidence, the conclusion is inescapable that the rate is confiscatory (Appellant's main brief, 119-124).

Appellees have filed two briefs in this Court and have not noticed this point. Their "General Thesis," (Appellees' brief, 85), is that appellant's evidence considered by itself was insufficient. They, in effect, deny the right of the trial court and jury to consider the evidence offered by the appellees along with the evidence offered by the appellant and to determine from the whole of the evidence whether the prescribed rate was confiscatory.

In briefs previously filed the appellant has discussed the evidence viewed as a whole and has demonstrated that, in many and various ways, the jury might reasonably have interpreted and blended the evidence in such a way as to arrive at a supportable, if not necessary, conclusion that the prescribed rate was confiscatory. (Appellant's main

brief, 147-170; also 34-50; Appellant's Reply Brief, 53-66.) On pages 20 and 21 of their Supplemental Brief appellees state the confiscation issue that is properly before this Court and that "this Court has the undoubted power to determine," but nowhere do they present the pertinent facts, taken from the record as a *whole*, that will enable the Court to determine the issue. Instead, they invite the Court to make "a thorough review and analysis of the entire record" (p. 21). No such analysis of the "entire record" is made even in Appellees' Main Brief. The statement there made amounts to no more than a discussion of the credibility of witnesses and of the weight that may be attached to different phases of conflicting testimony. (Appellees' Main Brief, p. 98, *et seq)*. "Tables" are presented but, as pointed out in Appellant's Reply Brief, these admittedly exhibit only selections from conflicting evidence of certain bases of fact that the jury could have accepted but did not. It is not even claimed that the evidence, considered as a *whole*, was such as to compel the jury to accept as conclusive the interpretations of the evidence presented in these tables.

Appellees greatly emphasize the well known prima facie presumption of validity sustaining the order. This presumption is not irrebuttable. The applicable State statute (Art. 6059) provides how the presumption may be rebutted, that is, by the furnishing of "clear and satisfactory" evidence sustaining the attack on the order. The jury in this case were instructed that the burden devolved on appellant to furnish "clear and satisfactory" evidence showing that the rate was confiscatory (I, R.

194). "Clear and satisfactory" evidence is sufficient, under the State statute, to overturn any and every presumption sustaining the order. And the decisions of this Court show how the presumption of validity may be rebutted, that is, by the furnishing of "clear and convincing" evidence showing that the prescribed rate is confiscatory.

Appellant, in its briefs previously filed, has analyzed the evidence and has demonstrated that the finding of the jury is sustained by "clear and satisfactory" evidence, that is by "clear and convincing" evidence. Instead of attempting to analyze the evidence in an effort to overturn appellant's showing, appellees are content to make general assertions concerning the state of the evidence and to affirm that the evidence showing that the order is confiscatory "must be viewed in the light of the presumption" that sustains the order. The presumption cannot stand in the face of that "clear and satisfactory" evidence that, under the statute and the decisions of this Court, is sufficient to rebut it. If the rule were otherwise, the presumption would be irrebuttable.

The statute requires, in deference to the presumption, that the order must stand, unless overturned by clear and satisfactory evidence. But if there is in the record evidence of that nature that, if believed by the jury, shows confiscation, then the presumption no longer stands in the way of a finding of confiscation. In the face of the jury finding, amply supported by such evidence, the presumption, having spent its force, is now impotent. This Court has said in respect of such a presumption:

"It cuts off no defense, interposes no obstacle to a full contestation of all the issues, and takes no question of fact from either court or jury. At most, therefore, it is merely a rule of evidence. It does not abridge the right to a trial by jury or take away any of its incidents." *Meeker vs. Lehigh Valley R. Co.*, 236 U. S. 412, 430; *Borden's Farm Products Co. v. Baldwin*, 293 U. S. 194, 209.

Such also is the holding of the State courts in applying the State statute requiring clear and satisfactory evidence. *Angelina, etc., R. R. Co. v. Railroad Commission*, (Tex. Civ. App., writ of error refused), 212 S. W. 703; *St. Louis, etc., Ry. Co. v. State* (Texas Comm. App.), 255 S. W. 390. In the case last cited the Court said:

"Under article 6658 of the Revised Statutes of Texas, the burden of proof was on the railway companies to show by clear and satisfactory evidence that the apportionment of cost was unreasonable and unjust. But in this case the issue as to whether the apportionment of cost was unreasonable and unjust was one of fact, and not of law. The jury was instructed that before it could find that the order was unreasonable and unjust in this respect, it must so appear by clear and satisfactory evidence. It therefore follows that the trial court did not err in refusing to direct a verdict for the state. The Court of Civil Appeals was without authority to substitute its finding on this issue for that of the jury."

In this case the Court of Civil Appeals, admittedly having no power to substitute its findings of fact for those of the jury (Appellant's Reply Brief, 45-46), has held that as a matter of law the evidence is

insufficient to show confiscation. The question of law is open here as it was in the Court of Civil Appeals. Matters of weight and credibility were for the jury. The law question only is reviewable. The law question decided relates to the "quantum and character" of evidence that is legally sufficient to support a judgment setting aside a rate order as being confiscatory. That question is one arising under the Federal Constitution. It has been wrongly decided, and the decision should be corrected. The judgment of the State appellate court should be reversed, and that of the District Court affirmed, or the cause should be remanded with instructions to reinstate the judgment of the State District Court. *Jones National Bank v. Yates*, 240 U. S. 540, 563.

We wish to again point out that in respect of two of the main phases of the tendered issue of confiscation—the fair value of appellant's property and what would be a fair rate of return—the evidence was admittedly conflicting. The State court so found (V, R. 3363, 3368); and the State court further held that because this conflicting evidence consisted of the testimony of "equally well qualified experts," it was insufficient as a matter of law and of no probative force. With either of these two issues decided in appellant's favor by the jury, the conclusion that the rate was confiscatory was inescapable. This ruling of the State court relates to the quantum and character of evidence required to sustain an attack on a rate order challenged as confiscatory under the Federal Constitution. The ruling is clearly wrong and should be corrected.

IV.

Discussion of Other Points and Statements Made by Appellees.

(1) *Appellant's alleged failure to submit segregation evidence to the Commission.*

Appellees complain of appellant's alleged failure to submit evidence to the Commission upon which it could have made a segregation of the property and business between interstate and intrastate commerce or between Texas and Oklahoma public service, here again making a negative use of the excluded Commission record (Appellant's Reply Brief, 3-4). They say that the record shows that appellant was working "hammer and tongs" upon a segregation theory during the time the Commission's hearings were going on. (Appellees' Supplemental Brief, p. 8.) The record does not support the latter statement. In support of the statement, reference is made to page 71 of appellees' main brief. Appellees there state that the gravitometer readings were commenced in 1933 in preparation of the court hearing. The record does not support this conclusion. The record shows that appellant maintains and operates recording gravitometers for making continuous record of the specific gravity of the gas transported and sold by it. The dates upon which these various gravitometers were installed are not shown in the record. The function of these instruments was explained by the witness Schmidt. He testified that the charts are taken off the gravitometers and included in the com-

pany's records; and that those records are available to the State of Texas and the Railroad Commission. (II, R. 1505-1506.)

The Commission could have made the same character of segregation before promulgating the order that it made in the District Court in an effort to sustain the order. The basis of such a segregation was laid in the evidence as to the over-all property and business. Moreover, the Commission could have limited its order to gas delivered in intrastate commerce. If it had done this the issue would have been confined to the validity of the order when applied solely to the intrastate deliveries of gas. But the Commission made the order applicable to all deliveries of gas whether made in interstate or intrastate commerce. It was not open to appellant to control the drawing of the order. The evidence shows that the order was not drawn until long after the hearing was terminated.

In as much as the order in its operation is inseparable, it is not material that appellant's business may be separable into two parts, interstate and intrastate. *Cooney v. Mountain States Telephone Co.*, 294 U. S. 384, 392; *Pacific Telephone & Telegraph Co. v. Washington*, 297 U. S. 403, 416. The order is an indivisible legislative act. It has been so drawn, so interpreted and so enforced by the Commission and the State court (Appellant's main brief, 97-104).

This is a stronger case for the inseparability of the involved legislative act than is the ordinary case involving a statute. See *Cooney v. Mountain States Telephone Co., supra.* Statutes are not supported by findings of fact. This rate is purportedly supported

by elaborate findings of fact (I, R. 14-116). These findings include the Line A properties and operations. As we have already pointed out in detail, the findings of the Commission and those of the State appellate court show that, with the Line A properties and operations eliminated, the order would not have been promulgated by the Commission because, with Line A eliminated, the prescribed rate would not have yielded the 6% which the Commission found was the "minimum" rate to which the appellant was entitled. This clearly appears from the Commission's findings considered in the light of the trial evidence and the findings of the State appellate court (Appellant's main brief, 101-103).

(2) *The quantity of Oklahoma gas transported to Texas.*

Appellees say that the total volume produced from company reserves in Oklahoma and transported to Texas was only 613,780 MCF for the year 1933. They then make the point that for the same period approximately 500,000 MCF of gas from Oklahoma and the Texas Panhandle was stored in the Miller lease. (Appellees' Supplemental Brief, p. 9.) Appellees, on Exhibit 4 (III, R. 2124-A), show under the heading "Gas Purchased and Produced—Oklahoma" that the total gas transported from Oklahoma to Texas for 1933 amounted to 1,267,775 MCF of gas. The 613,780 MCF referred to in Appellees' Brief was gas produced from appellant's own reserves and excluded the gas *purchased* by appellant in Oklahoma and transported to Texas. The amount

of gas transported from Wheeler County, Texas, through Oklahoma and thence back into Texas and delivered at Texas city gates amounted to 6,113,200 MCF of gas for the year 1933. The amount transported for other years is shown in the record. (Appellant's Exhibit 44, V, R. 3201-3205.)

Here the appellees again refer to the alleged storage of the "smaller volume of Texas Panhandle gas coming through Line A" in the Miller lease (Brief, p. 9). The figures given by appellee show that the amount of Line A gas thus stored must be very small—negligible—when compared with the total deliveries on that line. Furthermore, as pointed out in our Reply Brief, this storage is, of course, without effect on the gas delivered on Line A and consumed long before the Miller lease is reached (Reply Brief, p. 26).

(3) *Average operating results.*

Appellees complain that the trial court did not specifically instruct the jury that they might take into consideration average operating results from January 1, ~~1937~~, to April 30, 1934, in arriving at their verdict on the issue of confiscation (Supplemental Brief, p. 18). This objection to the court's charge was not made in the trial court (I, R. 182-4); it is made for the first time in this Court. It therefore obviously comes too late. Furthermore, the objection is clearly without merit. The jury were permitted to consider the average operating results mentioned, as clearly appears from the record:

(a) Appellees' accounting Exhibit 4 shows appellant's earnings upon the Texas operations only from

1929 through March 31, 1934 (III, R. 2116-A). Appellees' Exhibit 5 shows the operating income, expenses and the net earnings for the years 1927 through March 31, 1934 (III, R. 2126-A). These exhibits were received in evidence and were available for consideration by the jury. The charge contained no instruction preventing the jury from considering this evidence. On the contrary, the jury was instructed that they should answer the single special issue submitted to them "from the evidence introduced before you" (I, R. 192); and in the special issue the jury was required to find "from the evidence in this case" whether the rate was confiscatory (I, R. 194). The exhibits referred to constitute a part of the evidence "introduced before" the jury and therefore a part of the evidence on which they were *required* by the charge to base their answer.

(b) The opinion and findings of the Railroad Commission were received in evidence and the jury were specifically instructed that they might consider the findings and conclusions of the Commission for the purpose of assisting them in determining whether the order was unreasonable and unjust (Charge, I, R. 194). The opinion and findings of the Commission set out in great detail the earnings of appellant for the years 1927 through 1932, and undertake to demonstrate the amount that would have been available to appellant for return under the 32¢ rate if it had been in effect during each of those years (Opinion and Findings, I, R. 105-106). The order was not applied to any period prior to its effective date, to-wit, September 13, 1933, but the jury were at liberty to take into consideration in determining

whether the order, when applied prospectively, would be confiscatory in the light of earnings for prior years. The earnings for these prior years were in evidence, and, presumptively, the jury gave them due and proper weight. It therefore affirmatively appears that appellees erroneously stated that,

"Thus, the jury's vision was limited strictly by the form of submission to the question whether the rate was unreasonable prospectively from the date of trial in 1934, forward, and the jury was not permitted to answer as to whether it was reasonable when considered in the light of the average operating results * * * * from 1927 to 1934, inclusive." (Appellees' Supplemental Brief, p. 18.)

The findings of the Railroad Commission, put in evidence before the jury, expressly showed that the Commission had considered the average operating results in question in testing the proposed rate and in determining whether, in the view of the Commission, it would operate in a reasonable way. The jury was expressly instructed that it could consider the findings of the Commission in connection with the trial evidence in deciding the ultimate issue as to whether the rate was confiscatory. In these circumstances, it must be presumed that the jury, following the charge, duly considered these average operating results in arriving at the conclusion that the rate was confiscatory.

(4) *Canceled and surrendered leases and Federal income taxes.*

Appellees erroneously state that in the table appearing on page 64 of Appellant's Reply Brief can-

celed and surrendered lease expense was not handled in the manner in which the Commission handled it. The Commission amortized this expense on a five-year basis. We have done likewise in the table referred to. (See note 1, p. 64, Appellant's Reply Brief.) In this table we have handled operating expenses in the same manner as the Commission treated them. The items eliminated by the Commission have been eliminated and the items amortized by the Commission have been amortized. (For details, see IV, R. 2297-2304.)

Federal income taxes have been correctly computed by appellant. Appellees' criticism is without merit (Appellees' Supplemental Brief, p. 23). The evidence shows that the amount of Federal income tax allocable to appellant upon the consolidated return amounted to $296,954.64 for 1931 and $234,312.46 for 1932 (I, R. 395).

Appellees' statement that "Hulcy testified that only an amount of approximately $52,000.00 would be due by the company for the year 1931 * * *" (Appellees' Supplemental Brief, p. 23) is inaccurate. The testimony here referred to was given in response to the cross-examination by appellees' counsel. The witness Hulcy stated that if the 32¢ rate had been in effect and appellant had been allowed five per cent of the rate base adopted by the Commission as depreciation and depletion reserve accruals, and the total amount paid for interest had been deducted, the income tax would have amounted to approximately $50,000.00 (I, R. 406).

Most of the contentions made in Appellees' Supplemental Brief have been anticipated and discussed in

Appellant's Reply Brief. We do not desire to repeat what has there been said; nor do we undertake herein to answer all of the statements made in Appellees' Supplemental Brief with which we do not agree. We think the appellant's position in respect to all material phases of the case have been sufficiently presented in the other briefs.

Respectfully submitted,

ROY C. COFFEE,
MARSHALL NEWCOMB,
OGDEN K. SHANNON,
BEN H. POWELL,
CHARLES L. BLACK,

NO. 313

LONE STAR GAS COMPANY,

Appellant

versus

STATE OF TEXAS, ET AL.,

Appellees

APPEAL FROM THE COURT OF CIVIL APPEALS FOR THE THIRD SUPREME JUDICIAL DISTRICT OF TEXAS

APPELLEES' MOTION TO DISMISS APPEAL

To the Honorable Supreme Court of the United States:

Appellees move that this appeal be dismissed, as having been improvidently granted, for the following reason:

PROPOSITION:

THIS COURT HAS NO JURISDICTION OF THIS CAUSE FOR THE REASON THAT THE

APPEAL WAS TAKEN SOLELY FROM THE COURT OF CIVIL APPEALS FOR THE THIRD SUPREME JUDICIAL DISTRICT OF TEXAS (AN INTERMEDIATE APPELLATE COURT) AND FROM THE FINAL JUDGMENT OF JULY 10, 1935, RENDERED BY SAID COURT, AND NOT FROM THE SUPREME COURT OF TEXAS (THE HIGHEST COURT OF THE STATE) OR FROM THE JUDGMENT OF SAID HIGHEST COURT, DATED OCTOBER 7, 1936, REFUSING WRIT OF ERROR AND THUS AFFIRMING ON ITS MERITS, WITHOUT OPINION, THE JUDGMENT OF THE COURT OF CIVIL APPEALS; AND THE APPEAL, THEREFORE, HAS NOT BEEN TAKEN FROM THE FINAL JUDGMENT OF THE "HIGHEST COURT OF A STATE IN WHICH A DECISION IN THE SUIT COULD BE HAD," AND WAS ACTUALLY HAD IN THIS CASE, AS PROVIDED BY SEC. 237 OF THE JUDICIAL CODE, U. S. C. TITLE 28, SEC. 344 (a).

The Court of Civil Appeals entered its judgment of reversal and rendition on July 10, 1935. (R. V, 3370). In due time the Company filed in the Court of Civil Appeals its motion for rehearing (R. V, 3371-3405), which motion was overruled on September 25, 1935, with supplemental opinion (R. V, 3405-3406). Thereupon within the time prescribed by the applicable statute the Company filed in the Court of Civil Appeals, as prescribed by the statutes, its application for writ of error; which application, together with the entire record in the cause and certified

copies of the orders entered by the Court of Civil Appeals, were transmitted to and filed in the Supreme Court of Texas on November 2, 1935, (R. V, 3407-3435). The Supreme Court of Texas on October 7, 1936, entered its order, "that the application be refused." (R .V, 3435). Thereafter within due time, and on October 22, 1936, the Company filed in the Supreme Court of Texas, and that Court overruled, its motion for rehearing. (R. V, 3456).

On February 9, 1937, the Company presented its petition for appeal (from the State Court to this Court) to Hon. Jas. W. McClendon, Chief Justice of the Court of Civil Appeals, praying for an order granting leave to appeal to this Court from the final judgment of the Court of Civil Appeals, and not from the final judgment of the Supreme Court of Texas. That petition for appeal was denied by the Chief Justice of the Court of Civil Appeals (R. V, 3457-3458).

Thereupon, and on February 12, 1937, the Company presented to Hon. Benjamin N. Cardozo, Associate Justice of this Court, assigned to the Fifth Circuit, its petition for leave to appeal to this Court from the said final judgment of the Court of Civil Appeals, of July 10, 1935 (R. V, 3457), which appeal was granted on the same date (R. V, 3468). Throughout said petition for appeal, assignment of errors and prayer for reversal accompanying same, (R. V, 3458) the Company sought to appeal from, and assigned errors in, and prayed for reversal of,

the final judgment of the Court of Civil Appeals only, and not that of the Supreme Court of Texas.

At page 1 of its printed jurisdictional statement, filed in this Court pursuant to Rule 12, the Company describes the judgment appealed from as being the final judgment of the Court of Civil Appeals, and this description is repeated on page 5, where the facts are affirmatively recited, showing the filing of the application and the refusal thereof by the Supreme Court of Texas. And throughout said jurisdictional statement it is made plain that the final judgment sought to be appealed from and reviewed is that of the Court of Civil Appeals and not that of the Supreme Court of Texas.

Appellant does not show that it has, and as an actual fact it has not, presented its petition for leave to appeal, from the final judgment of the Supreme Court of Texas as aforesaid, to the Presiding, or any, Justice of the Supreme Court of Texas, nor to any Justice of this Court, as prescribed by the applicable federal statutes and rules governing this Court's jurisdiction, and the procedure, in appeals from State Courts.

ARGUMENT

Section 237 of the Judicial Code, as amended, (U.S.C. Title 28, Sec. 344-a) provides that: "A final judgment or decree in any suit in the highest court of a State in which a decision in the suit could be had . . . may be reviewed by the Supreme Court."

This Court has held that where the state court of last resort is vested with appellate jurisdiction to review the judgment of an intermediate, appellate court, and the state court of last resort has declined to grant the appellate writ, this Court will accept the interpretation of the state court of last resort as to whether the denial of the appellate writ amounts to a total refusal to exercise any jurisdiction upon the merits at all, or whether it constitutes in effect an actual exercise of active appellate jurisdiction and is tantamount to an affirmance of the intermediate appellate court's judgment without written opinion. In the latter situation (which we say is presented by this appeal and record) the appeal properly lies from the judgment of the state court of last resort, and not from the judgment of the intermediate appellate court.

Norfolk & Southern Turnpike Co. v. Virginia, 225 U. S. 264, 267-269, 56 L. Ed. 1082;
F. S. Royster Guano Co. v. Virginia, 253 U. S. 412, 413, 64 L. Ed. 989;
Hetrick v. Lindsey, Ohio, 265 U. S. 384, 386, 68 L. Ed. 1065;
Matthews v. Huwe, 269 U. S. 262-266, 70 L. Ed. 266;
Tumey v. State of Ohio, 273 U. S. 510, 515, 71 L. Ed. 749;
Van Huffel v. Harkelrode, 284 U. S. 225, 230, 231, 76 L. Ed. 256;
Whitfield v. Ohio, 297 U. S. 431, 435, 80 L. Ed. 778, 782.

Article 1728, Revised Civil Statutes of Texas, 1925, fixes and defines the appellate jurisdiction of

the Supreme Court of Texas. The pertinent parts thereof, applicable here, are quoted in the margin.[1]

Other statutory articles pertaining to the practice of applying for writ of error, which is the exclusive applicable statutory mode of removing causes from the Court of Civil Appeals to the Supreme Court of Texas, are quoted in the margin also.[2]

The Supreme Court of Texas has held, in *Gammel Statesman Pub. Co.* v. *Ben C. Jones & Co.*, 206 S. W. 931, that the refusal of a writ of error by the Supreme Court of Texas, *as in this case*, necessarily

---

[1] "Appellate jurisdiction—The Supreme Court shall have appellate jurisdiction coextensive with the limits of the State, extending to all questions of law arising in the following cases when same have been brought to the Courts of Civil Appeals from final judgment of trial courts:

1. * * *
2. * * *
3. Those involving the construction or validity of statutes necessary to a determination of the case.
4. * * *
5. Those in which the Railroad Commission is a party.
6. * * *

"In all cases where the judgment of the Court of Civil Appeals is a correct one and where the principles of law declared in the opinion of the court are correctly determined, the Supreme Court shall *refuse* the application; and in all cases where the judgment of the Court of Civil Appeals is a correct one but the Supreme Court is not satisfied that the opinion of the Court of Civil Appeals in all respects has correctly declared the law, it shall *dismiss the case for want of jurisdiction.*"

[2] " 'Art. 1729—Writ of error or certificate.—All causes mentioned in the preceding Article (1728) may be carried to the Supreme Court either by writ of error or by certificate from the Court of Civil Appeals. * * *'

" 'Art. 1740.—Petition of writ of error.—A writ of error before the Supreme Court may be applied for by petition addressed to said Court and the petition shall contain such other requisites as may be prescribed by the Supreme Court; * * *

" 'Art. 1742.—Filing.—The petition shall be filed with the clerk of the Court of Civil Appeals within thirty days from the overruling of the motion for rehearing'."

volves and constitutes a consideration of the cause on its merits by the Supreme Court of Texas, and an actual exercise of active jurisdiction by that urt, and an affirmance by that Court, upon its erits, of the judgment of the Court of Civil Appals, even though no opinion be written, and even ough the legal effect of the refusal is not exessly recited in or written into the order refusing e application for writ of error; so that by virtue erely of the refusal of the application, the opinion d judgment of the Court of Civil Appeals become ose of the Supreme Court of Texas by adoption, d subject to its protection and enforcement by propriate process.

The holding of the above cited case is expressly nfirmed by statutory enactment, contained in ragraph 6 of Article 1728, quoted in footnote 1, pra, as follows: "In all cases where the judgment the Court of Civil Appeals is a correct one and here the principles of law declared in the opinion the Court are correctly determined, the Supreme urt shall *refuse* the application."

It is even apparent from Appellant's own motion r re-hearing on its application for writ of error the Supreme Court of Texas, R. V. 3444, that it, pellant, clearly acknowledged the taking of juris-

---

206 S. W. p. 932. "The motion in the case before us was filed and d upon by the Court of Civil Appeals after the Supreme Court had sed a writ of error in said cause, and by such action *affirmed* the inal judgment of the Court of Civil Appeals and that of the trial t."

diction of the cause by the Supreme Court of Texas, in the overruling of appellant's several assignments of error embraced in the said application.'

We think there cannot be the slightest doubt, that if an appeal could have been prosecuted to this Court at all by the Company in this case, it would, under the mandatory, clear, and inexorable provisions of Section 237 of the Federal Judicial Code, have had to be prosecuted from the final judgment of the Supreme Court of Texas affirming upon its merits without opinion the judgment and opinion of the Court of Civil Appeals, and not from the judgment of the Court of Civil Appeals itself.

In the case of *Adam* v. *Saenger* (No. 197, October Term, 1937)—U. S.—, recently decided by this Court, the appeal was correctly taken from the Court of Civil Appeals of Texas, because the Supreme Court of Texas in that case, "*dismissed the case for want of jurisdiction,*" as provided for in that part of paragraph 6 of Art. 1728 (Footnote 1, supra), reading as follows:

> "In all cases where the judgment of the Court of Civil Appeals is a correct one but the Supreme Court is not satisfied that the

---

' Appellant's motion for re-hearing of application for Writ of Error to the Supreme Court of Texas, R. V., 3436. . . :

"Twenty-fourth Assignment of Error.

"This Honorable Court erred in overruling the Seventeenth Assignment of Error presented in the application for Writ of Error *and in thereby holding* that the judgment of the Court of Civil Appeals approving and holding valid the rate prescribed in the order of the Railroad Commission did not take defendant's property without due process of law." . . . R. V., 3444.

> opinion of the Court of Civil Appeals in all respect has correctly declared the law, it shall *dismiss the case for want of jurisdiction.*"

This question has been briefed somewhat more in detail on both sides in No. 13, October Term, 1937, *United Gas Pub. Serv. Co., Appellant*, v. *State of Texas, et al, Appellees* (No. 807, Oct. Term, 1936), in which case this Court, as we conceive, erroneously overruled our motion to dismiss upon the grounds here urged, doubtless through a failure to understand, from our imperfect presentation, the state practice, statutes, and decisions.

We are fully aware that the Court has, in several instances, retained jurisdiction of appeals prosecuted from our Courts of Civil Appeals in the circumstances here involved, but we think the Court has clearly but inadvertently fallen into error in so doing, and that its error was probably due to a failure of the parties litigant heretofore to make plain to this Court the state law applicable.

As the matter now stands, the rule observed by this Court in appeals from Texas is in direct conflict with its rule observed in appeals from the State of Ohio, and perhaps other states, where the state practice, so far as material to this question, is identical with that in Texas. There certainly should be uniformity, and not conflict, in the application of the jurisdictional statute governing appeals to this Court from the state courts.

For the Court's convenience we attach as an Ap-

pendix hereto a copy of the entire opinion and certificates of the Supreme Court of Texas in the case of *Gammel Statesman Pub. Co.* v. *Ben C. Jones & Co.*, 206 S. W. 931, *supra*.

We, therefore, respectfully urge the Court to reconsider this question and to dismiss the appeal as not having been prosecuted from "the highest court of a state in which a decision of the suit could be had."

Respectfully submitted,

WILLIAM MCCRAW,
Attorney General of Texas
ALFRED M. SCOTT,
Assistant Attorney General
EDWARD H. LANGE,
Laredo, Texas
Attorneys for Appellees.

APPENDIX "A"

Commission of Appeals
Section A
No. 9

The Gammel Statesman Publishing Co., et al.,
Plaintiffs in Error,
vs.
Ben C. Jones & Co.,
Defendants in Error.

From Travis Co.
3rd Dist.

The judgment of the trial court in this cause was affirmed by the Court of Civil Appeals for the Third Supreme Judicial District on May 24, 1911. 141 S. W., 1048. On June 6, 1911, defendants in error filed their original motion for rehearing in said cause. The court adjourned without acting on this motion, but over-ruled same at its next term on December 6, 1911. On January 4, 1912, defendants in error filed their application for writ of error to the Supreme Court and the same was denied on February 7, 1912. On February 24, 1912, defendants in error filed in the Supreme Court their motion for rehearing on the refusal of their application for writ of error and said motion was over-ruled on February 28, 1912. On March 25, 1912, defendants in error filed in the Supreme Court an application for mandamus against the judges of the Court of Civil Appeals for the Third Supreme Judicial District to require the latter court to grant a rehearing and

reopen the case, and this was refused on April 3, 1912. Defendants in error next filed in the Supreme Court an application for mandamus against the Judge of the Trial Court and same was refused. On May 28, 1912, defendants in error filed in the Court of Civil Appeals a motion styled "motion to vacate judgment." This motion was refused by the court on October 12, 1912. On October 23, 1912, defendants in error filed in the Court of Civil Appeals what they termed "motion for rehearing of motion to vacate judgment" and this was over-ruled on January 8, 1913. On January 15, 1913, defendants in error filed in the Court of Civil Appeals a motion designated "supplemental motion for rehearing of motion to vacate judgment". The Court of Civil Appeals on February 19, 1913 granted this motion and entered judgment, setting aside its former judgment rendered May 24, 1911, affirming the judgment of the District Court and all other orders and decisions made by it subsequent to that time and reversed and remanded the cause for a new trial.

Plaintiffs in error contend that said court was without authority to grant the motion, because same was filed and acted upon at a subsequent term of the court to that at which its original judgment was rendered and after the Supreme Court had denied a writ of error in said cause. This is the only question presented for review.

We conclude, after a careful examination of the motion in connection with the record, that while not

so designated, it is in substance a motion for rehearing within the meaning of that term as used in articles 1633 and 1641, Revised Statutes, 1911. The Court of Civil Appeals so held in granting the motion. 156 S. W., 317.

The motion was not filed within the time allowed for the filing of motions for rehearing and was not acted upon at the term of the court at which the original judgment was rendered. This being true, the court was without authority to take any action on the motion and the judgment entered granting the motion and setting aside and vacating the original judgment rendered by said court in said cause and reversing and remanding the case to the trial court, must, we think, be held to be void and of no effect. Articles 1633 and 1641, R.S. 1911. McGhee v. Romatka, 92 Texas, 241. The original judgment of affirmance stands just as if the motion had not been filed.

It is contended that under the holding in the case of McGhee v. Romatka, supra, this court is without jurisdiction to review the action of the Court of Civil Appeals in granting the motion.

The motion in the case before us was filed and acted upon by the Court of Civil Appeals after the Supreme Court had refused a writ of error in said cause and by such action affirmed the original judgment of the Court of Civil Appeals and that of the trial court. The judgment of the Court of Civil

Appeals entered in granting the motion not only set aside and vacated its judgment rendered at a former term, but also in effect set aside and vacated the judgment of the Supreme Court in denying the writ of error in said cause. It is well settled that when the jurisdiction of the Supreme Court attaches, the court has full control of the cause and can make such orders concerning it as may be necessary to preserve the rights of the parties and enforce its mandates. Its jurisdiction continues until the case is fully determined by the court and its judgment is completely executed by the court below. For the purpose of enforcing its mandates, it may make any order and, if necessary, may resort to the writ of mandamus or any other appropriate writ known to our system of jurisprudence. Wells v. Littlefield, 62 Texas, 28. The action of the Supreme Court in refusing a writ of error in this cause was binding on the Court of Civil Appeals. The Court of Civil Appeals at the time the motion under review was filed and acted upon was without jurisdiction of the case and had no power to enter any order or judgment therein. To hold otherwise would be to deny to the Supreme Court its power as a court of last resort. The question of the power of the Supreme Court to enforce its own jurisdiction was not before the court in the case of McGhee v. Romatka.

We are of opinion that the motion to dismiss the application for writ of error should be overruled and that the order and judgment entered by the Court of Civil Appeals setting aside and vacating its former

judgment and reversing and remanding the cause for a new trial should be held to be void and of no effect.

Strong

Judge.

The judgment recommended by the Commission of Appeals is adopted and will be entered as the judgment of the Supreme Court. We approve the holding of the Commission on the question discussed.

Nelson Phillips

Chief Justice.

December 11th, 1918.

(ENDORSED)

No. 9 COMMISSION OF APPEALS Section A. No. 2572 The Gammel Statesman Publishing Company, et al., Plaintiffs in Error v. Ben C. Jones & Co., Defendant in Error. OPINION. Order of Crt. of Civ. App. vacating its original judgment remanding the cause to the Dist. Crt. is reversed and the cause is remanded to the Crt. of Civ. App. for the execution of its original judgment. Filed in Supreme Court Dec'r. 11, 1918. F. T. Connerly, Clk. by H. L. Clamp, Deputy.

Strong, Judge.

I. Introductory Statement	1-4
II. Division A:	
INTERSTATE COMMERCE:	4-75
1. Point I: Company is estopped from raising interstate commerce defense, because Commission not apprised of same before order made, defense being asserted for first time in District Court	4-5
Statement and argument	32-33
2. Point II: Distribution of gas to local consumers in Texas is intrastate commerce	5-6
3. Point III: Commission empowered to fix rates in burner tip cases where gas in whole or in part is transported across State lines by circuitous process of conducting hearing on transmission phase in each of such burner tip cases	6-7
4. Point IV: State courts properly disregarded corporate fictions and treated Lone Star group of affiliated companies as an operating unit, under common ownership, management and control	7-8
Statement and argument	33-37
5. Point V: Lone Star group operations being under common ownership, management, and control, are subject to State regulation, even though gas in whole or in part imported into Texas from Oklahoma	8
6. Point VI: Result of Commission's order is to establish gate rate applicable only to domestic gas in cities and towns in Texas served by Company and is an essential step in fixing of burner tip rates in each of such cities and towns	8-12
Statement and argument	37-44
7. Point VII: If corporate fictions are disregarded, only commerce in which Lone Star system engages in Texas is intrastate business serving	

Page

natural gas to ultimate consumers at burner tips, and transportation of gas across state lines by owner is merely an incident of local commerce.... 12-13
Statement and argument 44-45

8. Point VIII: Gas transported through Line A from Wheeler County, Texas, across corner of Oklahoma and back into Texas for local Texas consumption, is not interstate commerce, since both termini of the line are in Texas 13-14
Statement and argument 45-46

9. Point IX: Transportation of gas through Line A not interstate commerce, because record discloses no necessity for construction of line through corner of Oklahoma, and further because line could have been built more economically if laid entirely in Texas, its construction through Oklahoma being only a device to avoid state regulation 14-15
Statement and argument 46-47

10. Point X: Only small and diminishing volume of Oklahoma produced gas transported by Company into Texas; importation of this gas unnecessary, for Company's Texas requirements, as Company has ample gas reserves in Texas..... 15-16
Statement and argument 47-54

11. Point XI: Excess of gas transported from Oklahoma into Texas is of small and diminishing volume over that of Texas gas transported by Company into Oklahoma, the gas flowing alternately in each direction across the State lines through Company's system and at Company's own operating convenience 16
Statement and argument 47-54

12. Point XII: Amount of gas transported by Company from Oklahoma into Texas has decreased each year and is now reduced probably to vanishing point, since Company in 1934 removed one

INDEX (Continued)

Page

of its main transmission lines through which gas had previously been transported across State line into Texas 16-17
Statement and argument 47-54

13. Point XVIII: Company owns ample gas reserves in Texas sufficient to supply all actual and potential Texas demand, making it unnecessary to import gas from Oklahoma 17
Statement and argument 47-54

14. Point XIV: Commission's order does not affect or burden importation or exportation of gas across state lines, nor discriminate against foreign gas in favor of Texas gas 17-18

15. Point XV: Commission's order effective only within Texas, does not directly burden interstate commerce, even if Oklahoma and Wheeler County, Texas, gas be considered as transported in interstate commeree 18-20
Statement and argument 54-55

16. Point XVI: Destination of Wheeler County, Texas, and Oklahoma gas not known or determined in advance, and shifted at will of Company 20-21
Statement and argument 55-56

17. Point XVII: Oklahoma gas after arriving in Texas (and Wheeler County, Texas, gas after crossing corner of Oklahoma) and before delivery to distributors is brought to rest and commingled with Texas gas, and subjected to other treatment depriving it of claimed interstate character 21-23
Statement and argument 57-61

18. Point XVIII: Absence of Federal legislation regulating interstate transportation of gas, leaves field to State regulatory authorities 23-26

19. Point XIX: Company engaged in numerous intrastate activities and is subject to State regulation 26-27
Statement and argument 61-62

INDEX (Continued)

Page

20. Point XX: Company failed to make requisite segregation between its Texas and Oklahoma properties and operations 27-28
Statement and argument 62-75

21. Point XXI: Company not having raised interstate commerce question before Commission, no duty devolved upon Commission to make segregation 28-29
Statement and argument 62-75

22. Point XXII: Burden on Company to make correct segregation between Texas and Oklahoma properties and operations, and Company failed to discharge this burden before Commission and District Court 29-30
Statement and argument 62-75

23. Point XXIII: Even if order in part void under Federal commerce clause, it is divisible and effective as to practically all of Company's operations in Texas 30
Statement and argument 62-75

24. Point XXIV: Company failed to discharge burden of proof of presenting clear and convincing evidence as to that portion of its business claimed not to be subject to Texas regulation 30-31
Statement and argument 62-75

III. DIVISION B:
CLAIMED DENIAL OF ADEQUATE JUDICIAL REVIEW:

Statement and Argument 76-84

IV. DIVISION C:
CLAIMED CONFISCATION: 85-194

1. Company's evidence was insufficient as a matter of fact and of law to show confiscation 85

2. Point XXV: Order is presumed prima facie to be non-confiscatory and valid 85-86
Statement and argument 98-194

INDEX (Continued)

Page

3. Point XXVI: Order has force of state statute 86
   Statement and argument 98-194
4. Point XXVII: Burden on Company to prove unconstitutionality by clear and satisfactory evidence 86-87
   Statement and Argument 98-194
5. Point XXVIII: No impossible burden placed upon Company 87-88
   Statement and argument 98-194
6. Point XXIX: Company does not sustain burden of proving confiscation by attacking Commission's evidence, but must, itself, submit evidence legally sufficient 88
   Statement and argument 98-194
7. Point XXX: Courts reluctant to find rate confiscatory where not put into actual effect 88-89
   Statement and argument 98-194
8. Point XXXI: Under actual test of 32c rate, increased consumption and increased net revenues probable, under record 89-90
   Statement and argument 98-194
9. Point XXXII: This Court not concerned with irregularities, erroneous methods, or reasoning by Commission or State courts, but only with overall result of rate fixed 90
   Statement and argument 98-194
10. Point XXXIII: If any finding or allowance by Commission be determined unjust to Company, complainant must prove that other liberalities in its favor have not offset errors 90-91
   Statement and argument 98-194
11. Point XXXIV: Company's claims of confiscation erroneously assumed Commission's findings, so far as favorable to Company, are minima below which the Commission is estopped to go in testing validity of rate 91-92
   Statement and argument 98-194

INDEX (Continued)

Page

12. Point XXXV: Issue here is confiscation, not reasonableness 92
    Statement and argument 98-194
13. Point XXXVI: Commission in fixing rate, and Courts in testing its validity, should use average operating results, computed over reasonable period of years 92-94
    Statement and argument 98-194
14. Point XXXVII: Order effective only within Texas, and burden on Company to submit requisite evidence for the making of segregation between its Texas and Oklahoma properties and operations 94-95
    Statement and argument 98-194
15. Point XXXVIII: Court will consider depressed economic conditions in determining line of confiscation 95
    Statement and argument 98-194
16. Point XXXIX: Courts will reject expert testimony as being without probative force where placed upon untenable grounds or methods of approach 95-96
    Statement and argument 98-194
17. Point XL: Company has not made frank disclosure of necessary data within its knowledge, or means of ascertainment 96-97
    Statement and argument 98-194
18. Point XLI: Company's computations have overshot the mark 97-98
    Statement and argument 98-194

IN THE

SUPREME COURT OF THE UNITED STATES

OCTOBER TERM, A.D. 1937

NO. 313

LONE STAR GAS COMPANY,
Appellant

Versus

THE STATE OF TEXAS, ET AL,
Appellees

APPEAL FROM THE COURT OF CIVIL APPEALS FOR THE THIRD SUPREME JUDICIAL DISTRICT OF TEXAS, AT AUSTIN

BRIEF AND ARGUMENT FOR APPELLEES

INTRODUCTORY STATEMENT

The Company's contentions are, in their essence, but a challenge to the entire rate regulatory power of the State. The Company has chosen to make this case a war, to see which is the more powerful—the Company or the State. We have accepted the gage of battle upon that basis. The future of rate regulation in Texas depends upon the outcome.

Appellant has tersely set forth only such facts as it deems favorable to it; and in the light most favorable to it. The brief consists in part of half-truths, and on occasion, of affirmative mis-statement.

That method of briefing would be admirably adapted to Appellant's purpose, if such purpose were to present the case to this Honorable Court in a distorted and misleading light. The overall effect of the brief is to place upon Appellees the burden not only of briefing their own side of the case in the usual way, but of undoing the affirmatively and prejudicially erroneous work of Appellant. If Appellant were to be permitted to gain the natural advantage of such method, whether deliberately adopted or not, the net result would be to shift the well established legal burden from Appellant of showing by "clear and convincing evidence" that it is a victim of confiscation or has been deprived of other federal constitutional rights, and illegally to place upon Appellees the burden of sustaining the legality and non-confiscatory character of the order by evidence and other demonstration of their own.

Appellees do not wish to have such an unlawful and unjust onus placed upon them, though they are confident they could sustain it under compulsion; and they hope that this Honorable Court will hold Appellant strictly to the discharge of the burden which devolves upon it by law.

Nevertheless, Appellees wish to be of as much help to the Court in arriving at a correct decision of the case as may be possible to do.

As affirmatively appears in the record, the hearings before the Commission lasted almost continuously for a period of about seven months; and the record made before that body was considerably more voluminous

than the record before the District Court, which has been somewhat diminished in printing. (R. I, 16).

At the trial in the District Court Appellees proffered in evidence the entire record made before the Commission, including all oral testimony and exhibits, but upon the Company's objections thereto the trial court excluded it, and it went up with the record on appeal as a bill of exceptions and is now to be found *in toto* in the original typewritten record in this Court. It was at the insistence of Appellees that the stipulation was made (R. V, 3485-3487) that the entire original appellate record should be brought to this Court in lieu of the usual transcript, so that this Court might have access to the entire record if it wishes. In filing printing praecipes in this Court Appellant was very insistent that no part of the Commission record should be printed.

We desire to make plain our attitude upon this point, however: that if this Court discovers any necessity, or feels any desire, to examine the whole or any part of the Commission record, or any portion of the District Court record which was not printed, we not only willingly invite the Court to do so, but will if necessary have the desired additional portions of the record printed even yet. We are not only willing, but anxious, that the Court read and consider the whole of the printed record, and such remaining parts of the unprinted record as it sees fit.

Appellant's brief in a large part is addressed to attacks upon the *reasoning* of the Court of Civil Appeals in its opinion. The judgment of the Supreme Court of Texas, affirming upon its merits the judg-

ment of the Court of Civil Appeals, by the refusal of a writ of error,[1] is totally ignored. This Court reviews and corrects errors in federal questions committed only in the *judgments* of courts below, and not mere errors of reasoning in their opinions. Our contention is that the judgment rendered by the Court of Civil Appeals, and affirmed by the Supreme Court of Texas, was a correct one upon this record, irrespective of whether or not the *rationale* by which they arrived at their conclusions and judgments was in all respects irrefragible and above criticisms.

In Appellant's preliminary statement of the case, (p. 4 of its brief) it points out that all except two of the distributors to whom it sells in Texas are its own affiliates; but it very carefully omits to point out that Appellant itself also distributes gas in retail directly to approximately 33,000 domestic consumers in the important city of Fort Worth, Texas, (R. I, 15, 219, 388; R. III, 1896; R. V, 3288A, "Fort Worth Division") and also makes extensive domestic, commercial and industrial sales directly to the consumers along the rights of way all over its system as well as in the "Fort Worth Division" of Lone Star Gas Company.

DIVISION A

INTERSTATE COMMERCE

I. In all proceedings before the Commission Appellant made not the slightest objection or suggestion that the Commission, because of the claimed self-

[1]Gammel-Statesman Pub. Co. vs. Ben C. Jones & Co., 206 S. W. 931.

enacting force of the commerce clause of the federal constitution, had no power to fix a uniform gate rate applicable to all gas delivered by Appellant's pipe line system at all points served by it in Texas, but deliberately lay in ambush for the Commission and by its premeditated silence and acquiescence permitted the Commission to make such a gate rate without the slightest hint of the claimed defense of interstate commerce, and Appellant is now thereby estopped to assert such attack or defense in any form for the first time in a judicial review of the Commission's order:

B. & O. R. Co. vs. United States, 298 U. S. 349, 392, 80 L. Ed. 1209;
Western Dist. Co. vs. Pub. Serv. Comm. of Kans. 58 Fed. (2d) 241, 243, (aff. 285 U. S. 119, 76 L. Ed. 655);
St. Joseph Stockyards Co. vs. United States 298 U. S. 38, 47-48, 53-54, 80 L. Ed. 1033;
Manufacturers R. Co. vs. United States, 246 U. S. 457, 470, 488-490, 62 L. Ed. 831;
C. N. O. & T. P. Ry. Co. vs. Interstate Commerce Commission, 162 U. S. 184, 196, 40 L. Ed. 935.

II. Distribution of natural gas to local consumers in Texas is intrastate commerce, and of local concern only, even though the supply, in whole or in part, be transported across state lines:

East Ohio Gas Co. vs. Tax Commission of Ohio, 283 U. S. 465, 470-471, 75 L. Ed. 1171, 1175;
Western Distributing Co. vs. Pub. Serv. Com. of Kans., 285 U. S. 119, 124-125, 76 L. Ed. 655, 658;

Pub. Ut. Com. of Kans. vs. Landon, 249 U. S. 236, 245, 63 L. Ed. 577, 586;
Dayton P. & L. Co. vs. Pub. Ut. Com. of Ohio, 292 U. S. 290, 306-308, 78 L. Ed. 1267, 1279;
Columbus G. & F. Co. vs. Pub. Ut. Com. of Ohio, 292 U. S. 398, 399-401, 78 L. Ed. 1327;
Manufacturers L. & H. Co. vs. Ott, 215 Fed. 940, 944-945.

III. The Commission has undoubted power, effectually and for all *practical* purposes, to determine and fix in burner tip cases the gate rate to be *charged and collected* for natural gas by transmission companies to distributors, even though the supply be in whole or in part transported across state lines, by the circuitous process of conducting in each burner tip case a hearing upon the transmission phase of the business, and fixing the maximum charge which the distributors may set up as an operating expense for gas purchases at the city gates. The fixing of a maximum operating expense for gate purchases for the distributors is in practical effect the same as directly fixing the charge to be made by the pipe line company. This is true both as to independent and affiliated distributors, for reasons more fully pointed out hereinafter.

Western Distributing Co. vs. Pub. Serv. Com. of Kansas, 285 U. S. 119, 124-125, 76 L. Ed. 655, 658;
Dayton P. & L. Co. vs. Pub. Ut. Com. of Ohio, 292 U. S. 290, 306-308, 78 L. Ed. 1267, 1279;

Columbus G. & F. Co. vs. Pub. Ut. Com. of Ohio, 292 U. S. 398, 399-401, 414-415, 78 L. Ed. 1327;
United Fuel Gas Co. vs. R. R. Com. of Ky., 278 U. S. 300, 320-321, 73 L. Ed. 390, 401.

IV. The Court of Civil Appeals and the Supreme Court of Texas properly disregarded the corporate fictions and treated the Lone Star group of affiliated companies as being in legal contemplation one integrated system or operating unit engaged in operating, under one common ownership, management and control, all phases of the natural gas business, to-wit. purchasing, producing, transporting, and distributing locally natural gas to the consumers at the burner tips in Texas:

Chicago, etc. Ry. Co. vs. Minneapolis Civic Assn., 247 U. S. 490, 498, 500-502, 62 L. Ed. 1229;
United States vs. Delaware L. & W. Ry. Co., 238 U. S. 516, 529, 59 L. Ed. 1438;
United States vs. Lehigh Valley Ry. Co., 220 U. S. 257, 273-274, 55 L. Ed. 458;
McCaskill Co. vs. United States, 216 U. S. 504, 514-515, 54 L. Ed. 590;
Davis vs. Alexander, 269 U. S. 114, 117, 70 L. Ed. 186;
United States vs. Reading Co., 253 U. S. 26, 57-63; 64 L. Ed. 760;
Northern Securities Co. vs. United States, 193 U. S. 197, 341, 48 L. Ed. 679, 702;
United States vs. Union Pac. Ry. Co., 226 U. S. 61, 88, 89, 57 L. Ed. 124, 134;
Southern Pac. Terminal Co. vs. Interstate Commerce Commission, 219 U. S. 498, 521-522, 55 L. Ed. 310;
Central Vermont Ry. Co. vs. Southern N. E. R. Corp., 1 Fed. Suppl. 1004, 1005, 1006;

Wabash Ry. Co. vs. American Refg. Trans. Co., 7 Fed. (2) 335, 343-345;
Gallatin Nat. Gas Co. vs. Pub. Serv. Com. of Mont., 79 Mont. 269, 256 Pac. 373, 377, 378.

V. When the corporate fictions are disregarded and the system considered as an integrated whole, under common ownership, management and control, as was properly done herein, the situation is the same as if production (or purchase), transportation, and distribution were actually all conducted under a common ownership, management and operation; and all such operations are subject to state regulation even though the gas in whole or in part be imported from other states:

Authorities cited under Points II and III, above, and
Pa. Gas Co. vs. Pub. Serv. Com. of N. Y., 252 U. S. 23, 64 L. Ed. 434;
Western Dist. Co. vs. Pub. Serv. Com. of Kans., 285 U. S. 119, 76 L. Ed. 655;
Dayton P. & L. Co. vs. Pub. Ut. Com. of Ohio, 292 U. S. 290, 78 L. Ed. 1267;
Columbus G. & F. Co. vs. Pub. Ut. Com. of Ohio, 292 U. S. 398, 399-401, 78 L. Ed. 1327;
United Fuel Gas Co. vs. Ry. Com. of Ky., 278 U. S. 300, 320-321, 73 L. Ed. 390;
East Ohio Gas Co. vs. Tax Com. of Ohio, 283 U. S. 465, 75 L. Ed. 1171;
Peoples Gas Co. vs. Pub. Serv. Com. of Penn., 270 U. S. 550, 70 L. Ed. 726;
Manufacturers L. & H. Co. vs. Ott, 215 Fed. 940, 944-945.

VI. The result, and the only result, which the Commission intended and accomplished in promul-

gating the order, was to establish a compensatory and reasonable gate rate for application to all domestic gas delivered by Appellant at the cities and towns in Texas (approximately 275 in number) served by Appellant's pipe line system; upon which gate rate have been and are to be founded in separate and subsequent proceedings and orders the domestic burner tip rates for such towns. Approximately 125 of such domestic burner tip cases were pending before the Commission when it initiated its investigation, (R. I, 15). It is the plan and purpose of the Commission in all pending and subsequent burner tip cases involving such cities and towns to treat the present gate rate order as being final, binding, and conclusive, upon all distributors and others at interest, as to the price which Appellant may charge and collect from the distributors, and which the distributors may pay Appellant and set up on their books as an operating expense for gas purchases to be covered into their burner tip rates; thus obviating the necessity of fixing the gate rate over in a separate proceeding in each of the 275 burner tip cases at prohibitive and needless expense. Under the cases cited above under Points II and III, the fixation of such a gate rate is an essential step necessarily involved in the ultimate fixation of burner tip rates, and must be accomplished either directly or indirectly at some stage of the admittedly intrastate function of gas rate regulation as a whole, in order to arrive ultimately at reasonable burner tip rates. Under the state law, the Commission is not required to exhaust its entire jurisdiction in one proceeding and order, but it may lawfully accomplish the process of regulation by piece-

meal,[2] as it has started out to do in this case, by fixing the price which may be charged at the wellhead,[3] and the amount to be charged at the city gates,[4] and in separate and subsequent proceedings based upon the previously fixed wellhead and gate rates it may finally fix the ultimate burner tip rates,[4] either in the exercise of its original jurisdiction possessed concurrently with the incorporated cities and towns (see Art. 1119 as amended, quoted in appendix to Appellant's original brief) and under Arts. 6050-6059,[5] or its appellate jurisdiction on appeal from action of the cities under Art. 6058,[5] as done in *United Gas Pub. Serv. Co. vs. State,* 89 S. W. (2d) 1094, writ refused, affirmed by this Court Feb. 14, 1938, No. 13. So far as federal constitutional questions are concerned (which only are of interest to this Court) we must consider only the question whether, consistently with the federal commerce clause, the Commission may directly dispose of the production and transmission phases in one proceeding and order, as it has done here, as an indispensable step in the process of ultimate local burner tip regulation, or whether under the federal commerce clause it must accomplish identically the same ultimate result indirectly by trying the production and transmission phases in each of

[5]See appendix at end of this brief.

approximately 275 burner tip cases. Nothing in the letter or spirit of the federal commerce clause can reasonably be interpreted as prohibiting the pursuit of the first-mentioned course in the circumstances shown by this record. The federal commerce clause has not such self-enacting force that it precludes all state legislation affecting interstate commerce. The question of whether it precludes particular state regulation is not one for the judiciary but for the Congress.[6] The substance and not the form should be controlling. The important thing from the standpoint of the federal commerce clause is the substantial effect of the state regulation upon interstate commerce, and not the mere means by which the ultimate result is reached. There is no substantial difference, so far as the essential ultimate effect of the gate rate order upon interstate commerce is concerned, between the Commission's order here, and the situation as it would stand if the Commission should conduct 275 separate burner tip hearings, and in each case try the production and transmission phases over. If the essential ultimate result can be attained by the Commission through the indirect method of prescribing maximum gate rates for gas purchases by the distributors in burner tip cases, (and Appellant admits that this may be done, R. V, 3500-3501) then certainly the same end may be lawfully reached by the more expeditious and economical direct method here employed. The result ultimately to be obtained, and the essential

[6]South Carolina State Highway Dept. vs. Barnwell Bros., ... U. S. ..... 82 L. Ed. ..... (No. 161, Oct. Term, 1937, Feb. 14, 1938, Adv. Op. L. Ed. No. 10, 469, 473-477).

effect thereof upon interstate commerce, are identically the same in each instance. If the distributors be affiliated, the money all goes into and comes out of the same pocket anyway—that of the holding company, Lone Star Gas Corporation. If the distributors be non-affiliated they cannot long avoid financial ruin if they continue to pay more at the gate than they can cover into their rates; so in either event the amount fixed as the gate rate is for all practical purposes controlling as to the amount to be realized at the gate for the gas.

VII. Since the only "commerce" in which the integrated Lone Star system engages in Texas is the intrastate business of serving natural gas to the ultimate consumers at the burner tips (the corporate fictions being disregarded); and since such transportation of gas across state lines as occurs is purely an incident of such local commerce; the mere transportation by Appellant of its own gas across state lines into Texas, whether from Oklahoma or the Texas Panhandle field, for the sole purpose of there selling same in intrastate local distribution to Texas consumers, is not interstate commerce, but is only an incident of local commerce. Mere transportation, across state lines, of a commodity by its owner does not, of itself and abstractly considered, constitute "commerce" at all—much less "interstate commerce"—but the characterization of that transportation as an incident of interstate or intrastate commerce is conditioned by and depends solely upon what kind of "commerce" the owner is going to engage in with the commodity when it arrives at its destination in the receiving State:

United States vs. Ohio Oil Co. (the Pipe Line Cases), 234 U. S. 548, 561-562, 58 L. Ed. 1459, 1471;
Pa. R. R. Co. vs. Pub. Serv. Com. of Ohio, 298 U. S. 170, 80 L. Ed. 1130;
Pa. Gas Co. vs. Pub. Serv. Com. of N. Y., 252 U. S. 23, 64 L. Ed. 434;
Dayton P. & L. Co. vs. Pub. Ut. Com. of Ohio, 292 U. S. 290, 78 L. Ed. 1267;
Western Dist. Co. vs. Pub. Serv. Com. of Kans., 285 U. S. 119, 76 L. Ed. 655;
East Ohio Gas Co. vs. Tax Commission of Ohio, 283 U. S. 465, 75 L. Ed. 1171;
United Fuel Gas Co. vs. R. R. Com. of Ky., 278 U. S. 300, 320-321, 73 L. Ed. 390;
Manufacturers L. & H. Co. vs. Ott, 215 Fed. 940, 944-945;
State ex rel Caster vs. Flannelly, 96 Kans. 372, 152 Pac. 22, 26-27;
W. Va. & Md. Gas Co. vs. Towers, 134 Md. 137, 106 Atl. 265, 267-269.

VIII. The gas transported through Line A from the Panhandle field in Wheeler County, Texas, across the southwest corner of Oklahoma and back into Texas for local Texas consumption is not *inherently* interstate commerce, but is in fact and in law essentially intrastate commerce, since both termini are in Texas. Whether its regulation is potentially within reach of congressional action as a part of the "current of interstate commerce," (see *Minnesota vs. Blasius*, 290 U.S. 1, 78 L. Ed. 131) is immaterial:

Lehigh Valley R. R. Co. vs. Pa., 145 U. S. 192, 201-202, 36 L. Ed. 672;
U. S. Express Co. vs. Minn., 223 U. S. 335, 341-342, 56 L. Ed. 459;

Ewing vs. City of Leavenworth, 226 U. S. 464, 467, 57 L. Ed. 303;
United States vs. Powers Co., 211 Fed. 169.

IX. The transportation of gas through Line A from the Panhandle field in Wheeler County, Texas, across the southwest corner of Oklahoma and back into Texas for local Texas consumption is not in fact or in law interstate commerce, in the circumstances revealed by this record, because the evidence plainly shows that there was no necessity or justification for running Line A into the State of Oklahoma, but the same could more economically and profitably have been laid entirely within Texas, and the placing of a short section of this line parallel to, and barely within, the Oklahoma line in barren country (destitute of markets except for Hollis, Oklahoma, which could more economically have been served by a tap line extending from a main line in Texas) and when Wellington, Texas, (a larger town than Hollis, Okla.) could have been served by such Texas line, was merely a fraudulent subterfuge or device for the purpose of giving the appearance of interstate commerce to that which in its essence is not such, and for the purpose of evading the lawful regulatory power of the Texas Commission:

Sprout vs. South Bend, 277 U. S. 163, 168, 72 L. Ed. 833;
Interstate Buses vs. Holyoke St. Ry. Co., 273 U. S. 45, 71 L. Ed. 530;
Austin vs. Tenn., 179 U. S. 343, 359-360, 45 L. Ed. 224;
B. & O. S. W. Ry. Co. vs. Settle, 260 U. S. 166, 168-169; 67 L. Ed. 189;

Inter-City Coach Co. vs. Atwood, 21 Fed. (2d) 83;
Fed. Trade Com. vs. Smith, 1 Fed. Suppl. 247, 253.

X. As to the relatively small and rapidly diminishing volume of Oklahoma-produced gas transported into Texas, the record shows obviously that this gas is unnecessarily imported, it being undisputed and indisputable that there is much more than ample Texas gas available to Appellant from its own reserves and from its existing and potential purchase connections in Texas to meet all of its Texas demands; and, further, that the Oklahoma-produced gas costs Appellant from 6 to 15 cents per MCF in Oklahoma, plus the cost of transportation to Texas, whereas the Texas gas can be bought in unlimited quantities for from 2 to 6 cents per MCF.

The continued importation of such small volumes of Oklahoma gas, and the interposition of such importations under the claimed defense of interstate commerce, are therefore only obviously fraudulent subterfuges to avoid state regulation in Texas.

Peoples Nat. Gas Co. vs. Pub. Serv. Com. of Pa., 270 U. S. 550, 70 L. Ed. 726;
Sprout vs. South Bend, 277 U. S. 163, 168; 72 L. Ed. 833;
Interstate Buses vs. Holyoke St. Ry. Co., 273 U. S. 45, 71 L. Ed. 530;
Austin vs. Tenn., 179 U. S. 343, 359-360, 45 L. Ed. 224;
B. & O. S. W. Ry. Co. vs. Settle, 260 U. S. 166, 168-169; 67 L. Ed. 189;

Inter-City Coach Co. vs. Atwood, 21 Fed. (2d) 83;
Fed. Trade Com. vs. Smith, 1 Fed. Suppl. 247, 253.

XI. As to the relatively small and rapidly diminishing volume of Oklahoma-produced gas transported into Texas, the record shows that the greater part of such volume is returned to Oklahoma in kind from Texas gas, and in the segregation between Texas and Oklahoma properties and operations made by the Commission in the District Court the small excess of Oklahoma-produced gas transported into Texas over the Texas gas transported into Oklahoma is adequately compensated for by the allowance of the average prevailing Texas sales price for gas, thus giving the Oklahoma gas virtually "free transportation" to Texas. The Company's evidence shows that the gas flows alternately in each direction across the Texas-Oklahoma line and throughout the system. In reality, therefore, this is but a temporary borrowing or exchange of gas between portions of Appellant's system located in the two States, adopted of the Appellant's own volition, for its own operating convenience, if not for fraudulent purposes, and is not interstate commerce.

XII. The amount of Oklahoma-produced gas transported into Texas, or at least the excess of such Oklahoma importations over Texas gas transported into Oklahoma, as compared with the total amount of gas sold on the Lone Star system in Texas, is so unsubstantial and negligible in amount, that it should be disregarded under the rule of *de minimis lex non curat;* especially since the record shows undisputably

that such importations, already small at the time of the District Court trial, were and are sharply and steadily declining, and have now probably reached the vanishing point; and in view of the fact that Appellants own testimony showed (R. II, 1417) that Line H was to be (and it actually has been) removed in 1934; so that now probably more Texas gas is transported to Oklahoma than vice-versa.

XIII. Since the evidence showed without dispute that Appellant owns ample gas reserves in Texas, and can easily and cheaply acquire unlimited additional gas reserves and gas purchase connections in Texas, to supply all of its actual and potential Texas demands for many years to come, the order does not require Appellant to use in Texas any gas imported from Oklahoma or elsewhere; and all of Appellant's Texas deliveries should therefore be treated as if they were Texas gas. If Appellant sees fit voluntarily to use in Texas any gas imported from Oklahoma in lieu of the ample Texas gas available, Appellant thereby subjects the same to Texas control:

Peoples Natural Gas Co. vs. Pub. Serv. Com. of Penn., 270 U. S. 550, 70 L. Ed. 726.

XIV. The order does not in any way prohibit, restrict, impede, or directly burden, the free importation or exportation of gas from state to state, nor does it discriminate against foreign gas in favor of Texas gas, but leaves the gas free to flow unrestrictedly both ways across the state line, and leaves all foreign and Texas gas upon an absolute equality of footing in Texas:

Sonneborn vs. Cureton (Keeling), 262 U. S. 506, 513-514, 67 L. Ed. 1095;
Peoples Nat. Gas Co. vs. Pub. Serv. Com. of Penn., 270 U. S. 550, 70 L. Ed. 726;
Penn. Gas Co. vs. Pub. Serv. Com. of N. Y., 252 U. S. 23, 64 L. Ed. 434;
Western Distr. Co. vs. Pub. Serv. Com. of Kans., 285 U. S. 119, 124-125, 76 L. Ed. 655;
Dayton P. & L. Co. vs. Pub. Ut. Com. of Ohio, 292 U. S. 290, 306-308, 78 L. Ed. 1267, 1279;
United Fuel Gas Co. vs. R. R. Com. of Ky., 278 U. S. 300, 320-321, 73 L. Ed. 390, 401;
East Ohio Gas Co. vs. Tax Commission of Ohio, 283 U. S. 465, 470-471, 75 L. Ed. 1171-1175;
Manufacturers L. & H. Co. vs. Ott, 215 Fed. 940;
The instant case is to be distinguished from:
West vs. Kans. Nat. Gas Co., 221 U. S. 229, 55 L. Ed. 716;
Penn. vs. W. Va., 262 U. S. 553, 67 L. Ed. 1117.

XV. Even if it be conceded (as it is not) that both the Oklahoma-produced gas and the gas from the Panhandle field in Wheeler County, Texas, are transported in interstate commerce, yet the effect of the present order establishing a gate rate for application within Texas, is not a prohibited, direct and substantial burden upon interstate commerce, but has at most only an unprohibited, indirect, remote, unsubstantial, and incidental effect upon interstate commerce; and the fixation of such a gate rate, even applied to all the gas sold in Texas by Appellant, is within the legal power of the Texas Commission as one of the indispensable steps toward the exercise of its undoubted power to

fix reasonable ultimate burner tip rates even upon gas transported across state lines:

XVI. Considering the fact that when the gas leaves the Wheeler County field in Texas, and the various fields in Oklahoma, its destination is not known or determined in advance, and the fact that the same is, after arrival in Texas, shifted at the will of Appellant to whatever destination may suit its own whim and fancy, thus enabling Appellant by playing fast and loose through such continuous shifting, to defeat regulation by all competent authorities, both State and Federal; and the fact also that no orders are placed for, or sales made of, the gas before its entry into Texas, and no sale of any specific or particular identifiable volume thereof is ever made even after entry into Texas, but that in a part of the system's territory the same is drawn off from the mixture of Texas and Oklahoma gas only upon demand of, and as needed by, the affiliated distributors and the Texas consumers (including those in the Fort Worth Division) to whom it is ultimately sold, such Texas Panhandle and

Oklahoma gas is not moving in interstate commerce when it reaches the city gates in Texas:

Sonneborn Bros. vs. Cureton (Keeling), 262 U.S. 506, 67 L. Ed. 1095.

XVII. Even if it be conceded (as it is not) that both the Oklahoma-produced gas and the gas from the Panhandle field in Wheeler County, Texas, are transported in interstate commerce in such circumstances as to be originally beyond the regulatory power of Texas, yet the treatment of such gas by Appellant in the following particulars, after the gas arrives in Texas, and before delivery to the distributors, constitutes a breaking of the original package, and a commingling and amalgamation of the gas with the general mass of property in Texas, and the bringing of the interstate movement to a rest and end, in such a way and to such extent as to deprive the same of its claimed original interstate character and exemption from state control; namely: in extracting therefrom the gasoline and other volatile hydro-carbons; changing the chemical content, specific gravity, and BTU heating content thereof; reducing the pressure of same (through regulators owned, maintained and operated by Appellant) from high pressures of 150 to 350 pounds to low pressures of 20 or 30 pounds per square inch before delivery to distributors and industrial customers in Texas; reducing the same to pressures even as low as 4 to 6 ounces before service to numerous rural right-of-way customers and to approximately 33,000 retail domestic, commercial, and industrial customers in the City of Fort Worth; the breaking up of the larger streams of such gas in the high pressure transmission lines into many smaller

streams and lower pressures in tap and lateral lines; the storing of large volumes of the Texas Panhandle and Oklahoma gas for long periods in the underground Miller farm near Petrolia, Texas; and the commingling of such claimed interstate gas with much larger volumes of admittedly intrastate gas in such way that the same cannot be, or at least has not been in this record, definitely measured, identified, and segregated by volume and source in such way that it can be ascertained at any particular city gate what portion, if any, of the total delivery at any particular time is from Oklahoma and what portion, if any, is from the Texas Panhandle Field.

West Va. & Md. Gas Co. vs. Towers, 134 Md. 137, 106 Atl. 265, 267-269;

XVIII. Congress never having enacted any legislation toward regulating the interstate transportation of natural gas by pipe line, but having in the amendments to the Interstate Commerce Act expressly excepted that traffic from federal regulation, the undoubted congressional intent is evinced that this field of regulation shall be left to the respective states, in so far as same pertains to their local concerns. The fixing of a uniform gate rate for natural gas served by Appellant's pipe line system only to cities and towns in Texas, to the extent and in the circumstances shown by this record, only as a prelude and an indispensable step toward the fixing of ultimate burner tip rates in Texas, which the state has the undoubted power to fix, is not a subject of national character or concern requiring or even permitting convenient and practicable uniformity of regulation as between state and state, and it is, therefore, not forbidden to the state by the Commerce Clause of the Federal Constitution. This is a legislative matter in which the Congress alone has the power and discretion to determine as a legislative

policy (and not the courts as a judicial function) whether the states shall not be permitted to legislate, even though interstate commerce be affected. Texas is, therefore, left free to exercise regulatory control of that business by taking this necessary intermediate step toward fixing reasonable prices at which natural gas, even though imported from other States, may be sold to its own citizens in intrastate commerce to local consumers, this being a matter of local concern to Texas only, in no wise affecting Oklahoma or other states:

State ex rel Caster vs. Flannelly, 96 Kans. 372, 152 Pac. 22, 27;

XIX. Appellant is shown to be engaged in intrastate activities in Texas to such extent as to subject it to the regulatory power of Texas in its entire business, in that it is engaged in substantial volumes of right-of-way retail sales of gas at reduced pressures to rural domestic customers; in the sale of gas at lowered pressures to numerous industries, many of them large, through tap lines, metering and regulating stations owned, operated, and maintained by Appellant at and on the properties of the industries; in the direct service, in retail distribution, of approximately 33,000 domestic, commercial, and industrial customers through local distribution properties, metering and regulating devices, owned, operated, and maintained by Appellant in the City of Fort Worth, Texas, in the maintenance of its general office building and principal place of business of the Lone Star group of affiliated companies in Dallas, Texas, where such group, including Appellant, receives and fills orders for gas, and other commodities and services handled by the group, issues checks in payment of all obligations, and carries on all of the general administration and other operations pertaining to the entire business of said affiliated group; and in the fact that through common stock ownership, affiliation, and control through common or interlocking directors, officials, and employees, both Appellant and its affiliated distributing companies are in reality the *alter*

egos of the Lone Star Gas Corporation (a Delaware holding company) engaged in local distribution in all Texas towns (approximately 275 in number) on the system, with the single exception of Gainesville:

Southern Nat. Gas Corp. vs. Alabama, 301 U. S. 148, 81 L. Ed. 970;
Alabama vs. Southern Nat. Gas Corp., 170 So. 178.

XX. Appellant having for the first time raised the claimed defense of interstate commerce before the District Court, and having made no such suggestion or defense before the Commission, this suggestion or claimed defense, (if same was to any extent well founded, which we do not concede), that some part of Appellant's properties and operations within Texas were exempt from Texas control, created for the first time, in the District Court, a necessity that a plain, definite, just, reasonable, and practical segregation as between Texas and Oklahoma properties and operations, and between that gas claimed by Appellant to be subject and not subject, respectively, to the regulatory control of Texas, should be made by Appellant, in order that both Texas and Oklahoma might justly and intelligently regulate those portions of Appellant's properties and business falling within their respective spheres of legislative regulation; and in order that Texas consumers might not be unjustly burdened by the more expensive intrastate operations in Oklahoma, and in order that the Commission might exempt from its order all gas, if any, properly beyond its regulatory control. In order to establish the defense, the burden of making such a segregation, and of supplying plain,

definite, and convincing evidence on which such a segregation could be made by the Commission and the reviewing courts, rested upon Appellant and not upon the Commission, and was not discharged by Appellant.

Norfolk & Western Ry. Co. vs. North Carolina, 297 U. S. 682, 688-689, 80 L. Ed. 977;
Smith vs. Ill. Bell Tel. Co., 282 U. S. 133, 146-151, 75 L. Ed. 255;
Simpson vs. Shepard (Minnesota Rate Cases), 230 U. S. 352, 435-436, 461, 465-466, 57 L. Ed. 1511;
Great Northern Ry. Co. vs. Weeks, 297 U. S. 135, 143-145, 80 L. Ed. 532;
Smyth vs. Ames, 169 U. S. 466, 540-542, 42 L. Ed. 819, 847;
Wabash Valley Elec. Co. vs. Young, 287 U. S. 488, 497-498, 77 L. Ed. 447;
Houston vs. S. W. Bell Tel. Co., 259 U. S. 318, 322, 66 L. Ed. 961, 964;
United Fuel Gas Co. vs. R. R. Com. of Ky., 278 U. S. 300, 73 L. Ed. 390.

XXI. It was not necessary that the Commission in its opinion and order make any express segregation between Texas and Oklahoma properties and operations, or between the gas subject to state regulation and that not so subject; especially in view of the fact that Appellant did not interpose any suggestion or claimed defense of interstate commerce before the Commission or submit any evidence upon which such segregations could be made; and it was, therefore, requisite only, and would have been sufficient, that Appellant (not Appellees) adduce before the District Court clear and satisfactory evidence which would have enabled that court and the appellate courts to make the necessary

segregation without the Commission having done so in its opinion and order. This latter burden was not discharged by Appellant:

Smith vs. Ill. Bell Tel. Co., 282 U. S. 133, 75 L. Ed. 255;
Lindheimer vs. Ill. Bell Tel. Co., 292 U. S. 151, 78 L. Ed. 1182.

XXII. Appellant did not discharge the burden which rested upon it under the law (if interstate commerce was directly burdened, which we deny) of making a reasonable, just, and practical segregation between Texas and Oklahoma properties and operations, or between the gas subject to state regulation and that claimed not to be so subject, either before the Commission or the District Court. Appellant made no suggestion or claimed defense of interstate commerce, and no segregation whatever, before the Commission; and before the District Court it made only a wholly untenable, unsound, impractical, unjustifiable, incomprehensible, unjust and erroneous attempt at segregation. Although no burden rested upon Appellees to do so, yet they voluntarily offered a segregation made upon just, reasonable, and practical bases in the District Court as between Texas and Oklahoma properties and operations which shows plainly that upon the basis of such segregation the order, as applied in Texas, is not confiscatory. Voluntary and unnecessary submission of such a segregation by Appellees, even if wholly unacceptable, did not lift from Appellant the burden of making a proper one:

Norfolk & Western Ry. Co. vs. North Carolina, 297 U. S. 682, 688-689, 80 L. Ed. 977;

Smith vs. Ill. Bell Tel. Co., 282 U. S. 133, 146-151, 75 L. Ed. 255;
Simpson vs. Shepard (Minnesota Rate Cases), 230 U. S. 352, 435-436, 461, 465-466, 57 L. Ed. 1511;
Great Northern Ry. Co. vs. Weeks, 297 U. S. 135, 143-145, 80 L. Ed. 532;
Smyth vs. Ames, 169 U. S. 466, 540-542, 42 L. Ed. 819, 847;
Wabash Valley Elec. Co. vs. Young, 287 U. S. 488, 497-498, 77 L. Ed. 447;
Houston vs. S. W. Bell Tel. Co., 259 U. S. 318, 322, 66 L. Ed. 961, 964;
United Fuel Gas Co. vs. R. R. Com. of Ky., 278 U. S. 300, 73 L. Ed. 390.

XXIII. Appellant was not in any event entitled to attack and strike down the order as being void *in toto*, and to prevent its operation as applied to the whole of Appellant's business and in all situations in Texas, even if (as is not admitted) under the Federal Commerce Clause the order could have been invalidated in part as applied to particular situations. The order is not indivisible or necessarily void as to all situations and business, even if shown to be void as to some, which latter we do not concede.

XXIV. Even if the order was, because of the claimed defense of interstate commerce, invalid in part as applied to particular portions of Appellant's property and business or as to particular situations (which is not conceded), the burden devolved upon Appellant (and was not discharged) of presenting clear, definite, and convincing evidence which would enable the reviewing courts to carve out such particular portions of Appellant's properties and business, and such particu-

lar situations, and to segregate same from the much greater properties and business, and the much more numerous particular situations, as to which the order was unquestionably valid and operative. If, for instance, the order was invalid as applied to the independent distributor at Gainesville (admittedly no interstate gas is served to the independent distributor at Waxahachie, R. V, 3006A, 3206A, I, 232-234, II, 1505) the attack should have been directed particularly at, and limited to, that particular situation; similarly, as to the towns where Appellant delivers at the city gates a mixture of gas from the Texas Panhandle, Oklahoma, and Central West Texas fields, Appellant should have directed its attack at, and limited it to, only that volume or portion of such gas at each particular city gate which came from a foreign state in interstate commerce and was, therefore, claimed to be exempt from state regulation; likewise, if the gas coming through Line A from the Panhandle field in Wheeler County, Texas, across the southwest corner of Oklahoma and back into Texas was gas moving in interstate commerce and, therefore, exempt from the regulatory control of Texas, as Appellant contends, before being commingled with Texas gas at various points in Texas, then the duty devolved upon Appellant to level its attack directly at, and limit it to, this particular volume of foreign gas at each city gate.

STATEMENT AND ARGUMENT UNDER POINT I

(Pp. 4-5, supra)

Throughout approximately seven months of hearings before the Commission, the Company deliberately and carefully abstained from every word and deed which would even suggest to the Commission any intention of the Company then, or later, to object that because of any claimed defense of interstate commerce the Commission was deprived of power to promulgate the order and make it applicable as it did. This fact is very plainly revealed by the statement of Appellant's counsel, (R. I, 305) that

> "It does not appear from the opinion and order of the Railroad Commission that the Commission would have found that 32c was a reasonable charge for gas moving throughout its entire transit up to the city gates in intrastate commerce, *had it been advised or had it known that it did not have the right to determine and enforce a rate applicable to all gas sold by the defendant.*"

This statement, it will be observed, was made not before the Commission, but in the District Court trial, *after* the Company had for the first time raised in its District Court pleadings (R. I, 124, 130, 136-137) the interstate commerce defense. Equivalent statements are made at R. II, 1496-1497.

The entire 11,232 pages of oral testimony adduced before the Commission, and all of the exhibits introduced before it, may be searched in vain for a single hint upon the Company's part to put the Commission upon guard that the Company intended then, or later, to raise any such objection. We have not seen fit to

incur an expense of $15,000.00 or $20,000.00 for having the Commission's record printed in this Court merely for the purpose of showing what it *does not* contain, but if the Company can point to anything in the Commission's record which would fairly put the Commission upon notice, or even upon reasonable suspicion, that the Company intended to raise any such objection or defense then or at any later stage, we will stand the expense of having such record excerpts printed as this Court may deem necessary.

This being true, we think the strongest possible case of estoppel is presented, to preclude the Company absolutely from attacking, or urging any defense against enforcement of, the order because of any claimed interstate commerce operations.

A defense of this character may be waived by the conduct, or silence and acquiescense, of the party litigant when under the duty to speak, the same as in the case of any other defense or ground of attack.

STATEMENT AND ARGUMENT UNDER POINT IV

(Pp. 7-8, supra)

See Commission findings, R. I, 25-28. Lone Star Gas Corporation owns in excess of 99 per cent of the voting stock of Lone Star Gas Company, (R. I, 235) and of the voting stock of every distributing company in Texas to whom Lone Star Gas Company sells gas, with the single exception of one independent distributor at Gainesville and one at Waxahachie, R. I, 235-237, 257. The volume of sales to the independent distributors at the two points mentioned are

relatively small; amounting to slightly over one per cent of total Texas deliveries, R. I, 297. Appellant and all of its affiliated companies maintain their general offices and places of business in two adjoining and interconnecting buildings in the city of Dallas, Texas, R. I, 237, 238, 250, 426-428. The completely interwoven and interlocking personnel and common members of the respective boards of directors and principal responsible officials of the various affiliated companies are shown in Chart R. III, 1917, 2175, and R. I, 235, 250, 314, 379-382, 238, 240-241, 245-246. Voting by proxy and power of attorney is done at stockholders and directors meetings, R. V, 3339, R. I, 249. Although Lone Star Gas Corporation has no permit to do business in Texas, (R. I, 235) it maintains in the Texas offices of its underlying affiliates a dummy or memorandum set of its books for the guidance and information of the affiliates, R. I, 428-429. Access to these Lone Star Gas Corporation books has always been denied the regulatory authorities of Texas, for the purpose of obtaining any information relative to the cost to the holding company of services claimed to have been rendered the affiliates by the holding company, or for any other purpose, R. III, 1880. The holding company habitually lends large sums of money to the underlying companies upon unsecured notes, at 6% annual interest, the money being advanced as and when needed. This indebtedness, in the case of Lone Star Gas Company, amounted to approximately $19,000,000.00 at its peak a few years before the hearing, but had been reduced to approximately $17,600,000.00 at the time of the hearing, R. I, 412. The unsecured advances to Community Natural Gas

Company amounted to $8,000,000.00 or $9,000,000.00, R. I, 242. All of the affiliated companies owed substantial unsecured amounts of money to the holding company with the possible exception of Municipal Gas Company, R. I, 243. Municipal Gas Company owed in excess of $100,000.00 to Lone Star Gas Company, unsecured, for city gate purchases, R. I, 245. Lone Star Gas Corporation is a Delaware corporation, with its nominal domicile in Wilmington, Delaware, but has its principal office at 800 Union Trust Building, Pittsburgh, Pennsylvania, R. I, 250. Lone Star Gas Corporation does most of its banking with the Union Trust Bank, of which bank G. W. Crawford, one of the principal stockholders, directors, and officials of the entire affiliated group, is also a director, R. I, 414, 472. The holding company is also a part owner of the Northern Natural Gas Company group, (R. III, 2058), consisting of 7 or 8 affiliated companies, of which D. A. Hulcy, one of the principal officials of the Lone Star group, is the common secretary-comptroller, R. I, 314.

The Lone Star group maintains common purchasing facilities in Pittsburgh, Pennsylvania, through the services of J. M. Simpson, Vice-president of Lone Star Gas Corporation, purchaser for the entire Lone Star group, and for the Columbia Gas and Electric Corporation group, a set-up controlling assets of about $600,000,000.00 to $700,000,000.00, R. I, 367, 417-418. The Lone Star group avails itself of the legal services of the General Counsel, who is a director, stockholder and official of various affiliated companies in the Lone Star group, in all rate litigation and other legal matters, R. I, 248. The Lone Star group also maintains a technical staff of rate litigation experts,

available to all companies in the group, consisting principally of the Company's principal witnesses in this cause, Hulcy, Biddison, Steinberger, and Connor.

The holding company has the right to select and control the selection of all members of the board of directors of each of the various affiliated companies in the group, and actually exercises such control, R. I, 377-378, 383-384. Hulcy testified in substance that he could not answer whether the directors of the underlying companies would be put off the boards if they failed to follow the wishes of the holding company, because such had never happened, R. I, 384.

In its attempt to justify payment of management fees to the holding company, the Appellant detailed much "advice" furnished it and the underlying companies, pertaining to all of Appellant's affairs, (but without even attempting to prove the cost to the holding company of such services); but to the discerning mind, the record reveals plainly that this is but an obvious camouflage of the absorption by the holding company of the profits of the Appellant, and that the "advice" would more appropriately be called "dictation" or "control" R. I, 239-244, 366-367, 411-413, 415-417, 419-420, 428-429, 434, R. III, 1640, 1880, 1902, 2126A. In addition to paying the holding company the management fees for such pretended "advice and services", Appellant also pays again for them, directly to the attorneys, engineers and auditors who furnish such "advice and services", R. I, 415-417.

Connor, (R. II, 1114-1115), for purposes of going concern value, considers the affiliates as being one integrated and commonly owned, controlled and op-

erated setup, from well to burner tip. But otherwise the Company insists they are all separate and independent entities.

If this record does not reflect a holding company which is not content merely to hold, we have never seen one.

In these circumstances we think there is not the slightest doubt that the highest state courts correctly disregarded the corporate fictions and treated the entire group as under a single ownership, management, and control, engaged in all three phases of the natural gas business in Texas.

STATEMENT AND ARGUMENT UNDER POINT VI

(Pp. 8-12, Supra)

The Company admits (R. I, 376) that it would not be practicable to segregate the properties, expenses, and revenues in such a way as to determine and fix a separate reasonable gate rate for application at each of the cities and towns, approximately 275 in number, served by its pipe line system in Texas. The Commission was thoroughly in accord with this view, and so are we. The only alternative was to fix a uniform gate rate for application at all Texas points upon the system. In order to accomplish its confessedly proper function of determining and fixing reasonable burner tip rates, the Commission had to pursue one of two methods: It could conduct 275 separate burner tip cases, and in each case hear full evidence upon the production and transmission phases (gate rate) and thus determine the reasonable cost of delivering gas to

the particular city gate; or it could in one hearing, fix a final uniform gate rate for the entire system in Texas, and later build the burner tip rates upon same after hearings as to the distribution operations only.

In view of the fact that the State has probably expended something in the neighborhood of $200,000.00 in the investigation, determination and defense of this 32c gate rate, and the Company has expended probably close to $1,000,000.00 in contesting the matter, the Court may gain some insight into the expense that would be involved in 275 repetitions of the gate rate case. And this is quite aside from the 6 years of time elapsed from the beginning of this proceeding to the present hearing.

We have stated frankly to the Court in Point VI the Commission's policy and intentions with respect to the treatment of the gate rate fixed in this proceeding. It is not a meaningless inquiry or quest after mere preliminary information, as this Court construed the gate rate inquiry and orders to be in *State Corporation Com. vs. Wichita Gas Company*, 290 U. S. 561, 78 L. Ed. 500, but is an indispensable step toward fixing ultimate burner tip rates, and is a final, binding and conclusive legislative act fixing the rate to be charged by the pipe line company and paid by the distributors for gas delivered at the city gates.

The Commission has expressly kept the proceeding open (R. I, 116) for further orders and modifications upon further appropriate application and proof by any interested party. That means that if, because of changed conditions or other reasons, the future should reveal that the 32c gate rate requires modification, the

Company or any other interested party may obtain it by due application and proof before the Commission in the gate rate cause, Gas Utilities Docket No. 75.

In all burner tip cases which have come before the Commission or the courts since the order, however, the Company has not chosen to so treat and accept the order as being final, binding, and conclusive upon the matters therein determined. In each of such burner tip cases the Company has insisted upon the privilege of introducing full evidence, and obtaining a complete *de novo* hearing, upon the entire production and transmission phases, as if the gate rate had never been heard or determined by the Commission. And this, notwithstanding the Company has never made application to the Commission in Gas Utilities Docket No. 75 for a modification of the gate rate fixed, but has chosen rather to defy and ignore it as a nullity and to attack it directly under the 14th Amendment in all the courts of the land, and to ignore and attack it collaterally in all burner tip cases based on the present order, both before the Commission and the reviewing courts. On the contrary, the Commission has insisted, and will continue to insist, both in fixing and defending burner tip rates in towns on Appellant's system, that the applicable gate rate has been finally and conclusively fixed by the present order, in Gas Utilities Docket No. 75.

Paradoxically, the Company has insisted that it is not permissible for the Commission to conduct any burner tip hearings, or enact any burner tip orders, or try any burner tip cases in the courts, until the final determination of this cause in this Court. If the Com-

pany's position be sustained, this Court can readily see what some of the consequent results would be. If the Commission had to suffer a period of six years to elapse from the initiation to the final determination of a gate rate, before even beginning the program of fixing burner tip rates based thereon, the process of rate making and ensuing litigation would be an endless one, and the entire program of rate regulation would be stymied pending perpetual litigation over the gate rate. If and when the Commission ever got around to the matter of fixing the 275 burner tip rates, each of these would require six years also to reach the stage of finality. Furthermore, the expense itself would be utterly prohibitive, considering that the gas consumers have to bear all the expense both on the State's and the Commission's side. This would result inevitably in a total break-down of the rate regulation program. And, doubtless, from the Company's standpoint that would be a "consummation devoutly to be desired."

Moreover, and more to the point, if the Company can defeat all state regulation merely by running one of its main transmission lines a few miles within Oklahoma, and by injecting a few atoms of Oklahoma gas into its 4,000 mile pipe line system, 86 per cent of which is located in Texas; and, retreating behind the bulwark of the federal commerce clause, establish that the state is entirely impotent to fix any gate rate at all, as the Company contends here, this would be even more effectively lethal to the state regulatory power than the Company's tactics above outlined.

Appellant relies especially upon *Missouri ex rel. Barrett vs. Kansas Natural Gas Company*, 265 U. S.

298, 68 L. Ed. 1027, and upon *State Tax Commission of Mississippi vs. Interstate Natural Gas Company*, 284 U. S. 41, 76 L. Ed. 156, as establishing that the Commission has not the power to do that which it has undertaken to do in this case. Both of those cases are plainly and readily distinguishable from this case upon several different grounds, the most obvious of which is that in those cases the whole volume of gas was transported from another state; the sales involved in those two cases were being made only at wholesale by an interstate transporter of gas to *independent and non-affiliated* distributing companies, and not to *alter egos* or affiliates owned, operated and controlled by the transporter or by a common holding company who owned and operated and controlled both the transporter and the distributor as is the case here; and further, the transporter was not there shown to be engaged in the numerous and extensive intrastate distribution and other activities that Appellant carries on in Texas, nor had the gas been subjected to the numerous methods of treatment and inextricable commingling shown here, which would deprive it of any interstate character it may ever have possessed.

Appellant has seemed especially to rely upon this Court's language in the *Barrett case* that "The paramount interest is not local but national,—admitting of and requiring uniformity of regulation. Such uniformity, even though it be the uniformity of governmental non-action, may be highly necessary to preserve equality of opportunity and treatment among the various communities and states concerned." That language, regardless of how appropriate it may have been to the

particular case there under consideration, can have no application to the situation here. In the first place, it is addressed to a question of legislative policy and not to a justiciable question of law or fact. *South Carolina State Highway Commission vs. Barnwell Bros.*, ——————U. S. ——————, 82 L. Ed.——————. In the second place, the State of Oklahoma and its communities can have no possible interest in what rates may be fixed by the State of Texas for the sale and distribution of gas in local commerce within the State of Texas. Likewise, Oklahoma can have no interest in what gate rate may be applied in Texas as a basis upon which to build local Texas burner tip rates.

Appellant's contention in this respect boils down to an insistence (R. V, 3500-3501) that although the state may admittedly, for all practical purposes, fix the rate to be *charged* by the Appellant and directly fix outright the amount which may be *paid to* Appellant by the distributors, at all city gates in Texas, even for interstate gas, by the indirect method of fixing in burner tip cases "what such companies may reasonably *pay and charge* for the gas sold to them by the defendant at the city gates," that it cannot accomplish the same result directly in a uniform gate rate case by ordering the affiliated pipe line company not to *charge and receive from* the distributors in excess of a certain sum. We submit that this is a distinction without a practical difference. The ultimate effect upon interstate commerce in either instance is identically the same.

Where the distributors and the pipe line company are affiliated with and controlled by, a common parent holding company, as is the case here, the situation

amounts to no more than this: That the entire system and operations from well to burner tip are owned, managed, and controlled by a single corporation, and the Commission has in this order merely fixed the price to be charged by that corporation—not upon a sale to someone else, for there is no sale possible from oneself to oneself—but a price to be set up as a reasonable charge for all operations by that single corporation up to and including deliveries at the city gates. *State of Texas vs. Public Service Corporation of Texas,* 88 S. W. (2d) 627, writ refused. In such case the money all goes into and comes out of a common pocket in any event—that of the holding company—and it makes no difference how the ultimate process of local burner tip regulation be accomplished—whether step by step or all at one fell swoop; whether directly or indirectly. In the case of sales to a non-affiliated distributor the fixing of a maximum operating expense which the distributor may set up for gas purchases at the city gate is equally effective for all practical purposes in determining the amount realized at the city gates for interstate importations of gas, because the independent distributor, in its desire to avoid certain and immediate financial bankruptcy, would be impelled by motives of self-preservation not to pay more to the independent pipe line company than it would be allowed to cover into its burner tip rates. In the present case there are involved sales of only relatively small volumes (R. I, 297) to only two independent distributing companies. Admittedly no gas claimed by the company to be transported in interstate commerce is delivered at the city gate of Waxahachie, R. II, 1505, R. I, 232-234; Map R. V, 3006-A,

The small volumes of sales to the independent distributing company at Gainesville are the only ones in which the interstate commerce question could have any possible application as to an independent distributing company.

Appellant cites only one case by this Court on the question of a state's power to fix a gate rate on interstate gas transported and sold to it *affiliates* in the receiving state. That was only a *dictum*, in *State Corpn. Commission vs. Wichita Gas Co.*, 290 U. S. 561, 563-564, 78 L. Ed. 500, 502. The statement is expressly admitted to be only dictum, (290 U. S. 568) where this Court states that it is unnecessary to pass upon the validity of the gate rate orders, there involved. None of the four cases cited supports the dictum.

STATEMENT AND ARGUMENT UNDER POINT VII

(Pp. 12-13, supra)

If the State appellate courts were correct (as we believe unquestionably they were) in holding that because of common ownership, operation, management, and control of all natural gas operations the Lone Star group of affiliated companies is to be considered in legal contemplation as a single unified owner, then in reality there are no sales at any city gate in Texas, where the interstate commerce question would have any possible application at all, with the single exception of the small volumes sold to the independent distributor at Gainesville, R. I, 257.

This being true, aside from said small sales to the Gainesville Gas & Electric Company there is no "commerce" carried on in the State of Texas by the Appellant or its affiliated group of companies save and

except the admitted intrastate commerce of sale and distribution of gas direct to its local consumers in Texas, and the sale of admittedly intrastate (West Texas) gas to Waxahachie Gas Company at the city gate of Waxahachie.

STATEMENT AND ARGUMENT UNDER POINT VIII

(P. 13, supra)

None of the cases cited by Appellant on page 65 of its brief is in point upon the operations here involved.

Hanley vs. K. C. S. Ry. Co., 187 U. S. 617, 65 L. Ed. 104, and *M. P. R. Co. vs. Stroud*, 267 U. S. 404, 69 L. Ed. 683, involved interstate carriage of freight, by common railroad carriers, between termini in the state of origin and destination, but over a route crossing state lines; which field of regulation had been expressly taken over and removed from the field of permissible state regulation by the terms of the interstate commerce act, which had the effect of broadening the scope of regulation beyond what otherwise would have been held to be interstate commerce, *per se*, immune from state regulation, in the absence of such a national statute.

State Tax Com. vs. Interstate Natural Gas Co., 284 U. S. 41, 76 L. Ed. 156, involved sales of gas by an interstate transporter to independent distributing companies at wholesale, the entire volumes having been imported from another state.

Western Union Telegraph Co. vs. Speight, 254 U. S. 17, 65 L. Ed. 104, was decided by this Court virtually by default, no brief or argument having been

submitted on behalf of the respondent. The terse opinion by Mr. Justice Holmes cites only *Hanley vs. K.C.S. Ry. Co. supra*, and *Kirmeyer vs. Kansas*, 236 U. S. 568, the latter a liquor case; and neither case is in point. The Court properly decided this question in *Lehigh Valley Ry. Co. vs. Pennsylvania*, 145 U. S. 192, 201-202, 36 L. Ed. 672, and the other cases cited by us under our Point VIII.

STATEMENT AND ARGUMENT UNDER POINT IX

(Pp. 14-15, supra)

A mere glance at the map of Line A, in the appendix to Appellant's brief, should be almost sufficient to convince the Court that the Company could have no purpose in detouring and extending that line a short distance within and parallel to the Western boundary line of Oklahoma, except to attempt evasion of state regulation. See Company map, R. V, 3009-3010, showing that there are no gas fields in Oklahoma within reach of Line A, and also that on the Texas side the terrain is smooth, level and free of obstructions, whereas the actual route of Line A in Oklahoma crosses many streams and much rough country.

Many other pertinent facts are reflected by the record, however, to reinforce that conclusion. The Commission's witness Freese testified (R. I, 269-272) that *Line A* could have been constructed as cheaply wholly within Texas as over the route chosen; that a smaller quantity of rock excavation would have been encountered; that the line would have been laid on a straight course instead of a curve; and would have been ap-

proximately five miles shorter than the existing line; and furthermore that it could have been routed through Wellington, a town of 1,968 population (not now served by the line) instead of Hollis, Oklahoma, with a population of 1,699, which is the only Oklahoma town served by Line A on the section within Oklahoma, and which town could as well be served by a slightly longer tap line from the main line wholly within Texas. The Commission's witness French had personally inspected the parallel transmission line of Northern Texas Utility Company, constructed at about the same time as, or later than, *Line A*, wholly within Texas, from the Texas Panhandle Field to the City of Wichita Falls, Texas, and intervening points; he testified that he made excavations and classified the soils on this line and checked them against the original field construction notes of the line; that on this line he classified 91.94 per cent as machine excavation, 1.53 per cent as loose rock, .45 per cent as solid rock, and 6.08 per cent as hand earth excavation; that he found no unusual difficulties on the Texas route; that the river crossings on the Texas route were not unusually difficult or expensive to construct, R. III, 1843-1851. Contrast Steinberger's classification (R. II, 1253) on that portion of Line A in Oklahoma only, as machine excavation 86.5, hand earth 5.3%, and rock 8.2%.

STATEMENT AND ARGUMENT UNDER POINTS X, XI, XII, and XIII

(Pp. 15, 16, 17, supra)

Prior to 1918, the tremendous natural gas deposits in Texas had not been discovered or developed. The

only extensive Texas field developed prior to that was the Petrolia Field. Upon incorporation of Lone Star Gas Company in 1909, certain leases in that field owned or controlled by the incorporators were transferred to Appellant in payment of a substantial amount of its original $2,500,000 capital stock, R. III, 1879. Its original line supplied gas only to Fort Worth and Dallas, Texas, and intermediate towns between those points and the Petrolia Field. About the year 1918, with the discovery of the Ranger Field in central west Texas extensive reserves were developed in that area and tapped by extensions of Appellant's system. In 1918, Appellant constructed Line G from the Fox, Loco, Palacine and other fields in Oklahoma. In 1918 Line H from Walters, Oklahoma, to Petrolia, Texas, was completed and joined with Appellant's system. In 1919, Line Second H, Walters, Oklahoma to Petrolia, Texas, was completed and connected with the system. In 1926-1927, Line A from the Panhandle Field in Wheeler County, Texas, to Petrolia, Texas, was constructed and connected, R. I, 368.

At the time of the trial, therefore, the Company was obtaining its supplies from three principal sources —Central West Texas Field from which the gas was transported eastward; the Texas Panhandle Field, in Wheeler County, from which it was transported south-eastward, through Line A; and the Oklahoma Fields, from whence it was transported southward, through Lines G, H, and Second H. According to the Company's computations at page 28 of its brief, it is deducible that the following percentages of Appellant's total deliveries in Texas and Oklahoma were ob-

tained for the following years from the three principal sources:

Year	From West Texas Fields	From Panhandle Fields	From Oklahoma Fields
1929	67.1 per cent	14.8 per cent	18.1 per cent
1930	69.3 per cent	16.5 per cent	14.2 per cent
1931	74.0 per cent	17.0 per cent	9.0 per cent
1932	70.4 per cent	23.3 per cent	6.3 per cent
1933	76.7 per cent	19.5 per cent	3.8 per cent

State's Exhibit No. 5 (R. I, 297) shows that Oklahoma produced gas, for the following years, constituted the following percentages of Appellant's total deliveries in Texas:

1931	10 per cent
1932	7 per cent
1933	4.5 per cent

As offsets against these quantities of Oklahoma gas consumed in Texas, it should be remembered that there were very large, rapidly and constantly increasing volumes of Texas gas being consumed in Oklahoma. Company witness Schmidt testified that if the past rate of decline in Texas consumption of Oklahoma gas from 1929 to 1933, inclusive, should continue there would be no Oklahoma gas consumed in Texas by the end of 1934, R. II, 1481, 1482-1487.

In the District Court trial, Company Witness Connor testified that the Company intended to take up and remove Line H, (from Oklahoma) during the year 1934, R. II, 1417. This line has now actually been removed in accordance with the Company's in-

tentions thus expressed; leaving only Line G and Line Second H to bring gas to Texas from Oklahoma. The system map (Appendix to Appellant's brief and record V. 3006A) show three main transmission lines extending from Petrolia, Texas, to the vicinity of Dallas and Fort Worth, Texas. These are lines B, Second B and the "Government 10-inch Line" (the last-named line being excluded from the appraisal and being the line used in carrying out Appellant's contract with the U. S. Government for supplying its helium plant from whence the helium contract revenues were derived which are segregated in the Commission's opinion, R. I, 20.) Line Second B has also now been taken up and removed.

Commission's Exhibit No. 4 (R. III, 2124 A) closely compared with Commission's Exhibit 5 (R. III, 2126 B) shows that after offsetting the deliveries of Texas gas as against Oklahoma gas delivered in Texas, there is a net balance in the exchange, favorable to Oklahoma, of the following percentages of the Company's total deliveries in both states:

Year	From Oklahoma Fields
1929	16.9 per cent
1930	13.0 per cent
1931	6.7 per cent
1932	4.2 per cent
1933	.4 per cent

The obvious reason for the continued sharp and steady decline of Texas importations of Oklahoma gas are the depletions and failure of the older Okla-

homa Fields and the simultaneous discovery and opening of the vast new fields in Texas. The Company's Line A now taps the Shamrock Field in Wheeler County, Texas, and in addition, its own evidence shows that it owns or controls vast undeveloped deposits in Gray and Carson Counties, Texas, west of Wheeler County, all being parts of the vast Texas Panhandle Field of the extent of which this Court took judicial notice in the recent case of *Thompson vs. Consolidated Gas Utilities Corporation*, 300 U. S. 55, 81 L. Ed. 510. The Company witness, Schmidt, recognizes (R. I, 222) that this is one of the largest gas reserves in the world.

The Company also admits that it possesses other vast developed and undeveloped gas reserves in the West Texas fields; and in the past it has produced from its reserves only about 20 per cent of its total deliveries, and has purchased the remaining gas, approximately 80 per cent of its deliveries. The prevailing wellhead price in the Texas Panhandle Field, observed by the Company since 1926, has been 2c per M C F, R. I, 581. In the West Texas Fields the prevailing price is approximately 6c per MCF R. I, 586. In Oklahoma the prevailing wellhead prices are as follows: Chickasha, 8c; Duncan, 10c; Loco, 6c; R. I, 593-594. The Company formerly purchased gas from its affiliate, Meridian Gas Company in the Chickasha, Oklahoma, Field, at 15c per M C F, R. I, 108. The average overall field prices paid by the Company in Texas and including much more expensive Oklahoma purchases, from 1920 to 1933, are shown at R. I, 606-607.

Appellant will not deny that since the close of the District Court record it has removed lines H and Second B, and has constructed two large transmission mains from the Long Lake and Cayuga fields in East Texas to points near Dallas and Waco, Texas, respectively, where said transmission lines connect with Appellant's pipe line system.

Dunn testified that the Company owned in total semi-developed and marketable gas reserves in proven areas, 367,362,084,000 cubic feet. R. I, 524, 525, 535.

Dunn further testified that the Company had in the semi-developed reserves a forty year supply based upon the 1933 production; testifying that in 1933 the Company produced from 7,000,000 to 9,000,000 M C F, R. I, 534.

Hulcy testified that if the withdrawals were 9,000,000 or 10,000,000 MCF a year, there was not any question but that it would be sufficient to last approximately forty years. R. I, 577.

It should be noted that the witnesses testified that the Company-produced gas was approximately 9,000,000 MCF for the year 1933. They did not point out, however, that this 9,000,000 MCF was considerably in excess of the actual withdrawals during that year from the Company's reserves, or that it included the volumes of inert gas introduced into the West Texas gas at the Joshua dilution plant just southwest of Fort Worth, Texas, R. II, 1571. The actual withdrawals from the Company reserves for

the years 1927 to 1932, inclusive, were as follows: R. I, 107.

1927	2,671,443 M Cubic Feet
1928	3,451,935 M Cubic Feet
1929	5,162,647 M Cubic Feet
1930	6,473,463 M Cubic Feet
1931	4,924,844 M Cubic Feet
1932	4,829,077 M Cubic Feet

The withdrawals from Company-owned reserves for 1933 were 6,046,035 M Cubic Feet, being 5,432,255 M cubic feet from Texas reserves, and 613,780 M cubic feet from Oklahoma reserves. R. III, 2165, 2124A.

Based upon actual withdrawals from the Company reserves for 1933, which are 6,000,000 MCF, it can readily be seen that the Company has a sufficient volume in its developed marketable reserves to last sixty years. Company Exhibit 30 (R. V, 3019), shows that by volume the Company's developed marketable reserves in Oklahoma are only 1.2% of those in Texas. Hulcy (R. I, 458-459) admits that 95% of the Company's entire business is in Texas against 5% in Oklahoma; while 13.8% of its pipe line mileage is in Oklahoma and the remainder in Texas.

These facts, and others appearing in the record, suffice to show clearly four things:

(1) That during and since 1933 there has been no necessity or occasion for the Company's importing a single cubic foot of gas from Oklahoma, or any other state, to meet the Company's Texas demands.

(2). That the Company's developed marketable reserves, aside from its undeveloped reserves and its unlimited purchase contracts and connections in Texas, are more than sufficient to meet its entire probable Texas demands for a period of many years in the future, and that this has been the situation for at least several years in the past.

(3) That instead of there being a net flow of gas from Oklahoma to Texas during and since 1934, there is in all probability now, and has been since 1934, and will continue to be in the future, a greater and increasing flow of Texas gas to Oklahoma than of Oklahoma gas into Texas. Company witness Schmidt himself testified (R. I, 225-226) that the gas at various times flowed in both directions in line G. Hulcy testified the same as to the whole system, R. I, 376. At Record I, 229, Schmidt attempted to modify his testimony in that respect, but still admitted that this occasionally happens. At R. II, 1470-1471, he finally denied belief that it has happened.

(4) That both because of the higher prevailing wellhead prices on gas purchased in Oklahoma, and because of the Company's greater investment per meter in Oklahoma than in Texas, the Company's operations in Oklahoma are very much more expensive and less profitable than those in Texas. The Company so admits, R. III, 1594.

STATEMENT AND ARGUMENT UNDER POINT XV

(Pp. 18-20, supra)

Under the Commission's order the Company is left free, as it has always been, to import as much gas into

Texas, and to export as much gas from Texas, as it pleases, and to permit a free interflow of gas from any and all sources within its lines as it may see fit. There is absolutely no prohibition, restriction, impediment or burden upon the free interstate flow of gas. The only effect of the order is that from whatever source the gas comes to the city gates in Texas it must all be sold at a reasonable price, including foreign and Texas gas alike. The effect of such an order upon interstate commerce, if any interstate commerce be involved at all, which we deny, is certainly not a direct and substantial burden upon the same, but is at most only an incidental, indirect, remote, unsubstantial and unprohibited burden. The order is made applicable in Texas only: R. I, 15.

STATEMENT AND ARGUMENT UNDER POINT XVI

(Pp. 20-21, supra)

The record shows that when the gas leaves the Texas Panhandle field through Line A, and the Oklahoma fields through lines G and Second H (line H having now been removed) the Company does not know what the ultimate destination of the gas is. It is not destined for any particular locality, but is only started off in a general direction destined for general commingling in the northern part of the system, R. I, 225-226, 376. No sales are made of the gas, or of any particular volume thereof, to any person prior to the time it arrives in Texas; and our view is that (corporate fictions disregarded) no sale is made of it to any person after its arrival in Texas, except to the ultimate consumers at the burner tips—with the single exception of the small sales to the independent distributors

at Gainesville and Waxahachie. The gas simply flows along its way until by fortuitous circumstance of load demand it is drawn out of the line.

Schmidt testified the direction of flow in Line G alternates (R. I, 225-226) and Hulcy says the same of the whole system. R. I, 376. Dunn testified (R. I, 531, 224) that he is the sole person who determines where the supply of gas shall be withdrawn or purchased, and where it shall be directed to in the 4,000 mile system of the Company. In these circumstances it will readily be seen that it lies easily within the power of the Company to shift its withdrawals and transportation from day to day, and from hour to hour, and from year to year, in such way as totally to evade and defeat effectual regulation by any and all state authorities and even by federal authority, if a federal regulatory body should be provided by Congress. See how the proportions of gas from the various sources may be shifted at any given point by the Company from day to day, R. V, 3241. When a proceeding should arise before any state body the Company would merely have to transport a little gas into its system from Oklahoma, and under its theory the entire operations would be exempt from state control in both states as interstate commerce. On the other hand if an inquiry should arise before a federal regulatory body next day, all the Company would have to do would be to shut off the supply of gas from Oklahoma and there would be no interstate commerce involved. The only practicable way in which any effective regulation can be provided at the present time in Texas is to uphold the Commission's right to regulate in the manner in which it has been done here.

STATEMENT AND ARGUMENT UNDER POINT XVII

(Pp. 21-23, supra)

The gas coming through Line A is run through a gasoline extraction plant at Hollis, Oklahoma. Schmidt describes the process. Similar treatment is given the gas coming through Lines H and Second H at the gasoline plant in Petrolia, Texas, and Line G at the gasoline plant at Gainesville, Texas. Schmidt testifies (R. II, 1479) that the extraction of these volatiles reduces by about 3% the BTU heating content of the gas. He also says (R. II, 1484) that in this extraction process the gas is allowed to expand somewhat from its higher pressures in a 30" diameter tank and filter through an extraction oil. He admits (R. II, 1591) that the extraction process changes the B. T. U. content of the gas. Schmidt pretends that the gasoline is extracted only to prevent line trouble, (R. II, 1479, Brief p. 32) but he admits the Company has made profits on the gasoline; and the Company repressures the gas into the "Miller Farm" near Petrolia, Texas, to absorb more gasoline and recover and extract same for profit, R. II, 1484.

Appellant, at p. 24 of its brief, quotes a provision said to be inserted in its gate rate contracts to the effect that the distributing companies shall install and operate "such regulators and regulator stations as it may require to regulate the pressure of the gas *after delivery thereof by vendor to vendee.*" The statement is ambiguous, and even misleading, unless one knows the significance of the language we have put in italics. The actual facts are that although the gas arrives at the city gate measuring stations at pressures ranging

from 100 to 350 pounds per square inch. Appellant itself owns, maintains and operates the first regulator or reducing mechanism through which the pressure is reduced to 25 or 30 pounds at the outlet side of the regulator before being metered and delivered to the distributors. At the next stage after this pressure reduction, the gas goes through the meter and is there measured and delivered to the distributors under this reduced pressure.

An examination of the Company's appraisal, Exhibit 28, will show that Appellant owns both the regulators and meters through which the gas is passed before delivery to the distributors. An example will be found at R. IV, 2386, and many others may be found in the record. The Company's witness Schmidt testified specifically (R. II, 1469-1470) that title to the gas does not pass to the distributors until it passes through the reducing regulator and is metered at low pressure and reaches the outlet side of the meter. At brief, p. 25, the Company states that this reduction in pressure "is done to accommodate the distribution plants in their operations" and solely for that purpose. It will be observed, however, that in the gate rate contracts the Company is specifically obligated thus to reduce the pressures before deliveries, a good example being found in the contract with the independent distributor Gainesville Gas & Electric Company (R. IV, 2325), requiring the Company to reduce the pressure to 20 pounds per square inch. For a similar provision in the contract between Lone Star Gas Company and Municipal Gas Company see R. IV, 2319. See also R. I, 219; R. II, 1470. Thus it will be seen that what the contract provision means, as quoted by the Com-

pany on page 24 of its brief, is that the distributing company shall install and operate only "such regulators and regulator stations" as the distributors may require to *further* reduce the pressures from 25 or 30 pounds to 4 or 6 ounces, after delivery to them, and before delivery to the retail domestic consumers. This shows clearly, also that the Company makes a gross mis-statement when, at p. 106 of its brief, it says, "There is no evidence of any reduction in pressure except that effected by the regulators of the distributing companies."

It is shown further that Appellant operates the retail distribution system in the important city of Fort Worth (shown in the exhibits and testimony as "Lone Star Gas Company, Fort Worth Division") where the local service necessitates that the gas be reduced to pressures as low as 4 to 6 ounces before delivery to the customers, and where approximately 33,000 customers are served (R. I, 219, 328; R. III, 1896).

The same situation prevails, as reflected by the Company's exhibits and testimony as well as those of the Commission, as to the retail domestic, commercial and industrial sales made by the Company on its rights of way over its entire system. In these cases the Company owns, maintains and operates the regulator equipment and the meter equipment. See for instance the item of gas connections $15,050.78 (R. I, 339), and also Company's Exhibit 5, R. III, 2211. For sales at farm taps on main lines see R. I, 407. For field and miscellaneous sales in Texas operations see R. III, 1641, 2116B. For list of numerous large industrial and commercial concerns served

directly by Appellant in Texas, see the following references: R. IV, 2393, 2406, 2407, 2409, 2414, 2415, 2428-2430, 2435, 2438, 2440, 2447, 2452, 2453, 2457-2459, 2464-2466, 2476-2477, 2492-2508, 2520-2522, 2525, 2535-2543, 2547-2556, 2558, 2560-2564, 2566-2589; R. III, 1693-1695.

A mere examination of the various system maps in the record, and the evidence generally, will disclose the even in the Company's transmission system, through its tap and lateral lines to retail domestic, commercial and industrial customers on its rights of way and in its tap lines to the city gates, the high pressure streams of gas in the main lines are broken up into much more numerous and minute streams.

See also the important industrial sales to West Texas Utilities Company, R. III, 1693-1695, shown by the map appendix to Appellant's brief, near the southwest corner of Oklahoma, as having been 1,713,055 MCF for 1933, out of a total production for that year from the Texas Shamrock Field of 6,448,138 MCF. The drawing off of this great quantity at that point to a single industrial customer in Texas necessarily "breaks the original package" even if the Line A gas be considered originally interstate gas. It will be seen that this is the first tap in Texas, as shown in map in Appellant's brief, and this takes place before any deliveries are made at any city gates; at each of which gates a further "breaking" takes place, of course.

Near Petrolia, in Texas, is located what is referred to in the record as the "Miller Farm," a depleted gas lease in which the Company for several years has been

repressuring or storing gas derived in part from Line A, (R. II, 1478, 1541), but mostly from Lines H and Second H coming from Oklahoma. The gas is there stored ordinarily in the summer time and withdrawn during the winter. The volumes so repressured or stored, in excess of the amounts withdrawn, are shown in Appellees' Exhibit 4, R. III, 2124-A. Since this table shows only the excess of volumes stored, over volumes withdrawn, the actual volumes stored greatly exceed the volumes shown by the table. Schmidt testified that 500,000,000 cubic feet were stored in this farm in 1933 alone, R.II, 1486-1487; R.I, 593; R.II, 1484-1485. It is obvious that gas stored in these sands is totally arrested in its movement for periods of six months or longer; nevertheless, Company witness Schmidt denies such fact, and states that it just "circulates through the sand", R. II, 1483. Schmidt's idea, thus expressed, as to what constitutes an "arrest" of movement of gas may explain his testimony, R. II, 1478-1484, that the forward movement of the gas is not arrested when it passes through the expansion tanks of seal oil in the gasoline extraction process.

In view of the decisions of this Court, cited under Point XVII, we believe it plain that the Company's entire business in Texas is intrastate, and subject to regulation by the Commission.

STATEMENT AND ARGUMENT UNDER POINT XIX

(Pp. 26-27, supra)

Statements and Arguments under Point XVII are adopted.

The record shows that in addition to the numerous other intrastate activities engaged in by the Company in Texas, and hereinbefore pointed out, the Company and all of its affiliates maintain their general offices in Dallas, Texas, where the entire business of said companies is transacted and carried on, R. I, 426-428, 237-238. We believe this brings the case squarely within the decision of this Court in *Southern Natural Gas Corporation vs. Alabama*, 301 U. S. 148, 81 L. Ed. 970, affirming *Alabama vs. Southern Natural Gas Corporation*, 170 S. 178.

STATEMENT AND ARGUMENT UNDER POINTS XX TO XXIV, INCLUSIVE

(Pp. 27-31, supra)

As shown under Point I, supra, Appellant did not raise the defense of interstate commerce before the Commission, nor was any segregation of any character made before the Commission in the evidence of either party. As a consequence the Commission received evidence from both parties as to overall property valuation and operations of the Company in both Texas and Oklahoma.

The evidence before the Commission, and District Court alike, discloses that because of the relative scarcity of gas in Oklahoma, and the consequent higher wellhead prices there prevailing, ranging from 6c to 15c per MCF, paid by the Company for gas purchased in Oklahoma, (R. I, 593-594, 108), and because the Company's investment per meter in Oklahoma was much higher than in Texas, the intrastate operations

in Oklahoma were very much more expensive and less profitable to the Company than those in Texas, R. III, 1594. This situation was not brought about by the State of Texas, the Commission or the consumers in Texas, but was a natural advantage bestowed by nature herself. This being true, we do not conceive that the consumers in Oklahoma, whose rates are to be fixed by the Corporation Commission of Oklahoma, are entitled as a legal or moral right to the same rates for natural gas as are the consumers in Texas.

Nevertheless, the Commission was fully cognizant of that situation, and took special note thereof, (R. I, 107-108) in pointing out the higher wellhead prices paid in Oklahoma; and also (R. I, 15) in stating that "the Company's Texas properties and its Oklahoma properties constitute parts of an integrated operating system. For that reason, *we have considered the Oklahoma properties and operations and the effect thereof on the revenues and the expenditures within Texas.*" The Commission realized, of course, that it had no jurisdiction to fix rates applicable in Oklahoma, so it continued: "On this basis we have fixed a rate for application *within the jurisdiction of Texas.*"

These markedly less profitable operations in Oklahoma were brought more sharply to the fore in the segregation made by Appellees before the District Court. The exhibits and testimony of Appellee's witness Phillips (R. III, 1667-1668, 2116-A, 2126-A) show that the net earnings, before providing for de-

preciation and depletion, attributable respectively to the Oklahoma and Texas operations, were as follows:

1931 - Texas	$4,758,714.46	= 96.9%
1931 - Oklahoma	150,456.67	= 3.1%
1932 - Texas	4,882,297.56	= 97.4%
1932 - Oklahoma	128,178.93	= 2.6%
1933 - Texas	4,185,327.48	
1933 - Oklahoma, a loss of	61,531.12	(red)

Year ending March 31, 1934, (overlapping nine months with 1933):

Texas	$4,416,571.74	
Oklahoma, a loss of	30,277.50	(red)

. The properties are 86% in Texas and 14% in Oklahoma, R. III, 1736-1737, 2142, 2157.

Although this great disparity in profit between Oklahoma and Texas operations was perfectly apparent to the Commission, it deliberately favored the Company, and the Oklahoma consumers, by fixing its rate at such a figure as that, if applied overall to the Company's entire operations in both Texas and Oklahoma, it would yield a reasonable net average return of 6%.

Totally ungrateful for this generosity, the Company immediately attempted to stab the Commission in the back by raising for the first time in the District Court the claimed defense of interstate commerce.

This new attitude upon the Company's part imposed upon it the burden of making before the District Court a segregation, first, as between its admittedly intrastate operations and the operations which it claimed were exempt from state control as inter-

state commerce, if it wished to sustain such defense; and, secondly, it thoroughly justified Appellees in insisting also that, if such a defense were to be interposed, there should be made also a segregation between Texas and Oklahoma properties and operations, so as to exclude the less profitable (and, for 1933, losing) Oklahoma business (R. III, 1594; 2116A, 2126A, 1667-1668) from consideration in determining whether the rate as applied only within Texas was unreasonable, unjust or confiscatory.

From the beginning of the District Court trial, however, until practically its close, the Company insisted that no segregation upon either basis was necessary or permissible, but that it was entitled to attack the order upon the same overall basis in Texas and Oklahoma as the Commission had used in fixing the rate. Appellees were firm in their insistence, however, that segregations should be made by the Company upon both bases, as part of the burden of proof devolving upon the Company, if in fact there were any interstate commerce involved.

The Company apparently was not very confident of its position, however; and finally yielded to the insistence of Appellees, to the extent of submitting a purported segregation as between what it chose to call "interstate and intrastate operations." R. II, 1500. The Company insisted that if any segregation were necessary or proper at all, the burden was upon the state, and not upon the Company, to make it, R. II, 1496-1497; also see R. I, 325-327, 376, 392-393, 482, 558, 568; R. III, 1629, 1735; R. II, 1142-1143, 1230, 1235, 1264.

The Company admitted that its records were kep in such way as to permit of easy segregation betwee Texas and Oklahoma properties and operations R. I, 390-393, 456-460, 481-482, 508, 557-558 570; R. II, 1143.

The Company also insisted that no segregation wa necessary or permissible in the District Court, becaus the Commission had made none. This contention i refuted by this Court's decisions in *Smith vs. Illinoi Bell Telephone Company*, 282 U. S. 133, 75 L. Ed 255, where the Illinois Commission had made no seg regation whatever between intrastate and interstate op erations in fixing local telephone rates for Chicago and where this Court remanded the cause, not to th Commission for further findings and segregation, bu to the *District Court* to make a proper segregation and where, after the segregation had been made by the District Court, and findings made by it holding the rate confiscatory upon the basis of such segregation this Court reversed the second District Court judg ment and finally upheld the rate as non-confiscatory *Lindheimer vs. Illinois Bell Telephone Company* 292 U. S. 151, 78 L. Ed. 1182.

The Company did not purport to make any segre gation whatever in the District Court as betwee Texas and Oklahoma properties and operations. Th segregation which it did make purported to be one be tween what Hulcy thought were "interstate and in trastate" operations; (R. III, 1604) and was worke out and sponsored by Schmidt, Connor, and Hulcy The first step was Company's Exhibit 45 (R. V 3207) which was a purported segregation only of th

gas supposed to have been produced in the Wheeler County, Texas, field and the Oklahoma fields on the one hand, and the West Texas gas on the other hand; and this segregation is based upon the specific gravity tests hereinafter discussed. The remainder of the segregation was made by Hulcy in Company's Exhibit 46 (R. V, 3279) which exhibit relates to properties, revenues and expenses.

Schmidt, in Company's Exhibit 45, provided the sinking-sand foundation upon which was constructed the Company's segregation of properties, revenues and expenses as between what the Company asserts as interstate and intrastate operations. It is in no sense a segregation as between Texas and Oklahoma property, revenues and expenses. The segregation is based upon the determination of "specific gravity" of gas in the Company's lines at some 11 or 12 points where it kept apparatus for such determinations. The Company made such a segregation based upon specific gravity determinations for the year 1933 only, which year admittedly was an abnormally warm year, R. III, 1594-1595. Even if the segregation were otherwise acceptable, being for 1933 only, it is too short a spread of experience on which to base a rate. Schmidt testified that Oklahoma-produced gas had a specific gravity of about .63. He also testified the specific gravity of the gas from the Panhandle area of Texas was about the same, R. II, 1499. The specific gravity of the gas from Central West Texas averages .785 to .83, R. II, 1499-1500. He left out of account the gas from Petrolia field, whose BTU content and specific gravity were different from all of the other gas. See also R. II, 1568-1569, showing that the West Texas gas had a

higher BTU content (1200) until it was diluted with inert gases at Joshua. Also R. II, 1591, giving BTU content of Texas and Oklahoma gases. He further testified that, based upon his specific gravity determinations, a segregation of Oklahoma gas could not be made from that gas produced in the Texas Panhandle, at any particular point on the system, R. II, 1579. This being true it was impossible to segregate the Texas Panhandle gas on the one hand from the Oklahoma-produced gas on the other hand at any given point on the system; therefore, he would be unable to determine by this test the combined volume of West Texas gas and Texas Panhandle gas as distinguished from the volume of Oklahoma-produced gas at any particular point in the system.

Schmidt testified that in the preparation of Exhibit 45, it was necessary to take into consideration the specific gravity of the gas, the pressure base, the temperature of the gas, and the barometric pressure at the point of measurement, (R. II, 1499); that the specific gravity will make a difference in the volume in the relation of the "inverse portion" of the square root of the gravity; that the specific gravity of the gas produced and transported from the Central West Texas area ranges in specific gravity from about .785 to about .83. (R. II, 1699); that the BTU content of the gas is changed after passing through gasoline plants (R. III, 1591); that the Oklahoma gas from line H and second H goes through a gasoline plant. (R. II, 1501); that the gas through line G goes through a gasoline plant, (R. II, 1501); that the introduction of inert gas at Joshua changes the specific gravity, (R. II, 1501); that the specific gravity of

the gas produced in the Panhandle field and in the several Oklahoma fields was approximately .63 (R. II, 1506); that a curve was made for each month principally because the specific gravity of the West Texas gas varies by a few points each month during the year and it was therefore necessary to determine the average specific gravity of the West Texas gas by months and plot a curve for each month instead of making a curve that might apply for a year, (R. II. 1507); that Fort Worth and Dallas, Texas, are furnished commingled gas at certain measuring stations and at other measuring stations wholly gas produced in Central West Texas, (R. V, 3228, 3229), that corrections had to be made for unaccounted for gas (R. V, 3221); that gas being compressible it does not follow Boyle's law exactly, (R. II, 1511). The above will suffice to show the intricacies through which the calculations must be carried to make a segregation by the specific gravity method. But this is not all. Schmidt further testified as follows: On line C-2 during the months of January, February, March, April, October, November, and December the specific gravity varied to such an extent that it was necessary to take daily averages of the specific gravity, (R. V, 3218), thus showing how unreliable the readings were for showing the true proportions of West Texas gas on the one hand and the indistinguishable Oklahoma-Texas Panhandle gas on the other hand. Similarly, for line E, (R. V, 3219). Similarly for Line F, (R. II, 3220). But further steps are outlined. The sales must be allocated by classes as between domestic and industrial gas. The witness testifies, due to the existence of these variable factors it was necessary to make

a determination by months of the relative volume of gas produced in the central West Texas area which had been sold at the domestic rate and the gas from the same area which had been sold at the industrial rate, (R. V, 3227). He testifies the metropolitan area of the city of Dallas received its supply of gas from 5 points of delivery, (R. V, 3229). Similarly for Fort Worth, (R. V, 3229). It will be noted from the charts shown at R. V, 3267 to 3278 that for a resulting specific gravity in the main of .80 the percentage of West Texas gas varies from approximately 79 per cent, (R. V, 3271) to 100 per cent (R. V, 3267). In other words, a specific gravity of .80 in the resulting mixture could mean a variation of 25 per cent in the amount of the West Texas gas.

Hulcy sponsored in evidence Company Exhibit 46 which purports to be a segregation of the property, revenues and expenses bottomed upon Company Exhibit 45. If the method of segregation adopted in Company Exhibit 45 falls down then the segregation of revenues, expenses, and property bottomed upon Company Exhibit 45 must fall also.

Even if the method of segregation were proper (which we do not concede) the year 1933 being an abnormally warm year (R. III, 1594-1595) as well as a "depression year," does not furnish a sufficient "spread of years" for adequate study. See cases cited under our Point XXXVI, infra.

A single illustration will suffice to show the degree of variation from day to day, by manipulation or otherwise, to which such a segregation is subject. At

Record V, 3241, Central Station, Dallas, on Line C, it is shown that on January 24, 1933, 13,604 MCF were measured at this station, all (100%) of which was West Texas gas. At Record V, 3242, March 2, 1933, the total gas measured at this station was 13,492 MCF, of which only 48% was West Texas gas. In other words, for the same total volume of gas the Company can at its own will and direction change the proportions of West Texas gas from 100% to as low as 48%.

We have heretofore pointed out Dunn's testimony that he is solely responsible for the sources, withdrawals, and direction of the gas in the system. R. I, 531. It is also significant to note Hulcy's testimony (R. I, 376) that direction of flow of the gas is continually reversing and shifting all over the system.

We point out also that it is conclusively shown that throughout the Commission hearings the Company was "lying low" before the Commission about the interstate commerce defense, while busily engaged in taking these gravitometer tests (of which it did not advise the Commission), and all the time the Company was preparing the data to spring for the first time in court. The order for the Commission's investigation served upon the Company was dated October 14, 1932, the hearing began November 1, 1932, and the Commission's order was dated September 13, 1933, R. I, 15, 116. It will be observed that the beginning of these gravitometer tests was January 1, 1933, and continued through that calendar year, R. V, 3241. The tests were made daily and continuously during the year. Although the hearings be-

fore the Commission continued until June 29, 1933, (R. I, 16), the Company made no disclosure before the Commission of its plan of making the gravitometer tests, nor of the results thereof. This shows plainly that this whole scheme was concocted after the Company learned of the pending rate investigation, and was carefully concealed from the Commission until its order was entered, and until the Company launched its attack upon the order on the ground of interstate commerce in the District Court for the first time in 1934.

Furthermore, the Company's exhibits and testimony show that while there were only 11 or 12 gravitometer test stations used, they were placed only at Gainesville and Petrolia, and the remainder grouped immediately around Dallas and Fort Worth. R. V, 3209-3222, map R. V, 3208A. No such tests were made at each of the city gates within the area in which the Company claims to have served mixed gas. And the Company throws no light upon why it chose and grouped the particular points for these tests as it did.

Hulcy was apparently not satisfied with the results of his labors; for, while he testified that it would be impossible to fix a separate gate rate for each town, (R. I, 376), he does in effect attempt by his segregation to do so upon a much more complicated and unreliable basis in "Area C" in which mixed gas is served.

This matter of "Area C" requires explanation. In the Company's testimony in explanation of its exhibit 46 (R. II, 1530-1567) Hulcy outlined areas A, B and C. "Area" and "Zone" are used synonymously

in the record and the map attached hereto as an appendix. Area A was the area covering the greater part of the Company's system in Texas within which it admitted that its operations were purely intrastate and subject to state regulation. Area B embraced the whole of Oklahoma and that portion of Texas served by Line A, west and north of Petrolia, within which area the Company claimed its operations were beyond state control. Area C embraced the relatively small zone in north central Texas within which it claimed to serve a mixture of Oklahoma, Texas Panhandle, and West Texas gas. Based upon these three areas, Hulcy worked out what he denominated D and E operations. D operations represented those which according to the Company's segregation embraced all property and operations in Area A plus an allocated portion of same in Area C; and E operations embraced all property and business in Area B plus the remaining parts of those in Area C. R. V, 3280.

In the Appellant's brief in the Court of Civil Appeals and in its application for writ of error to the Supreme Court of Texas, it attached as appendices a map in color with the lines of these respective areas plainly delineated. The colored map did not appear in the record. For some reason, the Company has not attached to its brief in this Court the map colored and with the areas delineated as it did in the state appellate courts. The map attached to its brief in this Court is the same map, but with the colored area lines and delineations obliterated. If the Court will hold the Company's map up to the light, it will see faint traces, similar to water marks, where these area lines

have been deleted, as has also been the legend which appeared in the upper right hand corner. For the Court's enlightenment, we have had the map, as it appeared in the Company's briefs in the state appellate courts, reproduced and attached as an appendix to this brief.

It conclusively appears that, aside from all other objections to this totally unreliable method of segregation, the results are not determinative at all of the proportions of West Texas gas on the one hand and the Texas Panhandle and Oklahoma gas on the other hand, served at each of the city gates, in Area C, and a very clear illustration of this fact is shown by the following circumstances:

Gas from West Texas is fed into Line F from the south. Gas from Oklahoma is fed into this line from the north during a part of the time. See map, R. V, 3208-A. The specific gravity measurements on this line were made on the McKinney tap, a tap line off the main line, about midway of Line F. There are some 15 cities and towns fed with gas from this line, and the proportions of West Texas, Texas Panhandle and Oklahoma gas respectively could vary considerably from the proportions measured at McKinney.

Aside from all other fatal objections to this method there is also the fundamental one that because of the Company's inability to determine by the gravity tests what proportions were Oklahoma gas as distinguished from Texas Panhandle gas, the segregation is wholly worthless if our contention be sound, as we think it is,

that the gas through Line A from the Texas Panhandle field is not transported in interstate commerce. R. II, 1497-1529; I, 230-231.

Contrast with the complicated, unreliable and inexact segregation made by the Company, the segregation made by Appellees in the District Court. The properties were divided according to the geographical location; that is, properties in Texas were allocated to Texas, and properties in Oklahoma were allocated to Oklahoma, except for Line A which was allocated wholly to Texas inasmuch as it brings gas from the Texas Panhandle across a corner of Oklahoma back into Texas. The revenues and expenses were divided on the same geographical basis. The net amount of Oklahoma gas brought into Texas was allowed for at the connecting point near the state line, at the average sale price for this gas in Texas. This net amount of Oklahoma gas brought into Texas was determined by deducting the amount of gas crossing the line into Oklahoma from the amount of gas crossing the state line from Oklahoma into Texas, R. III, 1736, 1737, 1748, 2124-A, 2142, 2157. This Court has approved such a geographical-and-use segregation in *Wabash Valley Elec. Co. vs. Young*, 287 U. S. 488, 495-497, 77 L. Ed. 447, 453.

Commission witness Phillips, in Ex. 4, (R. [redacted] 1632-1638, 1679-1683) directly allocated the operating revenues and expenses to Texas and Oklahoma respectively, and found that they substantially coincided with the proportions shown by the witness Freese in segregating the physical properties.

DIVISION B

CLAIMED DENIAL OF "ADEQUATE JUDICIAL REVIEW"

At page 126 of its brief, Appellant admits that it was not denied an "independent judgment as to the facts" by the District Court, or by the Court of Civil Appeals. Therefore, the doctrine of such cases as *Ohio Valley Water Co. vs. Ben Avon Borough*, 253 U. S. 287; *Bluefield Water Works & Imp. Co. vs. Public Service Commission*, 262 U. S. 679, 692, 693, and *St. Joseph Stockyards Co. vs. United States*, 298 U. S. 38, 51; and the *dictum in B. & O. R. Co. vs. United States*, 298 U. S. 349, 368, goes out of the case entirely.

The essence of Appellant's complaint as to denial of procedural due process under the Fourteenth Amendment, as stated at page 127 of its brief, is that by the judgment of the Court of Civil Appeals (and, incidentally that of the Supreme Court of Texas) it was denied "an adequate judicial review of the rate order." In subsequent argument in the brief, specifications are made that this claimed denial of adequate judicial review consisted in the judgment that the evidence as a whole was legally insufficient to overturn the presumed validity of the Commission's order, or to raise any issues of fact as to confiscation under the Federal Fourteenth Amendment to be resolved by the triers of fact.

Most of Appellant's complaint is directed at the *language and reasoning* of the Court of Civil Appeals in its opinion; more especially that to the effect that where the evidence is merely conflicting, and the reduced rate has not been given a reasonable test in

actual operation, the Court is not justified in overturning the Commission's order.

But here again, as was so aptly said by this Court in *United Gas Public Service Co. vs. Texas*, ____ U. S. ____, 82 L. Ed.____ (No. 13, Oct. Term, 1937):

> "We must distinguish 'between what was said and what was done,' between 'dictum and decision,' between reasoning and conclusion. *Dayton Power & Light Co. vs. Public Utilities Commission*, 292 U. S. 290, 298, 302."

Regardless of the reasoning of the Court of Civil Appeals in its opinion, what it in essence did was to analyze all of the evidence and to determine and adjudge, based upon such analysis, that the same did not as a matter of law possess sufficient legal probative force to overturn the *prima facie* validity of the Commission's order, or to raise any issues of fact as to unreasonableness and unjustness, or confiscation under the Federal Fourteenth Amendment; and that, for that reason, there were no fact issues raised to go to the jury as triers of fact. R. III, 3335, 3353, 3354, 3357, 3559-3370, especially 3369. For that reason, the Court very properly disregarded the verdict of the jury and reversed the judgment of the District Court, dissolved the injunction and upheld the rate order as having successfully withstood attack.

This *judgment* of the Court of Civil Appeals, affirmed by the Supreme Court of Texas, was a correct one, arrived at by well-established legal methods often sanctioned and applied previously in the decisions both of our highest state courts and of this Honorable Court.

In *Railroad Commission of Texas vs. Shupee*, 57 S. W. (2d) 295, 301 (affirmed by the Supreme Court of Texas, 123 Tex. 521, 528, 73 S. W. (2d) 505, 508) the same able Court of Civil Appeals from whence this appeal comes, in construing a statute in all substantial respects identical with Article 6059 (see appendix at end of this brief) relating to appeals to the courts for judicial review of the Railroad Commission's orders, said:

> "The manifest difference in these statutes is only as to the quantum of proof necessary on the respective appeals, and does not affect the principle on which the court acts in determining whether the order is unreasonable and unjust as to complainant, which rule is the same in each appeal. That is, each of these appeal statutes is construed with reference to the particular statutes to which each relates, and merely requires that the court must *first* judicially determine whether the complainant has introduced evidence of such probative force or value, or such character or quantum, as will satisfy the statutory burden placed by each statute upon the complainant; and when the court has judicially determined such matter favorably to complainant, *then to proceed with the trial of any fact issue as in ordinary trials on a preponderance of the evidence.*"

This is a succinct statement of the principle *applied* by the Court of Civil Appeals and the Supreme Court of Texas in this case, regardless of what else in addition was said in the opinion, and shows plainly that had Appellant's evidence been sufficiently "clear and satisfactory" or "clear and convincing" to hurdle the well established preliminary legal test, the court

would have been justified in submitting the fact issues, which would in that event have been raised, to the jury.

The principle has become staunchly established in the jurisprudence of our state in such decisions as *Railroad Commission of Texas vs. Galveston Chamber of Commerce,* 105 Tex. 101, 115, 145 S. W. 573; *Railroad Commission of Texas vs. Weld & Neville,* 96 Tex. 394, 409; 73 S. W. 529; *G. C. & S. F. Ry. Co. vs. Railroad Commission of Texas,* 102 Tex. 338, 352, 113 S. W. 741, 747; *Brown vs. Humble Oil & Refining Co.,* 126 Tex. 296, 87 S. W. (2) 1069, and many others.

Furthermore, the principle has received sanction and has been applied by this Honorable Court in a line of rate cases too numerous for us to cite. One of the latest and clearest enunciations of the principle by this Court is in *St. Joseph Stockyards Co. vs. United States,* 298 U. S. 38, 53, 80 L. Ed. 1033, 1042, as follows:

> "But this judicial duty to exercise an independent judgment does not require or justify disregard of the weight which may properly attach to findings upon hearing and evidence. On the contrary the judicial duty is performed in the light of the proceedings already had and may be greatly facilitated by the assembly and analysis of the facts in the course of the legislative determination. Judicial judgment may be none the less appropriately independent because informed and aided by the sifting procedure of an expert legislative agency."

The principle was also well stated and appropriately applied by this Court in the Laredo case (*United Gas Public Service Co. vs. Texas*) supra, as follows:

> "This Court will review the findings of fact by a State court . . . (2) where a conclusion of law as to a Federal right and findings of fact are so intermingled as to make it necessary, in order to pass upon the Federal question, to analyze the facts . . . we make that analysis, not to determine issues of fact raised on conflicting testimony or inferences, and thus to usurp the function of the State court as a trier of the facts, but to perform our own proper function in deciding the question of law arising upon the findings which the evidence permits."

The cases cited under our Point XXXIX, infra, show that expert testimony, of which this record is almost wholly made up, has in law no probative force, and is "in no real sense evidence," unless it is "clear and satisfactory" or "clear and convincing" in the sense that it is reasonable and based upon satisfactory basic factual data. The Company's evidence here is clearly insufficient as a whole to meet that test, and was therefore properly rejected.

This principle has been applied by this Court also in such decisions as *San Diego L. & T. Co. vs. National City*, 174 U. S. 739, 754, 43 L. Ed. 1154; *Darnell vs. Edwards*, 244 U. S. 564, 569, 61 L. Ed. 1317; *Willcox vs. Consolidated Gas Co.*, 212 U. S. 19, 41, 53 L. Ed. 382; *Louisville vs. Cumberland Tel. & Tel. Co.*, 225 U. S. 430, 433, 436, 56 L. Ed. 1151; *Norfolk & W. R. Co. vs. North Carolina*, 297 U. S. 682, 689-690, 80 L. Ed. 977; *Brush Electric Co.*

vs. Galveston, 262 U. S. 443, 444-446, 67 L. Ed. 1076; *Lincoln G. & E. Co. vs. Lincoln*, 250 U. S. 256, 261-262, 268, 63 L. Ed. 968; *Cedar Rapids Gas Co. vs. Cedar Rapids*, 223 U. S. 655, 667-670, 56 L. Ed. 594; *Galveston Electric Company vs. Galveston*, 258 U. S. 388, 401, 403, 66 L. Ed. 678; and many others.

In short, what the highest courts of our State have done in this and other cases, and what this Court has done in the above cited cases and many others, is to analyze the evidence and determine as a preliminary law question whether the elaborate theories, calculations, speculations, tabulations, estimates and prophecies of the expert witnesses testifying for the complaining utilities, were based upon sufficiently sound underlying basic factual data to possess enough probative force to overturn the *prima facie* validity of the rate order, and to raise issues of fact to be resolved; in other words, whether such evidence is sufficiently "clear and satisfactory" to raise fact issues of unreasonableness and unjustness under the state law and decisions, or sufficiently "clear and convincing" to demonstrate confiscation under the Federal Fourteenth Amendment. If this preliminary law question be determined in the negative, then there are no fact issues to pass upon.

The Court of Civil Appeals and the Supreme Court of Texas were not examining the evidence with a view, primarily, of resolving any fact issues and making original fact findings of their own, but were doing precisely what this Court has said in the above quoted excerpt from the Laredo case it may properly do, namely,

sifting the evidence with a view of determining what fact findings if any, the evidence *would be sufficient to support;* and, having determined this, to decide the law question as to whether the evidence was "clear and satisfactory" or "clear and convincing." The issues have both been properly resolved against Appellant by the state appellate courts in this case.

In making the contention that the highest state courts have by this legal *modus operandi* denied it due process under the Federal Fourteenth Amendment, the Appellant is necessarily arguing impliedly that this Honorable Court has by that identical legal method denied many litigants due process under the Fifth Federal Amendment in the numerous decisions of this Court above cited, and many others.

This contention of Appellant necessarily resolves itself into a question simply of the correctness, as a law question, of the highest State courts' action in adjudging that the evidence was legally insufficient, and lacked the necessary quality of being "clear and satisfactory", and "clear and convincing" to raise fact issues of confiscation, etc.

If this determination by the state courts was error at all, it was necessarily either an error of state law or of Federal law. If it was merely an error of state law, this Court does not concern itself with the question. If it was an error of Federal law, then this Court has the entire record before it, and will, as it has so often done, exercise its undoubted privilege of analyzing the evidence and determining what fact findings, if any, the evidence would have been sufficient to support, and then, based upon this determination, decide

further the legal question of whether confiscation under the Fourteenth Amendment has been shown by that "clear and convincing evidence" which this Court has so often held to be indispensable to demonstrate denial of Federal rights. This Court not only has the power to do so, but we gladly invite it to do so.

Appellant contends in effect that it has been deprived of a jury trial. But this raises no question of federal right; for, in the first place, no assignment is made that the Seventh Federal Amendment has been violated; and, in the second place the amendment has no application in cases arising in the state courts. *Minn. & S. L. R. Co. vs. Bombolis*, 241 U. S. 211, 60 L. Ed. 961. Neither does the Fourteenth Federal Amendment guarantee a trial by jury: *Walker vs. Sauvinet*, 92 U. S. 90, 23 L. Ed. 678; *Maxwell vs. Dow*, 176 U. S. 581; *Frank vs. Mangum*, 237 U. S. 309.

There is nothing in the Federal Constitution which requires a state to maintain the distinction between the functions of the jury and that of the court; it may do away with the jury altogether: *C. R. I. & P. R. Co. vs. Cole*, 251 U. S. 54, 64 L. Ed. 133. *Palko vs. Connecticut*, ____ U. S. ____, 82 L. Ed. ____, No. 135, Oct. Term, 1937, L. Ed. Adv. Op. No. 5, p. 220, 223.

The principle applied by the Court of Civil Appeals and the Supreme Court of Texas in disposing of this case, is actually nothing more than a mere adjective or procedural rule of evidence or burden of proof applied in obedience both to a state statute (Art. 6059) and the decisions of this Court. The Federal Fourteenth Amend-

ment does not guarantee one the benefit of a mere rule of evidence. A right to have one's controversies determined by the existing rules of evidence is not a vested right, for such rules pertain to the remedies which the state provides for its citizens, and generally they neither enter into and constitute a part of any contract, nor can they be regarded as being of the essence of any right which a party may seek to enforce: *Luria vs. United States*, 231 U. S. 9, 58 L. Ed. 101.

Appellant insists that the jury has in its verdict found that the 32c rate is *confiscatory*, within the prohibition of the Federal Fourteenth Amendment. This argument is predicated upon this Court's holding in the Laredo case that the issue of confiscation had been submitted and found against the United Gas Company in that case, but that here the issue has been submitted and resolved against the Commission. The argument is plausible but specious; and the conclusion does not necessarily follow the premises. Since the line of *reasonableness* (a question of state law) is higher than the line of confiscation (a matter of Federal law), a finding (as in the Laredo case) that the reduced rate is *reasonable* necessarily means that it is non-confiscatory; but the converse is not true. A finding (as here) that the rate is *unreasonable* does not necessarily imply at all that it is *confiscatory*.

Thus the question of claimed denial of "adequate judicial review" disappears and merges itself into the question of whether the record shows confiscation by the requisite degree of clearness. And to this latter question the remainder of this brief will be addressed.

DIVISION C

CLAIMED CONFISCATION

GENERAL THESIS: APPELLANT'S EVIDENCE AS A WHOLE WAS INSUFFICIENT AS A MATTER OF LAW TO DEMONSTRATE CONFISCATION OR OTHER DEPRIVATION OF FEDERAL CONSTITUTIONAL RIGHT, AND TO OVERTURN THE PRESUMED VALIDITY OF THE ORDER. THIS BECOMES MORE CLEARLY EVIDENT WHEN APPELLANT'S EVIDENCE IS CONSIDERED IN CONNECTION WITH, AND CHECKED BY, APPELLEES' COUNTERVAILING EVIDENCE AS TO THE COMPENSATORY CHARACTER OF THE RATE. HOWEVER, THE VOLUNTARY AND UNNECESSARY SUBMISSION OF SUCH EVIDENCE BY APPELLEES DID NOT HAVE THE LEGAL EFFECT OF LIFTING THE BURDEN FROM APPELLANT OF PROVING BY ITS OWN EVIDENCE A CLEAR AND CONVINCING CASE OF CONFISCATION OR OTHER FEDERAL CONSTITUTIONAL INVALIDITY.

XXV. The order is presumed *prima facie* to be non-confiscatory and valid:

R. R. Com. of Cal. vs. Pacific G. & E. Co., ... U. S. ....., 82 L. Ed. ....., No. 804, Oct. Term, 1937, Adv. Op. No. 7, p. 327;

St. Joseph Stockyards Co. vs. United States, 298 U. S. 38, 52, 53, 54, 60, 64, 67; 80 L. Ed. 1033, 1041, 1042-1043, 1046, 1048, 1049;

Lindheimer vs. Ill. Bell Tel. Co., 292 U. S. 151, 164, 169, 175; 78 L. Ed. 1182, 1191, 1193, 1194, 1197;

Los Angeles G. & E. Corp. vs. R. R. Com. of Cal., 289 U. S. 287, 304, 305, 307; 77 L. Ed. 1180, 1192;
Dayton P. & L. Co. vs. Pub. Ut. Com. of Ohio, 292 U. S. 290, 298; 78 L. Ed. 1267, 1274;
Darnell vs. Edwards, 244 U. S. 564, 569; 61 L. Ed. 1317, 1321;
Willcox vs. Consolidated Gas Co., 212 U. S. 19, 41; 53 L. Ed. 382, 395;
United Fuel Gas Co. vs. R. R. Com. of Kentucky, 278 U. S. 300, 313; 73 L. Ed. 390, 398.

XXVI. Orders of the Commission have the same force and effect as ordinary statutes of the State; and are, therefore, entitled to the exceedingly strong presumption of validity that is accorded to statutes in determining the constitutionality thereof:

Pacific States Box & Basket Co. vs. White, 296 U. S. 176, 185-186; 80 L. Ed. 138, 146;
West Texas Compress Co. vs. P. & S. F. Ry. Co., 15 S. W. (2) 558, 560;
R. R. Com. of Texas vs. Uvalde Construction Co., 49 S. W. (2) 1113, 1114.

XXVII. The burden is upon the complaining party to prove confiscation or deprivation of other constitutional rights by evidence so clear and satisfactory as to leave no reasonable doubt in the judicial minds of the reviewing courts:

Cases cited under Point XXV above; and
Art. 6059 R. C. S. Tex. (1925);[7]

---

[7]"In all trials under this article the burden of proof shall rest upon the plaintiff, who must show by CLEAR AND SATISFACTORY evidence that the rates . . . complained of are unreasonable and unjust to it or them."

R. R. Com. of Cal. vs. Pacific G. & E. Co. No. 804, Oct. Term, 1937, ... U. S. ....., 82 L. Ed. ....., L. Ed. Adv. Op. No. 7, p. 327, 334.
United F. G. Co. vs. R. R. Com. of Ky., 278 U. S. 300, 313, 73 L. Ed. 390. 398;
San Diego Land & Town Co. vs. National City, 174 U. S. 739, 754; 43 L. Ed. 1154, 1160;
Knoxville vs. Knoxville Water Co., 212 U. S. 1, 16; 53 L. Ed. 371, 381;
C. M. & S. P. R. Co. vs. Thompkins, 176 U. S. 167, 173; 44 L. Ed. 417, 420;
G. C. & S. F. Ry. Co. vs. R. R. Com. of Texas, 102 Tex. 338, 352; 113 S. W. 741, 747, 795;
R. R. Com. of Tex. vs. Weld & Neville, 96 Tex. 394, 409; 73 S. W. 529;
R. R. Com. of Tex. vs. Galveston Chamber of Commerce, 105 Tex. 101, 115; 145 S. W. 573.

XXVIII. The foregoing rule (XXVII above) does not place upon the Company, as it contends, an impossible burden in the sense that the order will be upheld if there is any evidence countervailing against the Company, R. V, 3351. It does mean that the Court of Civil Appeals, and the Supreme Court of Texas, properly did what this Court has many times done, namely, analyzed all of Appellant's evidence and determined as a preliminary law question that the same lacks the quality of being sufficiently "clear and satisfactory" or "clear and convincing" to outweigh the presumed validity of the order. The law itself, which places upon one complaining of the Commission's order the extraordinarily heavy burden of proving it confiscatory by clear and convincing evidence, stands always at the threshhold of a rate case as a continuing challenge of the legal sufficiency of the complaining

party's evidence to raise issues of fact. If the evidence does not measure up to that required standard, in the opinion of the reviewing courts sitting in chancery (this being an equity case), then the complaining party has, as a matter of law, failed to discharge the burden of overturning the order. The complaining party proceeds at his own peril as to meeting this burden. Any other rule would make the courts, and not the Commission, the ultimate legislative rate-makers. *St. Joseph Stockyards Co. vs. United States,* 298 U.S. 53, 80 L. Ed. 1033, 1041.

XXIX. The complaining party does not meet the burden of proving the invalidity of the order by attacking the evidence adduced by the opposing party, but must himself submit evidence sufficiently clear and satisfactory to overturn the order:

Allen vs. S. L. I. M. & S. Ry. Co., 230 U. S. 553, 560; 57 L. Ed. 1625, 1629;
Atlantic Coast Line R. Co. vs. Florida, 295 U. S. 301, 317-318; 79 L. Ed. 1451, 1461-1462;
Norfolk & W. Ry. Co. vs. North Carolina, 297 U. S. 682, 689-690; 80 L. Ed. 977, 982-983.

XXX. This Court has been especially reluctant to find rates confiscatory where, as here, they have not been put into effect and given a reasonable trial in actual operation, to eliminate speculation and to determine definitely the volume of business and net revenue that would be produced under the reduced rates:

Knoxville vs. Knoxville Water Co., 212 U. S. 1, 16-17; 53 L. Ed. 371, 381-382;
Darnell vs. Edwards, 244 U. S. 564, 569; 61 L. Ed. 1317, 1321;

Willcox vs. Consolidated Gas Co., 212 U. S. 19, 41; 53 L. Ed. 382, 395;
Georgia Power Co. vs. R. R. Com. of Georgia, 262 U. S. 625, 633; 67 L. Ed. 1144, 1148;
St. Joseph Stockyards Co. vs. United States, 298 U. S. 38, 49, 72; 80 L. Ed. 1033, 1040, 1052;
Louisville vs. Cumberland Tel. & Tel. Co., 225 U. S. 430, 433, 436; 56 L. Ed. 1151, 1152;
Brush Electric Co. vs. City of Galveston, 262 U. S. 443, 444-446; 67 L. Ed. 1076, 1077-1078;
Lincoln G. & E. Co. vs. Lincoln, 250 U. S. 256, 262; 63 L. Ed. 968, 974;
Cedar Rapids Gas Co. vs. Cedar Rapids, 223 U. S. 655, 667-670; 56 L. Ed. 594, 603-604;
S. & N. Ala. Ry. Co. vs. R. R. Com. of Ala., 210 Fed. 465, 480.

XXXI. If Appellant had put the 32c rate into effect promptly upon promulgation of the order and had given it a reasonable test or trial period, and thus enabled its *alter egos*, the affiliated distributors, to carry the saving into the burner tip rates to the consumers, as it should have done instead of defying the order and choosing rather to assert its unconstitutionality in all the courts of the land, it is probable, if not certain, under the record here, that an increased attachment of new customers and an increased consumption per customer on the Lone Star group's entire integrated system would have resulted, which long before now would have more than offset in increased net revenue to the group the amount of the reduction:

Louisiana R. Com. vs. Cumberland Tel. & Tel. Co., 212 U. S. 414, 426; 53 L. Ed. 577, 583;
Willcox vs. Consolidated Gas Co., 212 U. S. 19, 49-50; 53 L. Ed. 382, 398;

Knoxville vs. Knoxville Water Co., 212 U. S. 1, 16; 53 L. Ed. 371, 381;
Brush Electric Co. vs. Galveston, 262 U. S. 443, 446; 67 L. Ed. 1076, 1078.

XXXII. This Court is not concerned with mere irregularities or erroneous methods or reasoning pursued by the Commission, or by the State courts, but is interested only in determining whether the prescribed rate in its over-all result ("totality of its consequences") falls below the line of confiscation:

R. R. Com. of Cal. vs. Pacific G. & E. Co. No. 804, Oct. Term, 1937, ____ U. S. ____, 82 L. Ed. ____ (L. Ed. Ad. Op. No. 7, p. 327, decided Jan. 3, 1938);
Los Angeles G. & E. Corp. vs. R. R. Com. of Cal., 289 U. S. 287, 304-305, 314, 315-316, 317; 77 L. Ed. 1180, 1192, 1197, 1198, 1199;
Lincoln G. & E. Co. vs. Lincoln, 250 U. S. 256, 267-268, 63 L. Ed. 968;
Dayton P. & L. Co. vs. Pub. Ut. Com. of Ohio, 292 U. S. 290, 297-298, 309; 78 L. Ed. 1267, 1274-1280;
Lindheimer vs. Ill. Bell Tel. Co., 292 U. S. 151, 175; 78 L. Ed. 1182, 1197;
St. Joseph Stockyards Co. vs. United States, 298 U. S. 38, 49, 69; 80 L. Ed. 1033, 1040, 1050;
W. Ohio Gas Co. vs. Pub. Ut. Com. of Ohio (Lima Case), 294 U. S. 63, 70; 79 L. Ed. 761, 768;
R. R. Com. of Texas vs. Galveston Chamber of Commerce, 105 Tex. 101, 115-116, 145 S. W. 573, 580.

XXXIII. A corollary is, that even should it be proved that the Commission has made a finding er-

roneously prejudicial to the Company as to some particular element or elements of the rate structure (which was not done here), the Company must go farther and prove that other compensating liberalities have not been indulged in its favor by the Commission in the findings and allowances as to other elements of the rate structure:

R. R. Com. of Cal. vs. Pacific G. & E. Co. No. 804, Oct. Term, 1937, ... U.S. ....., 82 L. Ed. ..... (L. Ed. Adv. Op. No. 7, p. 327, decided Jan. 3, 1938);

Los Angeles G. & E. Corp. vs. R. R. Com. of Cal., 289 U. S. 287, 316-317; 77 L. Ed. 1180, 1198-1199;

Lindheimer vs Ill. Bell Tel. Co., 292 U. S. 151, 175; 78 L. Ed. 1182, 1197;

Dayton P. & L. Co. vs. Pub. Ut. Com. of Ohio, 292 U. S. 290, 305, 306, 309-310; 78 L. Ed. 1267, 1278, 1279, 1280-1281;

Lincoln G. & E. Co. vs. Lincoln, 250 U. S. 256, 267-268; 63 L. Ed. 968, 976.

XXXIV. All of the Company's claims of confiscation are bottomed upon the fallacious assumption that the average 6% net annual return fixed by the Commission, and all of its other findings as to rate base and other elements and subsidiary facts relating to the rate structure, insofar as such findings are favorable to the Company, are sacred and inviolable minima below which the Commission and the reviewing courts are estopped and precluded from going in determining the issue of confiscation; and that, insofar as such findings are unfavorable to the Company, they are subject to its attack. No estoppel or *res judicata* is involved in connection with the find-

ings, either of the Commission or of the inferior reviewing courts. If the Company is free to attack the findings, as being too low, then the Commission must be equally free to show that they are too liberal:

St. Joseph Stockyards Co. vs. United States, 298 U. S. 38, 46-47, 56, 63-64, 72; 80 L. Ed. 1033;

Lindheimer vs. Ill. Bell Tel. Co., 292 U. S. 151; 78 L. Ed. 1182;

Columbus Gas & Fuel Co. vs. Pub. Ut. Com. of Ohio, 292 U. S. 398, 414; 78 L. Ed. 1327, 1336;

Prentis vs. Atlantic Coast Line R. Co., 211 U. S. 210, 227; 53 L. Ed. 150, 159;

XXXV. The Company's claims of confiscation are likewise founded upon the erroneous assumption that unreasonableness (which is here a question of State law) is the same thing as confiscation, which is a Federal question. The issue before this Court is not whether the 32c rate will yield 6%, or any other reasonable rate of return, but whether it is confiscatory. This distinction should be borne in mind in reading the precedents. Some cases previously before this Court, coming up from inferior Federal Courts, have involved both confiscation and unreasonableness.

XXXVI. All of the Company's claims of confiscation are built also upon the untenable assumption that if it be shown that the net revenues under the reduced rate for any particular twelve-months' operating period would, under the basic findings of the Commission, apparently have fallen below the average 6% level fixed by the Commission, upon a theoretical application of the 32c rate to the volume

of business actually enjoyed in the past under the 40c rate, that this, *ipso facto*, shows confiscation. In attempting to make such a showing, the Company insisted before the Commission that the latter, in fixing the rate, should only use the operating results for the years 1931-1932, during which years the revenues were indisputably deeply affected by the economic depression; and, before the courts, that the validity of the rate should be tested only by the operating results of depression years, including 1933, which year was admittedly and indisputably doubly abnormal because of the depression and the unsually high temperatures. This method was erroneous, first, for insisting upon confining the investigation before the Commission to too short a test period, which is condemned by all of the authorities, regardless of abnormalities; and, second, for attempting to have the rate fixed and tested by the results of operating periods which were abnormal for two different reasons, each year resting upon its own bottom without considering the average results of any spread of years. The authorities amply establish that the Commission, in fixing the rate, and the Courts, in testing it, both for unreasonableness and confiscation, should not limit their vision to a single twelve-months' operating period, or even two consecutive abnormal operating periods, but should consider the *average results* of a reasonable spread of fat and lean years, in order to equalize the fluctuations inevitably brought about by abnormalities of every kind:

United Gas Pub. Serv. Co. vs. State of Texas, ____ U. S. ____, 82 L. Ed. ____, L. Ed. Adv. Op. No. 10, 490, 500, 502, Feb. 14, 1938.

Louisville vs. Cumberland Tel. & Tel. Co., 225 U. S. 430, 433, 436, 56 L. Ed. 1151;

Los Angeles G. & E. Corp. vs. R. R. Com. of Cal., 289 U. S. 287, 298-299, 303-304, 311-312, 319-320; 77 L. Ed. 1180;
St. Joseph Stockyards Co. vs. United States, 298 U. S. 38, 46-47, 55, 71, 72; 80 L. Ed. 1033, 1038-1039, 1051-1052;
Lindheimer vs. Ill. Bell Tel. Co., 292 U. S. 151; 78 L. Ed. 1182;
Galveston Elec. Co. vs. Galveston, 258 U. S. 388, 400, 401, 403; 66 L. Ed. 678, 685, 686;
Lincoln G. & E. Co. vs. Lincoln, 250 U. S. 256, 268; 63 L. Ed. 968, 976;
Darnell vs. Edwards, 244 U. S. 564, 569; 61 L. Ed. 1317, 1321;
Brush Electric Co. vs. Galveston, 262 U. S. 443, 446; 67 L. Ed. 1076, 1078;
Knoxville vs. Knoxville Water Co., 212 U. S. 1, 14-15, 17-18; 53 L. Ed. 371, 380, 381, 382;
Acker vs. United States, 298 U. S. 426, 431; 80 L. Ed. 1257, 1261-1262;
West Ohio Gas Co. vs. Pub. Ut. Com. of Ohio (Kenton Case), 294 U. S. 79, 81; 79 L. Ed. 773, 776;
Municipal Gas Co. vs. Com. 225 N. Y. 89, 98; 121 N. E. 772, 774;
Denver Union Stockyards Co. vs. United States; 57 Fed. (2) 735, 752-753;
Kings County Lighting Co. vs. Lewis, 110 Miscl. Rep. 204; 180 N. Y. Suppl. 570, 593;
S. & N. Ala. Ry. Co. vs. R. R. Com. of Ala., 210 Fed. 465, 480;
Reno P. L. & W. Co. vs. Com., 298 Fed. 790, 801.

XXXVII. Obviously the Commission could not, and did not attempt to, prescribe any rate to be effective in Oklahoma, but only "within the jurisdiction of Texas." In order to prove the prescribed rate confisca-

tory when limited to and applied within Texas only, the burden devolved upon Appellant, and was not discharged, of submitting to the reviewing courts evidence sufficiently clear and satisfactory as a matter of law, to enable the courts to make a proper, reasonable, just, and practical segregation between Texas and Oklahoma properties and operations; otherwise, the probability was presented, and in fact this record made it a certainty, that the more expensive Oklahoma intrastate business would unduly raise and burden unjustly to Texas rate-payers, the cost of Appellant's intrastate business in Texas.

XXXVIII. The net annual rate of return, after due allowance for operating expenses and depreciation and depletion, which according to this record would probably have been earned by Appellant under the Commission's order, if it had been put into actual effect promptly when promulgated, and the rate of net return which under the record would probably be earned in the future according to this record, is not confiscatory when viewed in the light of economic conditions then and now prevailing:

Dayton P. & L. Co. vs. Pub. Ut. Com. of Ohio, 292 U. S. 290, 311, 78 L. Ed. 1267, 1281.

XXXIX. The weight to be accorded to the testimony of Appellant's experts cannot be determined without understanding their approach to the questions and the criteria which governed their estimates. The testimony of Appellant's witnesses shows quite clearly that in every essential element of the rate structure, both ultimate and subsidiary, and in many particulars, they proceeded, in part at least, upon erroneous,

conjectural, unfair, extravagant, speculative, and untenable bases in arriving at their estimates, opinions, conclusions, valuations, and prophesies. (See argument, infra, for details.) Their testimony and estimates are, therefore, to be rejected as having no probative force in law and as being "in no real sense evidence," in so many instances as to make the totality of Appellant's evidence fall far short of raising any fact issues as to confiscation:

St. Joseph Stockyards Co. vs. United States, 298 U. S. 38, 53, 54, 60, 64, 67, 59-60, 62, 63; 80 L. Ed. 1033, 1045, 1047;

Los Angeles G. & E. Corp. vs. R. R. Com. of Cal., 289 U. S. 287, 304, 305, 307, 317-319; 77 L. Ed. 1180, 1199-1200;

Dayton P. & L. Co. vs. Pub. Ut. Com. of Ohio, 292 U. S. 290, 298-301, 302, 305, 311-312; 78 L. Ed. 1267, 1274-1276, 1277, 1278, 1281, 1282;

Columbus G. & F. Co. vs. Pub. Ut. Com. of Ohio, 292 U. S. 398, 412-413; 78 L. Ed. 1327, 1335-1336;

Lindheimer vs. Ill. Bell Tel. Co., 292 U. S. 151, 162-164, 170-175; 78 L. Ed. 1182, 1189-1191, 1194-1197;

Knoxville vs. Knoxville Water Co., 212 U. S. 1, 18; 53 L. Ed. 371, 382;

United Fuel Gas Co. vs. R. R. Com. of Ky., 278 U. S. 300, 316-317, 73 L. Ed. 390, 399.

XL. The Appellant's attitude from the inception of this proceeding before the Commission has been one of studied concealment and distortion of the facts, and non-cooperation, rather than one of candid revelation. An examination of the entire record herein will show this to be true. The Company would much

better have served its own interests by aiding the regulatory authorities and the reviewing courts in arriving at the truth, rather than engendering lasting distrust by continuing attempts to distort the facts unreasonably in its own favor:

Knoxville vs. Knoxville Water Co., 212 U. S. 1, 18; 53 L. Ed. 371, 381-382.

XLI. The Appellant, in its evidence and computations presented before both the Commission and reviewing courts, has relied upon "elaborate tabulations of estimates," "at war with realities", which have "proved too much" and "overshot the mark." (See details set out in argument following.) "Men do not transact business without protest at confiscatory rates, at all events in the absence of extraordinary circumstances making submission to the loss expedient. If such circumstances exist, the Appellant has not proved them. . . That being so, what the public utility has done belies what it has said." If Appellant's own computations were given full faith and credit at their face value, and more especially if Appellant's own tests for determination of confiscation be adopted (as we think they should not be), they would reveal that for many years prior to the initiation of these proceedings, the Appellant had been doing business at its own 40c gate rate, voluntarily fixed and adhered to without any constraint upon the part of public regulatory authorities, and without asking for permission to raise the rate, at net rates of return which, according to the Company's own computations would apparently have been confiscatory. And, further, the indisputable facts in the record show that the 40c rate has been far

above the line of confiscation. This inherent vice in Appellant's contentions deprives them of all probative force for the purpose of establishing confiscation:

Dayton P. & L. Co. vs. Pub. Ut. Com. of Ohio, 292 U. S. 290, 311-312; 78 L. Ed. 1267;
Lindheimer vs. Ill. Bell Tel. Co., 292 U. S. 151, 161, 162, 163, 164, 175, 176; 78 L. Ed. 1182.

STATEMENT AND ARGUMENT UNDER POINTS NOS. XXV TO XLI

All we have said in Division A of this brief with reference to segregation as between Texas and Oklahoma properties and operations, and what Appellant contends are "interstate and intrastate" properties and operations on the other hand, is here adopted. We hope we have made our view sufficiently plain that we do not consider there are any interstate commerce operations involved here at all; and, therefore, no necessity or proper occasion for making any segregation as between interstate and intrastate commerce. That necessity would arise only if, and to the extent that, Appellant were correct in its contention that any part of its operations in Texas constitutes interstate commerce such as to be beyond the regulatory reach of the State of Texas. In our view, however, there was both necessity for and propriety in making a just, practical and reasonable segregation as between Oklahoma and Texas properties and operations in order that in testing the adequacy of the 32c gate rate in its operation as applied within Texas, the Texas consumers might not be required unjustly to bear the burden of the more expensive and less profitable operations in

Oklahoma, even though the Commission, in its desire to be more than just and generous both to the Company and to the consumers in Oklahoma, did see fit unnecessarily to fix the rate upon an over-all and unsegregated basis for application within Texas only. Such was the segregation voluntarily offered by the Appellees in the District Court.

By way of prelude we express our confidence that whether the adequacy of the rate as applied in Texas be determined upon an over-all Texas-Oklahoma basis (as fixed by the Commission and as contended for by the Company) or upon the basis of Appellees' segregation between Texas and Oklahoma properties and operations, or even upon the basis of the entirely unacceptable purported segregation between so-called "interstate and intrastate" operations submitted by the Company in the District Court, the rate will not be found confiscatory upon any basis.

To demonstrate this, we have inserted at the end of this brief our Tables I to V inclusive, the bases of which are stated in detail, infra pp. 189-192. It is pertinent in this connection to observe that in these Tables we have not deducted any of the improper operating expenses to which we object below, except management fees, and, in some cases, some of the donations. It is important also to observe that only a little more than six months elapsed between the effective date of the order (September 13, 1933) and latest operating statement appearing in the record (April 30, 1934). This is certainly too short a period by which to test the legality of a rate never put into operation. The Tables show that on any basis the average rate of return after application of the 32c rate is above 8%.

As pointed out in *Lindheimer vs. Ill. Bell Telephone* Co., 292 U. S. 151, 164, 78 L. Ed. 1182, 1191, the propriety of the items in Appellant's operating expense accounts may be quite as important a factor as the valuation of properties in the rate base. In fact, that is an understatement. As a matter of fact where the rate of return has been fixed at 6%, as here, a dollar in the operating expense account (and the same thing is true as to a dollar in the depreciation reserve accruals) possesses a ratio of importance 16.67 times as great as a dollar in the rate base; because each dollar of gross revenue charged to the depreciation reserve or the operating expense account takes away the equivalent of a 6% return for one year on $16.67.

For these reasons and because of the great sums claimed by Appellant as necessary for its annual depreciation reserve ($3,465,123.36 per annum for entire properties of Lone Star Gas Co. as of January 1, 1933, R. II, 1262, V, 3056) and for items of operating expenses of which we have questioned the propriety, we choose first to discuss the item of depreciation reserve; next, the questioned items of operating expense; then the elements in the rate base; then rate of return; and, last, the operating computations submitted by the Company and compared with those in our Tables I to V inclusive.

The Commission's Exhibit 5, (R. III, 2140-A) shows accurately the undepreciated historical book costs of the Company's entire properties as per its records for the years 1927, through the year ending March 31, 1934, at the maximum of $50,514,576.98 as of December 31, 1932. As against

this, the Company submitted its reproduction cost new estimate of $73,983,405.57, as of January 1, 1933, R. IV, 2363. These figures compare with the Commission's overall undepreciated rate base of $46,520,137.06, determined as of December 31, 1932, (R. I, 110); and with the undepreciated reproduction cost new estimates submitted by the Commission's witness, in the District Court, of $40,256,862.39, as of June 15, 1934, for the Texas segregated properties exclusive of production system, R. III, 2143.

Thus it will be seen that Appellant's witnesses have taken a $46,000,000.00 property and by some processes of legerdemain added to it an estimated additional inflation, undepreciated, of approximately $28,000,000.00. It is our purpose in the course of this discussion to expose some of the methods by which this astounding result was produced. These results were reached chiefly through the cooperative team work of the Company's talented galaxy of expert witnesses, Steinberger, Biddison, Connor, Hulcy, and Dunn. The division of labor between them was substantially as follows:. Steinberger supervised the taking of inventories, conducted certain "costs studies", the qualities of which we will touch upon in later passages, and served as cup-bearer to the witnesses Biddison, Hulcy, and Dunn. Steinberger and Biddison were largely responsible for the reproduction cost new estimates of the physical properties, or direct structural costs, totaling $50,813,515.57, R. IV, 2366. Geologist Kendrick, engineer Dunn, and accountant Hulcy made their contributions in estimates and evaluations of gas reserves. Engineer Connor added to the $50,000,000.00 of estimated

direct reproduction cost of physical properties and gas reserves a mere trifle of approximately $25,000,000.00 in claimed intangible values, consisting of preliminary and organization expense, engineering and supervision, interest during construction, taxes during construction, legal and administrative cost, working capital and going concern value. Connor also made a modest little estimate of $3,465,123.36, annual accruals to the depreciation reserve, although the actual charges to reserves as shown on the Company's books for seven years average only $344,871.84 per year, Table II, infra. Hulcy sponsored the accounting exhibits.

It would be utterly impossible for us to point out in a brief of reasonable length more than a few typical illustrations of the hundreds of erroneous and unjust methods used by the Appellant's witnesses in arriving at their estimates. But, when the Court reads the record, it will discover that on almost every page there appear one or more of these glaringly obvious inadmissible methods of treatment by the Company's experts. We believe the Court will be constrained at least to agree with the restrained understatement of the Court of Civil Appeals, when it said in its opinion, (R. V, 3369) that:

> "The calculations, estimates, and opinion of its experts show a studied effort on the part of Appellee to charge large items as operating expenses and depreciation, at war with the actual experiences of the Company, and we find no proof which would authorize the trial court to submit to the jury any issue, but find that Appellee wholly failed to meet the burden of proof

placed upon it, and to show by clear and satisfactory evidence that the rate was confiscatory, unjust, and unreasonable as to it."

The testimony shows that the estimates and methods of the Company's experts had absolutely no relation to reality or to the Company's actual experience; and that said witnesses were brazenly frank in stating that they had made no attempt to ascertain from the Company's records its actual experiences and history, or to relate their testimony and estimates in any way thereto; R. I, 662, 750.

ANNUAL ACCRUALS TO DEPRECIATION, DEPLETION AND AMORITIZATION RESERVES

Connor was the sole witness purporting to carry the burden for the Company upon this phase of the case, both before the Commission and the District Court. In the court trial, he sponsored Company Exhibit 42, consisting of a typewritten volume of 312 pages purporting to set forth the bases and methods of approach used in arriving at his conclusions and estimates. The contents of this tome, as well as Connor's oral testimony, are in part fantastic, in part unintelligible, in part audacious, in part merely erroneous, and in all parts highly inflated; bearing no relation to realities, and in no way fairly substantiated by the actual experience of the Company. We have not chosen to encumber the record before this Court by printing the whole of Connor's Exhibit 42, but have only given the Court a representative cross-section thereof in R. V, 3057-3196. His oral testimony with respect to these subjects will be found in R. II, 1256-1323,

1331-1434, 1452-1459; R. III, 1992-2002, 2029-2043. We ask the Court to refer to R. II, 1366-1368 for a representative sample of the meaningless abracadabra of which Connor's testimony, in large part, was made up. On cross-examination he could seldom, if ever, be forced into answering a question, but instead would evade it and launch out upon a long, rambling, unintelligible, pseudo-scientific treatise, remarkable chiefly for its inanity.

Mr. Connor began his employment with the Lone Star Group in 1921, and has been with it ever since. R. II, 861. Previously he had been employed to some extent to represent public authorities. But after his employment by Lone Star, he admits he changed his views materially about many matters pertaining to rate regulation, R. II, 1014-1015.

Mr. Connor's total estimated annual accruals were $3,465,123.36, (R. II, 1262; V, 3056) which would be equivalent to a 6% annual return on $57,752,-056.00. The Commission's allowance for depreciation and depletion (1931) on the 6% sinking fund basis was $983,698.43; R. I, 98, 107. This equals 2.13% of the Commission's rate base. The difference between the Commission's allowance and Connor's estimate is $2,481,424.93, which is equivalent to a 6% return on $41,357,082.00. Biddison and Steinberger found the overall percent condition of the property to be 94.26% (R. II, 1145) and the "observed depreciation"—which they erroneously used as being synonomous with "accrued depreciation" —to be 5.74%, as being the total accrued depreciation since the establishment of the Company in 1909. Biddison's testimony was that the replacements and

maintenance (the latter charged to operating expenses) were such as to keep the property stabilized in this high percent condition indefinitely, and that the property had not suffered any decline in percent condition over a period of the past 2½ years, R. II, 1142-1143, 1171, 1183; V, 3037. The unexpended balance in the depreciation reserve fund was shown to be $15,695,413.88 as of December 31, 1933, R. III, 2140B, 1657. If a proper relative balance had been maintained in the past between the actual accrued depreciation in the property and the unexpended balance in the reserve fund, theoretically this unexpended reserve of $15,000,000 plus should equal the accrued depreciation as found by the Company of 5.74%. (Upon this basis, according to the Company's computations, the property would have an undepreciated reproduction cost new of $273,439,-266.00!) Thus, the Company's estimated total accrued depreciation since 1909, of 5.74%, approximately equals the amount of annual depreciation as estimated by Connor.

It is also enlightening to compare Connor's estimates with the actual charges to the depreciation reserve in the past. (*St. Joseph Stockyards Co. vs. United States*, 298 U. S. 38, 65-67, 80 L. Ed. 1033, 1048-1049). The record shows that the average charges for the seven years 1927-1933 amounted to $344,871.84 per annum; and for the three years 1931-1933 amounted to $331,008.55 per annum, R. III, 2140B; V, 3363. These averages show that the charges are fairly uniform and are not increasing. This indicates with fair certainty that the property has now reached a stabilized condition where the ac-

tual current depreciation is fairly uniform from year to year and can be accurately measured by the actual charges to the depreciation reserves. This also accords with the testimony of Biddison to the effect that the properties are now maintaining a uniform percent condition, R. II, 1142-1143; 1171, 1183; V, 3037.

Despite the fact that the property is static insofar as decline in percent condition is concerned, and that the actual charges to the depreciation reserves are apparently uniform when averaged over a period of years, Mr. Connor found an annual depreciation allowance $3,120,251.52 in excess of the actual average annual charges to the depreciation reserves. (*Smith vs. Ill. Bell Tel. Co.*, 282 U. S. 133, 158-159, 75 L. Ed. 255, 268.) This is equal to a 6% return on $52,004,192.00.

Mr. Connor very candidly admitted that in making his estimates, he had given no consideration to the question of whether any, and how much, money had been or should have been collected from the rate payers in the past and set aside by the Company to offset depreciation as it accrued in the past, R. II, 1380-1392, 1433-1434; III, 2042-2043; V, 3061, 3083, 3094-3097, 3106-3114, 3116-3131. He insisted strenuously, however, that the effect of this method of approach was not to require the rate payers of the present and future to bear the cost of depreciation accruing in the past. (*Knoxville vs. Knoxville Water Company*, 212 U. S. 1, 13-14, 53 L. Ed. 371-380). The Commission laid clear emphasis upon this fatal error in Mr. Connor's calculations, in its findings, R. I, 78, 79, 85, 91.

The Company at pages 48, 153-154 of its brief complains that the Commission witness in his estimates of the amount of future accruals would have required the Company to use $5,000,000 out of its unexpended reserve balance of more than $15,000,000, for future removals, replacements and abandonments of property which had depreciated in the past. The record references show that Mr. Connor did not contemplate the use of a single penny of this reserve fund collected by the Company in the past for the express purpose of taking care of past accrued depreciation, simply because the removals, replacements and abandoments due in large part to such past accrued depreciation would not actually take place until the future, R. III, 2042-2043. Thus, Mr. Connor's estimates are not uniform over the entire life of the property, but depend upon the date of the rate inquiry; and he charges up in any rate investigation to the users of the present and future the entire cost of depreciation over the whole life of the property. The later the investigation, the greater would be his estimates. The estimates of the Commission's witness assumed the use of only such portions of the unexpended reserve as was determined to be necessary to offset this past accrued depreciation, and did not attempt to use any portion thereof which the Company may have collected from the past users in excess of its actual accrued depreciation. As an illustration of this point, the two large transmission lines B and C were installed in 1910. Substantial depreciation has accrued on these lines, and reserves have been or should have been, set aside in the past to offset this accrued depreciation. Under Mr. Connor's theory, no con-

sideration would be given to the reserves which should have been set aside in the past as this depreciation accrued, and the present and future rate payers would have to pay for the complete replacement, removal or retirement of these lines although the depreciation largely accrued in the service of past users.

In the state courts the Company made much capital of the claim that Mr. Connor's mortality curve equalled the actual mortalities of the past. This does not mean a thing. While on all other subjects Biddison and Connor protested emphatically that the past history of the Company was immaterial, paradoxically Mr. Connor at least purported to have made an exhaustive study of historical mortalities. But he did not correctly apply them in reaching his dollar results. It depends upon the shape of the assumed curve. The witness can shape the curve to serve his own purposes, and thus make the calculated past mortalities equal any given amount. The flatter the curve in the earlier years of the property (prior to a rate investigation), the steeper it must be in future years after a rate investigation. This is the principle upon which Mr. Connor would make the later users bear practically all the depreciation expense, although the Company undoubtedly has collected (as it should have done) at least the past depreciation from the past users.

The Company complains of the use of the sinking fund method of depreciation computations by the Commission and its witness. This Court has said, in *Clark's Ferry Bridge Co. vs. Public Service Commission of Pa.*, 291 U. S. 227, 240-241, 78 L. Ed. 767, 774, that, "In reviewing the findings of the state

court we are not required to enter a debatable field of fact and to choose and prescribe an invariable method of computation. To justify the overruling of the determination of the state court we must be able to see that what has been done will produce the result which the Constitution forbids. . . . We find it impossible to say, from a constitutional standpoint, that another method should have been employed or a greater amount allowed." In that case and in *Los Angeles G. & E. Corp., vs. R. R. Com. of California*, 289 U. S. 287, 295, 297, 298, 320-321, 77 L. Ed. 1180, where from the opinion it appears that the sinking fund method was used, such method has met the approval of this Court.

Furthermore, Mr. Connor himself, although using the straight line method on a few of his items, used the sinking fund method on most items, R. II, 1276, 1277, 1296, 1297, 1306-1316, 1321, 1322; V, 3056A, 3059, 3117, 3153-3157, 3161, 3178, 3179, 3185-3192. Mr. Connor used a 7% interest rate for sinking fund accruals in the hearing before the Railroad Commission, R. I, 80, 81; R, II, 1358, 1429. He used a 5% interest rate for sinking fund accruals in the District Court, R. II, 1262, 1276, 1277, 1296, 1297, 1306, 1310, 1315, 1316, 1321, 1322; V, 3117, 3161, 3178, 3179, 3182-3192. The use of a 5% interest accrual rate as used before the District Court increases the annual requirements over the amounts found under the 7% interest rate as used before the Railroad Commission. The Commission used a 6% sinking fund accrual basis, and the Commission's witness in the District Court used a 6% interest rate. The Commission also found that the sinking fund accrual rate

should be the same as the rate of return, R. I, 79-81; II, 1360, 1361; III, 1831 et seq., 1862, 1863. Both the straight line method and sinking fund method are generally recognized and would give the same results if properly applied, R. I, 77, 78; II, 1259, 1260; III, 1831, 1874-1875.

Typical of Mr. Connor's methods of inflating his estimates for both depreciation and depletion accruals, is his treatment of the withdrawals from gas reserves in estimating depletion. The history of the Company showed that up to the time of the District Court trial the Company's actual withdrawals from its own developed reserves were at the rate of approximately 5,000,000 to 6,000,000 MCF per year; R. I, 107 for 1927 to 1932 inclusive; R. III, 2124A, 2165, for 1933. Actual withdrawals by years were as follows:

1929	5,162,647 MCF
1930	6,473,463 "
1931	4,924,844 "
1932	4,829,077 "
1933	6,046,035 "

Instead of adopting the actual withdrawal rate, of from 5,000,000 to 6,000,000 MCF per annum being experienced by the Company, Mr. Connor assumed current and future withdrawals of 20,000,000 MCF, this being the same rate assumed by Dunn and Hulcy in capitalizing the value of gas reserves. He also based his unit depletion charge on the capitalized value of gas reserves found by Hulcy, which capitalization assumed a wellhead price of ($ .047) more than double the actual wellhead price ($ .020) for a

major portion of the Company's gas reserves, and of the unsoundness of which capitalization we will say more later. This method of computation resulted in an annual amount of $146,000 (20,000,000 MCF at $ .0073) and of $412,000 (20,000,000 MCF at $ .0206) as a part of the depletion and depreciation allowance on developed leaseholds and gas well equipment. If Mr. Connor had used the actual withdrawals being experienced by the Company, these particular inflated estimates would have been reduced by from two-thirds to three-fourths, R. I, 559, 560; II, 1266-1271, 1335-1337, 1348, 1349, 1352, 1353, 1364, 1365, 1456-1459; V, 3032, 3055, 3134, 3135, 3139, 3141, 3195, 3196.

If Mr. Connor was going to assume withdrawals of gas from Company reserves at the rate of 20,000,000 MCF per year as compared with the actual of 5,000,000 to 6,000,000 MCF in the past and at the time of the trial, he should either have assumed that gas purchases would have been accordingly reduced to the extent of the difference of approximately 14,000,000 to 15,000,000 MCF per year, which would have reduced the operating expenses approximately $900,000 per annum (see R. III, 2126D for average price of gas purchased), or, if he was going to assume that gas purchases would increase and keep pace with his assumed increased withdrawals from Company reserves, this necessarily would have quadrupled the Company's overall sales in the future, which would have resulted in quadrupling also its revenues. But Mr. Connor has not carried his assumptions to either of these logical conclusions.

Under no conditions should the Company have estimated its valuation of developed reserves, and its depreciation and depletion accruals, upon the assumed withdrawal of 20,000,000 MCF per year in the future, and at the same time based its operating revenues and expenses upon an entirely different basis.

As found by the Commission, a part or all of the depreciation on some items of property is currently charged to operating expenses as "maintenance," and all replacements and repairs to some items of property are currently charged to operating expenses, R. I, 75, 83, 84, 86, 87, 96, 97. With the exception of general tools, automotive and construction equipment and telephone equipment in part, Mr. Connor makes no deduction from depreciation for replacements being charged directly to operating expenses, R. II, 1353, 1354, 1374, 1375, 1429; V, 3055-3196.

As a further example of Mr. Connor's duplications, consider transmission line equipment. After fully allowing for all "future" annual accruals sufficient to provide for replacements due to physical condition of pipe; replacements, removals and abandonments due to operating conditions or public requirements; and major rehabilitations (R. II, 1281, 1282, 1298-1300; V, 3093, 3094, 3107), Mr. Connor makes a duplicate and additional allowance on transmission line equipment as well as all other items of property of 1% per annum for decline in per cent condition (R. II, 1271, 1276, 1277, 1305, 1306, 1315-1321, 1351, 1352; V, 3057-3196); and this despite Biddison's testimony (R. II, 1142-1143, 1171, 1183; V, 3037) that the property would not decline, and had not de-

clined, in per cent condition; and as a triplication he allows for the amortization of $17,970,000 of transmission line equipment to run concurrently with the 1% allowance for decline in per cent condition, R. II, 1262; 1321, 1322, 1431, 1434; V, 3056, 3056A, 3185-3192.

We have heretofore pointed out the fact that Mr. Connor's basic rates before adding these duplications and triplications were based upon making all future replacements, retirements, etc., without calling upon the reserves which should have been set aside in the past to take care of the depreciation which has accrued in the past.

Connor's total annual rate of 5.40% applicable to transmission line equipment included 3.54% for future replacements as taken from his base mortality curve, R. V, 3095, 3096. This primary curve was based upon a study of the mortalities from all causes in the Fort Worth distribution system; Mr. Connor having "assumed that the characteristics of the mortalities of steel pipe in service in the system of Lone Star Gas Company would rather definitely follow the general trend of the mortality curve previously developed for steel pipe in service in the system of Fort Worth Division—Lone Star Gas Company." A substantial portion of the items from which the Fort Worth mortality curve was developed grew out of inadequacy, public requirements, changed operating conditions and other factors distinct from the physical failure of the pipe itself, R. V, 3064, 3065. Although the 3.54% per annum allowance from the base curve included renewals due to inadequacy, public requirements and

changed operating conditions as reflected in the base curve from the Fort Worth distribution system experience, Mr. Connor allowed an additional .94% per annum for removals and abandonments due to changed operating conditions and public requirements, R. V. 3096-3098. (Also, see Railroad Commission findings, R. I, 88, 89). This duplication is additional to all of the duplications above pointed out with respect to the largest item of property, viz., transmission line equipment.

Moreover, in addition to meeting all of these duplicate future replacements, the total annual rate on transmission line equipment would build up a credit balance in the reserves as shown in Columns E, Tables V-A and IX-A, R. V, 3117, 3131; R. II, 1296-1297.

Even without any of the duplications and additions, Mr. Connor's base mortality rate as applied to steel pipe is excessive. A good test of the mortality rate can be had in the history of Lines B and C laid in 1910, the oldest lines in the transmission system, and lines with severe soil conditions. These two lines contain 646 miles of 3 inch equivalent pipe. The actual mortalities from all causes have amounted to a total of 9% of the pipe in 21 years. Mr. Connor's 25 year life base mortality curve would indicate a total of 25% of mortalities as compared with the actual of 9%. The 33½ year life base curve adopted by the Commission indicates calculated mortalities of 20% over the 21 year life of these lines, R. I, 89, 90; R. II, 1396-1401; R. III, 1837, 1838, 1854-1856. The obvious cause of Mr. Connor's high mortality rate can be traced to his use of the history of only 700 miles of 3 inch

equivalent pipe laid in Fort Worth during the period 1909 to 1931, over an area 10 to 12 miles square, where only 60% of the mortalities were caused by deterioration of the pipe, R. I, 88, 89; R. V, 3064-3065.

In the hearing before the Commission, Mr. Connor predicted 420,000 feet of 3 inch equivalent, of pipe mortalities, for 1932. The actual mortalities amounted to 27,374 feet of 3 inch equivalent diameter pipe, R. II, 1363, 1364. For a graphic comparison of the actual pipe mortalities compared with the pipe mortalities estimated by the Company witness, Connor, and as estimated by the Commission and its witness, see chart, R. III, 2182A. It is to be noted from the curve that the replacements for 1931 marked J and C are of the non-recurring type, R. III, 1842, 1863, 1864.

It is by means of such methods of computations and duplications pointed out above that Mr. Connor was able to reach the astounding total of $3,465,-123.36 per annum as his estimated depreciation and depletion allowance, this annual amount being approximately the same as the total accrued depreciation which has taken place in the properties since 1909 as estimated by other Company witnesses. Such methods and devious calculations have also permitted Mr. Connor to arrive at this annual estimate more than 10 times the actual charges to the depreciation reserves as being experienced by the Company.

An examination of the findings of the Commission and of Appellees' exhibits and testimony before the District Court will show that the depreciation allow-

ances made by the Commission are ample in every case to take care of all replacements, removals and retirements from every cause not being currently charged to operating expenses and will allow for the complete amortization of the entire property over its estimated life. The calculations are simple and straightforward and are in such detail as to show the adequacy of the specific allowances, R. I, 75-99, 107, 111; III, 1828-1843, 1851-1876, 2099-2102; 2158-2162D.

QUESTIONED OPERATING EXPENSES

We indicate in the following paragraphs the items, and the extent, to which we object to the operating expenses set up and claimed in the Company's various exhibits and computations. Even in our own Tables I to V inclusive, at the back of this brief, setting forth computations of the percentages of net return which would have been available under the 32c gate rate, we have not deducted any of these questioned items of operating expense except the Management Fees, and, in some of the Tables, certain of the "Donations" which were allowed, but held improper, by the Commission. This fact should be borne in mind by the Court in studying our Tables aforesaid.

The following figures are taken from exhibits based upon overall operations in Texas and Oklahoma, and are not segregated as between the two states:

Management Fees: Appellees' Exhibit 5, R. III, 2126A, shows that beginning with 1929, and extending to the close of the record before the District Court, the Company claimed as an operating expense man-

agement fees paid to Lone Star Gas Corporation averaging $91,040.32 per year for the five-year period 1929-1933. This amount would provide a 6% return on $1,517,339.00 in the rate base. Company witnesses attempted to justify this item only by outlining in very general terms certain "advice" and "services", "financial assistance", "purchasing services", etc., rendered to it by various persons connected with the holding company; and it made no attempt whatever to prove the actual or reasonable cost of these items to the holding company. Besides paying the holding company these management fees, the Company paid the full value thereof again, directly to the persons who rendered them, in the case of Haskins & Sells, Auditors, (R. I, 434); the salary of P. McDonald Biddison, engineer for the group (R. I, 416-417); the general counsel for the group, (R. I, 415); and paid the holding corporation 6% on all borrowings, made up principally of a $17,600,000.00 loan, R. I, 239-244. Obviously this is but a scheme by which the holding company milks the Company of its profits and at the same time attempts to camouflage as mere "advice" and "services" what in reality is absolute dictation. The Commission properly eliminated this item, R. I, 25-27. *Dayton P. & L. Co. vs. Railroad Commission of Ohio*, 292 U. S. 290, 78 L. Ed. 1267; *Smith vs. Ill. Bell Telephone Co.*, 282 U. S. 133, 152-157, 75 L. Ed. 255, 265-268; *Chicago & G. T. R. Co. vs. Wellman*, 143 U. S. 339, 346, 36 L. Ed. 176, 180; *Acker vs. United States*, 12 Fed. Suppl. 776, 779, affd. 298 U. S. 246, 80 L. Ed. 1257; *Western Distributing Co. vs. Public Service Com.*, 285 U. S. 119, 126-127, 76 L. Ed. 655, 659;

United Fuel Gas Company vs. Railroad Commission of Ky., 278 U. S. 300, 320, 73 L. Ed. 390, 401.

Donations: The Commission (R. I, 23) included as allowable, under the title "Miscellaneous General Administrative Expense, $49,012.06" for 1931, the "charitable donations" which (R. III, 2228) averaged $10,284.05 per year for the three years 1931-1933. This item alone would have provided a 6% net annual return on $171,400.00 in the rate base. The Commission found, however, that "donations are not proper future operating charges. For the time being we are computing the actual 1931 expenses including charitable donations ($9,848.67) and the subscriptions and donations ($20,215.94) included in miscellaneous general administrative expense. This fact should be given its due weight in the consideration of 1931 rate of return," R. I, 23. The $20,215.94 "subscriptions and donations" would have provided a 6% return of $336,932.00 additional in the rate base.

There is no break-down accessible in the record by which we can determine how much of this amount was "donations" which we question, and how much was "subscriptions," which we do not question. As to all donations, charitable and non-charitable, however, we contend that they are not permissible operating expenses. *Idaho Power Co. vs. Thompson*, 19 Fed. (2d) 547, 548; *McCrory vs. Chambers*, 48 Ill. App. 445; *Holt vs. Winfield Bank*, 25 Fed. 812; *Davis vs. Old Colony R. Company*, 131 Mass. 258, 41 *American Reports* 221. A public utility must confine its expenditures to such as are legitimate for carry-

ing on its business. It may not, as between itself and the public, take the same liberties that a corporation may assume as between itself and its stockholders. Even in the latter case, donations, though calculated to advance the interests of a corporation, are not permissible over objections of the stockholders, and certainly are not permissible as against the public in a rate case.

Uncollectible Bills: Commission accountant Phillips, Exhibits 5, III, 2126A, shows "bad debts and adjustments" averaging $3,632.29 for seven years 1927-1933. This would provide a 6% return on $60,538.00 in the rate base.

Article 1440, R. C. S. Texas, 1925, provides "Deposits for installing service. Every . . . corporation . . . engaged in the furnishing of . . . gas . . . which requires the payment on the part of the user of such service of a deposit of money as a condition precedent to furnishing the same, shall pay 6% interest per annum on such deposit to the one making the same . . .".

This is a statutory recognition of the right of public utilities, such as Appellant, to require the deposit of a sufficient amount in advance from the customer, before the services are rendered, to indemify against the incursion of bad debts. *Central P. & L. Co. vs. Purvis*, 67 S. W. (2d) 1086, 1089.

This being true, we do not think bad debts are a proper charge against operating expense in public service operations. At R. I, 331, Hulcy explains these by saying "well, that is just some bills that we

did not collect.' We failed to get our money from the sales of gas." And at R. I, 437, he states that these bills are not owed by the affiliated companies but by private consumers along the rights of way. The Commission (R. I, 29-30) allowed the inclusion of this item at $7,727.33 for the year 1931, which was far above the average for the seven year period above shown, and would have provided a net return of 6% on $128,789.00 in the rate base. We think this item of expense should be eliminated from all computations of rates of actual return hereinafter.

Regulatory Commission Expenses: The Commission (R. I, 22-23) allowed $17,695.86 for the basic year 1931. The Commission found that necessary expenditures of this character in reasonable amounts "are properly chargeable to this account. Any expenditures for valuations, expert witnesses, or other items in defense of rates sought to be maintained by the Company, which expenditure is in excess of a reasonable amount should be borne by the owners of the Company. The 1931 regulatory expense was not relatively large. Whenever such expense is relatively large (such as 1932) it should be amortized over a reasonable length of time, say ten years. The instant case is the first time since the incorporation of the Lone Star Gas Company in 1909 that the Company has had occasion to incur any regulatory expense by reason of a hearing before a Texas Regulatory Commission." R. III, 2131, 2228 shows this item in the amount of $163,739.01 for 1932, and $66,792.39 for 1933. According to the Commission's findings these large amounts for 1932 and 1933 should be amortized respectively over periods of 10 years, which

neither the Company's accountants nor the Commission's accountants have done in the preparation of their operating statements except in the case of Company Exhibit 13. This should be done in the computations of rates of actual return on the question of confiscation.

Dry Hole Expense: The Commission (R. I, 28-30) allowed this item in the annual sum of $79,453.12, upon the basis of an average for the five year period 1927-1931. From R. III, 2126A, it appears that this item, as charged on the books, amounts to an annual average of $61,465.52 for the seven year period 1927-1933. The Commission pointed out (R. I, 28) that this item was computed upon the basis of an actual five year average and that this item was "in the nature of money advanced for the development of gas which will be produced in future years . . . . . the Company should be precluded from capitalizing dry hole expense in any future rate investigation."

The average allowed by the Commission was substantially in excess of the actual average for the seven year period, and if the production system properties be included in the rate base, and production expenses in the operating account, certainly the allowance is more than sufficiently liberal.

Of course, the doubtful question of whether these production system expenses (both dry hole expense and cancelled and surrendered leases, next discussed) should be included in the operating expense account at all, is tied in directly with the very doubtful ques-

tion of whether all of Appellant's production system properties should be included in the rate base (which we shall discuss later), or whether it would not be more just to pursue the method adopted by Commission witness Freese in his testimony and exhibits before the District Court, of excluding both production properties from the rate base, and production expenses from the operating account, and substituting in lieu thereof the allowance of the actual average prevailing field price being paid for gas purchased in Texas, R. III, 1795-1796, 2098-2099, 2164. The Commission several times in its opinion referred with approval to the appropriateness of applying the well head price in evaluating Company-produced gas, though in the end it did not adopt that method, R. I, 19, 20, 67-74, 104, 105, 113, 114.

Cancelled and Surrendered Leases: Much that we have said under "dry hole expense", above, is applicable here. The Commission (R. I, 28-30) discussed this item (cancelled and surrendered leases) fully and allowed $99,140.73 per annum. Reference R. III, 2126A, will reveal that the average charges to this account were relatively small up to the end of 1930. During 1931 increased funds were appropriated by the Texas Legislature for the use of the Commission in investigating natural gas pipe line rates, and the experts who testified for the Commission in this case, both in Commission and court hearings, were employed in that year, R. III, 1796. This is the only reasonable explanation of the fact that the cancelled and surrendered lease charges (R. III, 2126A) jumped to $239,230.96 for 1931, $255,829.03 for 1932, and $188,629.92 for 1933. Obviously these exorbitant and greatly in-

creased charges, incurred in unsuccessful exploration of Company-owned undeveloped leaseholds, were charged into the expense account with a view of an approaching rate investigation.

This is even more obvious when the leasehold account (gas leases, rights and lands in fee) is examined. It is to be noted that this capital account increased steadily in the approximate annual amount of $300,000, from January 1st, 1927, to December 31st, 1930, and then decreased steadily during 1931, 1932 and 1933, R. III, 2140A, 2211, 2214, 2217. Cancelled and surrendered lease expense is not an "out of pocket" expense during the accounting period in which the leases are charged off, but is simply a book transfer from capital account to operating expenses of the cost of leases acquired and capitalized in previous accounting periods. These book transfers are made at the will of the management. There is nothing in the record to substantiate the reasonableness of these charges during 1931-1933, inclusive. Although the Commission has allowed in the rate base, on which the 32c rate was fixed, the cost of undeveloped leaseholds, including delay rentals, as of December 31, 1931, and has allowed as operating expenses cancelled and surrendered leaseholds, it is obviously to the advantage of the Company to obtain the benefit of taking from gross revenues these huge operating expense charges, each dollar of which absorbs the equivalent of a 6% net annual return on $16.67 in the rate base. In other words, the charges for 1931 would absorb the return on $3,987,183.00; for 1932 the return on $4,263,817.00; and for 1933 the return on $3,143,832.00.

Inasmuch as all of the Company's production system properties as of December 31, 1931, including costs of undeveloped leaseholds and delay rentals, were included by the Commission in the rate base upon which the 32c gate rate was fixed, the following is a true picture of what has been happening ever since the end of 1931: with the gate rate remaining static and unchanged since the end of 1931 and with the production system property account actually declining (R. III, 2140A, 2211, 2214, 2217), at the same time the Company has been attacking the 32c rate upon the basis of rapidly mounting operating charges in the form of cancelled and surrendered leases, each dollar in such operating expense account being the equivalent of $16.67 in the capital account, or rate base as pointed out above. Thus, the consumer is caught in an enfilade of devastating fire from both directions.

New Business Expenses: For 1931, the basic year used by the Commission for fixing the rate, these items totalled $126,125.98,—broken down as follows:

New business advertising salaries $9,548.77;
New business soliciting and commissions $27,969.98;
Advertising supplies and expenses $81,234.85;
New business supplies and expenses $7,372.38.
(R. I, 30)

The Commission allowed, without question, all of the above items, except the $81,234.85 for advertising supplies and expenses, R. I, 22. It pointed out that this latter item was subject to numerous objections, but reluctantly allowed it in full because it was not clearly shown that all of it was subject to the objec-

tions pointed out, and there was no evidence submitted which would enable the Commission to segregate the proper from the improper portions, R. I, 23-25, 30. This item ($126,125.98) is clearly excessive and unreasonable upon its face. It absorbs a 6% net return for 1931 on $2,102,100.00. This is the basis on which operating expenses for the future were allowed. Smaller, but still grossly excessive, amounts were charged for subsequent years (R. III, 2227) as follows:

1932 $87,528.94 which equals 6 per cent return on $1,458,816.00.
1933 $99,793.94 which equals 6 per cent return on $1,663,232.00.

It is to be recalled that the bulk of the Company's business consists of gate sales only, to its affiliated distributing companies, the acquisition of whose business occasions no expense whatever; and of very small sales to independent distributing companies at Gainesville and Waxahachie, who are shown already to be under long term contracts which, so far as the record shows, cost the Company nothing to acquire (R. IV, 2323, 2342); and to approximately 90 industrial customers, along its rights of way, listed in the portion of the record which has been printed, (R. IV, 2386-2590) and to such farm taps as are served along the rights of way, R. I, 407.

Hulcy testified that this expense includes cost of soliciting business, and advertisements in newspapers and trade magazines; and that its purpose is to attach customers to the *distribution companies served*, and not to attach new customers to its pipe line business

except insofar as industrial business is obtained through solicitation and commissions; that its purpose is to increase gas sales by acquainting the customers with the advantages of gas as a fuel, R. I, 406-408. He could not state how much of the expense, if any, was incurred for advertising directly aimed toward increasing the use of gas and pointing out to gas customers the more extensive uses of gas and new gas appliances, R. I, 410.

The Company did not produce any evidence as to the value or cost of the newspaper advertising, nor give any evidence of the nature and contents of same, aside from what has been stated in substance above, either before the Commission or the court. As shown by the Commission's criticism, however, (R. I, 23-25), at least some of this advertising was pure political propaganda, to the effect that "60c of every gas bill goes for taxes."

Furthermore, everyone acquainted with the contents of modern newspapers, and with the habits of people living in modern urban centers, knows that no gas customer has ever been attached, or retained, through the medium of newspaper advertising, but that the prospective customers are all well acquainted with the merits of gas, and use it of their own accord, if they can afford it, in preference to all other fuels without any newspaper advertising.

If the Company had produced evidence before the Commission or court which would disclose how much of this large item of expense was legitimate advertis-

ing, we would have had no objection to the allowance of a reasonable amount therefor. But we do object strenuously to the inclusion of an unreasonable sum, of approximately $100,000.00 per year, which is shown affirmatively to be in part tainted by impropriety. And we think because of the Company's failue to adduce the required proof, the whole item should be stricken in determining confiscation.

All this is aside from the view expressed by Mr. Justice Stone that new business expense is not a proper charge against the present users: *West Ohio Gas Co. vs. Pub. Ut. Com.* (Lima case) 294 U. S. 62, 77-78, 79 L. Ed. 761.

Federal Income Taxes: An examination of the Company's exhibits analyzing its actual operating expense, will disclose that no federal income tax is included; which means, as is admitted by Hulcy, that the Company has never paid any, R. I, 405; R. III, 2224-2228. The Company, up through 1933, made consolidated income tax returns with its affiliates for the whole group, and the amount of tax paid thereon in such years (if any tax has actually been paid at all) was paid by the holding company, Lone Star Gas Corporation. The Company adduced no evidence as to how much income tax, if any, had been paid by the holding company, R. I, 399. The amount of taxes as between the holding company and the government was in controversy, and had never been settled. Nevertheless, it is shown by the record that the Company each year made out a "dummy," or memorandum income tax return, on the basis that would have been used had it made a separate return of its own to the

government, and this dummy memorandum return was passed on to Lone Star Gas Corporation, and not to the government, R. I, 396, 397. (Hulcy when asked on cross examination concerning this return evaded the question and testified "You are asking about something filed with the Federal Government, and which is entirely beyond our control", R. I. 602). The Corporation then would bill back to Appellant certain purportedly allocated amounts, the basis and correctness of which claimed allocations are not shown in the record. The Company would then credit the Corporation with the amount so billed, but even these amounts (aside from the question of their correctness) are not shown, with the exception of $296,954.64 for 1931 and $234,312.46 for 1932, R. I, 395.

We submit that this evidence is totally insufficient on which to establish any real and reliable allowance for Federal Income Taxes actually incurred or paid. The Commission found (R. I, 104) that "throughout this opinion we have computed return before Federal Income Tax." This means that its intention was to fix an average annual net return of 6 per cent before, and without deduction of, Federal Income Tax as an operating expense. It further found (R. I, 104-105) that after taking credit for depreciation at the rate allowed by the Internal Revenue Department and for interest on borrowings as permitted by the Department, there would be no liability for a federal income tax upon the basis of a 6% return in the future. Nevertheless, Hulcy, in making his computations of amounts available for net return, deducts computed amounts for this item in the grossly excessive

sums of $302,302.41 for 1931 (R. III, 2210), and $343,835.27 for 1932 (R. III, 2213).

The method by which he arrived at these computed, as distinguished from actual, income taxes is that in some instances he failed to take credit for interest on borrowings as permitted by the Internal Revenue Department, the principal item of which was made up of 6% paid the holding company on indebtedness ranging from $19,000,000.00 at the peak to $17,600,000.00 at the time of the District Court trial, R. I, 464; and, in some of his exhibits, instead of taking credit for the 5% depreciation actually allowed by the Internal Revenue Department in the past, he deducted only the amount, (2% plus), of depreciation as allowed by the Commission in its opinion, R. I, 405, 406; R. III, 2287.

Cross examination by counsel for the State developed from Hulcy that in Company Exhibit 13, (being the analysis of the comparative statement of revenues and expenses based on 32c domestic gate rate using rate base as found by Commission at December 31, 1931, plus net additions at cost) that if the depreciation be deducted in the amount of 5% which was the amount allowed by the Internal Revenue Department before calculating federal income tax, that the resulting federal income tax would have been approximately $52,000, plus, instead of the amount of $211,689.58, which is shown in the exhibit, R. I, 405-406; R. III, 2287, 2296.

In view of the fact that the Commission found that the 6% return fixed would be reasonable, without deduction for federal income tax; and that if proper

credit were taken for interest on borrowings no federal income tax would be due on a 6% basis (R. I, 104, 105); and in view of the Company's failure to produce any evidence of how much its actual income tax had been or would be, we do not think it would be justifiable to deduct in computations of net return for confiscation purposes any sum for federal income taxes.

RATE BASE

Quoted Prices: By far the largest item of physical properties was transmission line equipment, which was estimated by the Company, (R. V, 3038) in the amount of $31,894,439.40 of which amount pipe delivered at the sidings amounted to $20,954,471.01, R. V, 3052. As the basis of obtaining prices on pipe, as well as practically all other items of physical equipment, the Company purported to have obtained from "leading manufacturers" quotations of the prevailing prices, with all applicable discounts applied.

It was obvious that the Company's inquiries asking for quotations on the quantities of materials contained in the entire system were not made with a view of actual purchases of any such quantities, and the manufacturers were therefore bound to have known that the quotations were requested for rate evaluation purposes. The competition motive for quoting the lowest prices and the greatest obtainable discounts, to obtain an actual order in such vast quantities, was therefore totally lacking; and the manufacturer would, of course, not wish to offend actual customers of the past or prospective customers of the

future by quoting in those circumstances the lowest prices for such quantities available in case of a real purchase. Biddison testified (R. I, 648) that he believed in case of an actual purchase the pipe might be bought at prices "slightly under" the quoted prices, but that he was of the opinion, also, that the placing of orders in such large quantities would so stimulate the prices that they would not hold very long if that amount of business became available to the manufacturers. He stated, further, that in the placing of orders, for *actual* purchase of pipe, there are opportunities to "chisel a little", on the prices to be paid, but that he had not taken that fact into consideration in the preparation of his appraisal, R. II, 810. He attempted to deny that discounts of certain percentages were available on large lot pipe purchases, in the face of two telegrams from the manufacturer that they were so available, R. I, 657, 660, 685-686.

The Company avails itself of the services of J. M. Simpson, who maintains his office in Pittsburgh, Pa., and acts as common purchasing agent for all pipe and heavy materials for the entire Lone Star group as well as for other large groups of utility purchasers; and it was upon the theory that Simpson was able to obtain for the Lone Star group the lowest prices available to any purchaser on large or small lots that the Company attempted to justify in part its payment of management fees to the holding company, R. II, 905; R. III, 1980-1983. When it came to obtaining prices for evaluation purposes, however, it appears that the services of Mr. Simpson as purchasing agent were utterly worthless. The Company did not call Mr. Simpson as a witness to substantiate its prices as applied.

A striking example of the inflation injected into these prices is found at R. II, 902-904, where it is shown that during 1933, immediately after the date of Biddison's appraisal, the Company had actually made substantial purchases (11 carloads in one instance) of the highest quality large size pipe at prices very substantially lower than Biddison used in estimating the prices of lower quality smaller size pipe.

The Commission's witness, Freese, testified that his investigation showed that large lot purchases could be obtained at prices 10% to 15% or more below quoted prices, R. III, 1746-1747, 2096-2097. The Commission's opinion (R. I, 37-40) discloses that quoted prices from the leading manufacturers were identical and far above the prices actually obtained by the Company in actual purchases.

The Company sponsored an exhibit purporting to show a total increase in price of steel pipe in its system of $1,105,652.54 between January 1, 1933, and the last appraisal in 1934, R. V, 3052.

It conclusively appears that this temporary rise was due to the artificial inflation of the "steel code" (August 29, 1933, R. II, 900) under the National Industrial Recovery Act, which became effective prior to the latest Company appraisals, R. I, 420; R. II, 771, 901, 1229-1230; R. III, 1763, 1982. The same artificial stimulus was responsible for the Company's increase of common labor rates from 35c to 40c per hour, R. III, 1618, 1722. The NRA has long since been declared unconstitutional and the artificial stimulation has subsided.

Company witness Schmidt attempted to explain the Company's actual purchase of 24 inch pipe in 1933 at approximately $2.00 per foot, when the quoted price of $3.00, as used in the appraisal, by saying it was a "distress purchase," R. III, 2045-2046, 2051.

We have given in some detail the inflation resulting from the use by Appellant's witnesses of quoted prices rather than the use of prices at which the Company was actually purchasing the material. Throughout the appraisal Biddison, practically without exception, has used quoted prices; and, in fact, he seems proud of the fact that he had made no search of the Company's records to ascertain at what prices materials were currently, or within a recent period of time, being purchased by the Company: Gas Wells, R. I, 618, 624, 626; Other Production System Structures, R. I, 632, 633; Welding, R. I, 743; Lumber and Gravel, R. I, 751, 757. There are many other instances throughout the record.

Biddison, even though using quoted prices and discounts as furnished by manufacturers, without relation to actual purchases by the Company, failed to apply all of the discounts applicable even to such quotations, as for instance, in the purchase of casing where the record clearly reflects that the current quotation was 10, 10 and 2 from list, whereas the witness Biddison used a discount of 10, 5 and 2 from list, R. I, 657-659, 685-686.

Divided Responsibility: A single illustration of the substantial and inevitable error which results from the divided responsibility of having one witness responsible for prices, another for inventory, another for

application of unit prices, another for cost studies, another for the interpretation of the analysis of cost studies, another for the estimates of volumes of gas reserves, another for evaluation of gas reserves, another for evaluation of intangible elements, etc. *ad infinitum*, as per the division of labor between the expert witnesses used by the Company, is the following: That Biddison, in evaluating gas well equipment, included a large lot of miscellaneous special manufactured valves, and applied his idea of "substituted" quoted prices to same; resulting in the application of prices in some instances of more than $700.00 on valves which should properly have been priced at around $200.00; and Biddison was finally compelled to admit that because of the error in this particular instance his appraisal should be reduced to the extent of $4,603.78, R. II, 1171.

Another typical example is that Biddison, after being smoked out in cross-examination made a re-check and eliminated $25,473.00 for well lines which should have been excluded from the appraisal. Biddison had no part in the preparation of the inventory. He had no part in the determination of the prices for materials used in the appraisal, and was surprised to learn that included in the inventory were well lines and wells which were no longer used and useful in the public service, R. I, 746, 747; R. II, 1141.

Furthermore, this method lends itself admirably to the game of "passing the buck." Whenever a witness was pursued too closely on cross examination he could always find a refuge of safety by saying that he had no responsibility, that this matter was handled by some other witness, and thus the whole method

provided a wonderful opportunity to the Company of covering up numerous and substantial errors and duplications in the work of the witnesses; and which the Commission was, of course, utterly unable to discover and expose, in cross examination, except in isolated instances where the witnesses could not elude confession of error, R. I, 657-659, 685-686.

Excavation Costs: The total yardage of excavation estimated by the Company was 3,375,162.9 cubic yards, R. II, 1255. Of this total yardage, 2,786,080.03 cu. yds. or 82.54% were estimated as to volume, and classified as machine, rock and hand earth excavation, by what is known as the "barring method". That is, instead of making an opening over the pipe, a steel bar is driven into the ground until it contacts what is supposed to be the pipe, and in this way the depth of trench cover is measured; the outside diameter of the pipe, plus a few inches additional for "bedding" where it is concluded that rock excavation was done, was added to the trench cover, and the total trench depth thus determined. Trench widths could in no instance be ascertained except where actual construction records were available, which was the situation on only a very small part of Appellant's system. Thus over most of the system, trench widths had to be estimated, and the total yardage of estimated excavation thus determined. The Company operatives would then again drive the bar into the ground a few feet to the side of the pipe to determine whether there was rock. If the bar struck rock at any depth it was assumed that the soil from that depth downward was all rock, although it might have been only a thin ledge, R. I, 489-490, 497-498, 500-502; III, 1618.

A striking concrete example of the utter unreliability of this method is afforded by a comparison of actual construction records on Line Second B and the results obtained by barring methods on Line B, with the two lines running parallel 60 or 70 feet apart for a distance of 62.12 miles (R. II, 1256). Line B was constructed about 1910, and no actual records were available; consequently the barring method was used on it. Line Second B was constructed in 1929, and actual construction records were available. Cross-examination of Steinberger discloses that the barring method used on Line B produced an estimate of 11.97% hand earth excavation, 11.11% of hand rock excavation, and 76.92% machine. At the same time the actual records revealed that on Line Second B the percentages were: hand earth excavation, .83%, hand rock excavation 9.07%, and machine excavation 90.10%. In other words, the hand earth excavation estimated on Line B was 14.42 times as great as the hand earth excavation actually encountered on Line Second B, and the hand rock estimated on Line B was materially greater than that actually encountered on Line Second B; R. I, 501-504; R. II, 1249-1256.

Steinberger had assembled the detailed underlying data for purported cost analyses or studies of actual excavation cost on approximately 452 miles of trenching done on the system after 1929, no actual records prior to that year being available, R. I, 497-498. Steinberger, from this immense mass of detailed data, compiled his own "summaries" or "conclusions", as to what he interpreted the detailed data to show in the way of unit costs for the various classes of excava-

tion. He then passed these "summaries", or "interpretations", or "conclusions" of the data to Biddison, who, though admittedly knowing nothing of the detailed data or conditions under which the work had actually been performed, made "modifications" of Steinberger's "summaries, conclusions or interpretations", to suit his (Biddison's) own ideas of how the data ought to be rectified to apply in the present reproduction cost estimate because of supposed differences between conditions under which the work studied was actually performed (and of which conditions Biddison admittedly had no knowledge) and the hypothetically different conditions under which the property would be reproduced. This again presents an ideal opportunity for "padding" the hypothetical, as distinguished from actual, cost, and for making the most of the Company's preconcerted plan of dividing responsibilities so that no one could effectively be called to account for the unrealities and errors.

The Company witnesses used four classifications of excavation, which in direct order of cost were: (1) machine, $.4260 per cubic yard, (Line K) R. II, 779. The unit cost per cubic yard for machine excavation used by Biddison varied with the width and depth of the trenches—the unit costs ranging from about 40 cents to 45 cents per cubic yard, R. II, 785; (2) hand earth, in stretches more than 200 feet in length, $1.31, per cubic yard, R. II, 779; (3) hand earth excavation on "skips" or "lifts" of less 200 feet in length, encountered in connection with machine excavation, $2.138, (R. II, 1219, 1223); and (4) rock excavation, in Texas $3.897 per cubic yard, and in Oklahoma, $3.826 per cubic yard, R. II, 784; III, 1924.

These unit costs the Company purported to have derived from its aforesaid studies of actual construction costs, with the exception of unit costs for hand earth excavation on stretches in excess of 200 feet in length, which price of $1.31 per cubic yard was developed by witness Biddison through the device of a hypothetical gang set-up, Biddison admitting that no Company cost records were available on hand earth excavation on stretches in excess of 200 feet, R. I, 640; R. II, 784.

The absence of these actual cost records is sufficient proof that the Company had not actually encountered hand earth excavations on stretches in excess of 200 feet in its actual construction study. An examination of Appellee's Exhibit 6 (R. III, 2151) reveals substantial estimated amounts of hand excavation on certain stretches, as for example, 15,621.3 cubic yards of hand excavation in the "C" system, which together with machine excavation of 45,910 cubic yards and rock excavation of 1,405.5 cubic yards, constitutes the yardage in the "C" system. Other similar illustrations are shown at R. III, 2151-2152. It is to be noted classifications and quantities of excavation were furnished Appellees by the Appellant, R. I, 874. This yardage of hand earth excavation was classified by the Company, based primarily on the barring (estimated) method, but also includes those lines on which actual records of the construction were kept, R. I, 497, 498, 502, 505; R. III, 1923-1924.

The Company's methods resulted in gross and obvious overestimation of the yardage of hand earth excavation of both classes, and of rock excavation, with an underestimation of machine excavation yardage, and the application of the higher price of $2.138

per cubic yard to a large portion of the estimated hand excavation, R. II, 779.

Although the records show there were many field and tap lines in the system, ranging up to as much as 7 miles in length, (R. I, 722, 724), Biddison assumed hand earth excavation on these field and tap lines almost without exception; giving as his only reason therefor that it would be more expensive to move a machine in on the job than to do it by hand—yet, on his assumption of 100% reproduction new, the machines would be available on the main line trenches for use on the field and tap lines as they were reached, R. I, 501. These tap lines are the main line taps or laterals extending to city gates and industrial connections.

Next to the $21,000,000.00, cost of pipe, the cost of excavation was the largest other item in making up the total of approximately $31,000,000.00 for transmission line equipment, as estimated by the Company, R. II, 763-764; R. IV, 2365; R. V, 3052.

Furthermore, Biddison and Steinberger included in their unit cost of machine excavation their cost of "crumming", or cleaning up in the ditch following the machine. In several instances, cross-examination succeeded in establishing that they had included in the supposed work of these "crumming" or clean-up crews, the cost of quantities of rock excavation, which of course, was much more expensive and should not have been thrown into the machine costs.

Steinberger testified from his daily progress reports, which reports furnished the basis for his studies of excavation, as follows:

"Q. Go ahead.

A. I have a day here, Oct. 29th. We have 671 labor hours working from stake 386-00 to 476-00, a distance of 9000 feet charged to "crumming," crumming ditch and removing rock.

Q. Well, that is part of your hand excavation cost?

A. No, it is not.

Q. What have you figured that in,—as a part of the machine excavation?

A. Yes, crumming is part of machine excavation, just like clearing off a ditch is part of it" R. III, 1946.

A similar illustration of the opportunity afforded for "padding" the unit costs derived from a study based upon the daily progress reports can be cited as follows: witness Steinberger in testifying from daily progress reports of August 28th:

"Q. Wasn't there any crumming behind the machine?

A. Apparently not. Whatever crumming there was, was included with rock excavation. . . .

Q. So that to the extent you have left crumming out in the rock excavation you have understated the performance actually done by the rock excavation gang?

A. That is correct. One day it may be understated on performance and other days, overstated," R. III, 1944, 1945.

Freese compared the relative percentages of the various classes of excavation as determined by the barring method on Line B with the actually experienced relative percentages of excavation on Line Second

B, Line Second B being some 60 or 75 feet from and parallel to Line B, R. I, 503; II, 1251. Freese testified that if the Company had determined the classifications of the yardage by actual measurements and had applied the unit costs used by Biddison to the yardage so determined instead of the classifications as used by Biddison, that the cost of the excavation as shown in the Company's exhibits would have been reduced in the approximate amount of $600,000.00, R. III, 1779-1780.

Freese applied the following unit prices to the various classes of excavation: machine, $.375 per cubic yard; hand earth, $1.31; rock, $3.50, R. III, 1744. The Appellee also used as witnesses, Robinson and Dobson. Robinson was a contractor residing in San Antonio, Texas, who had done much excavation work in the area traversed by the Company's transmission lines, R. III, 1610. Dobson was undoubtedly the best qualified witness on machine excavation that appeared in this trial. His qualifications are shown at R. III, 1710. He testified that he now owns and operates 30 trenching machines. He also testified that, using only his own equipment, he could trench the Company's system in two seasons of 8 months each, R. III, 1720-1721. Robinson and Dobson were carried over the system and were given specifications describing the manner in which the trenching or excavation had been classified and the classification in cubic yards of rock, hand earth, and machine excavation, R. III, 1712-1721.

It will be noted that Freese, as well as Robinson and Dobson, had 3 classifications—machine, hand earth,

1411

and hand rock. All three testified that it was customary for such hand excavation as is incident to the machine excavation to be included in the unit prices for machine excavation, R. III, 1616, 1719. Dobson testified as follows: estimated machine excavation, $.285 per cubic yard; hand excavation $1.41 per cubic yard; rock excavation $4.00 per cubic yard, R. III, 1721-1722. Robinson testified: machine excavation 40c per cubic yard; hand excavation, $1.20; rock excavation, $2.90, R. III, 1617. Robinson and Dobson would have been glad to do the work at the prices testified to by them, R. III, 1723, 1624. Freese relied not only upon his own independent judgment as to the proper prices to be used for the various classifications (R. III, 1773-1774), but also upon the testimony of Dobson and Robinson.

A similar controversy as to excavation costs arose before the Commission. There will be found in the findings of the Commission detailed discussion of the testimony relative to this item before the Commission, the State having introduced in evidence before the Commission the testimony of Lee, Minter and Sherman in addition to Robinson and Dobson. The testimony of Lee, Minter and Sherman before the Commission confirmed the testimony of Robinson and Dobson. The Commission used substantially the highest figure on each classification testified to by any of Appellees' witnesses, R. I, 42-43.

Freese adopted the estimates of the Company witnesses as to backfill. There is no dispute as to this item, R. III, 1772.

Freese testified that he had examined the studies made by the Company on excavation, both on trans-

1
4
2

mission lines and on well or field lines. He testified that it would be improper to use unit costs developed by studies on actual measured excavation when applied to quantities determined by the barring method, R. III, 1779-1780. He further cited as an illustration the comparison between Line Second B, the measurements of actual construction of which were available, and the quantities on Line B, which were determined by the barring method, R. III, 1779-1780; the results of which comparison are stated above. Freese also cited studies of excavations on field lines in the Texas Panhandle and Oklahoma gas fields. These studies were made by Steinberger. Freese testified as follows: "Certain information was made available to us. However, it was not in such shape as we could analyze it and make heads or tails of it. I think that is apparent in this particular case. When you analyze in the Panhandle field, according to the Company's records you show a cost of rock and earth excavation of less than a dollar; in Oklahoma of around 60c or 70c on field lines; then when you analyze what is set forth in connection with machine excavation it runs up to over $2.00," R. III, 1771. In State Exhibit 6, R. III, 2151, 2152, is shown in tabular form the excavation yardage, unit prices, and amounts in dollars as used by Freese. The total allowance for excavation as estimated by him is $2,221,059.90, R. III, 2151, 2152. Steinberger testified that, on this item of excavation, Biddison had included in Company Exhibit 28, $558,008.58 more than the amount estimated by Freese in Exhibit 6, R. III, 1955.

Gas Reserves: Before the Commission and the District Court, the Company included in its appraisals

all developed and undeveloped gas reserves and leaseholds owned by it. The Company's statement to the contrary on p. 36 of its brief is absolutely unfounded. Freese's exhibits before the Commission, likewise included these reserves. The Commission included in the rate base all of the production system properties both in Texas and Oklahoma, except Petrolia (Texas) field, where the cost of operation alone was so grossly in excess of the worth of the gas that the Commission determined it would not be proper to allow these worthless production properties in the rate base as used and useful public service property, R. I, 47.

The record showed that in the past the Company had been producing only approximately 28% of its over-all deliveries and had been purchasing approximately 72%, R. I, 72. Freese testified, before the court, that 80% was purchased, and 20% produced, R. III, 1894.

According to the Company's evidence the average field price being paid by it for purchased gas over-all in Texas and Oklahoma, even giving effect to the much higher prices prevailing in Oklahoma, was only slightly in excess of 6c per MCF, R. I, 606-607. The average prevailing field price in the fields where the Company produced gas was slightly less than 5c (4.82c for 4, 924,844 MCF, or $237,233.40 for year 1931, R. I, 107, 113). In Texas it would be slightly less than 4c. (3.90c to 3.96c, R. III, 2165).

But if effect were given to the Company's methods and estimates, all the gas produced by it would cost 23.3c per MCF *at the well head*. The Company esti-

mated depletion of developed leaseholds at $146,000 per annum (R. V, 3055); depletion-depreciation of gas well equipment at $421,316 per annum (R. V, 3055); production system expenses amounted to $105,554.86 for 1933 (R. III, 2224); cancelled and surrendered lease expenses amounted to $188,-629.92 (R. III, 2215); production system property was included in the Company's proposed rate base at $9,108,352.94; not including non-physical values, (R. V, 3037), which at 6% return amounts to $546,501.18 per annum. This makes a total of $1,408,001.96 for the 6,046,035 M C F of Company-produced gas for 1933 (R. III, 2124A, 2165) or 23.3c per MCF at the well head.

It is not amiss to remind the Court that the Company and the Commission included in the rate base all production system properties, when plainly a very large part thereof (all of the so-called undeveloped reserves, and a part of its so-called developed reserves) was not actually used and useful in the present public service, and would not become useful at any reasonably near time in the future so that in reason and justice it could be considered in the nature of presently necessary working capital. *Columbus Gas & Fuel Co. vs. Pub. Ut. Com.*, 292 U. S. 398, 406-407, 78 L. Ed. 1327.

The Company's method of including all production system properties in the rate base and of placing grossly exaggerated valuations thereon was objectionable for every reason which impelled this Court to condemn such method in *United Fuel Gas Co. vs.*

Railroad Com. of Ky., 278 U. S. 300, 310-322, 73 L. Ed. 390, and for additional reasons which we shall now endeavor briefly to set out.

Company witnesses have evaluated what they called developed or marketable reserves in proven and semi-proven areas, by estimating the volume of gas in place beneath the surface. This valuation was arrived at by assuming that the entire volume would be exhausted over a period of 20 years in the future, and that the rate of withdrawals from Company reserves and the prevailing field prices of gas would increase progressively throughout the 20 year period. The assumed rate of withdrawals in the future was shown to be as much as four to five times the rate of withdrawals in the past, up to the time of the District Court trial, R. I, 107, 531, 577; III, 2124A, 2165.

Based upon Dunn's estimate of the future rate of withdrawal, Company witness Hulcy evaluated the developed reserves in the proven and semi-proven areas, R. I, 531, 576-577. Hulcy took the estimated volume of gas and determined what it probably would be worth, if presently marketed, in all fields except the Texas Panhandle and Petrolia fields.

In the Petrolia field there was no gas being sold so as to establish a prevailing field price, and Hulcy in lieu thereof assumed a price of 10c per MCF; which, he testified, had been established by the Federal Government for income tax depletion allowance in the war time period of 1917, R. I, 589. In the Wheeler County, Texas, field, where the overwhelmingly major portion of the Company's developed reserves is located

he assumed future rates of withdrawals over an estimated future 20 year period of production at a rate of withdrawal 4 or 5 times as great as the rate of withdrawals had been up to the time of the trial, and also assumed progressively increasing field prices over that period R. I, 107, 531, 577, 559-560; III, 2124A, 2165. From this total estimated valuation of Wheeler County reserves he deducted the estimated cost of present gas well construction and equipment, and assumed that 135 additional wells would have to be drilled in the future to produce the gas over the 20 year period and deducted from the estimated total the estimated cost of present and assumed future cost of gas well construction and equipment, less totally inadequate assumed salvage values; and to the remaining estimated value he applied an assumed present worth factor of .46319, (8 per cent compound interest basis), R. I, 561-566.

It will be perceived that all of these basic assumptions were in the highest degree speculative, conjectural, uncertain, and inaccurate and not supported by any substantial basic factual data. It will be seen also that the greater the rate of assumed future withdrawals and the greater the assumed future field prices, the shorter would be his assumed period of production, and the greater would be his assumed present worth of the reserves, R. I, 578-581.

The whole method involves in essence the capitalization of assumed speculative future earnings (R. III, 1659-1660) and is the identical scheme of evaluation which was condemned by this Court in *United Fuel Gas Company vs. Railroad Com. of Ky., supra.* The

Commission's witness Phillips, an accountant of broad experience, testified in respect to the question of the Hulcy method being capitalization of future earnings:

"Q. I will ask you, Mr. Phillips, if the method used in finding the present fair value of net gas reserves as calculated by Mr. Hulcy is not what accountants ordinarily understand and mean as being a capitalization of future earnings?

A. Well that is my accounting understanding of it and I believe it is the general understanding of accountants generally," R. III, 1659-1660.

It is pertinent to say that the valuation arrived at by Company witnesses of the production system properties was grossly excessive over the actual historical book cost of these properties.

As to the so-called undeveloped reserves, situated in unproven territory, the Company witnesses made no estimate of the volumes of gas in place, as they had no way of knowing that any gas was actually located under the leases at all, (R. II, 835) but these properties were evaluated by Company witness Steinberger, as per Steinberger's exhibit showing such leases, upon the basis of original acquisition costs as per books, plus all other costs incurred in connection therewith as per the books, such as delay rentals, etc., R. I, 570-572.

It is obvious that none of this property, estimated by Steinberger at $893,291.28 (R. V, 3034A), and given blanket endorsement by Biddison, (R. I, 654-655) is presently used or useful; it is certain that it will not become used or useful at any time in the reasonably near future, in view of the undisputed fact that the so-called developed reserves are sufficient at

past rates of withdrawal to last from 40 to 60 years; and it is doubtful whether they ever will become used or useful, especially in view of the admitted fact that it is not known whether they contain gas or not, R. II, 835.

The Company charges all costs of these leases into operating expense as cancelled and surrendered leases if the leases prove worthless; but on the other hand if gas is discovered and developed thereon the Company gets the benefit of the discovery by including the estimated value in the rate base at highly excessive figures. The Company gets all the profits of enhancement, and the consumers bear all the losses. This enhanced value of the proven leases is much more than sufficient to include the cost of the leases ultimately condemned. Yet the Company takes all the benefit of the enhancement due to actual development, by including the proven leases in the rate base at their enhanced value, but loads upon the rate payer, in addition thereto, the total cost of all the condemned leases by charging the cost thereof into operating expenses, R. III, 2126A. And in the meantime, until the undeveloped reserves ultimately are either made valuable and included in the rate base as developed reserves, or condemned and charged off into operating expense, they are included in the rate base at book cost.

In this connection we beg to refer also to our discussion of cancelled and surrendered leases as an operating expense, supra, pp. 122-124.

The Company includes *undeveloped* leaseholds in all of its appraisals at book cost, including $200,-

199.39 delay rentals. It was not shown that any of these leaseholds would be developed in the reasonably near future. R. V, 3034A, I, 568-575. The Commission also included in its rate base the undeveloped leaseholds, including delay rentals, at cost. R. I, 70-72, 570. It is held in *Columbus G. & F. Co. vs. Pub. Ut. Com.*, 292 U. S. 398, 406, 78 L. Ed. 1327, that it is not proper to capitalize delay rentals on such leases. The Company and the Commission included in operating expenses the cost of charged-off cancelled and surrendered leaseholds and dry hole expense. R. I, 28-29, III, 2208-2294.

Developed leaseholds were included in the rate base by the Commission at the actual cost of the leaseholds under one set of computations and, under another set of computations, the developed leaseholds were excluded from the rate base and the Company-produced gas was allowed for at the prevailing field well head price. Under either method of computation, the return averaged in excess of 8% for the years 1927-1932, inclusive, considered by the Commission. R. I, 20. In evaluating developed leaseholds and production property the Company purported to proceed upon the following assumption: "We are assuming that our own gas reserves are worth exactly the same, or that the gas produced by the Company in any field is really worth exactly the same as that purchased from any other producer. It is worth that much and no more, and we have gone about it on that assumption." R. I, 72, 594. The Company then proceeded, however, to capitalize the value of its production properties based upon future estimated withdrawals and assumed future increased field prices. R. III, 1659,

1660, V, 3031-3032. However, in respect of its principal reserves (Panhandle District of Texas), instead of using the prevailing field well head price of 2c per MCF, which is now being paid and which has always been paid in the field (R. I, 581-582), the Company more than doubled this price and assumed that the gas was worth 4.7c per MCF. R. V, 3032. If, instead of assuming a value of 4.7c per MCF, the Company had proceeded on the basis of 2c per MCF, the prevailing field price and the price being paid other owners by the Company in the Panhandle Field, the gross value of the Panhandle production properties as shown on R. V, 3032, would have been reduced from $9,933,-969.00 to $4,227,621.00, (R. I, 585) and the estimated net recovery value of the gas reserves as shown on R. V, 3031, would have been reduced from $16,055,292.00 to $10,348,944.00. The Company further assumed that it would withdraw this gas at the rate of 20,000,000 MCF per annum as compared with its actual withdrawal rate of from 5,000,000 to 6,000,000 MCF per annum. R. I. 107, 564, 576-577. If, instead of using a 20,000,000 MCF withdrawal rate in the future, the Company had used a withdrawal rate of approximately 12,000,000 MCF per annum, or more than double the actual withdrawal rate, the present worth discount factor would have been .31524 instead of the assumed present worth discount factor of .46319. R. I, 579. By applying the .31524 present worth factor to the net recovery value of $10,348,-944.00 based on the actual prevailing field price, we arrive at $3,262,401.00 as the present fair value of gas reserves including gas well equipment and construction. This compares with the present fair value

of $7,436,650.00 found by the Company (R. V. 3031) and which figure was used in all of its appraisals before the District Court. The Company used a present worth discount factor of .368 for the Texas Panhandle (Wheeler County) Field in its testimony before the Commission. R. I, 581. It is by means of these involved speculative and erroneously unjust calculations that the Company takes gas worth less than 5c per MCF (4.82c per MCF) and finally charges it into its rate base, depreciation and depletion charges and into operating expenses in such a way that it would cost 23.3c per MCF at the well head. See pp. 144-145, supra.

Proceeding on the basis that the Company-produced gas was worth what the gas could be purchased from other owners for, (the Company purchases approximately 72% of its gas, R. I, 74; Freese testified before the District Court approximately 80% is purchased and 20% produced, R. III, 1894), it would have been a great deal simpler and more just to charge directly into operating expenses the prevailing field well head price for the Company-produced gas. This was what the Commission did under one of its sets of computations (but did not adopt as a basis of fixing the rate), and also what the Commission witness did before the District Court. If the Company's capitalization of the value of its production properties and its estimated withdrawal rate had been in accordance with the actual facts it would have arrived back, at the end of its complicated and intricate calculations, at the prevailing field well head price of approximately 5c rather than 23.3c per MCF. The Company could

purchase all the gas it requires in the Panhandle field at 2c per MCF.

The Company should either (1) accept an actual cost basis for the appraisal of both undeveloped and developed leaseholds and charge the actual cost of bringing the gas to the well head and of cancelled and surrendered leases and dry holes, to operating expenses; or, (2), they should charge for the gas at the well head at the current prevailing field well head price. The Commission made computations on both of these bases. If the Company had correctly made its computations, its results would have been the same as using the prevailing well head price, with the exception of the fact that they would still charge cancelled and surrendered leases and dry hole expenses into operating costs. This latter exception is improper, inasmuch as the prevailing field well head price paid the other owners includes all cancelled and surrendered leasehold expenses, all dry hole expenses, depletion and depreciation, R. I, 599, 600, 28, 29, 67, 68.

We are perfectly willing to accept the Company's original basis of treating developed production properties, where it finds that its produced gas is worth the same as what it could buy gas for in the same field from other owners. However, this basis should be strictly adhered to in all of the resulting computations and its approval should not be inflated beyond this basis by in excess of $4,000,000, as has been done in this case, nor should operating expenses be made to bear the cost of developing these gas reserves, the value of which the Company now wishes to capitalize. Further the present users should pay only for

the Company-produced gas they use (5,000,000 to 6,000,000 MCF per annum) and not for a greatly increased amount (20,000,000 MCF per annum) as estimated by the Company witnesses, R. I, 74.

The Company claims on page 13 of its brief that the Commission eliminated from its rate base capital additions to the property made in the year 1932 in the amount $2,257,682.07. By referring to the pleadings in the state trial court (R. I, 142), the Company also claims that the Petrolia field account in the amount of $687,781.13 was "arbitrarily and capriciously eliminated". The $2,257,682.07 figure was made up of the cost of the Southern Oil and Production properties of $966,600.11 (including $200,000.00 "value of contract", R. III, 1603) and of the undepreciated original book cost of the Meridian Gas Company at $1,338,406.21, R. I, 343, 460. The Commission did include the prorata cost of the Southern Oil and Production properties in their rate base for the year 1932, the property having been purchased on October 1, 1932, and in the Tables, infra, which we are submitting, these properties are included for the year 1933 at their full cost.

As to the inclusion of the Meridian Gas Company properties, the Commission states, *"Neither the Company witnesses nor the witness Freese submitted an appraisal of these production properties.* We have allowed not only the actual production expenses but also fifteen cents per M. cu. ft. for the gas produced during 1932 as a return on this property. In other words, if instead of purchasing the property the Lone Star Gas Company had continued

to pay the very ample price of 15 cents per M. cu. ft. to the affiliated Meridian Gas Company, the 1932 operating expenses could be eliminated from the 1932 computations." R. I, 110. The Commission allowed for the gas produced from the Meridian properties, in addition to allowing all operating expenses, the sum of $70,227.30 for the year 1932. R. I, 108. The Meridian holdings comprise the production properties and gathering system in the Chickasha field and a short section of transmission line. Appellant acquired this property for $1,300,000.00 plus, from the Lone Star Gas Corporation on January 1st, 1932. R. I, 110, 343, 460, 461.

As to the estimated value of these properties, as per the Company witness, refer to R. V, 3032. It is there to be noted that the gross value of the Chickasha, Oklahoma reserves is $173,079.00, including all gas reserves, production gas well equipment, production property of every kind and including all recovery operating costs. Referring to R. V, 3031-3032, and without deducting the recovery operating costs, it is seen that by applying the present worth factor of .46319 (as used by Hulcy) to the gross value of $173,079.00 we have a present fair value of gas reserves, including gas well equipment and construction, of $80,168.00. This is the Company's own appraisal of the production properties and clearly shows that the Lone Star Gas Corporation sold the properties to its subsidiary, the Lone Star Gas Company, for $1,300,000.00 plus for the simple purpose of putting these properties in the Appellant's rate base, and it is largely with reference to these properties that the Com-

pany complains, on page 13 of its brief, that they were eliminated from the Commission's rate base. This is true in spite of the fact that the Commission allowed all operating expense plus $70,227.30 for the gas delivered by Meridian Gas Co., which latter sum is a return of 5% plus on the fictitious value claimed for these properties which the Lone Star Gas Company places in its various rate bases.

With reference to the Petrolia field account in the amount of $687,781.13 claimed by the Company as a part of its rate bases, the Commission found, and the Company in no way refuted the finding in the District Court, that the cost of getting the gas to the wellhead in the Petrolia field was in excess of the full value of the gas at the wellhead and that instead of this field having any value as used and useful public service property that it was a liability, R. I, 46-47; III, 1739. Based upon the Company's method of evaluating gas reserves and allowing for the gas at 10c per MCF, the Company found a negative value for this field. R. I, 590. We cannot escape the conclusion that the Petrolia field is being operated at a loss simply for the purpose of including its reproduction cost in the rate base.

It is to be noted in Tables II and III, infra, which we are submitting, that in the use of undepreciated book costs as rate bases, no deduction of the Petrolia field account and of the cost of the Meridian Gas Properties has been made. Furthermore, it is to be noted in Table II, infra, where the rate base as found by the Commission is used, that the Meridian Gas properties are included at book cost.

"Omissions and Contingencies" and "Duplications": These constitute another inexhaustible source of padding tapped by the Company's witnesses. On practically every item entering into direct structural cost, Biddison added substantial percentages for omissions and contingencies, even super-adding them into his developed unit costs purportedly based upon actual costs as incurred and studied. His theory was that there would be omissions from the inventory of property, which he testified was as complete and exact as it could practicably be made, (R. I, 614); and that contingencies would occur in a reproduction new which had not been encountered in the original construction, and which would increase the cost. When cross-examined as to whether the inventory might not as reasonably be expected to include duplications rather than omissions, and as to whether the unit costs as developed from studies of actual construction would not necessarily embrace all omissions and contingencies, Biddison replied, "So far as I know, nothing was omitted from the original study. It was not designed to have anything omitted from the original study. But, in the analysis of cost data you determine only the cost of the things from which the data was derived. When you go to apply that cost data to the construction of something else, at different locations, under different conditions, it is good judgment to allow for differences in those conditions that may cause differences in costs and any estimator who does not do that is courting disaster, either for himself as an estimator, or for the people who use his estimates as the basis for bids in trying to finance a proposition," R. I, 689. He admitted that he had made no effort to relate the

unit costs in his appraisal to the actual cost as historically incurred and as shown on the Company's books, R. I, 669.

At R. I, 662, Biddison testified:

"Q. Then you didn't look at the actual records of the Company to make that statement?
A. Certainly not.

Q. You were not even interested in it, were you?
A. No."

Further, at R. I, 750, Biddison on cross-examination testified:

"Q. Well, have you or anybody else, Mr. Biddison, for the purposes of this appraisal, tried to relate the prices or the costs you have actually used in your appraisal, to the costs of the Company on the books?
A. No."

Upon this basis, he added 2½% to all detailed costs of transmission line equipment on all lines throughout the system, R. I, 647; II, 766, 806. This item amounts in Company Exhibit 28 to $681,-416.72 on transmission system properties only. R. III, 1957. His unit costs on this item purported to have been developed from actual time studies on the system of the Lone Star Gas Company. On gas well construction, he added a contingency item of 24.75c per foot over costs actually incurred in this class of property, R. I, 617, 621, 689. This item was added to the Company's actual experience of $1.3017 per foot, making $1.5492 per foot used in his appraisal. These

additions included contingencies ranging from 15% to 25% of actual costs on individual items going into well equipment and construction. R. I, 687-690. To the Company's actually incurred historical cost of acquiring rights of way for transmission and gathering lines, he added 20% for contingencies. R. I, 637.

Company witness Dyer, sole witness as to reproduction cost of general office building, included a profit of 8%; included 5% for contingencies in the amount of approximately $13,000.00 in case the owner should change his mind as to plans, notwithstanding construction contracts uniformly provide that the owner shall pay additionally for such changes; R. I, 677, 678-680. He testified that he did not include any such contingencies in bidding on an actual post office job at Chattanooga, Tenn. R. I, 684. Dyer also included 3% for contractor's overheads, R. I, 678.

On installation of field measuring stations, Biddison used hypothetical gangs and 2½ % for omissions and contingencies. R. I, 710-711. For installation of drips, 5% contingencies, R. I, 744. On installation of field line equipment, 5% contingencies, R. II, 1173.

Biddison was asked several times to ascertain or estimate the total amount of his omissions and contingencies but testified he was unable to do so and that he had made no effort to do so but thought it was less than $1,000,000.00, R. I, 734-736; II, 806-807.

On cross-examination Biddison testified (R. II, 806-807):

"Q. You have been asked the question heretofore, Mr. Biddison, as to what the approximate amount of the total omissions and contingencies in your whole appraisal is. Have you figured that out yet?

A. No, I have not given it any consideration since the question at all."

On unloading, hauling and stringing of pipe, Biddison added contingencies of 10c per ton for handling through stock piles, not shown to have been historically incurred, and 5.7 cents per ton for gangs moving from job to job although these costs had been already included in actual cost estimates; also 10% for contingencies, and an additional 5% on the overall figure for contingencies and omissions, R. I, 734-736; III, 1767.

Commission witness Freese testified that the Company has included omissions and contingencies in an approximate amount of $1,000,000; that practically all of the Company's studies were based upon actual construction costs which included omissions and contingencies actually encountered; that he has checked some two million feet of pipe purchased against length shown in appraisal and that they were almost identical, so there could be no omissions and contingencies on transmission line pipe, on which Biddison allowed 2½ %, or $797,360.98; R. III, 1746-1747, 1780.

Commission witness Freese eliminated the 20% contingencies added on transmission line rights of way, by Biddison, because they had not actually been incurred by the Company, R. III, 1741-1742, 2146-2147.

In addition, the record reveals instances too numerous to specify here, where the Company's witnesses obviously included duplications between various capital items, between capital items and operating expense items, and between operating expense items and depreciation accrual items.

"Preliminary Development and Organization Costs": We have previously pointed out that the Company witness Connor added approximately $24,000,000.00 to the Company's estimated direct structural costs, to cover preliminary, organization and development expense, undistributed general overheads, working capital and going concern value.

A reference to Appellee's printing praecipe, R. V, 3529, will show that the Company did not request the printing of that portion (volumes 7 and 8) of Company's Exhibit 28, setting forth the basis on which Connor founded his estimates of these items. We do not blame the Company for attempting to keep the contents of that astounding treatise from coming to the attention of this Court. The utter prolixity, unintelligibility, and lack of perspicuity of the witness' attempt to explain his methods of approach can only be appreciated by an actual reading of the record, R. IV, 2602-2921.

The appraisal prepared by Biddison, Steinberger and Connor pre-supposes an outlay of $4,474,272.00 covering costs for "Preliminary Development and Organization Costs" to be hypothetically incurred in a reconstruction of the Company's properties; however, this does not include any item of such esti-

mated costs in connection with leaseholds or producing wells, transferred by the originating group to the corporation that is to be formed under Connor's proposed plan of organization, R. IV, 2606.

The present financial structure, and something of the past history of same, is briefly summarized by Commission's accountant Phillips, R. III, 1876-1879. The Company was originally incorporated in 1909 with $2,500.000, $100 par-value shares, R. III, 2176. This was partially paid in leases in Petrolia Field, R. I, 422-426. The present capital set-up consists only of 540,000 non-par value common voting shares, with no outstanding preferred stocks, bonds or other senior securities. The capital has been provided, and the property built up, only by issuance of capital stock for cash or property, by the borrowing of money, by the use of accumulated and undistributed earnings and by the use of the depreciation reserve. Only $12,500,000.00 has been paid in by stockholders, in cash or property. Something in excess of $28,000,000.00 is set up on the books as representing the non-par value shares. That includes an allocation of surplus earnings and an allocation of re-valuation surplus. Surplus on the books is now $8,000,000.00 or $9,000,000.00, R. III, 1876-1878. See the summary of the Company's financial history as found by the Commission from Hulcy's testimony, R. I, 64-66.

As against this very simple capital structure, Connor in his assumed reproduction cost sets up a complicated and ridiculously excessive capital structure consisting of an assumed issue of first mortgage bonds

of $38,000,000.00, preferred stock of $19,000,000.00 and common stock of $17,000,000.00, R. IV, 2637. Of the $4,474,272.00 estimated by Connor (R. IV, 2606), $4,050,000.00 is made up of cost of marketing securities and "remuneration for the originating group" which latter item alone is $2,000,000.00, which he assumes the promoters would take out in common stock. These costs have been condemned by this Court in *Los Angeles G. & E. Corp. vs. R. R. Comm. of Calif.*, 289 U. S. 287, 310, 77 L. Ed. 1180, 1195, as being "too conjectural to be allowed."

Connor, in preparing his estimate of this item of cost definitely and wholly disregarded the Company's history, as to whether or not any such costs have been historically incurred, or as to the manner and means under which the Company came into possession of its properties, even going so far as stating, "They might have charged the Company's office building to operating expenses, for all that I know", R. II, 1036.

Of the several items entering into this estimate, preliminary engineering and geological investigation total approximately $200,000.00. Connor says that the investigation of these two items would be absolutely necessary in connection with the reconstruction of the Company's properties at this time, as the organizers would proceed on the theory that none of the engineering or geological problems that would confront the Company had been solved; that the geological body that would be organized under this preliminary organization would have no knowledge or information of any character whatsoever as to the presently existing unlimited reserves of natural gas

available throughout the Texas Panhandle area. According to Connor it would be extremely doubtful whether they would even know that a gas field actually exists in Texas; R. II, 1029-1030.

Although Connor states that he is aware of the fact that discount on the proposed issue of securities cannot be (and he claims that it has not been) included by him as an element of cost entering into the reproduction cost new of the Company's properties, he nevertheless takes into consideration the fact that in the sale of the proposed issues of securities such securities would necessarily have to be sold at a discount in order to secure their ready sale, and he actually included a discount of 10% in his "interest during construction", R. II, 979-980.

Biddison and Connor both, in estimating their costs, gave no consideration whatsoever to the substantial savings to the Company on all items of cost which would be brought about by its affiliation with Lone Star Gas Corporation; the record showing that the Corporation has lent money to the Company on open, unsecured notes, as and when needed, at 6% simple interest; these advances amounted to about $19,000,000.00 at their peak, a few years before this rate case. They had been reduced to $17,600,000.00, at the time of the trial, R. I. 412.

In connection with the estimated cost of "Fiscal Agents Title Certification" in the sum of $25,000.00, Connor admitted that the Lone Star Gas Corporation had always acted as the fiscal agent for the Company

and that the Company itself had never incurred or actually paid out any such expenses, R. II, 1036-1037.

On cross-examination, Connor testified:

"Q. Why didn't you assume, Mr. Connor, that the Company would be organized just as it is organized, as a subsidiary of Lone Star Gas Corporation?

A, Because I think it is proper to make the estimate upon the basis of the reproduction of this particular property without reference to its connection or affiliation with any other property or properties. I don't know that that relation would affect the cost of its reproduction in any particular." R. II, 1037.

Administrative and Legal Expense: The total amount of estimated costs for this item is $2,347,595.00, and covers the amounts estimated to be incurred after the organizers of the proposed company had assembled their preliminary data and started actual construction of the Company's property. This cost estimate is apportioned between executive, legal, accounting, treasury, land, geological, and purchasing divisions, each of which is set out in detail at R. IV, 2659-2779. It presupposes an elaborate set-up of administrative officials and legal and accounting personnel, that does not bear even a remote resemblance to the Company's history or operations and is in fact one of the most speculative and excessive of all of Connor's undistributed general cost estimates.

These elaborate estimates were made by Connor even though the books of the Company show that this

item is being capitalized upon the basis of 2% of the actual cost, R. II, 1750.

General Engineering Costs and Reproduction Costs of Final Engineering Records: Connor estimates General Engineering Costs at $1,127,661.00. R. IV, 2780. He contemplates a four-year period of engineering work. It does not include the engineering costs that were incurred prior to incorporation of the Company, which costs are specifically set up under "Preliminary Development and Organization Cost," nor special fees paid for the designs of special structures, nor engineering costs directly charged by Biddison to specific property accounts in the estimate of the direct structural cost of the physical property, R. II, 955; IV, 2781. Nor, does it include the item of reproduction cost of final engineering records, which latter item is included in and made a part of direct structural cost of physical property, R. II, 954.

The estimated cost of final engineering records is set up at the sum of $765,690.35, R. IV, 2780. The combined general engineering work and the cost of final engineering records would contemplate a hypothetical four-year period for their completion. There would be 3 years of preliminary work and 3 years of final engineering work. For 2 years the preliminary engineering and the final engineering would be carried on concurrently, R. IV, 2781. Charging draftsmen's time at something in excess of $1.00 per hour, it was shown that according to Connor's estimates the final engineering drawings would in many instances exceed in cost, by several times, the cost of constructing

the object of which it was a drawing. For instance, chicken houses, cattle guards, water faucets, etc., R. II, 1085-1088.

The item also includes the assumed expense of "house counts" (made in the *cities* being served natural gas), although no such expense was ever incurred by the Company in any city in Texas, (R. II, 1092-1093) and although this expense, if incurred, should be included in distribution operations and borne by the distributing companies, and although he (Connor) would duplicate this expense in evaluating the distribution properties, R. II, 1116-1117.

General Supervision of Construction Costs: Connor estimates the cost of this item at $414,493.00, R. IV, 2654. It embraces the cost of salaries and expense of the general superintendent and his office organization; the expenses of the superintendent of plant and equipment and his organization and the expenses of the supervisor of safety and medical examination, R. II, 960. These charges have been segregated from the other supervisory charges for which separate estimates have been made in the appraisal. Connor considered them to be general in their nature and, therefore, in his opinion they did not lend themselves to allocation to specific properties, R. II, 960.

General Supervision Allocated to Specific Property Accounts: In addition to the said cost of general supervision, Connor sets up *another* estimate of supervision cost which he says is not allocated to specific property accounts. This item totals $425,634.00, R. IV, 2880. These two items of so-called supervision

charges are set up by Connor in addition to the estimated cost of supervision of job foremen which is included in the unit cost developed by Biddison and reflected in the direct structural costs of physical properties (R. II, 961), thus making a total of 3 different supervision estimates that enter into Connor's pyramided supervision cost structure. This $425,634.00 overhead item is included by the Company as a "direct cost" and made to appear as an inherent part of the physical property, R. IV, 2366 2368.

Taxes During Construction: The Commission findings in the amount of $9,681.29, appear at R. I, 48. The taxes are estimated by Connor at a total of $173,881, R. IV, 2367. He testifies they are intended to cover all expenditures in connection with the state, county, city and other taxes that would be levied and paid on the property of the Company during construction and before the facilities would be used for operation, R. IV, 2941-2942. Although Connor further stated that he did not know the amount of the taxes paid by the Company, historically, in connection with the construction of its property, and was unable to say whether any taxes were paid during the construction of the Dallas Gas Company Building, or the Lone Star Gas Company Building, (R. II, 1099), he, nevertheless, takes the position that the total amount of this item of cost would necessarily be incurred by the Company. He definitely admits that he gave no consideration or attention to the fact, as to whether the Company actually or historically paid any taxes whatsoever during the original construction of the property, R. II, 1100.

Freese, on the other hand, testified that the history of the Company disclosed that very little, if any, taxes were *actually* paid by the Company during the period of the construction of its properties, (R. III, 1753), he stated further, that the Company's own records disclose that during the years 1927 to 1929, at which time $17,000,000 of its construction work was carried on, only $1,616.73 was actually paid by the Company for taxes accruing during the said construction period, R. III, 1754.

The Company's actual experience, in recent years, clearly shows that the amount of taxes paid by it, proportionately, on the amount and value of the property then under construction, does not justify the inclusion of any hypothetical item of cost in the sum as here set up by Connor in his aforenamed Exhibit.

Interest During Construction: This item of cost is estimated by Connor at $4,975,933.00, R. IV, 2654, It represents the estimated cost of interest charges incurred from the date of the incorporation of the Company, until the property will pass from construction into operation, R. II, 975. In connection with this item Connor again assumes that 50% of the money required in the reconstruction of the Company's properties would be raised by the issuance of first mortgage bonds, 25% by the issuance of preferred stock, and the remainder by the issuance of common stock; and this, again, in the face of the known history of the Company that no such securities were ever issued by it, either in connection with the original construction of the first unit of its property, or at the time of the construction of any later units. Connor further assumes that the Company would be required to pay

interest at the rate of 8% per annum, although it is paying only 6% per annum for all sums of money borrowed by it, (R. II, 1107), the difference being made up of discount on senior securities.

Working Capital: Connor estimated this item at $1,701,600.00, R. V, 3005. This includes materials and supplies on hand in the amount of $555,000.00 at inventory prices and book cost, about which there is no complaint; allowance is also made of $255,000 to cover 45 days operating requirements, (R. V, 3006) which is not questioned. Included, however, is an item of $300,000.00 for cash balances in bank, R. V, 3006. We question the propriety of this last named item, as it is not shown that the banks require the maintenance of any cash balances in order to obtain banking services without charge. The current practice is that banks require no more than 10% of current borrowings to be maintained on deposit; and as the record shows that the Company's current, outstanding, short term loan with its Dallas banks, amounts to only $25,000 (R. III, 1964), and that the largest sum ever borrowed from banks, by the Company at any one time, was around $500,000 for a very short period of time, (R. III, 1969), a bank balance of approximately $50,000 would be the maximum amount that would ever be required to be set up for this element of cost. This Court can take judicial notice of the fact that the Interstate Commerce Commission allows only 45 days operating expense, without the addition of bank balances or other items.

Going Concern Value: Connor estimated this item at $7,792,888.00, R. IV, 2957. He based it primarily upon development costs in the initial stages

of the business—that is, fixed charges (depreciation, interest and taxes) upon idle plant, plus 10% net return (R. II, 1005) upon such idle plant as was estimated not to be carrying its full capacity load of business during the period of initial business development, pending attainment of normal customer attachment and customer consumption by the distributing companies served by Appellant, (R. II, 1004-1006). It was not shown that any such business development costs were incurred in the initial stages by the Company; but on the contrary, the financial history of the Company, as found in the opinion of the Commission, (R. I, 65), shows that the Company has been phenomenally successful in obtaining profitable business from the very beginning, R. III, 1755, 1803-1804, 2108. The Commission said: "To summarize our conclusions . . . we find the allowance of going value determined by . . . Connor, to be without any sanction in . . . . . reason . . .", R. I, 66.

The Commission further said: "We find * * * that the adoption of the reproduction cost new value as determined by us * * * containing, as it does, a complete allowance for all overhead expense, together with our allowance for operating expenses, fully and justly compensate the Company for all development costs which have been incurred or which would be incurred on a reasonable reproduction of the Company's properties and that such an allowance thus determined is ample to cover any and all items entering into and forming a part of going value." (R. I, 66, 52-66).

Connor also included an estimated cost of attaching customers, of obtaining new business and of training

the personnel in operating routine, etc., all of which were shown to have been charged to operating expenses and recouped by the Company, from the beginning of its history, R. III, 1645, 1803.

He attempts to differentiate his method of determining the existence and amount of going concern value, from the "past deficit method" (R. II, 1004-1005) and says that he has not estimated, or included, "any losses" of past operations by reason of inadequacy of rates, or otherwise. This is an obvious attempt to distinguish his theory from the methods condemned by this Court in *Galveston vs. Galveston Electric Co.*, 258 U. S. 388, 395, 66 L. Ed. 678, 683, where it is said that "past losses, obviously, do not tend to prove present values", and many other cases by this Court, following and applying that doctrine, down to the present time.

A careful reading of Connor's entire theory of Going Concern Value will reveal that it is identical with those methods rejected in the *Galveston* case; and, lately, in *St. Joseph Stockyards Co. vs. United States*, 298 U. S. 39, 62-64, 80 L. Ed. 1033, 1047-1048.

In his elaborate theorization, he utterly disregards the history of the Company, saying expressly that he does not know what the history is, has made no effort to find it out, and would have paid no attention to it if he had known it. He also says it would have made no difference to him, if the Company had been charging to operating expense and had fully recouped in the past all of the expenses which he used as a basis for measuring the claimed Going Concern Value, R.

II, 1134-1135. In so doing he goes squarely in the face of this Court's holding in *Houston vs. Southwestern Bell Tel. Co.*, 259 U. S. 318, 325, 66 L. Ed. 961, 965, where it is said, "Whether Going Concern Value should be considered and allowed at all in determining the base for rate-making, and, if allowed, what the amount of it should be, depends upon the financial history of the Company."

Furthermore, in determining and estimating this claimed element of value, Connor forgot the Company's position, asserted in connection with its interstate commerce contentions, namely, that it was a totally different entity from, and not in any way related to, its affiliated distributing companies.

Both Connor and Biddison, in assuming the destruction of the Company and all its properties, for purposes of reproduction, destroyed not only the Company and its property but also the personnel; also the distributing companies, and all of their property; and even the 230,000 domestic consumers who are customers, not of Appellant, but of the distributing companies, which customers he treats as being customers of the pipe line company. The only exception is the city of Fort Worth, where the Appellant carries on distribution operations directly serving approximately 33,000 retail customers, R. III, 1896.

Not content with going that far, he goes even to the extent of assuming that these 230,000 customers and all of their gas appliances and equipment have been destroyed and would have to be replaced, also. But

his audacity is not even yet exhausted. He admits that, having taken into consideration the supposed value of having these 230,000 retail customers attached to the distributing companies, who are not customers of the pipe line company at all, that he would, in any burner tip case involving any one of the distribution companies, duplicate this going concern element by including customer attachment and customer use value in the burner tip cases, also, R. II, 1115-1120. Under his theory, the more customers that were attached to the distributing companies, and the more gas per customer they used, the more valuable would be the properties, not only of the distributing companies, but also of the pipe line company; and, therefore, the higher the rates that would have to be paid by the customers, as the number of customers and the degree of customer use saturation was increased, R. III, 1118. This Court has never sanctioned the use of any such vicious circle as a basis of an element of value to be included in a rate base.

Typical of the Company's methods before the Commission and all courts, is the claim on page 145 of its brief, that "Appellees include nothing in their appraisal for going concern value". Counsel quote a single question and answer, from the testimony of the Commission's witness Freese (R. III, 1793-1794, 2108), which, standing alone, would support the statement. By referring to the record pages cited, however, this Court will see that the Company has affirmatively and deliberately misrepresented to the Court what the testimony was. At R. III, 1793-1794, appears the following testimony:

"Q. You made no separate allowance in connection with your Exhibit 6 for Going Value, Going Concern Value, or Cost of Reproducing the Business did you?

A. No.

Q. Was it your testimony that you had, nevertheless, allowed something for Going Value?

A. No; as I recall my specific statement, it was that we had priced everything as usable, as something that was in use, or could be used, and not something that had no business or no use, or was junk value, or something to that effect."

Then follow the question and answer, quoted by the Company on page 145 of its brief; and at R. III, 1755 appears the following testimony:

"Q. Now then, I notice in your non-physical properties, and in fact, nowhere in your summary is there a separate allowance for going concern value, or going value. Does that mean, Mr. Freese, that you have not evaluated this portion of the Company's property as a going concern?

A. No; that does not mean that we have not taken this at its reproduction cost new as a going concern, rather than its junk value as a going concern.

Q. Why have you felt justified in not making some sort of additional and separate allowance for going value?

A. In the first place, the history of the Company indicates that no losses on idle plant were actually incurred; or if any such losses were incurred during the earlier years of the Company, that they have been easily made up in the meantime. In the second place, during the operating periods considered in the auditors exhibits, most of the items which are ordinarily considered as

contributing to the building up of going value have been charged to operating expenses."

And at R. III, 2107-2108, occurs the following:

Q. Well, if the title is to be taken as it reads where have you included any allowance for going value, going concern value or cost of reproducing the business?

A. Mr. Griffith, I have not *separately* labeled a certain amount of dollars as going value. Every item included in there is property, as part of a going concern. Furthermore, in addition to that, in the operating expenses which we have allowed, we have allowed for the attachment of new business, the securing of new business, advertising expenses, and every expense that would be incurred in the nature of attracting new business and which is one of the things which ordinarily, and which does go to make up what is known as going value.

Q. Now, we may get to the profit and loss statement, later, Mr. Freese, but please confine yourself to this reproduction cost evaluation at this time. Can you point out to me a single dollar in here, or a series of dollars which represents going value, going concern value or the cost of reproduction of the business as distinguished from the cost of reproduction of the property?

A. Not *separately* labeled as such, no.

Q. If the property of the Company were to be reproduced as of June 15, 1934, and there was no business attached whatsoever, wouldn't your reproduction cost be the same as set forth in plaintiff's Exhibit No. 6?

A. Yes, and that would be true whether it was 100 per cent saturation or whether there was no saturation at all, *in view of the history* of the

> Company, the way it was actually produced and the way it could be produced from the beginning again. *There was no loss of return on idle plant during the history of the Lone Star Gas Company.*" *Italics ours.*

Freese's method of valuing all of the component parts of the property, as parts of an active, going concern with all business fully attached, personnel trained, and all undistributed general overheads and other intangible values fully allowed for, instead of making a *separate* lump sum estimate of going concern value, as such, has been repeatedly approved by this Court, more notably in *Los Angeles G. & E. Corporation vs. R. R. Com. of Cal.* 289 U. S. 287, 302-303, 313-319, 77 L. Ed. 1180, 1191, 1196-1200, and cases there cited and reviewed; and also in *St. Joseph Stockyards Company vs. United States*, 298 U. S. 38, 62-64, 80 L. Ed. 1033, 1047-1048. And see especially *Columbus G. & F. Co. vs. Pub. Ut. Com.*, 292 U. S. 398, 410-413, 78 L. Ed. 1327, 1334. These cases condemn the Company's methods as to this item.

Per Cent Condition: The Commission used the sinking fund method of depreciation accrual accounting and, therefore, used an undepreciated rate base. The same method was used by Freese in his testimony both before the Commission and the District Court. On the other hand, the Company's witnesses purported to use, in their testimony both before the Commission and District Court, the straight line method of computing depreciation, and a depreciated rate base. They expressly admit (R. II, 1145), that "fair value" as used by them is their reproduction cost new estimate, less "observed depreciation", as determined by their

estimated "per cent condition", which quoted terms they erroneously treat as being synonymous with "accrued depreciation." They further testify that in arriving at their estimate of per cent condition they did not take into consideration any depreciation except that which was palpable to the eye by a casual inspection of the outside surfaces of the property, and that it was impossible to examine the interior of the property for any signs even of physical depreciation such as corrosion inside of pipe, R. II, 1197-1199, 1202, 1206. Much of the property was not even inspected by the Company's witnesses. Furthermore, their per cent condition totally ignored the intangible factors which bring about depreciation and ultimate retirement of property, and which intangible factors account for fully as much of the depreciation in the broader sense as does physical deterioriation. It was by this method that the Company arrived at its estimated over-all per cent condition of 94.26 per cent, R. II, 1145.

The Company used its "observed depreciation" of 5.74 per cent as being synonymous with "accrued depreciation"—whereas it is obvious that it does not represent, even approximately, the amount of actual accrued depreciation in the property, due to all causes, including physical deterioration, obsolescence, inadequacy, changed operating conditions, public requirements, etc.

Contrasted with this assumption is the inconsistent attitude of the Company in estimating its necessary annual accruals to the depreciation reserve. On that side of the ledger, getting away from the question of the rate base on which the Company should be al-

lowed to earn a return, and over on the side of where it was computing the money to be taken out of gross revenues for meeting current depreciation, Connor expressly took into consideration all causes, both observable and non-observable, which contributed to bring about depreciation in value and ultimate retirement.

The Company has not seen fit to provide for depreciation on its books at a rate more than approximately half of the annual rate estimated as necessary by Mr. Connor, R. III, 2140B, V, 3056. Yet the balance in the depreciation reserves stood at $15,695,413.00 on December 31, 1933, as compared with a book cost as of the same date of $50,283,644.00, (R. III, 2140A, 2140B), indicating an overall per cent condition of the property of 68.8%, or even less if any measure of credence is to be given Mr. Connor's estimate of the annual amount necessary to be set aside in the depreciation reserves. There is a complete disparity between Mr. Biddison's superficially observed per cent condition of 94.26% and Mr. Connor's estimate of the annual depreciation requirements.

We have in this brief adverted to only a relatively few of the countless glaring errors and inconsistencies on the part of the Company with which the whole record is shot through. It would be impossible in a brief any shorter than the record itself to point out all of these errors. We cite them, not always for the amount of money which they involve, nor for their glaring erroneousness, but simply as typical illustrations of methods used by the Company throughout this proceeding, from its inception.

NET RATE OF RETURN NECESSARY TO INSURE FINANCIAL SOUNDNESS OF THE COMPANY

The Commission aimed at fixing the rate at such a level as would bring the Company a net return of 6% for the basic year 1931, and would in average operation in the future (prospectively from September 13, 1933, the date of the order) yield a net average rate of return in excess of 6% per annum, over a reasonable spread of years, R. I, 111. The Commission computed return before federal income tax, R. I, 104. This rate of return was supported in the District Court by the testimony of a Commission witness (R. III, 1815-1816) as being sufficient to insure the credit and financial integrity of the Company, to induce a free flow of capital, and as being commensurate with the rates of net return being realized by utilities in the same general section of the country whose business was attended with like risk as that of the Company. Commission's witness Montgomery testified that over a period of ten years 5% net annual return would be a sufficient return, R. III, 1816, 1822.

The testimony in behalf of the Company was as follows: Connor testified that for the above purposes a net return of 10% per annum after federal income tax was necessary, R. II, 1330. Biddison testified that a minimum of 10% to a maximum of 15% after federal income tax was necessary, R. III, 2014-2015. An 8% minimum after depreciation and depletion (whether before or after federal income tax was not shown) was testified as necessary by banker Thornton, official of Mercantile National Bank of Dallas,

which bank had in the past made large loans to Appellant and had bought bonds issued by some of the Lone Star underlying companies, and which was one of the banks with which Appellant was doing business at the time of the trial; such loans to Appellant being made at 4% to 4½ % interest, R. III, 1963, 1964. The same testimony was given by Florence, an official of Republic National Bank of Dallas, which bank likewise had made loans to Appellant and which bank through Florence had participated in the successful sale of 5% debentures of Lone Star Gas Corporation, and which bank had also made loans upon the security of stock in the Lone Star Gas Corporation. This witness likewise testified that loans to Appellant were made at 4% to 4½ % interest per annum, R. III, 1965, 1967, 1974.

This is all to be contrasted with the Company's claim (p. 40 of its brief) that the actual rate of return being enjoyed by it *under the* 40c *rate* voluntarily fixed and adhered to by it for many years without even asking permission to raise the rate, was, for the years 1931 to 1934, only .61% to 1.71%. If as the Company's testimony would show, net returns of from 8% to 15% after federal income tax are necessary to enable the Company to survive and operate successfully, we can not understand how it could have survived as long as it has on such small rates of return as it claims to have been making under its 40c rate. It is enlightening to compare both the Company witnesses' testimony as to what rate of return is necessary for it to earn, and the Company's claims as to what net percentages it has actually been earning, with the percentages as found by the Commission as actually

earned in the past (1909-1931), the weighted average of which percentages (before annual depreciation) was 12.03% upon undepreciated book cost, R. I, 65. The Commission found slightly in excess of 2% for annual depreciation as applied to the undepreciated cost.

The record shows that in the past the Company has had a "free flow of capital" sufficient to meet all of its requirements, as and when needed, from the holding company at 6% interest, (R. I, 239), and short term loans from the above mentioned banks at 4% to 4½%, R. III, 1963-1974.

This Court has held in *Dayton P. & L. Co. vs. Pub. Utilities Co., supra,* that it would take judicial notice of economic conditions and consider them in deciding whether a particular rate of return was confiscatory. A 6½% return was upheld as being adequate in that case; and a 6% return was upheld in *Willcox vs. Consolidated Gas Co.,* 212 U. S. 91, 53 L. Ed. 382; *Cedar Rapids G. & L. Co. vs. Cedar Rapids,* 223 U. S. 655, 56 L. Ed. 594; *Des Moines Gas Co. vs. Des Moines,* 238 U. S. 153, 59 L. Ed. 1244. In *Knoxville vs. Knoxville Water Co.,* 212 U. S. 1, 17, 53 L. Ed. 371, 382, in periods of economic depression comparable to those which prevailed here, this Court refused to set aside as confiscatory a rate of 6% *before deduction of 2% for depreciation.*

Future Revenues: The year 1933 was the warmest year in the Company's history (R. III, 1595, 1895) and therefore the temperature adjustments made by the Commission's witness in the District Court, R. I, 389, 390; R. III, 1881, 1887, 1888,

1892, 1895, 1900, 2164-2173, were proper, as held by this Court in *Los Angeles G. & E. Co. vs. Railroad Commission of Cal.*, 58 Fed. (2d) 256, 286, aff. 289 U. S. 287, 298-300, 302, 303-304, 77 L. Ed. 1180, 1189-1190, 1191-1192, 1200.

It is shown at R. III, 1896, that the Company introduced, before the Commission, Weather Bureau records for years prior to the date of the Commission's hearing. It complains now, however, that similar data were introduced by the Commission in the District Court trial.

This Court has often taken judicial notice of economic conditions prevailing from time to time and, therefore, judicially knows the conditions which prevailed from 1931-1933. Specific data as to these trends, as applied to the Company's experience are shown in the record. The trend of both gross and net revenues was downward from 1931 to 1933 inclusive, R. I, 386. This was particularly true of industrial revenues, and the domestic revenues dropped off over $1,000,000.00 from 1932 to 1933, R. I, 385-387. Hulcy admits that the economic depression and the low temperatures of 1933 were contributing factors to these slumps, R. I,386-389; R. III. 1642. Connor claimed that the Company had shared with others this general business distress, R. II, 1448-1449. The securities market was pretty low when the Commission held its hearing (R. II, 1450) and was still lower at the time of the District Court trial, R. II, 1450-1451. The Company's operating statements show, however, that the trend of both gross and net revenues was upward during the first quarter of 1934. See Tables II and III, *infra;* and R. III, 1641.

COMPUTATIONS BY THE RESPECTIVE PARTIES OF NET RATES OF RETURN EARNED BY THE COMPANY IN PAST YEARS UNDER THE 40c RATE AND PROJECTION OF THE RATES OF RETURN PROBABLY TO BE EARNED IN THE FUTURE UNDER THE 32c GATE RATE

It is to be recalled that the Commission had before it operating statements for the six calendar years 1927-1932, and for the year ending April 30, 1933, R. I, 19-20, III, 1607. These were not submitted by the Company, however. The Company presented such statements for only the calendar years 1931 and 1932, and the overlapping year ending April 30, 1933, before the Commission. Before the Commission, however, the Appellees' accountant, Phillips, presented "accurate and detailed statements of revenues, expenses and book costs for the years 1927-1932, inclusive, as taken from the records of the Lone Star Gas Company", R. I, 18. The Commission used the year 1931 "as a basis for finding the city gate rate which would earn a fair return", R. I, 16. "This rate was then applied to the years 1927-1932 as a test of its reasonableness", R. I, 16.

Before the District Court the operating statements presented by the Company covered only the three calendar years 1931-1933, and the overlapping year ending March 31, 1934. Thus the Company was making an unwarranted attempt (*United Gas Pub. Serv. Co. vs. Texas*, ____ U. S. ____, 82 L. Ed.____, Adv. Op. No. 10, pp. 490, 500, 502, decided Feb. 14, 1938) to limit vision to a short period, affected deeply by the depression, including the year 1933,

which was the warmest year in the history of the Company, R. III, 1595, 1881-1895. Before the District Court, Appellees' accountant Phillips presented operating statements for the seven calendar years 1927-1933, and the overlapping year ending Mar. 31, 1934, (R. III, 2126A) giving the District Court a vision of average operations over a reasonable period of years.

The Company now complains bitterly of the temperature adjustments made for 1933 and the year ending Mar. 31, 1934, by Commission witness Freese, in the computations before the District Court, although the Company itself had introduced evidence and data on temperatures before the Commission, R. III, 1887, 1896. See Company's brief, p. 47; Appellees' Ex. 8, R. III, 2164-2165, 1896; specification of Error 15 (g), Company's brief, p. 58. This assignment ignores this Court's approval of the temperature adjustments similarly made in *Los Angeles G. & E. Corp. vs. R. R. Com. of Cal.*, 58 Fed. (2d) 256, 285, aff. 289 U. S. 287, 298-300, 303-304, 320, 77 L. Ed. 1180.

The Company in its brief has presented various computations of the net rates of return which it claims it has been earning under the 40c rate and which it claims it would earn under the 32c rate. None of these computations shows the rates of return which would be earned under the 32c rate by reason of the fact that each of such computations involves one or more of the following basic errors which should be borne in mind of the Court in its consideration of the claimed rates of return:

(a) Failure to use a sufficient spread of years to show average operating results leveling out the inevitable fluctuations due to all factors.

(b) Using the 40c rate instead of the 32c rate.

(c) Failing to make temperature corrections for the abnormal temperature periods.

(d) Failing to take into account the increased consumption which would result from putting the reduced rate into effect.

(e) Failing to take into account the increased consumption which will be certain to result in the future, from economic recovery.

(f) Using Connor's excessive deductions for depreciation and depletion requirements.

(g) Using the inflated rate bases as estimated by the Company witnesses.

(h) In not deducting the improper and questioned operating expenses referred to by us above.

(j) In cases where a depreciated rate base is used, in using too high a per cent condition of the property, which per cent condition does not take into account the various intangible factors of depreciation, such as obsolescence, inadequacy, changed operating conditions, depletion; and failure to depreciate all properly depreciable items such as rights-of-way, etc.

(k) Making computations of federal income tax which has never been incurred by the Company or paid to the government.

(l) Applying the Company's unacceptable basis of segregation between what it calls "interstate and intrastate operations".

The above *elements of error* are applied specifically to the various computations presented by the Company, by letter designation only, as follows:

In the computations at the bottom of page 39 and top of page 40 of Company's brief: a, b, c, d, e, f, g, h, j, k.

In the computations at page 41 of Company's brief: a, c, d, e, f, g, h, j.

In the second computations, page 41 of Company's brief, which apply to the Commission's findings: a, c, d, e, (h, in part), k.

In the computations at the top of page 42 of the Company's brief: a, c, d, e, h, k.

In the computations on pages 43-44 of Company's brief: a, c, d, e, g, h, j, k, l.

In the computations at top of page 60 of Company's brief: Same errors as are in computations on pp. 43-44.

In the computations at the top of page 156 of Company's brief: a, c, d, e, f, (h, in part) j.

In the computations at the bottom of page 156 of Company's brief: a, c, d, e, (h, in part) j.

In the computations at the bottom of page 157 of Company's brief: a, c, d, e, f, g, (h, in part) j.

In the computations at the top of page 158 of Company's brief: a, c, d, e, g, (h, in part) j.

In the computations at the middle of page 158 of Company's brief: a, c, d, e, (h, in part), k.

In the computations at the middle of page 159 of Company's brief: a, c, d, e, g, h, j, k, l.

In the computations at the middle of page 165 of Company's brief: a, c, d, e, (g, in part) h, k.

In the computations in the middle of page 167 of Company's brief: a, c, d, e, f, h, j.

In the computations at the bottom of page 167 of Company's brief: a, c, d, e, h, j.

In the computations at the middle of page 168 of Company's brief: a, c, d, e, f, g, h, j.

In the computations at the bottom of page 168 of Company's brief: a, c, d, e, g, h, j.

In the computations at the top of page 169 of Company's brief: a, c, d, e, f, g, h, j.

In the computations at the middle of page 169 of Company's brief: a, c, d, e, g, h, j.

In many instances Appellant purports in its computations to have applied the Commission's findings throughout; but an examination will reveal that it has not done so, at least in full. In each such case the Commission's findings are plain, and the Court by referring to such findings will discover wherein the Company has failed to apply or has mis-applied the Commission's findings.

We now come to the submission, for the Court's consideration, of our own computations of the rates of return which would be available to the Company under the 32c rate upon certain bases. We understand that we are under no legal duty to submit evidence or computations of our own in support of the compensatory character of the rate, and that if our own computations and evidence should not for any reason meet with the approval of the Court this still would not lift from Appellant the burden of proving the rate

confiscatory by clear and convincing proof of its own. But we desire to be of as much assistance to the Court as possible; hence we submit at the end of this brief our Tables I to V inclusive.

It is to be remembered that none of our said computations takes into account the increased consumption which would result from economic improvement or from actually putting the reduced rate into effect; nor do any of them take into account the deductions which should be made of the improper operating expenses which we have objected to above, with the exception of management fees, and in Tables II, III and V, of donations as shown.

Table I applies all of the Commission's findings throughout, except that we have made temperature corrections for 1933 as shown by the evidence adduced before the District Court. The Commission had evidence before it to show that the earlier years averaged out as normal so far as temperatures were concerned and, therefore, required no correction. This Table shows average net percentages of 8.00% and 9.16%, respectively, upon the bases there shown, for the seven years, 1927-1933, after application of the 32c gate rate. The percentages for 1927 to 1932, inclusive, are taken from the Commission's findings. It is to be noted that, in applying the Commission's findings to the year 1933, the rate base includes the net additions made during 1932 and 1933 at cost. These net additions comprise to a large extent the Southern Oil Production Properties and the properties of the Meridian Gas Company, which latter properties were purchased from the Lone Star Gas Corporation.

Table II is an application of the 32c gate rate to over-all Texas and Oklahoma operations, using undepreciated book cost and an undepreciated rate base as found by the Commission, respectively, and actual charges to the depreciation reserves, and shows an average of 8.72% and 8.82% upon the rate bases, respectively, for the seven years 1927-1933. In this connection it is well to recall the Company's complaint that the use of the actual charges to the depreciation reserves does not make any provision for the amortization of the Company's property at such time in the future as the natural gas supply may be exhausted. It will be remembered, however, that the record shows that .344% per annum (R. I. 97) will amortize the property over a period of fifty years on a 6% sinking fund basis. By deducting this percentage for amortization from the net percentages shown in Table II, there would be left 8.38% and 8.48%, as average returns for the seven year period on the undepreciated book cost and on the undepreciated rate base as found by the Commission, respectively. For the use of the actual charges to the depreciation reserves, see supra pp. 105, 106. Expenses as shown in the table (Table II) include the charging off on the books of the Company of large amounts for cancelled and surrendered leases, see supra pp. 122-124. It is to be noted that the book costs used in this table exceed the book costs claimed by the Company in amounts of approximately $450,000 to $675,000 for the years shown in the Company's exhibits, R. III, 2211, 2214, 2217. These book costs include the Petrolia Field account and the Meridian Gas Company properties, see supra pp. 154-156. The rate bases "as found by the Commission"

include the Southern Oil Production and the Meridian Gas Company properties at book cost. In comparing the book cost with the rate base found by the Commission, it should be remembered that a large part of the properties was built during peak-price periods, R. I. 109.

Table III applies the 32c gate rate to the undepreciated book cost on Texas properties and operations only, as segregated by the Commission's witness in the District Court trial, using average charges to the depreciation reserves, which shows an average net return of 8.18% over the five year period 1929-1933 inclusive. If the amortization allowance of .344% (R.I. 97) be deducted from this average it still leaves 7.84% return over the five year period as applied to the undepreciated book cost of the Texas properties. The same observations made with reference to Table II as to expenses and as to book costs are pertinent to Table III.

Table IV applies the 32c gate rate to the Texas properties and operations only, as per segregation submitted by the Commission's witness in the District Court trial, upon the undepreciated reproduction cost new as found by the Commission's witness, his allowance for depreciation being substantially the same as the allowance found by the Commission; using actual operating expenses as per the Company's books, except for management fees, as segregated by the Commission's witness in the District Court trial; and making temperature corrections for the calendar year 1933, and the year ending March 31, 1934. This table shows a rate of return of 6.72% for 1933 and 6.70%

for the year ending March 31, 1934. For the use of the prevailing wellhead price for Company produced gas in lieu of the inclusion of production expenses and production property, see supra pp. 143-156, especially 150-154.

Table V shows the application of the 32c gate rate to the "D" operations, which the Company admitted to be intrastate Texas operations, as per its totally unacceptable basis of segregation submitted in the District Court, and even this shows a return of **6.63%** applicable to "D" operations. As a basis for these computations, corrections for management fees, charitable donations and temperature adjustments have been made. Depreciation has been taken as estimated by Commission's witness. The rate base as determined by the Commission, plus net additions at cost as of December 31, 1933, has been used.

These tables show conclusively that the rate of return, based upon the 32c wholesale rate for domestic gas, would be substantially above the point of confiscation when tested in the light of a reasonable spread of years, either on the basis of the properties and operations as a whole or any segregation of the Texas properties and operations.

CONCLUSION

The financial history of the Company (R. I, 64-66) repels the suggestion that the Company has been operating under a confiscatory rate at 40c per MCF, as claimed by the Company at page 40 of its brief. On the contrary, the following table, taken from the Commission's findings, aforesaid, shows that the Company has been phenomenally successful and prosperous:

Period	Book Cost Public Service Property	Amount Available for Depreciation and Return	Per Cent of Undepreciated Book Cost	
June 4, 1909—May 31, 1910	$ 4,741,620.41	$ 57,607.99	1.21	
June 1, 1910—Feb. 28, 1911	4,790,284.17	160,761.86	3.35	(4.47 per annum)
Mar. 1, 1911—Feb. 28, 1912	4,994,064.08	610,992.63	12.23	
Mar. 1, 1912—Feb. 28, 1913	5,800,664.91	814,811.21	14.04	
Mar. 1, 1913—Feb. 28, 1914	6,164,123.74	1,114,369.22	18.08	
Mar. 1, 1914—Feb. 28, 1915	6,980,985.13	1,164,663.69	16.68	
Mar. 1, 1915—Dec. 31, 1915	7,715,247.24	736,351.36	9.54	(11.45 per annum)
1916	8,090,251.99	1,101,618.66	13.61	
1917	8,627,698.92	901,798.88	10.45	
1918	9,399,508.86	694,208.51	7.38	
1919	12,749,862.20	1,032,035.11	8.09	
1920	16,225,774.18	1,227,479.44	7.38	
1921	16,336,266.61	1,331,944.53	8.15	
1922	17,572,198.80	1,677,754.21	9.54	
1923	18,870,227.60	2,232,771.43	11.83	
1924	20,281,257.29	2,843,831.77	14.02	
1925	24,294,693.33	3,950,790.60	16.26	
1926	25,113,114.07	4,334,870.94	17.26	
1927	33,307,350.60	4,513,876.52	13.55	
1928	36,879,954.99	5,028,295.46	13.63	
1929	44,449,143.87	5,869,183.24	13.20	
1930	47,703,209.28	5,297,491.90	11.10	
1931	47,776,749.63	4,605,721.83	9.64	

The foregoing tabulation reflects a weighted average annual rate of return on the undepreciated book cost, of 12.03%, before depreciation, R. I, 65.

While it may be true that on certain minor, subsidiary issues the evidence was conflicting, still after considering the many liberalities of the Commission, and setting them off against any possible elements as to which a conflict of evidence may have created a doubt as to sufficiency, (See Point XXXIII, pp. 90-91, *infra*, and cases cited), and considering the insufficiency of Appellant's evidence as a whole (the totality of its consequences), it is clear that no issue or issues as to confiscation were raised which required submission to the jury. Although the burden has not been upon the Commission at any stage of the proceedings to

submit any evidence in support of the rate fixed, yet, we submit that under the evidence voluntarily produced by the Commission the rate has affirmatively been shown to be compensatory. The correctness of the findings of the Commission has not been refuted by the Company's evidence, but on the contrary has been supported by the evidence. A reading of the Commission's opinion, (R. I, 12-116) and the opinion of the Court of Civil Appeals, (R. V, 3333-3370) will show that the Commission was in many respects very much more liberal with the Company than it was required by law to be, and if the Commission's findings are applied it is demonstrated beyond all cavil that the rate is compensatory.

We submit that under the authorities cited under our Point XLI, pp. 97-98 *supra*, the Company's evidence has "proved too much" and "over-shot the mark," and "must fail of the intended effect".

We, therefore, pray, that the judgment of the Court of Civil Appeals and of the Supreme Court of Texas be affirmed.

Respectfully submitted,

WILLIAM MCCRAW,
Attorney General of Texas

ALFRED M. SCOTT,
Assistant Attorney General
of Texas

EDWARD H. LANGE,
Laredo, Texas
Counsel for Appellees

APPENDIX A

(Revised Civil Statutes, Texas, 1925)

Art. 6050. Classification.

The term "gas utility" and "public utility" or "utility," as used in this subdivision, means and includes persons, companies and private corporations, their lessees, trustees, and receivers, owning, managing, operating, leasing or controlling within this State any wells, pipe lines, plant, property, equipment, facility, franchise, license, or permit for either one or more of the following kinds of business:

1. Producing or obtaining, transporting, conveying, distributing or delivering natural gas: (a) for public use or service for compensation; (b) for sale to municipalities or persons or companies, in those cases referred to in paragraph 3 hereof, engaged in distributing or selling natural gas to the public; (c) for sale or delivery of natural gas to any person or firm or corporation operating under franchise or a contract with any municipality or other legal subdivision of this State; or, (d) for sale or delivery of natural gas to the public for domestic or other use.

2. Owning or operating or managing a pipe line for the transportation or carriage of natural gas, whether for public hire or not, if any part of the right of way for said line has been acquired, or may hereafter be acquired by the exercise of the right of eminent domain; or if said line or any part thereof is laid upon, over or under any public road or highway of this State, or street or alley of any municipality, or the right of way of any railroad or other public utility; including

also any natural gas utility authorized by law to exercise the right of eminent domain.

3. Producing or purchasing natural gas and transporting or causing the same to be transported by pipe lines to or near the limits of any municipality in which said gas is received and distributed or sold to the public by another public utility or by said municipality, in all cases where such business is in fact the only or practically exclusive agency of supply of natural gas to such utility or municipality, is hereby declared to be virtual monopoly and a business and calling affected with a public interest, and the said business and property employed therein within this State shall be subject to the provisions of this law and to the jurisdiction and regulation of the Commission as a gas utility.

Every such gas utility is hereby declared to be affected with a public interest and subject to the jurisdiction, control and regulation of the Commission as provided herein.

Art. 6051. *May enjoin gas pipe line.*

The operation of gas pipe lines for buying, selling, transporting, producing or otherwise dealing in natural gas is a business which in its nature and according to the established method of conducting the business is a monopoly and shall not be conducted unless such gas pipe line so used in connection with such business be subject to the jurisdiction herein conferred upon the Commission. The Attorney General shall enforce this provision by injunction or other remedy.

Art. 6053. *Regulation of utilities.*

The Commission after due notice shall fix and establish and enforce the adequate and reasonable

price of gas and fair and reasonable rates of charges and regulations for transporting, producing, distributing, buying, selling and delivering gas by such pipe lines in this State; and shall establish fair and equitable rules and regulations for the full control and supervision of said gas pipe lines and all their holdings pertaining to the gas business in all their regulations to the public, as the Commission may from time to time deem proper; and establish a fair and equitable division of the proceeds of the sale of gas between the companies transporting or producing the gas and the companies distributing or selling it; and prescribe and enforce rules and regulations for the government and control of such pipe lines in respect to their gas pipe lines and producing, receiving, transporting and distributing facilities; and regulate and apportion the supply of gas between towns, cities, and corporations, and when the supply of gas controlled by any gas pipe line shall be inadequate, the Commission shall prescribe fair and reasonable rules and regulations requiring such gas pipe lines to augment their supply of gas, when in the judgment of the Commission it is practicable to do so; and it shall exercise its power, whether upon its own motion or upon petition by any person, corporation, municipal corporation, county, or commissioner's precinct showing a substantial interest in the subject, or upon petition of the Attorney General, or of any county or district attorney in any county wherein such business or any part thereof may be carried on.

Art. 6054. *Orders, etc. reviewed.*

All orders and agreements of any company or corporation or any person or persons controlling such pipe lines establishing and prescribing prices, rates, rules and regulations and conditions of

service, shall be subject to review, revision and regulation by the Commission on hearing after notice as provided for herein to the person, firm, corporation, partnership or joint stock association owning or controlling or operating the gas pipe line affected.

Art. 6055. To refund excess charges.

If any rate or charge for gas or for service or for meter rental or any other purpose pertaining to the operation of said business shall be made or promulgated by any person, firm or corporation owning or operating any gas pipe line, or in the event of an inadequate supply of gas or inadequate service in any respect, and complaint against same shall be filed by any person authorized by the preceding article to file such petition and such complaint is sustained in whole or in part, all persons and customers of said gas pipe line shall have the right to reparation or reimbursement of all excess in charges so paid over and above the proper rate or charge as finally determined by the Commission from and after the date of the filing of such complaint.

Art. 6058. Appeal from City Control.

When a city government has ordered any existing rate reduced, the gas utility affected by such order may appeal to the Commission by filing with it on such terms and conditions as the Commission may direct, a petition and bond to review the decision, regulation, ordinance, or order of the city, town or municipality. Upon such appeal being taken the Commission shall set a hearing and may make such order or decision in regard to the matter involved therein as it may deem just and reasonable. The Commission shall

hear such appeal de novo. Whenever any local distributing company or concern, whose rates have been fixed by any municipal government, desires a change of any of its rates, rentals or charges, it shall make its application to the municipal government where such utility is located and such municipal government shall determine said application within sixty days after presentation unless the determination thereof may be longer deferred by agreement. If the municipal government should reject such application or fail or refuse to act on it within said sixty days, then the utility may appeal to the Commission as herein provided. But said Commission shall determine the matters involved in any such appeal within sixty days after the filing by such utility of such appeal with said Commission or such further time as such utility shall in writing agree to, but the rates fixed by such municipal government shall remain in full force and effect until ordered changed by the Commission.

Art. 6059. *Appeal from orders.*

If any gas utility or other party at interest be dissatisfied with the decision of any rate, classification, rule, charge, order, act or regulation adopted by the Commission, such dissatisfied utility or party may file a petition setting forth the particular cause of objection thereto in a court of competent jurisdiction in Travis County against the Commission as defendant. Said action shall have precedence over all other causes on the docket of a different nature and shall be tried and determined as other civil causes in said court. Either party to said action may have the right of appeal; and said appeal shall be at once returnable to the appellate court, and said action so appealed shall have precedence in said appellate court of all causes

of a different character therein pending. If the court be in session at the time such right of action accrues, the suit may be filed during such term and stand ready for trial after ten days notice. In all trials under this article the burden of proof shall rest upon the plaintiff, who must show by clear and satisfactory evidence that the rates, regulations, orders, classifications, acts or charges complained of are unreasonable and unjust to it or them.

IN THE

Supreme Court of the United States

OCTOBER TERM, 1937

No. 313

LONE STAR GAS COMPANY, *Appellant*,

v.

STATE OF TEXAS, ET AL., *Appellees*.

Appeal from the Court of Civil Appeals for the Third Supreme Judicial District of Texas, at Austin.

SUPPLEMENTAL BRIEF FOR APPELLEES.

May it please The Court:

Throughout this proceeding, from its inception, the appellant has alternated so often between wholly inconsistent theories of the case that we have had great difficulty in ascertaining what the appellant's attitude really is; and we have had difficulty in attacking its positions because it would not remain stationary long enough to be attacked. This difficulty has been intensified by appellant's reply brief, filed March 28, 1938.

I. INTERSTATE COMMERCE.

At pp. 3-5 of appellant's reply brief, it complains that we have relied upon "matters outside the record" in referring to the record made before the Commission, and omitted in printing. We have made no statements as to what that record does contain. We have merely expressed our willingness that the Court should examine any part of that record, if it so desires. We have stated that the Commission record contains no suggestion by appellant of the interstate commerce defense, and appellant has not accepted our challenge to point out any place in that record wherein such defense was raised or suggested. Our statement that it was not raised or suggested before the Commission is conclusively supported by what appears in the printed record. (R. I, 305; II, 1496-1497; I, 124, 130, 136-137.)

Appellant urges that it was under no duty to disclose before the Commission its contemplated defense of interstate commerce, because the judicial review before the District Court was *de novo*. But a *de novo* judicial review of a rate order does not import that the parties are entitled to try the cause before the courts upon a totally new and fundamentally changed theory from that upon which it was presented to the legislative body. It only imports that each party is entitled to produce before the reviewing court evidence which has *newly developed*, or has been *newly discovered* without fault or negligence in failure to discover, after the close of the record before the administrative body. This distinction is made plain in *Western Distributing Company* v. *Public Service Commission of Kansas*, 58 Fed. (2nd) 241, 243, (aff. 285 U. S. 119, 76 L. Ed. 655). (See also the cases cited at p. 5 of our original brief.)

At p. 8 of the reply brief, appellant says that appellees have waived the estoppel by failure to plead and urge it specifically in the state courts. This contention is not sound. Appellees prevailed in the state courts, and are now entitled to urge such facts as are reflected by the rec-

ord, in support of the state court judgments. If appellees had lost in the highest state courts, and had now been urging estoppel without having specifically raised it in the state courts, then appellees' position might be different from what it is now.

At pp. 8-9 of the reply brief, appellant says it had no reason to anticipate that the Commission would make an order affecting all of its deliveries of domestic gas at the city gates in Texas regardless of the sources from which the gas was obtained. This claim comes with very bad grace from the Company. The Commission's opinion opens (R. I, 14-15):

> "On October 14, 1932, the Railroad Commission of Texas entered an order on its own motion, calling for a general investigation of rates and charges made by the Lone Star Gas Company for natural gas delivered at the city gate of towns and cities served by that Company. . . . . A copy of the order of October 14, 1932, and notice of a hearing to be held beginning November 1, 1932, in the City of Fort Worth, was sent to the Lone Star Gas Company. . . . . Accordingly, on November 1, 1932, the Company appeared."

Thus, it is plainly shown that the Company was explicitly put upon notice that the purpose of the Commission was to investigate, and make an order fixing, a reasonable gate rate for all domestic gas delivered by the Company at the city gates in all towns in Texas served by it; and no distinction was made as to the sources whence the gas might be obtained. Furthermore, throughout the seven months of hearings before the Commission, the Company itself as well as the witnesses sponsored by the Commission submitted only overall valuations of the Company's entire properties in both Texas and Oklahoma and as to its operating results in both states without attempting a segregation as between the two states upon any basis or as between purported intrastate and interstate operations. Thus, again, the evidence made no distinction as to the sources

whence the gas was obtained, and the Commission was permitted to conduct the entire proceeding upon the theory that it had the power to dispose of the matter in the very manner in which it later did; and this without the slightest suggestion of objection by the Company. It was only later in the District Court, that the Company for the first time raised the defense and stated that the Commission would not have entered the order that it did *"had it been advised or had it known* that it did not have the right to determine and enforce a rate applicable to all gas sold by the defendant." (R. I, 305.)

At p. 9 of the reply brief, appellant says that the Commission knew the Company was engaged in interstate commerce, because it is so recited in the opinion. But the expressions quoted from the Commission's opinion show clearly that what the Commission really intended by the term "interstate commerce" was the Company's intrastate operations in Oklahoma, over which the Commission recognized that it had no jurisdiction.

At pp. 5-7 of the reply brief, the Company asserts that the evidence taken by the District Court pertaining to the Company's pleas to the jurisdiction and in abatement is not proper and competent evidence for the consideration of this Court. The reasons stated are, that the evidence under these special pleas was taken without a jury and before a judge other than the one who presided at the jury trial which followed a short time later. Under these special pleas the Company attempted, unsuccessfully, to convince the District Court that it was without jurisdiction to hear the matter upon its merits at all, because of the claimed defense of interstate commerce. The proceedings had, and the evidence taken, under those pleas are plainly as much and as competent a part of the trial of this cause as were the proceedings had, and the evidence taken, during the later jury trial. The trial court did not exclude any part of this evidence, but expressly admitted and considered it, and overruled the Company's pleas upon the basis of it. Had the

Company's said special pleas been sustained at that stage by the District Court, it would have ended the proceeding then and there; and thus, by the Company's failure to raise this interstate commerce question before the Commission, the latter's entire labors and the vast expense thereof would have been totally lost. It ill becomes the Company to say that this evidence cannot now be considered. The Company's real reason for objecting to the consideration of its own evidence adduced under those pleas is that in the course of its testimony and evidence there submitted, it inadvertently made some very damaging admissions, which it sedulously avoided and tried to change and smooth over in the course of the subsequent jury trial.

At pp. 13-14 of the reply brief, the Company says that the order reduced its gross revenues by 20 percent. This is an exaggeration; for the order applies only to the domestic, and not to the commercial or industrial, sales at the city gates; nor to its rights of way sales; nor to its non-public-service operations. It says also that the order fixes its "compensation for transportation" both within and without Texas. This is a fallacy; for the order in reality only fixes the price to be charged by it for its *own commodity* upon simulated gate sales within the State of Texas, and does not fix "compensation for transporting" interstate, either for others as a common carrier for hire, or for itself. The cases, such as *Hanley* v. *Kansas City Southern Ry. Co.*, 187 U. S. 617, 47 L. Ed. 333, are plainly distinguishable from this. There, continuous interstate hauls were being made for hire by a common carrier whose business had been expressly embraced, as an agency or instrumentality of interstate commerce, by the terms of the Interstate Commerce Act itself, thus by competent legislation broadening the scope of national regulation beyond what perhaps would have been considered interstate commerce as an independent concept in the absence of federal statute. The case here is as if a farmer should raise apples in Oklahoma, and haul them in his own wagon into Texas, for the purpose of there selling

them in retail distribution directly to the consumers as a peddler about town. Fixing the price of the product, either piecemeal (step by step, as the Commission is doing here) or fixing the final and ultimate price to the consumer, is not a fixing of "compensation for transporting" in interstate commerce, but is only the permissible fixing of a reasonable price for the *commodity* to be sold in local Texas commerce. And such transporting across state lines of one's own commodities is not "commerce" with anyone—much less "interstate commerce"; but is only an incident to local commerce.

It is urged at pp. 13-14 of the reply brief that the order is a prohibited direct burden upon interstate commerce, the same as would be a 20 percent gross receipts tax levied by Texas upon the Company's revenues derived from its entire business both in Texas and Oklahoma. This contention is specious, because it overlooks the important consideration, pointed out by this Court in the recent case of *Western Livestock* v. *Bureau of Revenue of the State of New Mexico*,—— U. S. ——, 82 L. Ed. ——, No. 322, October Term, 1937. There, it is pointed out that the reason for striking down under the federal commerce clause gross receipts taxes levied by the states in many instances is that although the tax might be reasonable if levied only by one state, yet, if the one state has the right to levy the tax, all other states touched by the interstate commerce would, as of right, be entitled to levy a like, or even greater, gross receipts tax upon the same revenues; and thus, by multiple taxation the interstate commerce would be driven out of existence, and the local commerce of the respective states would thus be given an advantage over interstate commerce, totally fatal to the latter. Such is not the situation here; for no state except Texas can possibly tax or regulate the price of domestic natural gas delivered at the city gates in Texas. The case of *Western Livestock* v. *Bureau of Revenue, supra,* should be added to the citations under our Points XIV, XV, and XVIII, pp. 17-18, 18-20, and 23-26 of our original brief.

At pp. 12 and 19-20 of the reply brief, appellant suggests certain imaginary conflicts of interest, and of regulatory authority, which might conceivably arise between Texas and Oklahoma with respect to the case here under consideration; more especially the question of reasonable prices which might be charged for the gas in the respective states, and the question of apportionment of the supply of gas between the two states if it should become inadequate to meet the demands of both states. Neither of such situations, nor any similar situation, has arisen or is presented by this record.

With respect to the question of segregation between (1) the Texas and Oklahoma properties and operations, and (2) what the Company denominates "interstate and intrastate operations," the Company at p. 39 of the reply brief again urges its oft-repeated argument that the order is indivisible in character, and that it must stand or fall as a whole; and further, that the Company was not under the duty of rewriting the Commission's order, any more than were the reviewing courts. The argument that the order is indivisible and must stand or fall as a whole is totally unworthy of serious assertion, in view of this Court's many decisions that a legislative act, such as this, may be valid on its face, and as applied to particular situations and at particular times, but invalid in part as applied to other different situations and at other times. And even if it be true that neither the Company nor the courts are under any obligation to rewrite Commission's order, this certainly would not lift from appellant the duty of supplying to the regulatory body evidence upon which a proper and valid order could be written. In this connection, we point out that although the Company in all proceedings before the Commission had permitted the latter to proceed upon an overall and unsegregated basis in both states, yet, in the District Court its evidence in support of its defense of interstate commerce, asserted for the first time, in that court, attempted a purported method of segregation between what

it called "interstate and intrastate operations," which is very graphically made plain by the Company's own map, then introduced for the first time, which we have appended at the end of our main brief, delineating plainly, definitely and certainly, in colors, the zones and areas in which its operations were claimed to be wholly intrastate, interstate, and mixed, respectively. If any segregation within the Company's Zone C (see Company map at end of our main brief) was required, it certainly should have given the Commission the benefit of its theories so that the Commission would, at least, have had an opportunity to work out *some* practical basis for segregation within that zone; but this the Company wholly failed to do, although the record shows that it was working hammer and tongs upon that theory during the larger part of the time the Commission's hearings were going on (see our main brief, pp. 62-75, and especially 71-72).

The Company attempts to explain at great length its reasons for submitting to this Court, as an appendix at the end of its original brief, a totally different, deleted, and altered map, instead of the same map in zones and colors which it appended to its briefs in the Court of Civil Appeals and the Supreme Court of Texas. It has not yet, however, explained its reasons for wishing to present the case in a totally different light to this Court from that in which it was presented to the state appellate courts. The real reason is that the Company's theory of segregation became obviously untenable, and showed up too great a portion of its operations as being admittedly intrastate commerce and subject to state regulation; those in Zone A being admitted to be wholly so, and those in Zone C partly so. It showed also the utter impossibility of making any sort of workable segregation upon the Company's theories which would permit the regulatory authority and the courts to ascertain what portion of the domestic deliveries at each of the city gates within Zone C was Okla-

homa gas, Texas Panhandle gas, and West Texas gas, respectively, so that any effective regulation could be brought about within Zone C at all. Thus, it appears that the Company has been driven into abandoning totally its entire theory of segregation presented to the state courts; which has resulted perilously near in driving it also away from its entire claimed defense of interstate commerce. The Company is now attempting to sanctify, under the claim of interstate commerce exemption, its *entire* operations within Texas, and not simply a portion of those within the limited Zone C shown by its map in the state courts. Thus, it has attempted also to conceal and camouflage its entire failure to segregate that portion of the gas which it really claims is exempt as interstate commerce within Zone C from that which is admittedly intrastate commerce in Zones A and C.

In our statement and argument under our Points XX to XXIV, inclusive, pp. 27-31, 62-75, of our original brief, we neglected to point out that the Company's attempted segregation in the District Court failed also to take into consideration, and to exclude from its claimed "interstate operations," the large volumes of Oklahoma gas and the smaller volumes of Texas Panhandle gas coming through Line A, which is shown by the record to have been stored and brought to rest for a large part of each year in what is known as the "Miller Lease" near Petrolia, Texas. At p. 53 of our original brief, we show that for 1933, the total volume produced from Company reserves in Oklahoma and transported into Texas was only 613,780 MCF (R. III, 2165, 2124 A); and at p. 61 of our original brief, we show that for the same year the storage in the Miller Lease absorbed 500,000 MCF of the gas from Oklahoma and the Texas Panhandle claimed to be interstate gas. Notwithstanding the fact that this volume of stored Oklahoma and Texas Panhandle gas had clearly lost its original claimed interstate immunity (if such it ever really had) by being brought to rest for six months in storage in the Miller Farm, the Company includes this volume of gas, when withdrawn from

storage and run into Zone C, in what it claims to be its interstate operations.

This record reflects (see pp. 33-37 of our original brief) that the real and sole party at interest in this entire proceeding is the Lone Star Gas Corporation, a Delaware holding company with its nominal place of business in Wilmington, Delaware, but with its sole business domicile in Pittsburgh, Pennsylvania, which Corporation does not have a permit or right to do business in Texas, and has nominally no office or place of business or agents in Texas through whom it could be reached by legal process by the regulatory authorities or courts of the State except appellant and its affiliated distributing companies; but that in reality the Lone Star Gas Corporation, through its "dummy" affiliate corporations, which it both owns and controls as agencies or automatons, in reality carries on in Texas the admittedly intrastate business of purchasing, producing, transporting, and distributing locally to the consumers at the burner tips natural gas for domestic consumption in 275 cities and towns. The record reflects further that the Lone Star Gas Corporation, although it keeps in Dallas, Texas, a "dummy" or memorandum set of its own books in the possession, and for the guidance, of its affiliated underlying companies, the Lone Star Gas Company and the affiliated distributors, yet, it refuses to the State authorities access to these books for any purpose (R. III, 1640). It is said that these books were not material upon any question except management fees. But what about the question of the appellant's excessive claims for amounts of Federal income tax never paid to the Government, but set up in operating expense, nevertheless, in the amounts of hundreds of thousands per year? (See pp. 127-130 of our original brief).

It was asked from the Bench in argument whether the Commission had not treated the pipe line company and the affiliated distributors as being separate, distinct and unrelated corporate entities for purposes of fixing the gate rate and the burner tip rates separately, while at the same time

inconsistently considering the entire affiliated group as one unified and integrated set-up for the purposes of the interstate commerce question. The answer is that there has been no such inconsistency of treatment at any time.

In fixing the gate rate separately for the Lone Star Gas Company and later in separate proceedings and orders fixing the burner tip rates for the affiliated distributing companies in the 275 Texas cities and towns, the Company has been accorded exactly the same treatment that the Commission has accorded to another single corporation in the case of *State of Texas* v. *Public Service Corporation of Texas,* 88 S. W. (2d) 627 (writ refused). There the Public Service Corporation of Texas owned and conducted as a single operating unit the production, transportation and local distribution phases of the natural gas business, serving eight Texas towns, in seven of which the local distribution plants were owned and operated by the said Public Service Corporation of Texas. There the Commission proceeded exactly as it has done here; and proceeded to fix the rate at the city gates for the production and transportation phases without at the same time and in the same proceeding going further and fixing the burner tip rates in each of the seven towns where local distribution operations were carried on by the same company. The company attacked the Commission's right to do this, but such right was upheld by the highest state courts. Thus, it appears that there is nothing arbitrary or unjust in the Commission's proceeding likewise with this affiliated group of companies, which are to be considered as one, as it has done in the case of a single corporation.

The Lone Star Gas Corporation has seen fit to divide its entire integrated operations of purchase, production, transportation, and local distribution of domestic natural gas in Texas, into distinct departments or divisions; the purchase, production and transportation department, properties and operations of the integrated business being entrusted solely to its corporate agent, the Lone Star Gas

Company; and the distribution properties and operations being entrusted solely to its claimed separate and distinct corporate entities or agencies, the affiliated distributing companies in Texas. It so happens that this voluntary division of its properties, operations and business, by the Lone Star Gas Corporation, and its subsidiaries, coincides exactly with the division which the Commission has found it necessary and convenient to adopt for purposes of expediency and economy in fixing the uniform gate rate in Texas separately from the individual burner tip prices in each of the 275 Texas towns served by the Company's pipe line.

For the purposes of fixing the uniform gate rate, the only legal agent of the Lone Star Gas Corporation upon whom the Commission could lay hands in legal process was the Lone Star Gas Company, which confessedly had entire charge of the properties and operations up to the city gates; and it would be claimed by the entire affiliated group that the affiliated distributing companies had nothing to do with the operations up to the city gates. And likewise in burner tip cases it would be insisted by the entire affiliated group that only the affiliated distributing companies had anything to do with the distribution properties and operations. Thus, there is nothing inconsistent in the Commission's attitude in dealing with the Company only, in the operations up to the city gates, and in dealing separately and subsequently only with the affiliated distributing companies in fixing the burner tip rates in each of the 275 towns. The necessary segregation is thereby made between the properties and operations of the respective *departments* of the entire business along the very lines as set up by the Lone Star Gas Corporation itself and its affiliated companies; and in so doing, the Commission has never lost sight of the fact that the business is one integrated set-up owned, managed and controlled by the Lone Star Gas Corporation; nor has it failed, to the prejudice of any of the affiliated companies, to give proper effect to that fact, where it was properly mate-

rial. And certainly, there is no inconsistency or injustice to any of the affiliated companies in applying the principle of disregarding the corporate entities where it becomes material and appropriate, namely, in the question of interstate commerce.

II. DENIAL OF "DUE PROCESS" OR "ADEQUATE JUDICIAL REVIEW."

In the Company's original brief at pp. 126-127, it very plainly specifies what it does and what it does not urge as a denial of due process or adequate judicial review. At p. 126, the Company says:

> "The point here made is not based upon the failure of the Court of Civil Appeals to exercise an independent judgment as to the facts or its failure to make findings settling the conflicts in the evidence referred to . . . Nor do we challenge here the proceedings in the State trial court as amounting to a denial of due process."

And at p. 127, it says:

> "What we do complain of is the judgment of the Court of Civil Appeals, which, in effect, deprived appellant of the judicial review accorded it in the trial court and placed it in the same position as if that review had been denied by the trial court. Appellant's complaint is not that the Court of Civil Appeals has erroneously declared the State law applicable to the judicial review of rate orders. Appellant's complaint is that the procedure, provided by the State, as expounded and applied against it in the instant case, denies it an adequate judicial review of the rate order. What the Court of Civil Appeals said on the subject of judicial review of rate orders is the law of the State, at least for the purposes of this case. And appellant's complaint is that the law of the State, as thus declared and enforced against it, amounts to a denial of due process."

At pp. 41-42 of its reply brief, however, the Company attempts to retreat from the above-quoted plain admissions and position, and to interpret and assert now its position as being quite different from that taken in its original brief.

Even allowing this shift of positions, however, and considering the Company's positions as asserted both in its original and reply brief, its whole contention boils down to the argument that the claimed denial of due process or adequate judicial review consists only in the holding of the Court of Civil Appeals that the evidence as a whole was legally insufficient to outweigh and overturn the presumed validity of the Commission's order, or to measure up to the *quantum* and *character* (or *quality*) of evidence necessary to raise issues of fact as to confiscation under the Federal Fourteenth Amendment, or unreasonableness and unjustness under Article 6059 of the state statutes, and was thus insufficient to support the jury's verdict. In short, the contention is that the denial of due process consists in the overturning or setting aside of the jury's verdict, and the failure to give it a jury trial on the facts, and the claimed failure to exercise an "independent judgment as to the facts."

The necessary effect of sustaining this contention on the Company's part would be: (1) To convert into a federal question, of denial of due process under the Fourteenth Amendment, what is (if it is an error at all) plainly only an error of state law; and the result of this would be that every error of state law committed by a state court would automatically and *ipso facto* become a denial of due process under the Federal Fourteenth Amendment, and this Court would thereby by compelled to sit in review over and to correct all claimed errors of state law committed by all state courts. (See our original brief, pp. 76-84). (2) To deprive the Commission's action and order of their well-established, and heretofore uniformly applied, presumptions of correctness; and to attach all of such presumptions, on the contrary, to the trial court's judgment. The effect of

this would be to abolish entirely the requirement of Article 6059 that a person complaining of the Commission's orders shall be required to show by "clear and satisfactory" evidence that the same are unjust and unreasonable; and to abolish also the rule heretofore well-established in the Texas decisions (See cases cited at pp. 78-79 of our original brief) that the question of the "clear and satisfactory" *character* and *quantum* of the complaining party's evidence is a preliminary *law* question for the courts to pass upon before the submission of any issues whatever to the triers of fact; and to abolish also the well-established, and heretofore uniformly applied, rule of law laid down by the decisions of this Court (See cases cited at pp. 85-86, 86-87, 88, 90, 90-91, and 95-96 of our original brief) to the effect that the evidence of confiscation under the Fourteenth Amendment must also be "clear and convincing," and such as would leave no reasonable doubt in the judicial minds. A further necessary result of the Company's contention would be that the results of the expert labors and judgment of the members of the Commission could in every rate case easily be overturned and the judgment of trial courts substituted therefor under evidence not measuring up to the law's required standard of *quantum* and *quality* (i.e., being "clear and satisfactory" or "clear and convincing." And we cannot emphasize too strongly that this preliminary legal analysis of the evidence is, under the cited decisions of this Court and the state courts, a preliminary *law* question for the courts to pass upon before any fact issues are raised or submitted in judicial reviews of Railroad Commission orders (whether involving confiscation or not). If this preliminary legal test be successfully passed by the evidence, then as shown by the quotation from the *Shupee* case (p. 78 of our original brief) the issues of fact will be submitted to the triers of fact and determined upon a preponderance of the evidence, in the usual way. This is but giving due weight and presumption of correctness to the findings and action of the expert legislative agency, arrived

at after due notice and full hearing. And, as shown by the quotation from the *St. Joseph* case (p. 79 of our original brief) this is not a denial of an "independent judicial judgment as to the facts" nor of any other Federal Constitutional right. The Company's contentions would result in making the trial courts the ultimate legislative rate makers, instead of the Commission of experts; and in that case, it would be better to abolish the expert Commission entirely, and to vest the legislative power of rate making directly in the trial courts themselves.

It is plain from the decisions of the highest state courts cited at pp. 78-79 of our original brief (more especially, *Railroad Commission of Texas* v. *Shupee*, 57 S. W. (2d) 295, 301, affirmed by the Supreme Court of Texas, 123 Texas 521, 528, 73 S. W. (2d) 505, 508), and from the holdings of the Court of Civil Appeals in the *Laredo* gas rate case, and in this case, that the intention of the Texas Legislature in enacting Article 6059, the article here involved, was to establish a different and more onerous rule in judicial reviews of orders of the Commission (whether involving confiscation or not) from the rule of ordinary preponderance of the evidence applied in other ordinary civil cases; and to establish the rule and requirement in all judicial reviews of actions and orders of the Railroad Commission, that the orders cannot be overturned upon a mere preponderance of the evidence as in other ordinary civil actions, but that they may be overturned, only after the trial and appellate courts are satisfied as a matter of preliminary *law*, upon analysis of the complaining party's evidence, that the same is sufficiently "clear and satisfactory" or "clear and convincing" *to the judges as a matter of law and not merely to the triers of fact*, that the expert evidence rests upon firm and satisfactory foundations of underlying factual data or experience.

This rule is essential to the preservation of the action of the Commission as a body of experts, as against attack and attempts to substitute for such orders the action and judgment of trial courts.

And that this rule, as prescribed by the Texas Legislature, and as interpreted and applied by the highest courts of Texas, is not inconsistent with any federal constitutional rights of the complaining parties, is plainly shown by the many decisions of this Court, laying down independently of statutory provisions the requirement that the evidence in cases of claimed confiscation or other deprivation of federal right must be "clear and convincing" and such as to meet to the satisfaction of this Court the requirement as to the acceptability of expert or other testimony in such cases.

This record reveals that the jury's verdict in this case, prior to the time it was rendered and made known to the Company, did not in the Company's estimation possess the sanctity and inviolability which the Company now claims for it under the Federal Fourteenth Amendment. At R. I., p. ii (index) and R. I., 191, it appears that the Company requested the trial court to submit to the jury 118 separate "special issues" (none of which is printed in this record, and of the failure to submit which the Company now makes no complaint); and at R. I., 184-192, this Court is given a limited sample of the numerous and voluminous objections and exceptions which the Company leveled at the trial court's charge and submission of issues to the jury. Thus, it appears that the Company was preparing to make attacks upon the court's charge and the jury's verdict from every conceivable angle, if the case should eventuate adversely to the Company; and it is only since the favorable nature of the jury's verdict and the District Court's judgment became known to the Company that they have in the Company's eyes acquired such great sanctity under the Federal Constitution. If the jury's verdict had been adverse to the Company, it would be up here now complaining with great bitterness that the jury's verdict was not binding upon anyone, and would be attacking it from every conceivable standpoint. The Company would be urging this Court, as we are now, to review the entire evidence and determine for itself whether there was confiscation.

It is further to be observed that the jury's verdict in this case cannot be binding upon anyone, for several reasons: (1) As we have urged in many forms heretofore, the evidence as a whole was totally insufficient as a matter of law to support the verdict; (2) The jury were not given any instructions in any form to the effect that they might, in arriving at their answer to the single special issue submitted, take into consideration the *average* operating results for the reasonable spread of years in evidence, from January 1, 1927, to April 30, 1934, inclusive; and under this Court's holding in the *Laredo* case, appellees would clearly have been entitled to an instruction to that effect. Thus, the jury's vision was limited strictly by the form of submission to the question whether the rate was unreasonable prospectively from the date of trial in 1934, forward, and the jury was not permitted to answer as to whether it was reasonable when considered in the light of the average operating results reflected by the exhibits and testimony in evidence over the reasonable spread of years from 1927 to 1934, inclusive.

The facts in this record, and the Company's contentions in the light of those facts, make peculiarily plain the unwisdom of establishing any other rule in the judicial review of orders of the Commission than that laid down by Article 6059, and the decisions of the hightest State courts interpreting and applying that rule; and they make plain also the absolute necessity of establishing, maintaining and applying such a rule (requiring something substantially higher than the ordinary quantum and quality of proof before overthrowing the actions and orders of the Commission) in order to preserve and uphold the expert judgment of the Legislative Commission as against attacks by ordinary superficial, specious, and unsatisfactory expert evidence such as submitted by the Company here, and of substituting for the expert judgment of the Commission the judgment of a trial court. Such a rule has been uniformly sanctioned and applied in the decisions of this Court in rate cases where confiscation has been claimed.

The Company's contentions further disregard the force of this Court's holdings that "clear and convincing evidence" is required to demonstrate confiscation, and more especially the holdings of this Court in the *Laredo* case, as follows:

> "With respect to the proceedings in the state courts, appellant urges that the case was not tried and determined as required by the state law, and we are referred to the state statutes and decisions of the Texas courts as to the proper procedure in the trial court and on appeal. It is not our function in reviewing a judgment of the state court, to decide local questions. We are concerned solely with asserted Federal rights." . . . "The final judgment of the state court in the instant case must be taken as determining that the procedure actually adopted satisfied all state requirements." . . . "As to the requirement of due process under the Federal Constitution, appellant contends that it was denied the independent judicial judgment upon the facts and law to which it was entitled." . . . "The proceeding in the state court undoubtedly purported to afford an independent judicial review. As the Court of Civil Appeals of Texas said in the instant case, the trial of the issue whether the rate was unreasonable or confiscatory was '*de novo.*' "

It is plainly shown by the discussion of the Court of Civil Appeals (R. V, 3354-3359) that the Court of Civil Appeals recognized that under the Federal decisions (*Ohio Valley Water Company* v. *Ben Avon Borough*, and others) the judicial review must be upon an "independent judgment as to the facts and law," and that such a review was accorded the Company in this case. And from the opinion of the Court of Civil Appeals (R. III, 3335, 3353, 3354, 3357, 3359-3370, especially 3369) it appears plainly that what the Court of Civil Appeals did actually hold in this case was that as a matter of law the evidence as a whole did not meet the required preliminary legal test as to *quantum* and *quality* necessary to overturn the presumed validity of the Commission's order, and this was adjudged as a matter of

law and *not* a matter of fact. That this procedure was permissible from the angle of state requirements is plainly shown by the judgments of the highest state courts in the cases cited at pp. 78-79 of our original brief, and in the *Laredo* case, and in the present case. That it does not contravene the requirements of the Federal Constitution is shown by the numerous decisions of this Court, more especially the passage from the *St. Joseph Stockyards Company* case, quoted at p. 79 of our original brief, and the quotation from this Court's decision in the *Laredo* case set forth at p. 80 of our original brief. These decisions show plainly that this Court has adhered to and applied that very identical principle in all rate cases of claimed confiscation and deprivation of other federal rights.

The Company claims that this Court has not the power to review the facts in cases arising from the state courts, because of the inhibition of the Seventh Federal Amendment. This overlooks the action of this Court in reviewing and analyzing the facts in the *Laredo* case, which this Court said (see p. 80 of our original brief) was done "not to determine the issues of fact raised on conflicting testimony or inferences, and thus to usurp the function of the state court as a trier of the facts, but to perform our own proper function in deciding the question of law arising upon the findings which the evidence permits."

Since this Court plainly exercises that function consistently with the requirements of due process under the Fifth Federal Amendment, this Court should certainly accord to the state courts the privilege of applying the same principle, as they have done, without impinging upon the Fourteenth Amendment.

As we view it, then, all questions go out of this case entirely so far as this Court is concerned, except the two issues, (1) as to whether the order was void in whole or in part, (and if so, in what particulars and to what extent) under the Federal Commerce Clause; and, (2) whether the evidence is such as to meet the requirement of being "clear

and convincing," under the well-established rule uniformly laid down and applied in the decisions of this Court, as to confiscation.

These questions this Court has the undoubted power to determine from a thorough review and analysis of the entire record; and this we not only invite but urge the Court to do, feeling confident that when the review is completed, this Court will agree with the judgments rendered by the highest state courts, that the evidence was insufficient as a matter of law, both as to quantum and quality, to demonstrate confiscation.

III. CONFISCATION.

Upon the whole case, considering the wholly unacceptable and excessive claims and testimony of the Company as to annual depreciation requirements, improper and questioned items of operating expense (in both of which one dollar takes away the equivalent of a 6% annual return on $16.67 in the rate case) and considering the unacceptable character of the Company's evidence as a whole on all questions of valuation in the rate base, the evidence falls far short of being either "clear and satisfactory" under the state rule as to unreasonableness and unjustness, or "clear and convincing" under the well-established rule of this Court as to confiscation.

The Company urges that it was justified in saying in its original brief that the Commission's witness, Freese, allowed nothing for going concern value in his appraisal before the District Court. In the first place, this Court is not primarily concerned with the sufficiency of Freese's estimates for going concern value in the District Court, but only with the sufficiency of what the Commission actually allowed, in the light of the evidence as a whole in the District Court. And it conclusively appears from the Commission's opinion, and from the District Court record otherwise, that the Commission allowed fully and more than liberally in the rate structure not only for going concern value and every

other element of value but for all operating expenses, depreciation, depletion and amortization, and as to every ultimate and subsidiary element in the rate structure. What Freese's testimony in the District Court does show is this: *not* that he allowed nothing for *going concern value,* but only that he included nothing in his estimate and allowance of going concern value for *claimed losses of return and fixed charges on idle plant during the preliminary development period* in the early history of the Company's operations; his investigation having shown plainly that the Company had incurred no such losses. Freese's testimony is (see pp. 175-177 of our original brief) that he did allow fully for going concern value, though not in a separate lump sum estimate; whereas the Company (p. 145 of its original brief, and p. 77 of its reply brief) said that Freese *did not allow anything* for going concern value. The statements are totally erroneous and misleading.

In a brief of any reasonable length it would obviously be impossible for us to outline in detail all of the objectionable features and speculative, uncertain, and unacceptable bases and theories of approach in the Company's entire evidence on confiscation. We have attempted in our original, and in this, brief to outline enough of the higher points of objection to the Company's evidence to give this Court some insight into why the state appellate courts were justified in rejecting the entire evidence as failing to measure up to the requirement as to *quantum* and *character.*

In the Company's reply brief at p. 64, it sets forth a computation purporting to show upon various assumed hypotheses or bases certain low percentages of net return which would have resulted to the Company under a theoretical application of the 32c rate only over the period 1931 to March 31, 1934, inclusive. It will be observed in the first place that here again the Company has submitted the results only of depression years, including 1933, the warmest year in the history of the Company's operations. It is to be observed also by reference to the Company's Exhibit

37 (R. V, 3037-3039), on which one of the computations is founded, that the Company's engineer, Biddison, compiled this exhibit on August 30, 1933. Thus, it appears that the exhibit on which the Company's computation is founded was compiled subsequent to the close of the Commission's hearing on June 29, 1933, and before the Commission had even promulgated its rate order on September 13, 1933; and it appears that the Company, even before it knew what the Commission's order was going to be, was laying its plans and compiling exhibits to attack the Commission's order, whatever it might be, in the courts, upon the very grounds which it has urged in all of the courts since then.

The Company in constructing the table utilizes for rate bases the book costs at the end of each of the years shown instead of taking an average book cost for each year (Rate Base No. A). If an average rate base of book value had been taken each year instead of at the end of each year, and if cancelled and surrendered lease expense as found reasonable by the Commission, and corrections to normal temperature for the calendar year 1933 and for the year ending March 31, 1934, had been applied, rates of return after depreciation, of 5.81% for 1931; 6.06% for 1932; 5.27% for 1933; and 5.23% for the year ending March 31, 1934, would be shown.

It is also significant to note from the items reflected in the Company's table that although the Company states that "operating expenses" are utilized as found by the Commission, it includes the item of "Federal income tax" in the sum of $216,627.86 for 1931, $256,841.59 for 1932, $145,744.27 for 1933, and $175,769.90 for the year ending March 31, 1934, although the Commission very definitely excluded this item from allowable operating expense upon a finding that none would be due, and the Company's own expert, Hulcy, testified that only an amount of approximately $52,000 would be due by the Company for the year 1931 (R. I, 405-406) and although the Company has never paid any income tax to the Government (R. I, 405; R. III, 2224-2228).

An examination of our Tables I to V, inclusive, at the end of our original brief, will show that when the Company's excessive estimates as to annual depreciation accruals, and as to rate base valuations, and as to improper and questioned operating expenses are rejected (as they should be), and when reasonable amounts for such items, as found by the Commission or as estimated by the Commission's witnesses in the District Court trial, are substituted therefor, the record as a whole is absolutely insufficient as a matter of law to raise any issue of confiscation. Here again, we remind the Court that in our Tables I to V, inclusive, we have not deducted any of the improper and questioned items of operating expense referred to at pp. 116-130 of our original brief, except the item of management fees and certain parts of the donations. When these improper operating expenses are eliminated, they restore rightfully to the amounts available for return large sums at the ratio of $16.67 in the rate base to one dollar in the operating expense account.

We respectfully submit and pray, as in our original brief, that the case be affirmed with costs.

Respectfully submitted,

WILLIAM MCCRAW,
Attorney General of Texas,

APPEAL FROM THE COURT OF CIVIL APPEALS FOR THE THIRD SUPREME JUDICIAL DISTRICT OF TEXAS, AT AUSTIN

SECOND SUPPLEMENTAL BRIEF FOR APPELLEES

MAY IT PLEASE THE COURT:

Appellant delivered to us, on April 6, 1938, copies of "Appellant's Reply To Appellees' Supplemental Brief." Insofar as we have been advised, the Court has not authorized the filing of such additional brief by appellant, but we have no objection thereto if it will be of any aid to the Court; but if filed, as we presume it has been, it necessitates this additional brief from us in

order to correct some additional misleading and erroneous statements and contentions made by the Company.

I. ESTOPPEL TO URGE INTERSTATE COMMERCE

The Court of Civil Appeals held that under the facts of this case no interstate commerce was involved in the Company's Texas operations; hence the Court did not take notice of the plain estoppel of the Company to raise that issue, reflected by the entire record. Had the Court of Civil Appeals determined that interstate commerce did exist, and had dismissed the interstate commerce defense upon the ground of estoppel, that would not have precluded the Company from urging in this Court both the defense of interstate commerce and the claim of error in the application of the doctrine of estoppel. By similar reasoning the Company is not now precluded from urging the interstate commerce defense in this Court, (unless under our plea of estoppel) nor are appellees precluded from urging the estoppel on that issue. By its silence and acquiescence before the Commission upon the interstate commerce issue the Company led the Commission to believe that the Company was willing to stand or fall only upon the ultimate issues of confiscation, unjustness, and unreasonableness. In presenting before the reviewing courts what amounts in its essence to a gross fraud upon the Commission, and by thus changing the fundamental grounds and theories of its contentions from what they were before the Commission, the Company's attitude upon this entire subject has become plainly untenable.

II. LINE A OPERATIONS AND OKLAHOMA IMPORTATIONS INTO TEXAS DO NOT CONSTITUTE INTERSTATE COMMERCE

The Company fails to distinguish between "transportation," which is a mere incident of commerce, either intrastate or interstate, and "commerce" or "interstate commerce." The gas is not actually sold, or offered for sale, to anyone until it reaches the ultimate consumers at the burner tips—when it is remembered, as it should be, that the Company in the operation of the pipe line business in Texas, and the affiliated distribution companies in the local distribution operations in Texas, are only the agents, automatons, or *alter egos* of the Lone Star Gas Corporation, which is actually carrying on local commerce in Texas, though it has no permit to do so. All operations, from the bottoms of the wells to the burner tips, are carried on by the same integrated set-up, which in reality is the Lone Star Gas Corporation. The railroad and telegraph common carrier cases cited by appellant involved carriage of goods and passengers, or transmission of intelligence, interstate, for other persons for hire; and are, therefore, not in point.

The Company's business, as actually transacted, is wholly intrastate commerce in Texas and Oklahoma respectively. Texas therefore has jurisdiction to regulate such operations in Texas and Oklahoma likewise has co-ordinate jurisdiction to regulate the Company's local business in Oklahoma; because the actual business transacted by the Company in each state respectively is purely local in nature.

The Company, in its latest brief, has attempted to move the Panhandle gas field from Texas into Oklahoma to support its points as to interstate commerce. We prefer to leave the field in Texas, where it actually is.

Line A has been in operation since 1926—approximately twelve years. The two remaining Oklahoma lines (Lines G and 2nd H) through which small quantities of Oklahoma gas are still imported into Texas, have been in operation since 1918 and 1919, respectively, approximately nineteen or twenty years. Rate litigation, involving the Company's operations, has arisen in both states. *Lone Star Gas Company et al v. Corporation Commission of Oklahoma,* 170 Okla. 292, 39 Pac. (2d) 547, 7 P. U. R. N. S. 490. And yet during that period and in the course of such litigation in both states no such conflicts of interest, authority, or jurisdiction have arisen as between the two states as appellant presents to the imagination of this Court. On the contrary, in the present instance, the Texas Commission has entered an order which was materially and unnecessarily generous, both to the Company and to the Oklahoma consumers on the Company's system, in fixing the Texas rate upon an overall basis and thus allowing the Texas rate to be raised substantially above what it should and would otherwise have been, by the allowance for the much more expensive and less profitable Oklahoma operations in setting the Texas rate. The Commission is here proceeding by steps, working toward the fixation of ultimate local burner tip rates in Texas only.

III. CONFISCATION ISSUE—SEGREGATION

The Court of Civil Appeals did not, as the Company represents, hold that any segregation was necessary as between interstate and intrastate commerce; and there is no inconsistency in that Court's opinion in holding on the one hand that no interstate commerce in Texas was involved, and on the other hand that the Company was under the burden of making a segregation between Texas and Oklahoma properties and operations. It is true the Court in several instances referred to the necessity of a segregation between Oklahoma and Texas properties and operations "or interstate and intrastate commerce"—thus perhaps incorrectly using the two terms interchangeably; but a careful analysis of the opinion makes it plain that the Court actually held that such a segregation was necessary only between Oklahoma and Texas properties and operations, and not between interstate and intrastate commerce; as there was no interstate commerce involved, and the Court expressly so held.

The submission of a voluntary segregation by appellees in the District Court, which segregation the Court of Civil Appeals approved, did not, even if such segregation had been held unsound, lift from appellant the burden of making a proper segregation between Oklahoma and Texas properties and operations. *Norfolk & Western Ry. Co. vs. North Carolina*, 297 U. S. 682, 688-689, 80 L. Ed. 977. However, the segregation made by appellees does show that the rate upon the basis of a proper segregation between Texas and Oklahoma is non-confiscatory. Appellant's evi-

dence relating to "overall integrated properties and expenses", if material at all, would have been so only if its *quantum* and *quality* had been of a sufficiently clear, convincing and satisfactory nature—which it was not.

The 85% allocation factor determined by the Court of Civil Appeals was a correct one as between Texas and Oklahoma if a segregation were required to be made. Appellant, however, applies a correct allocation factor to incorrect and unsound bases, to-wit, its own unreasonable valuations and estimates of depreciation, depletion, amortization, operating expenses, revenues, etc. This naturally results in an incorrect segregation. Likewise, the 85% allocation factor was the one worked out by the Commission's witness Freese only upon the overall *properties* in both states *as a whole*. It was not intended to be, and is not, workable when applied only to particular component elements of the property, such as transmission line equipment, or to operating expenses, or depreciation, or revenues, as the Company has attempted to apply it, or imagine the jury as having applied it.

The Company chooses, and insists erroneously that this Court should choose, just any sort of a blended combination of elements of the rate structure as contained in the evidence of both parties, that may be necessary to uphold the jury's verdict; choosing, of course, its own estimates insofar as possible where it thinks its own evidence is by a long stretch of the imagination tenable at all, and choosing on the other hand the elements taken from the appellees' evidence or the Commission's findings where these are more advantageous to the Company, or in lieu of the ele-

ments on which the Company plainly admits by implication that its own evidence was totally inadequate and untenable. This is a novel theory of reviewing the sufficiency of a rate before the courts, and one which so far as we know has never been adopted before, even by contentious litigants, and much less by courts of justice. Thus the Company speculates upon what *may have been* in the minds of twelve lay jurymen, though nothing of the sort is apparent from the jury's actual findings; and even if such things had been in the minds of the jury, they were clearly unsound and incorrect.

The Company argues in effect that whatever the jury's verdict may be in a rate case, regardless of the soundness or unsoundness of the bases and methods of submission to the jury, and regardless of whether the issue of confiscation was requested or actually submitted to and passed upon by the jury or not, the jury's verdict immediately attains final conclusiveness on all parties upon the issue of confiscation, and is not subject to review by the courts through the usual legal analysis of the existence or sufficiency of the evidence to support same. If this contention were sustained, the jury's verdict would end all rate controversies and the courts would have no function to perform or power to exercise in a review and analysis of the evidence. Confiscation would then become only a fact issue for the trial courts, and not at all a law question or a mixed question of law and fact for all the courts. This would result in doing the very thing which the Court of Civil Appeals and this Court and all other courts have held cannot and should not be done, namely, the substitution of the judgment of a trial court not only

for the judgment of the expert legislative body which fixed the rate, but even for the judgment of the reviewing courts—who would, under appellant's theory, be precluded from determining the existence or sufficiency of the evidence to support the verdict or judgment of the trial court. This would, in the final analysis, make the courts, and not the legislative body, the ultimate legislative rate-makers. The Company certainly would not be making any such contentions had the jury's verdict been adverse to it.

The only remaining questions presented to this Court are:

> "1. Did the Company fail to make out its case by not presenting clear and satisfactory evidence?
>
> "2. Does the rate, when properly tested, result in actual confiscation?"

There existed no necessity for a segregation before the Commission, because the Company made before the Commission no claim of interstate commerce, and no objection to the Commission's over-generosity in inquiring into and fixing the rate upon the basis of overall evidence as to Texas-Oklahoma operations, and the Company has thereby misled the Commission upon that point, and in reality perpetrated a fraud both upon the Commission and the courts by its methods adopted herein.

But actually, when proper segregation is made, there is no confiscation shown. Table IV, Appellees' Original Brief, page 199.

At page 20 of its latest brief the Company claims that if Line A operations are left out of account, the return on the remaining Texas intrastate business is shown to be confiscatory. This is not true. Table V, page 200 of Appellees' Original Brief, shows that even the return on West Texas gas (unquestioned intrastate operations) for 1933, which is based on the Company's erroneous segregation between what it chooses to designate as "interstate operations and intrastate operations," was 6.63%. This becomes 6.28% when depreciation correction is made for overall properties as urged at p. 61 of Appellant's First Reply Brief.

The Company frequently but unsuccessfully attempts to fall back upon appellees' evidence to support its contentions. For instance, it falls back upon appellees' evidence to supply the fatal deficiency of its own entire failure to present any evidence for years prior to the depression period 1931-1934; and also in its highly imaginative and speculative combinations or "blendings" of the evidence in such way that it contends the jury "could have found" the evidence clear and satisfactory as to "unreasonableness and unjustness"—and even as to "confiscation," which was not submitted or found at all.

For cancelled and surrendered leases the Commission allowed an average or amortized figure of $99,140.73 in operating expenses, arrived at by the average for the five-year period ending December 31, 1931. In connection with its table of computations at page 64 of its First Reply Brief, the Company states that it has allowed cancelled and surrendered lease expenses, in such

table, as the Commission amortized them; and this statement is repeated on pages 23-24 of Appellant's Second Reply Brief. The statements read fine if taken at face value, but they are not true. Reference to Record III, 2285, shows that the figures there shown as "Available for Depreciation, Depletion, Federal Income Tax and Return" are identical with the figures as they appear under the same heading on page 64 of Appellant's First Reply Brief. The Company has included in that tabulation the correct amount of $99,-140.73 for the year 1931, *but for all subsequent periods it has used amounts substantially in excess of that amount*. How these increased amounts are arrived at, we are unable to discover; but they certainly do not conform to the Commission's findings as the Company proposes. It is deplorable that the Company cannot, or will not, stay with the facts, and that thereby it puts us to the necessity of pointing out its errors a second and third time in order to prevent this Court from being seriously misled.

With respect to claims for Federal Income Tax, the Company again departs materially from the Commission's findings and from any basis fairly supported by the evidence. If the Company had applied the Commission's findings, as it purports to do, it would have deducted no federal income tax, for the Commission expressly finds none would be due under the 32c rate after all allowable deductions are taken. The Company, further, would have the Court believe that the testimony of its own witness, Hulcy, to the effect that approximately $52,000.00 would have been the correct amount of computed federal income tax for the

year 1931, was not true, and is not to be accepted or given any effect by the Court, because such testimony was given by Hulcy on cross examination rather than direct examination. Our previous statements are sufficient to show that the Company has never actually paid to the Government, nor has the Lone Star Gas Corporation ever paid to the Government for Lone Star Gas Company, any such amounts of Federal Income Tax as the Company computes and uses in its tabulations. What this record does reflect, is that the Company has made no payments of income tax direct to the Government at all; but only that the Lone Star Gas Corporation has rendered to the Government consolidated tax returns for the years here under review, for all of its underlying affiliated companies; that no payments have actually been made to the Government upon such returns for any year here under review, with the exception of one or two; that the total amounts actually paid, or actually and justly due, by the *Corporation* for the years in question upon such consolidated returns are not shown by this record at all; that the amount of such actual tax is still in dispute as between the Government and the Corporation for most of the years in question; and that nothing is shown in this record with respect to the methods or soundness of the allocations upon which the Corporation purported to charge to the Company allocated parts of the tax as computed or paid; the Company only making "dummy" or memorandum returns, not to the Government but to the Corporation, upon the erroneously assumed basis that the Company was making a separate return of its own to the Government; and the erroneous, excessive and fictitious

amounts thus computed and allocated to the Company by the Corporation are what the Company has charged into its tabulations here submitted as well as its previous tabulations.

We ask the Court again to remember that,

1. The 32c rate has never been put into actual operation so that we may know what it would have yielded during any period;

2. The theoretical application by the evidence here, of the 32c rate to the Company's actual operations, covers only a period of six or seven months subsequent to the effective date of the order—namely, from September 13, 1933, to April 30, 1934;

3. All of such theoretical applications of the 32c rate subsequent to December 31, 1930, cover only subnormal depression years, and include 1933, the worst financial year of the Company's history, doubly subnormal because of economic depression and abnormally high temperatures.

When all the things are kept in mind, which we have urged in our three briefs here, there can be no doubt whatever that the Company has, as the Court of Civil Appeals held, failed as a matter of law to submit the requisite quantum or quality of clear and convincing evidence to prove confiscation; and, further,

that the rate when properly tested does not result in confiscation.

Respectfully submitted,

WILLIAM MCCRAW,
Attorney General of Texas

IN THE

SUPREME COURT OF THE UNITED STATES

OCTOBER TERM, A. D. 1937

NO. 313

LONE STAR GAS COMPANY,
Appellant

Versus

THE STATE OF TEXAS, ET AL,
Appellees

APPEAL FROM THE COURT OF CIVIL APPEALS FOR THE THIRD SUPREME JUDICIAL DISTRICT OF TEXAS, AT AUSTIN

APPELLEES' PETITION FOR REHEARING, AND ALTERNATIVE MOTIONS FOR AMENDMENT, SUPPLEMENT, AND CLARIFICATION OF OPINION AND JUDGMENT

TO SAID HONORABLE COURT:

Appellees respectfully petition this Honorable Court to set aside its opinion and judgment entered herein on May 16, 1938; and pray that Appellees be granted a rehearing herein, and that the judgment of the Court of Civil Appeals be affirmed; and, in the alternative, pray that this Honorable Court amend, supplement, and clarify its opinion and judgment in the respects hereinafter indicated.

Counsel for Appellees certify that this petition, and the motions and arguments herein contained, are presented in good faith and not for delay.

For grounds Appellees present the following points:

I. This Honorable Court erred in reversing, and in not affirming, the judgment of the Court of Civil Appeals.

II. This Honorable Court erred in holding that the Court of Civil Appeals based its judgment solely upon the view that Appellant failed to make a necessary and "proper segregation of interstate and intrastate properties and business." In actuality the Court of Civil Appeals did not base its judgment solely upon that view, but actually and expressly based its judgment upon a thorough, mature, and deliberate consideration of all evidence in the record, including that bearing upon the overall and unsegregated properties and operations; and the Court of Civil Appeals only adverted to the absence of such a proper segregation as an alternative and cumulative ground for its judgment, in view of the Company's insistence (overruled by the state appellate courts, and now by this Court) that the order was void *in toto* for impinging in part upon the federal commerce clause. Quotations and summaries from the opinion of the Court of Civil Appeals, supporting this point, will be found in the argument hereinbelow.

III. This Honorable Court erred in remanding the cause to the Court of Civil Appeals "for further proceedings not inconsistent with" the opinion of this Court.

IV. This Honorable Court erred in not specifying with greater particularity what "further proceedings" the Court of Civil Appeals is authorized to take in this cause "not inconsistent with" this Court's opinion, and what restrictions, if any, are put upon the "further proceedings" of the Court of Civil Appeals. Appellees, therefore, respectfully pray that, if the cause is to be reversed and remanded (which they do not think it should be) this Court clarify its opinion so as to indicate which of the two inconsistent constructions, set out below, is correct.

(1) Appellees represent that, while they do not conceive that this Honorable Court's opinion is fairly open to the construction hereinafter next mentioned, yet Appellant and its counsel have, immediately following announcement of this Court's decision, publicly, unqualifiedly, and emphatically contended, in the press and elsewhere, that this Court's opinion and judgment can mean only that the Court of Civil Appeals must, and cannot consistently with this Court's opinion and judgment do otherwise than to, render final judgment affirming the judgment of the District Court.

Appellees further have been reliably informed that at least two of the three Justices of the Court of Civil Appeals have expressed the view that this Court's opinion is probably open to the above construction, or at least that it is ambiguous and subject to grave doubt upon that point.

(2) It is Appellees' construction of this Court's opinion and judgment, that, on the contrary, the

Court of Civil Appeals is not by this Court's opinion and judgment required to affirm the judgment of the District Court.

For our views as to some of the courses we think the Court of Civil Appeals is and should be authorized to pursue, consistently with this Court's opinion and judgment, see our argument hereinafter.

It is Appellees' view, further, that this Court's opinion and judgment do not, and certainly should not, require the Court of Civil Appeals to affirm the judgment of the District Court, for the various reasons set forth in subsequent argument, and for the further reason that these Appellees, as Appellants in the Court of Civil Appeals, assigned numerous errors of state law committed in the course of the District Court trial, which errors under the state law would in any event preclude the proper rendition of final judgment based upon the jury's verdict below, and which assignments the state appellate courts did not pass upon because deemed unnecessary to the disposition of the case which they actually made, and thought proper, but which assignments these Appellees are entitled to have passed upon, and will have passed upon, by the state appellate courts if the opinion and judgment of this Court do not preclude such further review and action below by peremptorily requiring affirmance of the District Court's judgment as contended for by Appellant. If any of these Appellees' assignments of error under the state law be sustained by the state appellate courts, then Appellees would at least be entitled to a reversal and remand to the District Court for retrial upon the merits, rather

than having final judgment rendered against these Appellees upon a record shot through with numerous reversible errors of state law, prejudicial to these Appellees only, which assignments have not been considered or passed upon by the state appellate courts.

V. This Honorable Court erred in stating, at page 5 of its opinion, and in citing *United Gas Public Service Co. vs. Texas* (decided February 14, 1938) and *Post vs. State*, 106 Texas 500, 501, as supporting the statement, that "Under the state practice the issues of fact were determined in the trial court and on the appeal the Court of Civil Appeals had no authority to make findings of fact." The *Post case* lays down the true general rule; but, as will be explained in argument hereinafter, the Court of Civil Appeals has not in this case violated the rule of the *Post case*, nor made any fact findings, but has only passed upon the *law question* of whether the evidence as a whole was "clear and satisfactory" so as to overturn the presumed validity of the Commission's findings and order, and raise any issues of fact. Appellees, therefore, pray that the paragraph on page 5 containing such statement and citations be stricken from the Court's opinion, as being unnecessary to the decision, and as being probably misleading in the future, prejudicially to these Appellees, to the state courts as to this Court's attitude upon this question of exclusively state law.

VI. This Honorable Court erred in stating in its opinion, at page 12, sixth and fifth lines from the bottom, that the case was submitted to the jury "under a proper instruction as to the burden of proof resting upon appellant"; and, on page 14, eighth and

ninth lines from the top, that Appellant's evidence "had been properly submitted to the jury." Appellees respectfully request this Court to strike such language from its opinion for the reason that, as will be demonstrated in subsequent argument, the language is founded upon an apparent misunderstanding of the well-established and settled state practice under the state constitution, statutes, and decisions, as to the judicial method of approach in determining the legal sufficiency of the evidence to overturn the *prima facie* validity of the findings and orders of the Commission. That method of approach is, as we have tried to make plain, and as we will endeavor to make even plainer, to review the evidence first upon the preliminary question of law as to whether the evidence is "clear and satisfactory" or "clear and convincing" so as to raise issues of fact as to whether the rate is "unreasonable and unjust" within the meaning of Article 6059, or "confiscatory" in violation of the federal Fourteenth Amendment and the equivalent provisions of the state constitution.

This preliminary question of law is one addressed to the *judicial mind;* and, until it is resolved by the judges favorably to the complainant, there is no question of fact addressed to the jury as triers of the facts. If on this preliminary legal test it be determined that the evidence is sufficiently "clear and satisfactory" or "clear and convincing" to raise issues of fact as to unjustness and unreasonableness, or confiscation, (which was *not* the situation in this case) the questions of fact thus raised would properly be submitted to the jury upon a mere preponderance of the evidence.

If the trial judge, as here, erroneously concludes, on this preliminary question of law, that the evidence is "clear and satisfactory," then his judgment in that respect is subject to revision on appeal—where, again, the question is resolved as one of law rather than of fact; though the appellate courts may, as this Court has in *United Gas Pub. Serv. Co. vs. State of Texas* said it does, analyze the facts only for the purpose of enabling them to decide the law question.

Appellees, therefore, respectfully request this Court to strike the above-quoted language from its opinion, as well as that referred to in Point V, supra, because such language, if allowed to stand, will in all probability erroneously and needlessly raise doubts in the minds of the Texas Bench and Bar as to whether this Honorable Court intends to hold that the settled state law and practice on these points is objectionable upon federal constitutional grounds, whereas we do not believe this Court intends to pronounce any federal interdiction upon the propriety of those well-established points of state law.

VII. This Honorable Court erred in giving any effect whatever to the jury's verdict, contrary to the state law, and in holding that such verdict "could not properly be set aside by the application of an untenable standard of proof and in disregard of the evidence which had been appropriately addressed to the Commission's findings and had been properly submitted to the jury."

In Appellees' view, the questions of whether the evidence was sufficient and proper to go to the jury

at all, and of the sufficiency thereof to support the jury verdict, and as to what effect, if any, should have been given the jury verdict, and the standards upon which the jury verdict could be set aside, and of the interpretation of the jury's verdict, are all questions of exclusively state law, upon which this Court, under its previous decisions, should follow the decisions of the highest state courts in this case.

As this Court correctly held in *United Gas Pub. Serv. Co. vs. State of Texas*, February 14, 1938, "The final judgment of the state court in the instant case must be taken as determining that the procedure actually adopted satisfied all state requirements." If the procedure followed by the state courts in this case does not meet the requirements of any federal constitutional provision, this Court should, as it has not done, point out wherein such procedure does infringe upon some specific federal constitutional right of Appellant. And, if the Court of Civil Appeals erroneously reviewed the evidence solely from the standpoint of segregation (as we believe it did not), then it seems to Appellees that the proper course would be for this Court, without remanding to the state courts, to rectify such error in its own review of the evidence, upon the proper overall basis, and determine in the usual way whether the evidence does or does not show confiscation with the degree of clarity required in this Court's previous decisions.

VIII. At page 4 of the opinion, line 9, the Court uses the word "interstate" property, whereas we think it intended the word "intrastate."

BRIEF AND ARGUMENT

There cannot be the slightest doubt that this Honorable Court has, in division "First" of its opinion, correctly upheld the contentions of the State and Commission that the Company's rights under the Federal Commerce Clause have not been infringed upon by the Commission's order. To have held otherwise would have thrown insurmountable obstacles in the path of the State's undoubted powers of appropriate local gas rate regulation, and we are gratified that this Court has thus upheld the arm of the state regulatory body in this respect.

We are also gratified that this Court has, in our opinion, correctly held that the Company received a full hearing, and was accorded all requisites of due process, before the Commission.

This Honorable Court, on page 13 of its opinion, adverts, however, to the "insistence" of the State, and, on page 14, to the State's "pressure" in the District Court, upon the point that there should be a proper segregation between that which was within and without the state's regulatory power and between Oklahoma and Texas properties and operations. This language upon this point creates in our minds the belief that this Honorable Court is erroneously under the impression that the State unjustifiably shifted its fundamental position in the courts from that taken before the Commission.

Such an impression is unjustified, and we do not believe that the State and Commission should be either criticized, or visited with the unjust penalty of

a reversal, for taking a position before the courts, which *the Company itself* had driven them to, and made necessary, by its unjustifiable course of raising no contention as to interstate commerce before the Commission, but injecting it for the first time into the judicial proceedings, first in the federal district court (R. III, 2187), and then in the state district court (R. I, 123, et seq).

The question of segregation would not have been in this case at all had it not been for the Company's injecting the interstate commerce issue into the case for the first time before the federal and state trial courts.

From the first time this claimed defense was interposed by the Company in the federal and state trial courts, this issue has, by the State and Commission, and by all reviewing courts, been considered the paramount question in the case.

This fact explains why the Court of Civil Appeals placed so much emphasis upon the matter of segregation. That Court first determined (correctly, as now adjudged by this Court) that there was no interstate commerce involved, and that the Company's rights under the Federal Commerce Clause, therefore, were not infringed upon by the Commission's order; but the Court of Civil Appeals then took the *alternative position*, that if it were in error in that view—a matter upon which this Court had the ultimate jurisdiction to pass—the Company, nevertheless, had failed to prove its case with the requisite quantum and character of proof, because of its indisputable failure to submit any tenable basis of segregation.

This Honorable Court has determined that the Court of Civil Appeals based its judgment *solely* upon the absence of such a segregation, and that the Court of Civil Appeals failed to give *any* consideration to the Company's overall, or unsegregated, evidence in determining the legal insufficiency thereof.

We respectfully insist that this Court was in error in so determining. We know as a fact that the Court of Civil Appeals did give full, deliberate, and careful consideration, and due weight, to all evidence in the record—including the Company's overall and unsegregated evidence as well as the evidence of both parties upon attempted segregations; and this fact is plainly reflected by language appearing in the opinion of the Court of Civil Appeals, which this Court has apparently overlooked, or to which at least this Court has not given sufficient weight.

The reversal also overlooks the well-established general principle of appeal and error, that not only need the lower court not state in its opinion all of the grounds for its judgment, but that such judgment, if correct, will be upheld notwithstanding the reasoning on which it was based may be *totally erroneous*. We conceive that the *judgment* of the Court of Civil Appeals, if not its opinion, was entirely correct—and that this Court, instead of now reversing and remanding, should follow its usual course of reviewing and analyzing the evidence upon the correct basis, and of determining whether as a matter of law it does or does not show confiscation with the requisite degree of clarity.

In the opening statement by the Court of Civil Appeals (R. V, 3333-3336), that Court summarized plainly from an overall basis. At R. V, 3335, the Court speaks plainly from an overall standpoint in saying: "Appellee (Company) did not meet this burden and quantum of proof and the trial court erred in overruling the Commission's motion for an instructed verdict and for judgment declaring the rate to be valid."

And, again, in concluding the opinion (R. V, 3369), the Court plainly speaks from the standpoint of overall proof when it says: "The calculations, estimates, and opinions of its (Company's) experts show a studied effort on the part of appellee (Company) to charge large items as operating expenses and depreciation at war with the actual experience of the Company and *we find no proof* which would authorize the trial court to submit any issue to the jury, but find that appellee wholly failed to meet the burden of proof placed upon it, and to show by clear and satisfactory evidence that the rate was confiscatory, unjust and unreasonable as to it."

Furthermore, the Court in reaching the above-quoted and oft-stated conclusion, unquestionably reviewed, and gave full effect to, the Company's overall evidence, as plainly reflected in each of the following portions of its opinion:

In its analysis and discussion of the "Interstate Commerce Issue" (R. V, 3336-3352).

And in analyzing and discussing the case from the standpoint of "Confiscation of Property" and "Legal

Sufficiency of Evidence to Show the Rate Confiscatory or Unreasonable and Unjust," the Court plainly speaks exclusively from the viewpoint of the overall evidence, unmixed with any question of segregation, in analyzing the overall evidence upon the following matters:

The Company's overall appraisals of transmission construction costs, and the arbitrary addition of 20% to actual costs for contingencies (R. V, 3362-3363); the Court expressly pointing out that, "Where they relate to the same property, (i. e., overall) the appraisals are in every way comparable."

The evidence was likewise obviously reviewed from the overall standpoint exclusively, in analyzing and condemning the Company's "Depreciation Allowances" (R. V, 3363-3364), "Federal Taxes" (R. V, 3364), "Management Fees" (R. V, 3365), "New Business Expenses" (R. V, 3365-3366), "Cancelled and Surrendered Leases" (R. V, 3366), "Regulatory Commission and General Expenses" (R. V, 3366-3367), "Going Value" (R. V, 3367-3368), and "Rate of Return" (R. V, 3368-3369).

If, as we believe, it is plain that, notwithstanding the emphasis placed by the Court of Civil Appeals upon the issue of segregation, by reason of its view that the interstate commerce question, determined by it adversely to the Company, was the paramount issue in the case, which issue of segregation was inseparably connected with the interstate commerce issue, the Court of Civil Appeals has nevertheless actually reviewed all evidence in the record—that bearing upon

an overall basis as well as upon segregation—then we do not believe there is any necessity for a reversal and any further proceedings by the state courts, in view of the determination by the state appellate courts that the evidence as a whole, segregated and unsegregated, was legally insufficient to raise any fact issues as to confiscation.

But if we be in error, as to our view that the state appellate courts made their determinations upon an overall basis as well as the alternative segregation bases, then, since this Court has now finally determined that there was no need of segregation, certainly the state appellate courts should be given an opportunity to review the record again, approaching the question of legal sufficiency of the evidence exclusively upon the basis on which the Commission made its findings and order.

In no event, in the present state of the case, should this Court enter any judgment and opinion *limiting* the state appellate courts to the rendition of a judgment affirming the judgment of the trial court. We do not believe this Court has done so, or intended to do so. That would not only cut off the state appellate courts from making their determinations exclusively upon an overall basis (as now held proper by this Court) as to the legal sufficiency of the Company's evidence to raise fact issues, but would also preclude them from considering and passing upon the numerous assignments, presented before those courts by the State and Commission, as to errors of procedure and of substance under the state law committed in the District Court—which assignments of error the state ap-

pellate courts have not yet considered nor passed upon because found *at that time* not necessary in view of the disposition made of the case in those courts.

Furthermore, for this Court now to enter an opinion and judgment ending the case and requiring the state appellate courts to affirm the judgment of the District Court would upset all of our state statutes, and highest state court decisions, as to procedure, rules of evidence and burden of proof in judicial proceedings wherein attacks are made upon orders and findings of the Commission.

This Court has always held that upon questions covered by state constitutional and statutory provisions this Court will enforce the state law as interpreted by the highest state courts. *Midland Realty Co. vs. Kansas City P. & L. Co.*, 300 U. S. 109, 112-113, 81 L. Ed. 540, 543-544. And in the very recent and important case of *Erie R. Co. vs. Thompkins*, decided April 25, 1938, 82 L. Ed. Adv. Sheets, p. 787, this Court has extended this principle also to questions of general law.

We do not believe it is the intention of this Court, in the present case, to depart from this principle and to make such a far-reaching invasion into the undoubtedly exclusive province of state law, which would necessarily result if the Company's interpretation of this Court's opinion be adopted, as limiting the state appellate courts in this case to the rendition of a judgment affirming the judgment of the District Court and finally striking the rate down as being con-

fiscatory. If this Court had intended that result, we believe it would, as it has not done, have said so plainly. *Rogers vs. Hill,* 289 U. S. 582, 587, 77 L. ed. 1385, 1389.

Some of the principal additional reasons why we do not believe this Court intended to so limit the "further proceedings" which the Court of Civil Appeals is required to take, are as follows:

Under that interpretation, this Court's undoubtedly sound holding upon the interstate commerce question would be purely dictum; for the rate order would by this Court's opinion and judgment thus be finally stricken down, solely upon the ground that it is found confiscatory, and there would be no need to pass upon the interstate commerce questions.

And, furthermore, there is nothing in this Court's opinion even suggesting that this Court has reviewed and determined the legal sufficiency of, the evidence to show confiscation with the required degree of clarity established as requisite by this Court's previous decisions, nor the sufficiency of such evidence to support the jury's verdict and the District Court's judgment in this case—whereas, in confiscation cases this Court has always heretofore expressly reviewed the evidence in detail and determined its legal sufficiency or insufficiency to support a finding of confiscation. Thus the effect of such a holding would be to compel, as a supposed federal constitutional right of the Company, the substitution of the jury's verdict and trial court's judgment for the expert judgment and discretion of the Commission, which this Court has held was arrived

at in a regular manner and upon a proper basis; and, contrary to the state law as declared in the opinion of the highest state courts, to forbid *those* courts to determine the sufficiency of the evidence to support that verdict and judgment; and, contrary to this Court's previous decisions, to finally strike the rate down as being confiscatory, upon a jury's verdict, without this Court itself, or any other appellate court, determining upon proper analysis that the evidence was such as to *require* a finding of confiscation under the onerous rules heretofore laid down and applied, in cases of claimed confiscation, by this and all other courts.

If this Court's judgment and opinion be construed as requiring the Court of Civil Appeals to render final judgment affirming the judgment of the District Court, that would write *finis* to the case, not only without this Court's having reviewed and determined the sufficiency of the evidence on any basis to show confiscation with the requisite degree of clarity, but also without giving any of the state trial or appellate courts a fair opportunity to make that determination exclusively from the overall basis which this Court has now held necessary. Thus all the expensive expert labors of the Commission, which this Court has after five years of litigation now found to have been regular and upon the proper basis, would now be finally stricken down and held for naught upon a mere unsupported jury verdict. That would sound the death knell of all rate regulation in Texas.

And, finally, we find it impossible to believe that this Court has, contrary to its numerous and uniform

prior decisions, invaded the exclusive province of the state courts in determining and applying the state law, without at least pointing out in its opinion wherein such state law and procedure violate any federal constitutional rights of procedural due process of the Company.

For fear this Court may not fully understand the state law and procedure established by our state statutes, and the uniform decisions of our highest state courts, applicable in this case, we now give in brief outline what our state decisions establish on those points:

The Commission is composed of impartial, skilled, and experienced rate experts, having at their command the necessary services of legal experts, accountants, engineers, and other technicians, and are, therefore, equipped in a special way to deal intelligently and justly with the intricate and difficult technical problems of rate-making.

If it were not so, and a trial court or jury were better equipped to fix just and reasonable rates than the Commission, we would do much better to eliminate the Commission entirely, and save the delay and expense of proceedings before it, by allowing the courts to fix the rates in the first instance. But we do not think there is anything in the Federal Constitution which should be so interpreted as to drive us to the necessity of doing that.

In order to prevent the results of the Commission's expert labors from being set aside and supplanted too

easily by the judgment and discretion of courts or juries less adequately equipped for exercising discretion in such matters, it is necessary that some degree of verity be accorded the Commission's work over and above that which would attach to it if their findings and orders could be overturned upon a mere "preponderance of the evidence" and the judgment and discretion of the trial court substituted therefor. *State vs. Southwestern Bell Tel. Co.*, 233 S. W. 425, *N. Y. & Queens Gas Co. vs. McCall*, 245 U. S. 345, 347-348; 62 L. ed. 337, 340-341.

To provide such a safeguard for the expert labors of the Commission, the State Legislature has provided (Article 6059) that the orders of the Commission may be set aside as unjust, unreasonable, or confiscatory only by the complainant's presenting "clear and satisfactory evidence" requiring such action.

The question of whether the evidence submitted is "clear and satisfactory" is one of law addressed to the *judicial minds* of the reviewing judges, and not to their minds as a question of fact.

At the threshhold of a suit to set aside an order of the Commission, therefore, the reviewing trial judges (and, subsequently, the appellate judges) are faced *in limine* with the necessity of deciding the *preliminary law question* as to whether the complainant's evidence as a whole measures up to that quantum and character of proof which may properly be characterized as "clear and satisfactory," within the meaning of the statute. If the evidence meets that preliminary legal standard, then fact questions are raised, and are properly to be

submitted to the jury, *upon a mere preponderance of the evidence.* *R. R. Com. of Tex. vs. Shupee*, 57 S. W. (2) 295, 301, Aff. 123 Tex. 521, 528, 73 S. W. (2) 505, 508; *R. R. Com. of Tex. vs. Galveston Chamber of Commerce*, 105 Tex. 101, 115, 145 S. W. 573, 580; *Humble O. & R. Co. vs. R. R. Com. of Texas*, 94 S. W. (2d) 1197, 1199, writ refused; *City of Austin vs. Austin Cemetery Ass'n.*, 87 Tex. 330, 338, 28 S. W. 528, 531; *Smith County O. & G. Co. vs. Humble O. & R. Co.*, 112 S. W. (2) 220; *State of Texas vs. Lone Star Gas Co.*, 86 S. W. (2) 484, Writ ref.; *United Gas Pub. Serv. Co. vs. State of Texas*, 89 S. W. (2) 1094, Writ ref.

Thus it is by no means made impossible, or unduly difficult, for the complaining party to establish his case by submitting evidence which is based upon satisfactory factual data, and which thus meets the requirements of intelligent judicial appraisal. Having once successfully passed this preliminary judicial scrutiny, the evidence is then properly to be submitted to the jury in the usual way.

We do not contend that jury fact questions cannot be raised in any rate case, nor that they *could* not have been raised in this case—by the submission of evidence clear and satisfactory in character. Our only contention is that the evidence in this case was not of that clear and satisfactory nature which, only, the statute provides shall be submitted to a jury for determination of the fact questions.

There is nothing in this procedural and evidentiary rule as to burden of proof inconsistent with due process under the Fourteenth Amendment.

If the evidence does not appear to the reviewing judges to be "clear and satisfactory," as a matter of law, then there are no fact issues raised to be determined, and the presumptively valid order of the Commission successfully withstands the attack as a matter of law. This is the situation presented by this record.

In this instance, the Court of Civil Appeals has correctly determined, as a matter of law, that the evidence as a whole was legally insufficient to raise any fact issues to go to the jury, and the Court of Civil Appeals, has, therefore, made no fact findings whatever, nor given any effect to the jury's verdict—because of the absence of legally competent evidence to support it. The state courts' determinations upon these questions of state law should be scrupulously respected by this Honorable Court, as they have always been.

It is upon these grounds that we request this court to strike from its opinion, as being inapplicable, the paragraph on page 5 citing and quoting from the case of *Post vs. State,* and *United Gas Pub. Serv. Co. vs. State of Texas.*

Furthermore, since the question of whether the evidence is "clear and satisfactory" is one of law for the judge, and would have been already passed upon by the judge before the evidence could be properly submitted to the jury, it would be improper, even in a case which could properly go to a jury, to instruct the jury, as was done in this case, that the burden is upon the complainant to prove his case by "clear and satis-

factory evidence," and it was, therefore, improper and erroneous for this Court upon this question of state law to say, at page 12 of the opinion, that the case was submitted to the jury "under a proper instruction as to the burden of proof resting upon appellant."

And, because the Court of Civil Appeals properly found that the evidence was as a matter of law insufficient to raise any fact issues, we believe it also improper upon this question of state law for this Court to state, at page 14 of its opinion that the Company's overall evidence "had been properly submitted to the jury."

This Honorable Court has not said, or even intimated, in its opinion that the above procedural rules, which are but mere adjective rules of evidence, or burden of proof, in any way impinge upon Appellant's federal constitutional rights; and it is clear, under this Court's decisions, that they do not so offend. *Luria vs. United States,* 231 U. S. 9, 58 L. Ed. 101. Yet Appellant is insisting and will insist, erroneously, that this is the necessary effect of this Court's decision.

Neither does the Fourteenth Amendment guarantee to Appellant the right of a trial by jury—the State may consistently with the Federal Constitution withhold a jury trial entirely, or grant one upon such terms and conditions as it may see fit. *United Gas Pub. Serv. Co. vs. State of Texas,* decided by this Court February 14, 1938; *Walker vs. Sauvinet,* 92 U. S. 90, 23 L. Ed. 678; *Maxwell vs. Dow,* 176 U. S. 581, 587, 44 L. Ed. 597, 599; *Frank vs. Mangum,* 237 U. S. 309, 59 L. Ed. 969.

Neither is there anything in the Federal Constitution which requires the State to maintain a distinction between the functions of the jury and those of the court. *C. R. I. & P. R. Co. vs. Cole,* 251 U. S. 54, 64 L. Ed. 133; *Palko vs. Connecticut,* No. 135, decided by this Court December 6, 1937.

As correctly said by this Court in *United Gas Pub. Serv. Co. vs. State of Texas,* supra, "The final judgment of the state court in the instant case must be taken as determining that the procedure actually adopted satisfied all state requirements."

If this Court had intended to hold that such state procedure violates any of Appellant's federal constitutional rights, undoubtedly it should and would, as it has not done, have said so plainly in its opinion in this case.

If the cause is to be remanded at all (which we do not think it should be), then what we think this Court intended to be done, and what certainly should be done and made plain, is to leave the Court of Civil Appeals free to review the entire evidence anew, upon an overall basis, in accordance with and in the light of this Court's present judgment and opinion, eliminating the interstate commerce and segregation questions; applying to such evidence the tests and standards provided by our state court procedure and decisions, and to arrive at its own independent determination as to whether the overall evidence was sufficient to raise any fact issues to go to the jury upon the question of confiscation, or was sufficient to support the jury's verdict; and, either to render final judgment, or to remand the

cause to the District Court for retrial upon the merits, as may be determined to be proper under our state laws and decisions.

In conclusion we respectfully request that if at all possible the Court act upon this petition for rehearing before the adjournment of its present term on May 31, 1938. This is especially desirable to the end that the Court of Civil Appeals may make the appropriate disposition of the case before its adjournment for the term about the middle of July of the present year.

Respectfully submitted,

WILLIAM McCRAW,
Attorney General of Texas

ALFRED M. SCOTT,
Assistant Attorney General
of Texas

Laredo, Texas

Attorneys for Appellees.

p. 4,

SUPREME COURT OF THE UNITED STATES.

No. 313.—October Term, 1937.

Lone Star Gas Company, Appellant, *vs.* State of Texas, The Railroad Commission of Texas, et al.	Appeal from the Court of Civil Appeals for the Third Supreme Judicial District of the State of Texas.

[May 16, 1938.]

Mr. Chief Justice Hughes delivered the opinion of the Court.

The Railroad Commission of Texas brought this action, under Article 6059 of the Revised Civil Statutes of Texas, to enforce the Commission's order of September 13, 1933, prescribing the rate for domestic gas supplied by appellant, Lone Star Gas Company, to distributing companies in Texas. The rate was fixed at not to exceed 32 cents per thousand cubic feet instead of the existing charge of 40 cents. The District Court of Travis County, upon the verdict of a jury finding the prescribed rate to be unreasonable, denied relief and enjoined the Commission and the state officials from enforcing the Commission's order. The Court of Civil Appeals reversed the judgment and held the order to be valid. 86 S. W. (2d) 484. Rehearing was denied. 86 S. W. (2d) 506. The Supreme Court of the State refused writ of error and the case comes here on appeal.

Appellant, a Texas Corporation, operates about 4,000 miles of pipe lines located in Texas and Oklahoma through which it transports natural gas to the "city gates" of about 300 cities and towns in those States and sells and delivers the gas in wholesale quantities to distributing companies. The latter companies, with two exceptions, are affiliated with appellant, being subsidiaries of the same parent corporation. One of appellant's pipe lines extends from a gas field in Wheeler County, Texas, a part of the Texas Panhandle field, crosses the southwestern corner of Oklahoma, is tapped for gas delivered at Hollis, Oklahoma, and returning into Texas runs generally in a southeasterly direction to various Texas points. At Oklaunion, Texas, the line is tapped by a branch line

which extends northward into Oklahoma and supplies certain cities in that State. At Petrolia, Texas, the line is joined by lines coming from Oklahoma.

The Commission dealt solely with the rate for the gas delivered in Texas. This consisted (1) of gas produced or purchased in Texas and transported and delivered entirely within that State, being upwards of 70 per cent. of the total; (2) that produced or purchased in Oklahoma and transported through appellant's lines into Texas which, on appellant's calculation, amounted at the average of the five-year period 1929-1933 to about 11 per cent. of the total; and (3) that produced or purchased in the Panhandle field in Wheeler County, Texas, amounting on the same computation to about 17 per cent. of the total.

The Commission gave a full hearing in which appellant participated. The Commission treated appellant's properties as an integrated system, and in that way "considered the Oklahoma properties and operations and the effect thereof on the revenues and expenditures within Texas", fixing the rate "for application within the jurisdiction of Texas". Appellant made no objection to that course. The Commission determined the rate base as of December 31, 1931, at $46,246,617.53, being $4,674,285.91 for production properties and $41,572,331.62 for transmission properties. The Commission considered appellant's revenues and expenses for a six-year period, 1927 to 1932, and made the rate on the basis of six per cent. as a minimum fair rate of return.

Appellant brought suit in the federal court, attacking the rate on constitutional grounds, but that court stayed its proceedings when the present action was brought by the Commission. In this action appellant first submitted pleas to the jurisdiction of the state court, and pleas in abatement, which were overruled. In its answer appellant attacked the rate order upon the grounds (1) that transportation and sales to local distributing companies through high pressure lines "of gas produced in Wheeler County, Texas, and transported into and through Oklahoma and back into Texas without interruption" constituted interstate commerce, and that the order violated the commerce clause of the Federal Constitution; and that the same was true of the gas produced or purchased by appellant in Oklahoma and transported in high pressure lines to Texas for sale and delivery there; and (2) that the pre-

scribed rate was confiscatory and repugnant to the due process clause of the Fourteenth Amendment.

The trial on the merits, before a jury, was begun on June 11, 1934, and was entirely *de novo*. The State introduced in evidence the Commission's order (to which appellant unsuccessfully objected as being void in its entirety because applicable to its interstate business), the stay order granted by the federal court, and a stipulation that the prescribed rate had not been put into effect. The record of evidence before the Commission was offered but was not received. On this formal proof the State rested. Appellant moved for a directed verdict which was denied and appellant then went forward with its evidence. The report and findings of the Commission upon which the order was based were introduced. In rebuttal of the Commission's findings, appellant submitted an appraisal of its properties as an integrated operating system as of January 1, 1933. That appraisal was voluminous, showing $73,983,405.57 as the cost of reproduction new. Evidence was offered as to the amount to be deducted for accrued depreciation and on that basis the fair value was claimed to be $69,738,021.16. The appraisal was later brought down to May 1, 1934, showing an increase in material and construction costs between January 1, 1933, and May 1, 1934, of $1,579,381.72. The book costs of the properties were also introduced, ranging from $47,776.749.63, on December 31, 1931, to $49,858,751.23 as of April 30, 1934. Appellant claimed that the books understated the actual costs. There was evidence with respect to the annual accruals to provide for depreciation, depletion and amortization. The operating expenses and revenues were shown for the years 1931, 1932 and 1933, and for the twelve months ending April 30, 1934. In this evidence there was no segregation of appellant's properties or operations as between Texas and Oklahoma or between intrastate and interstate business, appellant insisting that it was entitled to attack the Commission's order upon the same inclusive basis which the Commission had used.

The State insisted that if appellant wished to maintain as a defense that the order was invalid because it sought to regulate operations which were exempt from state control, appellant should make a segregation, first as between its admittedly intrastate operations and those claimed to be interstate, and second, as between

Texas and Oklahoma properties and operations. After the voluminous evidence above mentioned had been taken, appellant, still contending that such an issue was not properly raised as the action under the Texas statute was in the nature of an appeal from the Commission's order which was indivisible, presented evidence based upon "a segregation of its 'integrated operating system' as between interstate and intrastate commerce". Appellant states that this segregation was based "upon the actual use of its properties in the two classes of commerce". The fair value of its ~~interstate~~ intrastate property was thus claimed to be $38,350,882.32 and the net amount available at the Commission's rate for return on intrastate deliveries of gas as less than four per cent. In this segregation appellant's line used in transporting gas from Wheeler County, Texas, in the Panhandle field, through Oklahoma and thence into Texas, was allocated to interstate operations.

In rebuttal, the State offered evidence based upon a different method of segregating appellant's properties and operations. This method proceeded upon the basis of geographical location, that is, there were allocated to Oklahoma and Texas respectively the properties physically located in each State and the revenues and expenses were divided on the same geographical basis. In that way the properties allocated to Texas were valued at $40,256,862.39, and the net revenue which would be available at the Commission's rate was estimated to be, for the last two years of the accounting period, nearly seven per cent. Appellant complains of this appraisal upon the ground that it excluded the production properties located in Texas which appellant claimed had an actual cost of $5,191,539.42 as of March 31, 1934, and that the State substituted therefor an arbitrary and inadequate annual allowance on the basis of the field price for the volume of gas produced.

When the evidence was closed, each party moved that a verdict be directed in its favor and both motions were denied. The court gave to the jury a series of instructions embracing definitions of the terms of "fair return", "fair value", "used and useful"—as applying to the property actually used by appellant in the production, transportation, sale and delivery of natural gas to its customers and also to the property acquired in good faith and held by appellant for use in the reasonably near future in order to

enable it to furnish adequate and uninterrupted service—"operating expenses", "annual depreciation", "reproduction cost new", and "going value". The jury were instructed that the burden of proof was upon the defendant (appellant) "to show by clear and satisfactory evidence" that the rate fixed by the Commission's order was "unreasonable and unjust as to it", and the court explained that by that phrase was meant that the rate prescribed in the Commission's order "was so low as to have not provided for a fair return upon the fair value of defendant's property used and useful in supplying the service furnished by said defendant." With these instructions the court submitted to the jury a single special issue as follows:

"Do you find from the evidence in this case that, as applied to points in Texas, the order of the Railroad Commission of Texas, bearing date of September 13, 1933, providing for a rate of not exceeding 32 cents per thousand cubic feet of gas sold to the distributing companies at the gates of points served, is unreasonable and unjust as to the defendant, Lone Star Gas Company? Answer this question 'yes' or 'no' ".

The jury answered the question "yes". Judgment was entered accordingly enjoining the enforcement of the Commission's rate.

In view of the definition of "fair return" and "unreasonable and unjust" in the court's instructions, we are of the opinion that the issue for the jury to determine was in substance whether the rate was confiscatory. We so regarded a like submission in the case of *United Gas Public Service Company* v. *Texas*, decided February 14, 1938. There the jury's verdict sustained the rate but that fact does not alter the nature of the issue submitted.

Under the state practice the issues of fact were determined in the trial court and on the appeal the Court of Civil Appeals had no authority to make findings of fact. "Where the evidence is without conflict, it may render judgment. But where there is any conflict in the evidence on a material issue, it has no authority to substitute its findings of fact for those of the trial court". *Post* v. *State*, 106 Tex. 500, 501; *United Gas Public Service Company* v. *Texas*, *supra*.

The Court of Civil Appeals held that the burden was heavily upon the Company (appellant here) to show by clear and satisfactory evidence that the 32-cent rate would not afford a reason-

able rate of return on the property used in the Texas public service, that the Company did not meet "this burden and quantum of proof", and that the trial court erred in overruling the State's motions for an instructed verdict. The court viewed the appeal as presenting two main divisions, (1) certain constitutional objections to the rate order, and (2) the legal sufficiency of the evidence to show that the order was confiscatory or unreasonable and unjust. Under the first division, the court considered that there were three constitutional objections, (a) interference with interstate commerce, (b) interference with the right to contract, and (c) confiscation of property. The court sustained the jurisdiction of the Commission to deal with the operations of appellant and its corporate affiliates in Texas as "a single and integrated business enterprise". On the first two issues abovementioned the court ruled in favor of the State, and on the confiscation issue the court considered that the question whether the prescribed rate would yield a fair return was one of fact and passed to the consideration of the legal sufficiency of the evidence.

Holding that the rate fixed by the Commission was presumed to be valid, and referring to the authorities as to the scope of judicial review, the court set forth the five primary factors essential to the correct determination of the issue, viz., the present fair value of the property of the Company used in the public service, the reasonable annual allowance for depreciation, the reasonably necessary operating expenses, the reasonable operating revenues, and the reasonable rate of return.

But in dealing with the evidence upon these questions, the court applied a different criterion from that adopted by the Commission. The court held that it was necessary to segregate the property used in Texas, as well as that used conjointly in Texas and Oklahoma. The court spoke definitely upon this point, saying—

"Since appellee [appellant here] was engaged in the integrated business of producing, purchasing, transporting and selling natural gas to the distributing companies at the city gates of some 300 cities and towns in Texas and Oklahoma, it became necessary to allocate or segregate the property used in Texas as well as that used conjointly in both states, in order to determine the fair value of the property used in the Texas public service, the annual depreciation thereof, and the Texas operating expenses and revenue".

The court then set forth the different methods of segregation which the parties had adopted. The court said that the State's

method allocated "to Texas operations, or to intrastate commerce the value of all property located within the physical boundary of Texas". The "short section" of pipe line "from Texas Pan handle field across the corner of Oklahoma and back into Texas was also allocated to Texas operations. "Gas sales adjustment" was made by which "Texas or intrastate operations" were charged with the net amount of Oklahoma produced gas for the six-year period 1929 to 1934. The court observed that "no charge against Oklahoma or interstate operations was made for the use of the transmission lines and for equipment within Texas; the effect of which was to give free transportation in Texas of all Oklahoma produced gas". Texas and Oklahoma expenses and revenues "were allocated in general accord with the segregation of the physical properties". The court stated that under that method the fair value "of the property undepreciated used in Texas public service was $40,256,862.39" according to the calculations of the State's experts; and that after deducting operating expenses and annual depreciation "there remained for the last two years of the accounting period, being the two lowest revenue years", Texas net revenue "which would yield a return of 6.74% and 6.76% respectively".

The court then referred to the method of segregation used by the Company by which all the gas produced or purchased in the Texas Panhandle field and transported into Texas, and all Oklahoma produced gas, were allocated to interstate commerce; that the allocation was made by a determination of the specific gravity of the Oklahoma and Texas Panhandle gas on the one hand and the West Texas gas with which it was commingled in pipe lines on the other; that the Company had allocated operating expenses and revenue between the two States upon substantially the same basis; and that in this manner the fair value of the property used in the Texas public service on the basis of reproduction cost new, less depreciation, was said to be $38,350,882.32. The court held that gas from the Texas Panhandle field did not move in interstate commerce and hence that the testimony of the Company's experts was based upon an erroneous assumption and "proved nothing material to this case"; that the Company had offered no other proof upon a correct segregation or allocation of the property, and that the trial court had erred in refusing the State's motion for an instructed

verdict and for a judgment declaring the rate order "to be valid in every respect".

The court's specific ruling upon this point is shown by the following statement of its conclusion:

"The burden was upon appellee to show by clear and satisfactory evidence a proper segregation of interstate and intrastate properties and business, and to show the value of the property employed in intrastate business or commerce and the compensation it would receive under the rate complained of upon such valuation. Having failed to make a proper segregation of interstate and intrastate properties, appellee did not adduce the quantum and character of proof necessary to establish the invalidity of the rate as being confiscatory, or unreasonable and unjust".

The court adverted to the effect of the difference in theory in the two methods of segregation "with respect to the fair value of the property used in Texas public service, the annual depreciation thereof, and particularly as to the operating expenses and revenues". The court characterized the annual depreciation allowances as speculative and plainly excessive. The court said that with respect to operating expenses, except as to a few controverted items, and with respect to revenues, there was no substantial difference in the testimony "as to totals of both Texas and Oklahoma for the years of the accounting period" but that the same controversy arose "as to a proper segregation of such expenses and revenues to each State"; and since, as already pointed out, the Company had "failed to make proper segregation of the expenses and revenues, it failed to prove its case".

The court then criticised certain items of operating expenses as contrary to the actual experiences of the Company or so large as to be excessive upon their face, referring in particular to the items of "federal taxes", management fees charged by the holding corporation, new business expenses, canceled and surrendered leases, regulatory commission and general expenses, and going value. The court also took the view that no reason existed why a six per cent. rate of return should be declared confiscatory.

That the judgment of reversal was rested upon the proposition that there was a failure of proof on the issue of confiscation by reason of the fact that the Company had failed to make a proper segregation of its interstate and intrastate properties and operations is fully confirmed by the further opinion of the court in

denying the Company's motion for a rehearing, when the court said:

"We held that as a matter of law appellee failed to establish by clear and satisfactory evidence the ultimate fact issue, to wit: Whether the rate fixed by the Commission was so low as not to afford a reasonable return on the fair value of the property used in the Texas public service. Appellee was afforded a seven months hearing before the Commission and a three months trial on appeal to the court. It made no segregation as between its Texas and Oklahoma properties and operations; and did not prove the fair value of the property used in the Texas public service. The question of the value of such property determines the reasonableness of the rate and probably, in the ultimate analysis, adequacy of service and principles of financing".

The Court added that the valuation of such public service property was in the main a matter of estimate or opinion; that a scientific standard of absolute value was unattainable; and that because of this uncertainty, except where the evidence clearly shows gross over or under valuation, or "mistake, inequality or fraud" in the appraisal, the finding of value by an administrative commission is generally given finality and that this especially was the rule in the absence of an actual test under the new rate.

First.—We agree with the state court that the Commission's order did not violate the constitutional rights of appellant under the commerce clause.

The Commission did not attempt to regulate the interstate transportation of gas. Compare *Hanley* v. *Kansas City Southern Rwy. Co.*, 187 U. S. 617; *Western Union Telegraph Co.* v. *Speight*, 254 U. S. 17; *Missouri Pacific R. R. Co.* v. *Stroud*, 267 U. S. 404. Nor, in view of the circumstances in the instant case, can it be said that the Commission was undertaking to regulate sales and deliveries of gas in interstate commerce. Compare *Missouri* v. *Kansas Natural Gas Co.*, 265 U. S. 298; *Peoples Natural Gas Co.* v. *Public Service Commission*, 270 U. S. 550; *East Ohio Gas Co.* v. *Tax Commission*, 283 U. S. 465; *State Tax Commission* v. *Interstate Natural Gas Co.*, 284 U. S. 41; *State Corporation Commission* v. *Wichita Gas Co.*, 290 U. S. 561. The distributing companies in Texas, with the exception of those at Waxahachie and Gainesville (the amount of deliveries there being negligible in comparison with appellant's total gas business), are appellant's affiliates. The Lone Star Gas Corporation, organized in Delaware, holds more than 99 per cent.

of the capital stock of appellant and owns or controls a like proportion of the capital stock of the distributing companies. Thus, the latter companies and appellant are but arms of the same organization doing an intrastate business in Texas and the Commission was entitled to ascertain and determine what was a reasonable charge for the gas supplied through this organization to consumers within the State. *Western Distributing Company* v. *Public Service Commission,* 285 U. S. 119, 124; *Dayton Power & Light Co.* v. *Public Utilities Commission,* 292 U. S. 290, 295; *American Telephone & Telegraph Co. v. United States,* 299 U. S. 232, 239. It appears that there were pending before the Commission proceedings involving the reasonableness of the rates charged by the distributing companies to consumers in many communities in Texas, and in relation to those proceedings the Commission found it necessary to determine what would be a reasonable charge for the gas delivered by appellant to the distributing companies at the "city gates". It was obviously to the convenience of both the Commission and appellant that this essential factor should be ascertained in a single proceeding and the Commission's investigation, which led to the order now in question, was undertaken to that end. We think that appellant's sales and deliveries of gas in Texas to the distributing companies must be regarded as an essential part of the intrastate business in the conduct of which the appellant and the distributing companies were virtual departments of the same enterprise.

Appellant's pipe line from the Texas Panhandle field in Wheeler County led from production properties in Texas to distributing points in the same State. The fact that the line cut across a corner of Oklahoma did not make it any the less a part of the system serving Texas gas to communities in Texas. In ascertaining what would be a reasonable rate of charge for this Texas gas supplied to Texas consumers, it was not only fair but manifestly necessary to take into account the value of the production properties in Texas from which the gas was taken and also the value of the transmission line by which the gas was brought to the city gates of the Texas communities. It is futile to contend that in making its calculations on that basis, the Commission was regulating interstate transportation or imposing any burden upon interstate commerce. The *Hanley, Speight* and *Stroud* cases, *supra,* upon which appellant relies, are not in point. In seeking

to assure a just determination of a reasonable charge for the sales and deliveries in the intrastate business in Texas, the State was protecting its local interests and its action was not in conflict with any federal regulation. *Minnesota Rate Cases,* 230 U. S. 352, 402.

We think that the value of the pipe line from the Texas Panhandle field was properly included by the Commission in the rate base.

With respect to the gas produced or purchased by appellant in Oklahoma and transported by its pipe lines to Texas, the state court observed that the Oklahoma gas was run through extraction plants in Texas, leaving the residue gas changed in its composition and with its heating value lowered; that large amounts of the Oklahoma gas were run through and stored in wells in Texas; that, passing into appellant's pipe line system, that gas was commingled with Texas gas and divided and redivided until it was impossible to trace or identify it by volume at any city gate of delivery; that at various points before delivery its pressure was reduced and the gas allowed to expand; and that the amount of Oklahoma gas as a whole was negligible in comparison with the amount of the Texas gas with which it was mixed. Appellant refers to the testimony of its witness that the composition of the gas, after certain heavy hydro-carbons were removed at the gasoline plants, remained practically the same, that its forward movement was not stopped, and that not all of the gas coming from Oklahoma was stored in Texas. Appellant also contends that the state court erred in saying that only about four per cent. of its total gas came from Oklahoma, insisting that the correct figure was about eleven per cent. The discrepancy is apparently explained by the fact that the state court's figure was taken from the results of the year 1933 while that of the appellant is for the five years of its accounting period. It would seem, however, that the amount of the gas transported from Oklahoma into Texas was at a diminishing rate. Aside from that, we think that the proved manner in which the gas from Oklahoma was treated and handled in Texas made it an integral part of the gas supplied to the Texas communities in appellant's intrastate business and that the Commission was entitled so to consider it in fixing its rate.

It is in this light that the inclusion by the Commission in its calculations of appellant's producing properties in Oklahoma and its transmission lines to Texas must be considered. The purpose

of these calculations was to give proper credit to appellant for its investment and operating expenses in determining a rate for the gas sold and delivered in Texas. The Commission did not attempt to fix a rate for gas supplied to Oklahoma communities and did not impinge upon the jurisdiction of Oklahoma. There is no ground for concluding that the Commission's method of calculation either created any burden upon interstate commerce or operated to appellant's injury in relation to its intrastate business in Texas. Not only is the contrary a fair inference from the fact that appellant raised no objection to this method before the Commission, but the State points to the evidence which appears to show that the Oklahoma operations were more expensive than those in Texas and that the Commission's calculations actually produced a result more favorable to appellant than one which would have followed any segregation. Appellant does not successfully meet this contention.

Second. Concluding that appellant had no tenable objection to the method adopted by the Commission in treating appellant's property as an integrated operating system, and making its findings as to value, expenses, and revenues accordingly, for the purpose of determining the fair rate for the gas sold and delivered in Texas, we come to the issue of confiscation.

The Commission's order was presumptively valid, as the state court held, but it was open to attack in this action under the state statute. Appellant was entitled to present evidence to rebut the Commission's findings of value, operating expenses, revenues and return, upon which the order rested. Appellant presented much testimony and elaborate statistical data for that purpose, treating its property and business as the Commission had treated them. Appellant claimed that this evidence showed a far higher value for its properties than the Commission had allowed and that the rate imposed was confiscatory. The trial court submitted that evidence to the jury, under a proper instruction as to the burden of proof resting upon appellant, and the jury found in appellant's favor.

The Court of Civil Appeals reversed the judgment upon a distinct ground. That was that appellant had not sustained its burden of proof because it had failed to make "a proper segregation of interstate and intrastate properties and business". Thus,

the necessity for that segregation was made the criterion. That is clearly shown both from the court's main opinion and its opinion upon rehearing from which we have quoted. "Having failed to make a proper segregation of interstate and intrastate properties", said the court, "appellee [appellant here] did not adduce the quantum and character of proof necessary to establish the invalidity of the rate as being confiscatory, or unreasonable and unjust".

We think that this ruling as to the necessity of segregation, and that the sufficiency of appellant's evidence should be determined by that criterion, was erroneous. This was not a case where the segregation of properties and business was essential in order to confine the exercise of state power to its own proper province. Compare *Smith* v. *Illinois Bell Telephone Company*, 282 U. S. 133, 148, 149. Here, as we have seen, the Commission in its method of dealing with the property and business of appellant as an integrated operating system did not transcend the limits of the state's jurisdiction or apply an improper criterion in its determinations. But if in the circumstances shown the Commission was entitled to make its findings with respect to appellant's property and business upon the basis it adopted in order to fix a fair rate for the sales and deliveries in Texas, appellant was entitled to assail those findings upon the same basis. If the findings of the Commission as to value and other basic elements were to be taken as presumptively correct and appellant could not succeed save by overcoming those determinations by clear and convincing proof, appellant could not be denied the right to introduce evidence as to its property and business as an integrated system and to have the sufficiency of its evidence ascertained by the criterion which the Commission had properly used in the same manner in reaching its conclusion as to the Texas rate. Neither the fact that appellant, because of the insistence of the State that the property and business should be segregated, finally introduced evidence for that purpose, nor the inadequacy of its method of segregation, could detract from the force of the proof it had already submitted in direct rebuttal of the Commission's findings. The effort at segregation came after voluminous testimony had been taken which fully presented appellant's case with respect to the value of its property and the result of its operations as an integrated system and the bearing of this evidence upon the contested rate. This proof could

not be ignored because of a futile attempt, in response to the State's pressure, to find an alternative ground to support the attack upon the Commission's order. The first and primary ground remained and the determination of the court of first instance as the trier of the facts that the Commission's rate was confiscatory could not properly be set aside by the application of an untenable standard of proof and in disregard of the evidence which had been appropriately addressed to the Commission's findings and had been properly submitted to the jury.

The judgment of the Court of Civil Appeals is reversed and the cause is remanded for further proceedings not inconsistent with this opinion.

It is so ordered.

Mr. Justice BLACK dissents.

Mr. Justice CARDOZO took no part in the consideration and decision of this case.
